BOOKLET FREE.

FINEST Talking Parrots. I only deal in Parrots that will make first-class talkers; no rubbish. I am willing at all times to send my Parrots on four weeks' trial and three months' talking guarantee. Why? Because all my Parrots are young, strong, and reliable. My lifetime has been spent among grey Parrots, both at home and abroad. I guarantee every customer every satisfaction. Grey Parrots are my special fancy. I have trained them, know their wants, and can give every purchaser a bird that will please him in every way. I can supply grey talkers, not thinkers, that will say almost anything, at reasonable prices. Before you purchase a grey or green Parrot, send for my Booklet, entitled "Talking Parrots." All my birds are sent on four weeks' trial, at my risk. Send postcard for catalogue.—Mrs. Forster, Princes Park Aviaries, Violet Street, Liverpool.

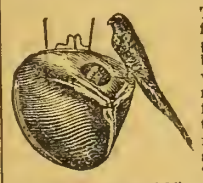
Daley, 95, Tithebarn St., Liverpool.



To breed Budgerigars successfully you must have the **"Improved Secure" Husks,** because they don't fall to pieces when in use as others do. They remain unequalled, and are different to any others. Individual testimonials don't count for much, so listen to what experts say:—CAGE BIRDS says they are "far superior to the old husks." "Feathered World" says: "Undoubtedly, the new husks are very superior to the old." Again "Exchange and Mart" says: "You had better order the improved form; even if it is a little dearer than the old-fashioned sort, it is cheaper in the long run." "Fur and Feather" tells its correspondents: "They have distinct advantages over the old sort." "Poultry" has said: "For Budgerigars we advise the use of the improved style of husks. Surely these are convincing testimonials. They are 4/6 dozen; smaller quantities, **5d.** each. Interesting pamphlet, entitled "Budgerigar Breeding," free on application. Superior box nests for Cockatiels, etc., **1/6.** Send for the pamphlet now.

HARPER, Upper Villiers Street, WOLVERHAMPTON

PARROT LOVERS

Should send post-card immediately for our new enlarged book entitled "Parrot Prattle" (registered copyright, infringers and imitators will be proceeded against). This book contains 120 pages of very interesting facts, and gives valuable advice and hints to all parrot buyers. Full details of our original system of selling Parrots on four week's trial, at our risk, which we were the first to introduce. We sell Parrots of all descriptions on four weeks' trial, at our risk, before settlement. Cheapest and best in the Kingdom, and any Parrot sold by us, and not giving full satisfaction, will be exchanged any time within twelve months. Remember we lead and others try to follow. Write to other dealers as well as us, and judge for yourselves. Lists of Parrots for sale and above book post free on receipt of postcard.

PARROT AVIARIES, MORECAMBE.

NESTS FOR ALL FOREIGNERS.

Advertisements continued on page 312.

RAILWAYS AND EXHIBITS.

The Burning of Lord Polwarth's Shorthorns.

Judgment was given by Lord Johnston in the action by Baron Polwarth against the North British Railway Company and North-Eastern Railway Company for £800 damages in respect of the loss of a three-year-old heifer, a two-year-old bull, and an aged bull, all shorthorns, which were sent for exhibition at Alnwick Agricultural Show held or July 13th, 1904. The animals were duly exhibited, and on the return journey were despatched by the North-Eastern Company round by Berwick and Tweedmouth, instead of by the route they had come—Kelso and Wooler. On the arrival of the train at Tweedmouth it was discovered that the waggon containing the animals was on fire. The heifer died on being removed, and the two bulls at Maxton later. The animals were valuable members of pursuer's herd, and he maintained that defenders were liable for their loss in that the North British Company contracted with him to carry shorthorns to and from the show, and the loss was due to negligence or the North-Eastern Company's breach of contract in failing to return the cattle by the route by which they had gone to Alnwick. Defenders pleaded that the action was irrelevant. They said the North British Company had no contract with pursuer for conveyance from Alnwick to Maxton, and fault or negligence was denied. They further pleaded that pursuers, having made no declaration, they were not liable to excess of £15 for each animal. Lord Johnston gave decree in favour of pursuer for £550 with expenses, holding that as the North-Eastern Company had intentionally diverted the cattle from the route by which they should have been returned they were guilty of a breach of contract.—"Evening Times."

A Captured Gull.

A quaint proof of the marvellous tameness of the Gulls that haunt the Thames Embankment was seen recently close to Blackfriars Bridge. From a circling ring, consisting chiefly of black-headed Gulls, a young Herring Gull alighted on the parapet and allowed a boy to take it gently in his hand. Even when firmly gripped it showed little fear, though it pecked the boy's hand in a perfunctory manner, and finally, nipping its own leg in its beak, remained sulking in that strange position. A very considerable crowd collected round the boy at once, and seemed to frighten him more than the bird. The last that was seen of either was the boy running as hard as he could with his prize under his arm, pursued by two men, each attempting to offer money for its freedom.

Bird Protection in Australia.

A movement for the better protection of useful native birds has lately been made in the Crown Lands Department, South Australia. On the list of native birds which are totally protected under the Birds' Protection Act of 1900 we note Blue Doves, Bell Birds, Bower Birds, Butcher Birds, and all species of small Crowshrikes; Cuckoos, Diamond Birds (or Pardalotes), Wagtails, Flycatchers, Herons, Bitterns, Egrets, Spoonbills, Ibis, Laughing Jackasses, and all Kingfishers; Mopokes, Nightjars, Native Tits, Owls of all species, Piping Crowshrikes (or native Magpies), Pipits, Larks, Reed Warblers, Robins, Seagulls, Stone Plovers (or Night Curlews), Superb Warblers, Emu Wrens, Blue Wrens, and Wrens of all kinds, Swallows, Martins, Swifts, Terns of all species, Tintacks (or *Ephthianuras*), Tree Creepers and Thrushes.

Owing to the holidays, several LATE ADVERTISEMENTS could not be included this week, but will appear next.

A BOON
AND A
NECESSITY TO EVERY FANCIER.

"Cage Birds" Stud Register
and BREEDING CAGE LABELS.

THE STUD REGISTER.

No breeder of high-class birds can afford to be without **"Cage Birds" Stud Register** hanging in his birdroom. Printed on suitable stiff card, it is ruled to hold a complete record of the breeding results of six pairs of birds; invaluable for future reference, to ensure that knowledge of one's stock so essential to pedigree breeding.

Post free, 2d. each; 4 for 6d.; 9 for 1/-

THE BREEDING CAGE LABELS.

The Breeding Cage Labels are neatly printed in sets of twelve, on perforated gummed paper, and can be torn off and affixed to the cage in a moment.

Here is a reduced fac-simile, which will serve to show their utility.

Post free, 2d. per dozen; four dozen for 6d.

CAGE No.....
COCK..... HEN.....
Issued by "Cage Birds."

Postal Orders only, where possible.

Address, **Manager, "Cage Birds," 154, Fleet Street, London, E.C.**

H. Francis (Coventry) writes:—I had so many replies to my advertisement re cages in last week's CAGE BIRDS that I could not possibly answer all by post. I should be pleased if you would mention this.

My advertisement in last issue brought dozens of replies, and I could have disposed of articles advertised several times over.—CHARLES R. PHILLIPS (Wood Green).

Eccles and Dis. C.B.S. are holding their open show on Saturday, November 30th, 1907, under C.B.U. rules.—A. WHEATLEY, Sec.

Mr. John Park, the well-known Scotch Fancy judge, has, we learn, removed to 977, Govan Road, Glasgow.

Mr. Henry Tams has been engaged to judge cage birds at Dublin Fanciers' and Industrial Association on June 19th.

Please note that the judges elected for our next show, writes Mr. G. E. Wilkinson, Hon. Sec. Nottingham O.S., are Messrs. J. H. Payne, W. E. Greeves, and C. Houlton.

The Accrington and District O.B.S. has elected Mr. J. Walsh (Blackburn) to judge British birds at their open show on October 18th and 19th, writes Mr. D. Harwood, Sec.

I have great pleasure in informing you of the success of the Choppington and District Cage Bird Society, writes Mr. J. Dixon, the Secretary. We have now a membership of 30.

Glasgow fanciers, we hear, are busy in their bird rooms, and big surprises are to be expected in unlooked-for quarters. Clydebank fanciers are strong in Scotch Fancies of the proper model.

The Chesterfield and District Fanciers' Association have secured the Assembly Room, Market Hall (an ideal show room), for their Show on October 25th and 26th, writes Mr. J. J. Dooley, the Hon. Sec.

Fanciers should not overlook the Lancashire and Lizard F. A. annual dinner and presentation of prizes, on April 6th, at the Spinners' Hotel, Oldham. Those desirous of being present should write the secretary, Mr. H. Oliver, 35, Hadfield Street, Glossop.

Bird-lovers interested in the hand-feeding and rearing of young birds should write Mr. Garthwaite, of 49, Hare Street, Grimsby, for a copy of his pamphlet on the subject, which will be sent post free on receipt of postcard giving name and address. This gentleman's method is interesting, and his "Lifebelt" food has had many testimonials accorded it.

One of the best samples of marking rings for young Canaries, etc., which has come under our notice reached us this week from Mr. G. B. Leclair, 150, Wallwood Road, Leytonstone, London, N.E. They are beautifully made of aluminium, extremely light, free from all roughness at edges or joints, and well designed for their intended purpose. Fanciers should send for a sample.

The following have been elected to judge at Wallsend and Mid Tyne C.B.A. Show, to be held November 8th and 9th: Mr. Barnes (Grantham), Mr. Mundell and Mr. Bruce. The show will be held under C.B.U. rules. We are to have a nest feather show the third Saturday in July, Mr. B. Wilson to judge.—JOHN R. EVANS, Sec.

At a meeting held on March 16th, writes Mr. C. James Melrose, Sec. Edinburgh Ornithological Open Society, with Mr. John McLennan (President) presiding, after a long discussion it was decided to hold our Annual Show of Scotch Fancy and Belgian Canaries on December 13th and 14th, and we trust that other societies will try and keep clear of this date.

A Sumptuous Book on Birds.

The Hon. Walter Rothschild, M.P., one of the greatest living authorities on birds, has been busy for years collecting data relating to "Extinct Birds." His book on this subject will, it is said, be a very beautiful volume, adorned with splendid reproductions of special paintings. The price of each copy will be £25.

Thermometric Wobblings.

The temperature has been curiously variable during the past week or so—genial and spring-like in the daytime, with quite sharp frosts during the night. A fancier was telling us only on Saturday last that he had to "thaw out" the water-tins in his outdoor bird room. Breeders should be careful to see their stock all cosy at night, for such variations usually bring a crop of egg-binding troubles in their train.

Invaluable in the Bird-room.

A good water-paint is an invaluable help to the bird-lover, and Hall's sanitary washable distemper can claim to be one of the very best at present on the market. It is made in a range of no fewer than 73 tints, amongst them being all the blues and greens (some of them very beautiful shades, indeed), beloved of fanciers. In case of application it cannot be beaten, all that is necessary being to mix the distemper with a little cold or hot water, and apply it thickly. It is very economical in use, and dries so hard that in three weeks' time it is not affected by washing. For stock, flight and breeding cages, the walls of bird-rooms, and for outdoor aviaries, nothing more suitable can be imagined, as, while quite non-poisonous, it is also a disinfectant, and destroys all objectionable insects. Fanciers should write Messrs. Sissons Bros and Co., Ltd., Hull, for shade card and particulars, which will be sent post free if CAGE BIRDS is mentioned when writing.

J. F. Gibbons has removed from Chorlton-Cum-Hardy to 26, Balmoral Road, South Shore, Blackpool.

Mr. A. Hitchings, Hon. Sec. of the Swansea C.B.S., has removed to 69, Mysydd Road, Landore, Swansea.

We have engaged Messrs. J. H. Payne and J. Robson to judge Cheltenham Annual Show on October 26th and 28th, held under C.B.U. rules, writes Mr. A. S. Treasure, Hon. Sec.

I have received a letter, writes Mr. W. Rudd, the well-known bird specialist, Government-stamped "salved from ss. 'Jebba.'" This came from the Gold Coast, and was only addressed "W. Rudd, Norwich, England."

We regret to learn that Mr. George Mackley, of Muspole Street, Norwich, has again been very ill, and customers are requested to accept this in explanation of any delay in replying to business communications.

A most interesting programme has been arranged by the Leeds C.B.S. "Breeding and Rearing," "Mule Breeding," "Norwich Plainhead," "Bird Room Requisites," and "Preparing for Exhibition" are the subjects of lectures to be given. Two nights are to be given during the year to "Questions and Answers." Shows, a washing competition, an outing, and a dinner will afford our Leeds friends instruction and amusement.

OBITUARY.

Mr. H. HOWE (Wellingboro').

We regret to announce the death of Mr. Henry Howe, one of Wellingborough's best-known tradesmen, which occurred on March 18th. For the past twelve months Mr. Howe had been in failing health. Deceased, who was aged 63 years, as a breeder and exhibitor of Canaries, was 15 years ago most successful at the largest shows in the country, particularly at the Crystal Palace, Nottingham, Burton-on-Trent, Birmingham, and Derby. Indeed, he beat some of the best exhibitors, and carried off hundreds of prizes. At the present time deceased's sons take a great interest in bird breeding and keeping, and have won numbers of prizes. Besides a widow, Mr. Howe leaves four sons and two daughters.

Respecting your report in last week's issue of the increased circulation of "C. B.," I am sure every lover of our feathered pets will congratulate you on your success, knowing that it is only some slight reward for your unceasing labour to give the best and cheapest knowledge to your readers. I trust and believe the circulation will keep increasing.—J. MUNRO, Hon. Sec. Bristol C.B.S.

Egg Recipe Wanted.

G. W. writes:—In a paper read by Mr. J. Lees before the Rochdale Good Intent C.B.S., March 6th, he named a cake which he mixed with bird food, the recipe for which he got out of CAGE BIRDS. I should be glad if he would give a copy of the same through "C. B."

Spring is Coming.

It may interest readers to hear, writes Mr. Harry G. Whibley (Tunbridge Wells), that a Swallow flew through the open window of St. James' Infant School in this town on Thursday last, March 21st, causing some excitement among the "babes" in its endeavours to escape.

The Crested Canary Club.

An extraordinary general meeting will be held at "The Napier," 25, High Holborn, on Wednesday, April 10th, at 8 p.m., for the purpose of reconsidering the resolution carried at the annual general meeting, Feb. 16th last, that the Crested Canary Club becomes affiliated to the Cage Bird Union; also to consider other important business.—R. L. CRISP.

A Happy Idea.

The President of the Mansfield Cage Bird Club offers each year, we learn, a large silver medal, value 20s., for the member gaining the most points throughout the show season—not at any particular show, but at all and sundry; and wherever points are won they count. The winner this year was Mr. H. Seagrave, and, in handing him the medal at the last meeting, the President expressed the pleasure it gave him to present it to a member so much esteemed, and whose winnings, he knew, were always gained in a straightforward manner.

Another "Move" at Seaham.

We are again altering our open show date, writes Mr. J. M. Nicholson, Hon. Sec. Seaham Harbour C.B.A., in favour of the Hartlepools C.B.S., although we were first to advertise the date, December 7th. They have appealed to us to do so, together with the Cage Bird Union, and out of courtesy to the older society we have changed to December 21st. We have now altered our date twice in favour of older societies, and we intend to stick to December 21st come what may. We have done our best not to clash with others, by taking the fixture list in your valuable paper, CAGE BIRDS. If all societies would advertise as soon as they fixed on a date, I am sure it would save a lot of unnecessary writing and bother.

SHOW DATES FIXED.

To secure insertion in this column a guarantee that the show will be advertised in "C.B." to the extent of at least 25/- must be sent to our manager.

THIS WEEK'S TRIBUTES.

I have had so many offers for my birds through advertising in CAGE BIRDS that I find it impossible to answer them all. I thank everyone for their offers.—A. TUTTY (Merton).

I have had 57 replies to one advertisement in CAGE BIRDS. Who says the advertisement rate is exorbitant? With results like that, a Scotsman wadna begrudge it.—J. STEEL (Dalkeith).

It is quite impossible for me to answer all letters which I have received re Norwich cock advertised last week, which is ample proof that CAGE BIRDS is undoubtedly a grand advertising medium.—J. ATTERBURY (Crewe).

Kindly thank the gentlemen who answered my small advt. in CAGE BIRDS re Sib Goldie and Norwich hen. It is impossible for me to answer all the letters and post cards I received from all parts of the country. I have had a good deal (over 20 offers for them), which speaks for the popularity of CAGE BIRDS.—GEO. J. BEATTIE (Hawick).

Through my advert. in CAGE BIRDS last week I have been packed out with letters and post-cards. I find it impossible to reply to all. My birds were claimed on the Friday evening by a gentleman from St. Helens, who paid the price I wanted. I wish your paper every success.—W. DAVIES (Newton-le-Willows).

Since advertising in your paper, CAGE BIRDS, I have received orders from all over the British Isles. I cannot speak too highly of your paper as an advertising medium.—H. IRELAND (Chelmsford).

Will you please thank all those who answered my advertisement in "C.B." on the 9th inst., as I find it impossible to do so by post, having so many answers?—W. BINNS.

I have had so many offers for my hens through advertisement in CAGE BIRDS that I find it impossible to answer them all. I thank everyone for their offers, and wish CAGE BIRDS every success.—C. W. WILLIS (Wimborne).

I thank all enquirers who have replied to my advert. in "C. B." I had replies from many parts of Ireland and England, which shows that your valuable paper is known all over the country. I have taken "C. B." since its birth.—WM. JAMES (Llandebie).

CLUB REPORTS.

SCOTTISH NATIONAL C.B.S.

Annual meeting, held Feb. 23rd. Mr. A. C. Dandie presided. The financial statement, showing credit balance of £74 9s. 2½d. was discussed, and met with general approval, being adopted unanimously. Votes of thanks were accorded those members and friends who had rendered special services at the show, and also to the retiring office bearers. After the election of office bearers, it was agreed to adjourn the meeting until March 9th, Mr. E. G. Wright giving notice of motion re amalgamation with Edinburgh Open O.S. At the adjourned meeting, Mr. Dandie was faced by another large attendance. Mr. Wright's motion, to appoint delegates to meet delegates from the Edinburgh Open Society to consider the question of amalgamation, was first disposed of, a heated discussion arising over the question at issue. On the vote being taken, the motion was defeated by a large majority. The classification then came under review, several alterations being made on same. The meeting again adjourned until March 23rd, when the dates for show were finally fixed for Wednesday and Thursday, January 1st and 2nd, 1908, and the judges for the various sections were appointed. Office bearers for 1907-8:—Hon. President, Wm. Grant, Esq. Hon. Vice-Presidents, Baillie Stevenson, W. Aitchison, Esq., J. Brown, Esq., F. A. Watt, Esq., G. M. Brotherston, Esq., and A. G. Cameron, Esq. President, Mr. A. C. Dandie. Vice-Pres., Mr. Jas. F. Dewar and Mr. L. J. Arrighi. Sec. and Treas., Mr. Jas. Winter, 17, Parkside-st., Edinburgh. Management Committee, Messrs. A. Rodger, E. G. Wright, T. Todd, W. Mather, A. Cochrane, S. Buglass, R. Craig, G. Brown, A. Gorrie, D. Kinlayside, J. Kay, T. H. Buchan, W. Finnie, J. Gourlay, J. Smeaton, J. Pendrigh, W. B. Smart, J. Goodfellow, R. S. Spence, D. Ross, A. W. Watson, and P. West. Auditors, Messrs. W. Aitchison, and J. Gordon Nicholson. A vote of thanks to the chair terminated a series of most successful meetings.—JAS. WINTER, Sec.

THE

APRIL NUMBER

OF THE

Bird World Magazine

IS

NOW ON SALE EVERYWHERE.

The frontispiece, in colours, depicting a dainty Spring migrant, is one of the most effective and charming plates ever issued, and will be voted by all a beautiful piece of work. There are many other splendid illustrations, and the literary contents are of great interest to all sections of bird-lovers.

Order it at once.

It will help make your Easter Holidays still more enjoyable.

Single copies **3d.**, from your booksellers or railway bookstalls; post free **4d.**, from

F. CARL,

154, Fleet St., London.

HARROGATE C.B.S.

Annual meeting March 20th, Ald. H. Milling (president) in the chair, when eight new members were elected; 13 were elected at the previous meeting. Our society at present numbers 54 members, an increase of 30 since the beginning of the year. The annual balance-sheet was presented and was considered very satisfactory, showing, as it did, a balance in hand of £6 14s. 7d..—G. H. BARNWELL.

LONDON AND PROVINCIAL O.S.

General meeting, held at the Raglan, on March 21st. Agenda:—Conclusion of "Questions on Yorkshires." Mr. J. W. Ramsden in the chair. There were upwards of 40 members and friends present, showing the keen interest taken in the subject. The Chairman, in calling upon Mr. H. E. Tringham to read the replies, stated briefly that this was a series of 18 questions of general interest to Yorkshire breeders, which were drawn up by Mr. Tringham, and submitted by him to 25 of the most prominent breeders of the variety in Yorkshire. Replies had been received from several of them, and the first of the series had formed the subject of a meeting held in July last, when quite a goodly number turned up. An adjournment had to be decided upon, to-night's meeting being the outcome. Having read the first seven questions (which were dealt with at the last July meeting), he read question 8, and Mr. Tringham read the various replies to the same. After the reading of Question 18, and the reply thereto, the discussion was opened, and was kept up with unabated interest until a late hour, when the Chairman said that he must reluctantly draw the meeting to a close. Upon the motion of Mr. Cozens, seconded by Mr. Mortlock, a very hearty vote of thanks was accorded to those gentlemen who had so kindly gone to such pains to furnish the replies. Mr. Cozens remarked that the replies were bristling with "tips" and information which could not fail to be profitable to those present. He coupled with this the name of Mr. Tringham, to whom they were all indebted for the trouble he had gone to, to write to all the gentlemen and carry the venture out so successfully. The vote was carried with acclamation. Mr. Tringham, in replying on behalf of the gentlemen in question, said it would be his very pleasant duty to convey the thanks of the meeting to them, also that anything he did for the L. and P.O.S. he looked upon as a labour of love, and he would be happy to do his utmost at any time.—H. E. TRINGHAM, Assist. Hon. Sec.

THE BIRD LOVERS' LIBRARY.

The Commoner Wild Birds of Great Britain.

By DAVID T. PRICE. London, 1907: Messrs. Gurney and Jackson. With Frontispiece; price 1s. net.

This is a 62-page handbook, of very convenient size for the pocket, and a glance at the contents tells us that it has been designed expressly for the purpose of accompanying the bird lover on his walks abroad in search of bird life. And quite admirably does it fulfil its mission. Our author has had the happy idea of dividing the birds into summer and winter groups likely to be met with in the garden, the woodland, on cultivated lands, by the seashore, etc., and to the tabulated list of species is added a short note of some characteristic most likely to aid in identification. Thus we find: Goldfinch (crimson faced), Redstart (variegated; quivering crimson tail), Stonechat (black-headed; hops), and so on. Then follow condensed but valuable notes on the species, with many helpful hints on their identification, both by plumage, song and flight. Mr. Price is evidently a keen out-door observer, and his little volume should find a welcome from all who take delight in a stroll through fields and woodlands, and would make closer acquaintance with the bird life there. The British bird-keeper will find one or two inaccuracies—as when the sexes of Green and Great Spotted Woodpeckers are said to be alike. Still, these are but minor blemishes on an excellent whole.

Birds of the Country-side: A Hand-Book of British Birds.

By FRANK FINN, B.A., F.Z.S. London, 1907: Messrs. Hutchinson and Co. With 12 coloured plates, 118 illustrations from photographs, and numerous outline drawings; price 5s. net.

We must say at once that this work is a distinct acquisition to our library shelf. A more creditably produced little volume we have rarely seen. It comprises some 200 pages of letterpress, yet is of handy size to slip into one's pocket when setting off for a country ramble. The 12 coloured plates are really good, which is not usually the verdict one can conscientiously pass in respect to the illustrations in colours of most "popular" works on birds. The one depicting the Chaffinch and Greenfinch is particularly pleasing. The photographs reproduced have been chosen with discrimination, and add immensely to the practical value of the book; they are all good, and some of them compel admiration. Of Mr. Finn's part, the letterpress—after all, the most important by far—we can only speak in terms of praise. This gentleman possesses the happy knack of presenting the facts of bird life in an interesting and easily-understandable manner, so that one is never bored, though ever learning. He has, too, accuracy of knowledge from the point of view of the keeper of birds in captivity—an unusual thing in those learned of birds from the scientific side. It is curious that Mr. Finn has also hit on the idea of collating the species under the localities in which they are likely to be found. Thus his headings are: "Part I.: In Towns and Gardens (all the year)"; and so on. Each species is thoroughly dealt with, many interesting and out-of-the-ordinary particulars being usually given. An informing chapter on "Classification" brings the volume to a close. "Birds of the Country Side" can be heartily commended to the notice of all who would like to possess an accurate, up-to-date handbook of British birds at a moderate price.

CLUB NOTICES.

No charge is made for notices of forthcoming meetings, but they can only be inserted once. Should secretaries desire to secure immediate insertion of their announcements **exactly as written** they can do so by prepayment at the rate of three words a penny.

Barnsley and Dis. C.B.S.—March 30th, at Maltsters' Rest, 7.30 p.m. Arranging of dates for First Feather Show and Open Shows.—T. Coward, sec.

Battersea and Dis. C.B.A.—April 3rd, at Duchess of Devonshire, Lavender-rd., Clapham Junction, 8.30 p.m. Mr. Allen Silver will lecture on the feeding of British birds; hearty welcome to all fanciers. —T. Easterling, hon. sec.

Blaydon-on-Tyne and Dis. C.B.S.—April 6th, at Co-op. Hall, Blaydon, 7.30 p.m. Washing Exhibition.—D. A. Ogilvie, sec.

Bolton and Dis. O. and R.C.S.—April 1st, at Joiners' Arms Hotel, Deansgate, 8 p.m. Important business; debate on bird parasites; all members and fanciers attend.—J. Stringer, sec.

Bolton and Dis. Progressive C.B.S.—April 2nd, at Olinda Cafe, Corporation Street, 8 p.m. Lecture by Mr. W. A. Bladon (Manchester), "Management of the Bird Room"; novelties for the bird room for discussion.—John W. Bancroft, sec.

Bramley and Dis. O.S.—March 30th, at Headquarters; committee meeting, 7. Lecture on breeding and rearing, by Mr. J. S. Clarkson (Halifax), 7.30.—Jas. Metcalfe, hon. sec.

Broughty Ferry C.B.S.—April 3rd, at Bakers' Hall, King Street, 8 p.m. All members requested to attend this meeting.—Charles Muir, sec.

Cheltenham C.B.S.—April 3rd, at the Sydney Arms Hotel, 8 p.m. Mr. T. J. King will open a discussion on pairing and breeding; fanciers invited.—A. S. Treasure, hon. sec.

Chester and Dis. C.B.S.—April 2nd, at Nag's Head Cocoa House, 8 o'clock. Fix date of Young Bird Show; distribution of Pair Show prize money, etc.—A. J. Red, sec.

Choppington and Dis. C.B.S.—March 30th, at Railway Hotel. Arrangement of classes and judges for present season.—John Dixon, sec.

City of Dundee and Dis. N.M. and B.B.A.—April 3rd, at Doig's Rooms, 8 p.m. Selection of judges for Open Show and proposed First Feather Show.—Alex. Miller, sec.

Coventry O.S.—April 3rd, at Sydenham Palace, Ford Street, 8.30. Important business; all members requested to attend.—G. Turrell, sec.

Dalkeith and Dis. C.C.—March 30th, at Ship Inn, 7 p.m. Distribution of revised rules and closing meeting for new members.—Thos. Briggs, sec.

Darlington C.B.S.—April 3rd, at Half Moon, Northgate, 8 o'clock. Table Show; three classes.—E. Brunskill, sec.

Denholme and Thornton C.B.S.—April 9th (instead of April 2nd), at the Club House, Bull's Head, Thornton, 8 p.m..—J. Jarratt, sec.

Dulwich and Peckham C.B.S.—April 4th, at the Herne Tavern, Peckham Rye, S.E., 8 p.m. Lecture on the breeding and exhibiting of Canaries, by Mr. J. Robson; all fanciers welcomed.—W. Hodson, sec.

Eastern Dis. O.S.—April 1st, at Free Gardeners' Hall, Abbeymount, Edinburgh, 8 o'clock. Important business.—A. Robinson, sec.

Eccles and Dis. C.B.S.—April 3rd, at Grapes Hotel, Peel Green, 8 p.m.—A. Wheatley, hon. sec.

Exeter and Dis. C.B.S.—April 2nd, at Oddfellows' Hall, 8 p.m. Paper by the Chairman (Mr. W. G. Down) on "Hints on the Management of a Bird Room"; discussion.—R. H. Folley, sec.

Greenwich and Deptford C.B.S.—April 4th, at the Two Brewers, Church Street, Greenwich, 8 o'clock. "My Experiences with the Yorkshire Canary," lecture by Mr. R. P. Broome; all fanciers welcome.—Geo. Hill, hon. sec.

Hartlepools C.B.S.—April 9th, at Headquarters, 8 p.m. (members please note alteration of date.) Members' prize money will be paid and subjects arranged for future meetings.—E. Woodhead, hon. sec.

Hastings United C.B.S.—April 4th, at Royal Oak Hotel. Selection of judges and hall for Annual Show.—A. E. Goddin and J. H. Goddin, hon. secs.

Hucknall Torkard C.B.S.—April 6th, at the Plough and Harrow Inn, 7.30. All fanciers wishing to join should attend.—A. A. Asbury, sec.

Inverness O.A.—April 5th, at Crown Mission Hall, Washington Court, 8.15 p.m. Lecture by Mr. G. McKenzie on the singing Canary; all invited.—A. Urquhart, sec.

Kilmarnock C.B.C.—April 3rd, at Board Room, Temperance Hall, 7.30 p.m. Open night for questions and debate.—R. McCaw, sec.

Leigh and Dis. C.B.S.—April 2nd, at Railway Hotel, Leigh, 7.30. Selection of judge for Young Show; members attend.—A. Parks, sec.

Loughborough and Dis. C.B.A.—April 3rd, at Charnwood Coffee House, 7.30 p.m. Subscriptions now due; all members attend; a treat in store for you.—E. Thorp, sec.

Manningham C.B.A.—April 13th, at Mowbray Arms, 8 p.m. Meeting on April 6th postponed to above date.—E. Kemp, sec.

Middlesbrough and Teeside C.B.S.—April 7th, at Crown Hotel, 7 p.m. Election of judges for Open Show and place for the excursion.—A. Wake, sec.

Newcastle and Dis. C.B.S.—April 4th, at Lockhart's, 65, Grainger Street, 7.30. Important business; subscriptions must be paid at this meeting; intending members please attend.—Curry and Hutchison, secs.

Nottingham and Notts O.S.—Postponed to April 10th, at Cobden Hall, 8 p.m. Lecture on British birds, by Mr. H. J. Chick.—G. E. Wilkinson, sec.

Ormskirk and Dis. C.B.A.—April 2nd, at Foresters' Arms, Ormskirk, 8 p.m. Mr. J. B. Tasker on "Pairing and Breeding Canaries"; intending members requested to attend.—T. H. Tiffin, hon. sec.

Preston O.S.—April 2nd, at the Empress Cafe, 29a, Church Street, 8 p.m. Lecture by Mr. C. Blackhurst, "Dietetics,"—R. Seed, hon. sec.

Queensbury C.B.S.—April 4th, at Granby Hotel, 8 o'clock.—S. Jagger, sec.

Queen's Park and Dis. C.B.A.—April 4th, at Windsor Castle Hotel, Harrow Road, W., 8. Important business; members please attend.—J. C. Bireb, sec.

Rochdale Good Intent C.B.S.—April 3rd, at Temperance Club, 8 p.m. Quarterly meeting.—Sam. M. Clayton, sec.

Rotherham C.B.S.—March 30th, at the Club House, College Inn. Special meeting; balance-sheet, etc.; please attend early.—J. C. Hayes, sec. (pro. tem.)

Sheffield and Dis. C.B.S.—April 4th, at Wentworth Cafe, Pinstone Street, 8 p.m. Table Show of British Birds; judge, Mr. A. Somerfield; paper on British birds by Mr. S. W. Birchley.—Bishop and Pilley, secs.

Shipley O.S.—April 3rd, at Victoria Hotel, 8 p.m. Classification and judges for Members' Shows, etc.—H. Dobson, sec.

Southend and Dis. F.A.—April 7th, at Victoria Hall, Alexandra Street, Southend, 8 p.m. General business and Annual Show.—B. P. T. Jones, hon. sec.

South Metropolitan F.A.—April 4th, at Club Rooms, 8 o'clock. Members' Rabbit Show.—A. Maddison, sec.

Stockton and Dis. C.B.S.—April 4th, at Leeds Hotel, 8 o'clock. Schedule for Open Show; all members please attend.—J. W. Lowes, sec.

Walthamstow F.A.—Annual meeting, April 2nd, at the Lightbouse, Markbouse Road, 7.30 p.m.—C. W. Mead, sec.

Wandsworth and Dis. —April 4th, at Ye Olde Swan, 8 p.m. Presentation of balance-sheet and arrangements for lantern lecture on poultry.—W. Summers, sec.

Warrington C.B.S.—Special meeting, April 4th, at Blue Bell, 7.45. To select judges.—Jas. Emmett, sec.

West London F.A.—April 4th, at Bush Hotel, Shepherd's Bush, 8 o'clock. Mr. Allen Silver will lecture on the range and distribution of some so-called British birds.—J. Dewhurst, sec.

Widnes and Dis. O.S.—April 4th, at Grosvenor Hotel, 7.30. Important business; members and intending members attend.—S. Andrews, sec.

ARE YOU A *NOVICE?*

IF SO, READ

"Cage Birds" .. Annual .. for 1907.

AND BE SO NO LONGER.

For the small sum of Sixpence 6D.

You can obtain on order from your newsagent the one and indispensable book of reference for cage bird keepers.

This Complete Guide to the fascinating and profitable hobby of bird-keeping now appears before the public for the fifth year. Anything and everything that the bird fancier requires to know will be found in its pages. Just read this list of contents:—

	PAGE		PAGE
Calendar	4	Breeding Register	146
Call Notes and Song of some Common British Birds	7	Show Record	151
Feeding and Rearing of Young Canaries	13	Cash Account	153
Thoughts on the Matching of Canaries	19		
Mule and Hybrid Breeding	21	ILLUSTRATIONS.	
The Pet Bird	27	Gold-crested Wren (*Frontispiece*).	
Some Pleasing and Beautiful Foreign Birds ..	31	Crest-bred	25
Year with the Wild Birds	35	Wheatear	29
Diseases of Cage Birds	39	Norwich	36
Review of the Exhibition Year	49	Cinnamon	43
Glossary of Terms	65	Goldfinch-Canary Hybrid	48
Societies, List of	83	Norwich	63
Judges	119	Crest	77

A HANDY BOOK FOR LOVERS OF BIRD LIFE

BIRDS OF THE COUNTRYSIDE

By FRANK FINN, B.A.

In Cloth gilt, 5/- net.

With about 130 full-page and other illustrations and 12 full-page Coloured Plates

"No better or more interesting companion for a stroll in the spring and summer days could be chosen by those who wish to be on speaking acquaintance with the birds they may come across."—WESTMINSTER GAZETTE.

LONDON: HUTCHINSON & CO., PATERNOSTER ROW.

QUESTIONS & ANSWERS

DOUBTS AND DIFFICULTIES SOLVED BY SPECIALISTS.

Queries will be answered under the following conditions:—

(1)—*All questions must be clearly written in ink (or typewritten) on one side only of paper, and must conclude with either the correct name of querist, or a pseudonym, or initials.*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper and enclosed with the query. In no case must the address appear on the query.*

(3)—*Queries intended for different specialists must not be written on the same sheet of paper.*

(4)—**Queries must not include** *or be included in orders for books, instructions re advertisements, or any other matter for publication.*

(5)—*The department to which the queries refer must be stated in bold letters on the left-hand corner of the query.*

(5)—*If an answer in the same week's issue is desired, queries must be posted to reach us by* **Monday's first post** *at latest. Queries will be dealt with in the order in which they are received, and only as space permits. The earlier queries are received the better attention they are likely to have.*

(7)—*Queries relating to illnesses of birds, except enquiries as to cause of death (for which see Post Mortems) will be answered by return of post on receipt of a postal order for sixpence and an addressed stamped envelope. Queries of an ordinary nature will be answered by post, if desired, on receipt of a postal order for one shilling and a stamped addressed envelope.*

(8)—*All who require letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence to pay postage expenses, &c., otherwise their letters will not receive attention.*

(9)—*All queries must be addressed* **the Editor, "Cage Birds," 154, Fleet Street, London, E.C.** *Only queries so sent will be answered. Postcards are not admissible.*

NOTE.—Readers are requested to carefully study past numbers and current issue before submitting questions. By doing so they may save trouble and unnecessary repetition.

THE following gentlemen represent CAGE BIRDS staff of **ADVISORY EXPERTS,** Queries must in no case be addressed to any of them individually, but to the Editor.

Norwich Plainheads.—**J. H. Payne.** Yorksbires.—**H. W. Battye.** Crests & Crestbreds—**W. E. Greeves.** Cinnamons & Miscellaneous Canary Queries—**J. North.** Border Fancies—**J. Patterson.** Scotch Fancies—**R. Wright.** Lizards **Barker Clegg.** Lancashires—**S. R. Compston.** Greens—**S. Hadwin.** Belgians—**W. B. Cobb.** Rollers—**F. A. Lester.** British Birds, Mules & Hybrids—**G. E. Weston.** Foreign Birds—**Wesley T. Page,** F.Z.S., M.B.N.H.S., &c. Park and Lake Aviculture—**Frank Finn,** B.A., F.Z.S., M.B O.U. &c. Wild Bird Life—**H. Norman.**

CANARIES.

NORWICH PLAINHEADS.

Answered by J. H. PAYNE.

Norwich Cock Out of Sorts (S.F.).—Stop giving your bird sop, and give instead every other day, for ten days, a small teaspoonful of egg food, to which add as much aromatic confection as will stand on a threepenny piece. After this give him fresh daily ten drops of tincture of quinine in his drinking water for a week. Let him have a pinch of maw seed three times a week, and the mixed seeds same as usual.

Young Bird Moping (Constant).—I am under the impression your Norwich bird has caught a slight chill from the journey. Give it, in its drinking water, for three or four days, ten drops of acetate of ammonia. Keep him in a warm corner away from draughts, and cover over at night with a warm cloth. Twice a week will be often enough to give the seed mixture. Give a little sponge cake, over which put a few drops of best sherry.

Young Birds Dead in Shell (No Name).—Will you write again, giving me full particulars of how you are feeding your birds, and where you breed with them? Are you near any large works where there may be steam hammers or anything that would cause a lot of vibration in your house? Are you breeding with the same cock as last year? Have you been successful in getting young from other pairs of Canaries in the same room? Give me all particulars you can think of, and say if your hen appears thoroughly healthy.

YORKSHIRES.

Answered by H. W. BATTYE.

Bad Plumage (Virus).—The best thing you could do would be to either give the hen a good wash (if you have been accustomed to band-washing birds), or get someone to wash it who is capable of doing so.

Sometimes Lively, Sometimes Moping (Anxious).—Stop the sherry wine and quinine, and give for one week, fresh daily, ten drops of syrup of buckthorn in his drinking water. Then continue the sherry and quinine for another week, when I think your bird will be all right. You do not say whether the bird sings or not.

Nesting Difficulties (Star).—You paired your birds too early. Separate them for a fortnight, and then try them again. The one egg your hen laid may be fertile, and it may not. But if you have allowed the hen to sit until the time you see this reply, you will be able to ascertain this by holding the egg before the window, between your finger and thumb, when, if it appears to be clear, you may venture to throw it away; but if it looks dark it will probably be fertile. Some argue that when two birds pair once, they fertilise the whole clutch of eggs; whilst others say they only fertilise one egg at a time. I am inclined to favour the latter view.

Irregular Laying (W. A. Rountree).—When birds are paired up as early as yours have been, it is not unusual for them to lay their eggs irregularly, and I can understand your hen missing a day; but I have my doubts about her laying two eggs on the fourth day, and should imagine you may have overlooked the egg on the day previous. However, I should advise you to let her sit her time, and if she hatches the eggs out, well and good; but if she does not hatch any take them away and keep her separated from the cock for at least one week. Then pair again, when the weather will most likely be more seasonable for breeding and rearing young birds. You will have a far better chance of rearing the youngsters when the days lengthen out, as they will not have to go so long without being fed.

BORDERS.

Answered by J. PATTERSON.

Yellow Cock in Trouble (G. G. Hay).—Could you not have given some reasons for those white lumps, or stated more clearly the size and correct colour of same? I should then have been better able to advise you correctly. I suspect the lumps to be abscesses, and more or less highly inflamed. You will easily know by looking closely. See if they are filled with matter. If so, catch him twice a day, and bathe each time with some permanganate of potash; give it a good dressing. Then rub a little pure lard on. If, on the other hand, it should be bald (and there are no abscesses), give for one day as much sulphate of soda as will lie on a sixpence; after that six drops of lemon juice in his drinking water. Give the head a slight dressing with hazeline ointment daily for a week. From your description, I think he will be all right for breeding by the end of April; but you give no details as to your present feeding. Please repeat your query if the above should not apply to your case. Place a few leaves of dandelions in the wires for bird to peck at every day; see they are free from frost.

First Egg Troubles (R.H.R.).—There is nothing unusual in your hen laying one egg a week before she lays her next. The first egg is what we term a "proud egg." I have no doubt she will lay her full clutch this time, which, I trust, will hatch out all right. But I am afraid there is little hope of the first egg hatching. At this time of the year, while the weather is still cold, the germ dies very soon, and unless you had it well protected and turned it over every day, I am afraid it will do no good. Many hens lay one day, then miss one; lay on alternate days, in fact. Your withholding the egg food on the days she did not lay had nothing to do with it, even though you had one similar last year. (2) It is easy to know a hen that is egg-bound. You will find them mostly huddled up in a corner of the cage, with their head under their wing, feathers all ruffled up, and swaying backwards and forwards on their legs. Blow up the feather at vent, which you will notice is all swollen and red. Anoint the vent with a feather dipped in warmed olive oil; let a little of it work into vent. Then hold her over a cup of steaming water. Then roll her lightly in a piece of flannel, leaving head out, and place near the fire (inside of cage), and in the course of half an hour, if she should not have come out herself, repeat the steaming.

LIZARDS.

Answered by BARKER CLEGG.

Pairing Two Silvers.—Both birds being by the same sire, and last season's birds, I would not advise you to proceed in the manner suggested. Much better to pair them with the birds you mention that are a year older. In pairing Golds or Silvers and birds that are inbred I advise them to be other than same season's birds, i.e., one year to two years, or one year to three years and so on. Lizards are practically a self-supporting variety. By selecting your stock and keeping an account of your proceedings you will breed birds of better quality, and maintain more energy and vigour. You will find a few remarks on line breeding in your back numbers of "C.B."

GREENS.

Answered by S. HADWIN.

What Green Canary is it? (H.D.).—You say you have a Green Canary similar in type to the illustration sent, and that you bought it for a Norwich Green. I should say that most likely it is a Border Fancy, seeing that it is only 4½ inches long. The illustration represents a good type of Yorkshire Green. As regards the birds not breeding, they are evidently not in condition yet. Separate for a while, continue feeding as stated, and when the cock is in full song and the hen dancing on the perch and flapping her wings put them together again. If you get them together by the second week in April you will be quite soon enough.

ROLLERS.

Answered by F. A. LESTER.

Roller with Sore Shoulders, etc. (J. Burnside).—The bird's shoulders are no doubt sore through his picking them; or is it red mite? Try a little vaseline on them—very, very little. Black enamel if put on and allowed to thoroughly dry will do no harm. Yes, you could breed in such a place, but endeavour to secure proper ventilation. While breeding give the usual diet: Two parts rape, one part Canary; when the young arrive give crushed hemp and egg food. You will have to rear your young ones on egg food till they can eat seed. Crush all seed for them for a week or two. Glad to help always.

Cocks Worrying Hens (May).—You have not gone on quite right with your birds. You should have taken the cocks away when the hens had first started to sit, and introduced them again when the young ones were 10 days old. Try taking them away now, and if the hens appear to be feeding the young ones keep them away till the young are nearly fledged, say about 12 days. If the hens get restless you must put them back at once or they will desert the nest. You will not do any harm by looking at them, but do not approach suddenly or make any quick motion or noise, as they are easily startled during this period. I have to do my breeding in a shop where there are hundreds in and out all day long, and I am usually fairly successful.

Breeding from Hen that has been ill (Noel).—Will hen Roller be fit for breeding from that has been ill, how many nests, and when can I start?—Yes, if you feel sure she is quite well again. Yes, if you feel sure the hen is quite well again. I should not take more than three nests, and only two if she appears to get weak after the first nest. Feed her up with egg food, about half a teaspoonful every day, and in a week's time hang her close to the cock bird for eight days and then put them together. Yes, I am that gentleman.

MISCELLANEOUS CANARY QUERIES.

Answered by J. NORTH.

Mutilated Feet.—Two Canaries have had their legs bitten by other birds. One has healed, but the three front toes have shrivelled up, while the back claw is perfect. Will the front ones grow again? The other bird's leg has turned black, and she cannot move it.—INQUIRER.

Very little can be done now, but earlier action would have prevented the misfortune, as Canaries and Parrakeets seldom even appear to tolerate each other's company, and these mutilations are generally the result of trying to keep them together. No; the toes will never grow again, and wide rough perches should be provided. For this purpose nothing can be better than a few corks placed end to end, with a wire running through them. The leg that has turned black has mortified and will slough away. To any part that appears inflamed or painful the application of Witch Hazel Extract is recommended as soothing and healing.

Egg Cake for Canaries (Airdrie).—This recipe for egg cake has frequently been given in these columns, and quite recently in the body of the paper, but as you may be one of the many new subscribers to CAGE BIRDS, I have much pleasure in again giving it. Eight eggs, 4 oz. sugar, 4 oz. suet finely chopped or melted, 1 lb. flour, ½ oz. baking powder. Rub the fat well into the flour, together with the sugar and baking powder, then well stir in the eggs (previously well beaten up), and bake in a slow oven either in the form of thin biscuits or as a cake. When it is a day or two old break it up and store in air-tight tins. It may be given to the bird in large pieces, or it may be crumbled up and given dry or moist.

Marking Young Canaries.—What is the best way of marking young Canaries? I found it impossible to remember last year how all my young birds were bred, and had intended to try the aluminium rings, but now feel afraid to venture?—WHITE OWL.

I do not think there is any reason why you should not try the aluminium rings, for what one breeder may not make a success of, another one might, because there is no doubt that in the hands of many the rings are perfectly satisfactory. Before they were invented a very simple plan was to number the cages and then cut a notch in a bird's flight feather to agree with the cage number. Thus, birds coming out of No. 1 cage had a notch made on their first wing feather, and so on. Birds that are marked, variegated, or Crested, might have their peculiarities recorded in a book kept for the purpose, and a few memoranda concerning the occupants of the numbered cages may often prove acceptable.

Boiled Rape Seed.—I have tried soaking German Summer rape seeds in water from six to twelve hours, and then boiling it in a saucepan. I did not discover any of the gelatinous substance one often hears of, but after mashing it I did. Is it usual to mash the boiled seed to a pulp, and then add powdered biscuit?—MARKHAM.

I am sure I have never advocated boiling and mashing rape seed. On the contrary, I have often stated that I considered the boiling spoilt its vitality, whereas sufficient soaking in cold or hot water caused the seed to soften and to commence those changes in its composition which renders it not only more agreeable to the birds and more easy of digestion, but also to assist in the assimilisation of the starchy seeds, such as canary and millet. It should be soaked for two or three days (so much depends on the temperature), or until it shows signs of sprouting. It should then be drained dry and mixed with some crushed sweet biscuit and given in a crumbly, not stodgy, condition. If, after trying it this way, you cannot get the birds to eat it, please write again.

Bird Fever (G.B.).—No one knows everything about bird fever, and it is a mystery how it arises in a room where the birds and cages are kept as clean and wholesome as yours. It is quite possible that the infection may be conveyed by house flies, but one cannot say for certain any more than they could say why such human fevers as measles and scarlatina spring up where none had existed before. Disinfection with burning sulphur and washing everything with boric acid solution is the only known way of stamping it out.

Bleeding Toe.—Paired Norwich cock last week, and on Saturday found its middle toe bleeding. Can you tell me how to stop it? I can only see it when I hold its foot in warm water.—W. JAMES.

I take it that the bird must have lacerated its middle toe by catching it in the wires or by pricking it with a sharp point of metal or wood. Your bathing it in warm water would induce the wound to continue bleeding. In all cases of hæmorrhage or bruises, there is nothing better than the application of extract of witch hazel. This bird should be run into a cage without perches, having the floor covered with sawdust, bran, chaff, or peat moss, until its foot has healed.

Canary Asthma.—My hen Canary makes a kind of sucking noise as if its throat was full of phlegm. I have used eucalyptus and cajuput, also syrup of tolu, but they appear to have no effect. Would this affect cock if paired up?—W. B. READER.

Your bird seems to have got what is called "Canary asthma," but which is more likely to be chronic bronchitis. It should not be paired up while suffering from it. Its mate and chicks would probably be affected. The bird should be kept in a box cage, situated in a bright and warm position, fed on milk sop sprinkled with seed, and into two tablespoonfuls of its drinking water half a teaspoonful of the following bronchial syrup should be added:—Glycerine, oxymel of squills, and ipecacuanha wine, of each equal parts. This has a wonderful effect in clearing the phlegm from the bronchial tubes.

Injured Leg (F.D.).—From your description of the condition of this bird's leg I gather that it is broken or dislocated. In such cases an early examination should be made and the limb restored to its proper position if out of joint. If broken it should be placed in normal position with the aid of small wooden splints, and bandaged with worsted or with gummed stamp-edging. The bird should be run into a box-cage without any perches in it, and the floor should be well covered with moss, chaff or saw dust. It should be supplied with some soft food and slice of sweet apple. The limb would get set in about a fortnight. Query re seed for Britishers has been handed to our Mr. Weston; please read the rules.

BRITISH BIRDS, MULES AND HYBRIDS.

Answered by G. E. WESTON.

Goldfinch Mules Not Singing (Market).—Young cock Mules start singing as soon as they have got over the moult, as a rule, providing their condition is good. The three you have, which were hatched last July and have never started singing as yet, you can safely write down as hens. It is very difficult for the inexperienced to distinguish cock Mules from hens—especially when the hens happen to be bred from yellow hen Canaries. Very few hen Mules, however, carry anything like the blaze (face colour) seen on a good cock bird, or the breast and body colour generally. If a Goldfinch Mule has a large, bright, rich-coloured blaze, it is fairly safe to consider it a cock. Yet some yellow hen Mules are very deceptive; one needs to remember that they are yellows—for, of course, they look to carry more colour than most buff cocks.

Concerning Linnets (S. Shew).—The best seeds you can give branchet (i.e., young) Linnets are maw, summer rape, charlock, linseed, teazle, and canary. Some summer rape and charlock should be soaked in cold water until it bursts and begins to germinate; give a feed every day in a separate (china) dish, dabbing it as dry as possible in a cloth before offering it to the birds. The water covering the stock of soaked seed should be drained off and renewed afresh every day or so. Half-inch square perches, with the top edges just taken off, are much better for Linnets and small Finches than entirely round perches. It is not advisable to hand-wash (if that is what you mean) Linnets and Chaffinches very frequently, though an occasional tub during the show season does not harm them, if skilfully performed—quite the contrary, in fact. Let them bathe freely of their own accord at other seasons. Back cages are very useful things to steady Linnets in (note letter in correspondence columns this week), but the Finch stock cage is much the best to keep them in regularly; they sing just as freely in it.

Greenshank and Artificial Grasses (J. Goodyear).—The Greenshank (*Totanus canescens*) is not by any means entirely a bird of marshy places. It is found on the coast; also inland. It breeds, I believe, only in Scotland (it is not at all a common bird), the nest being found on moorland, near hills or mountains, and sometimes close to water and sometimes some distance away. I remember hearing a friend of mine describing the raptures he experienced when he first found this long-sought (by him) nest. Artificial grasses may be obtained from any taxidermist's shop, or from any of the taxidermists who advertise in our columns.

Concerning a Blackbird (Blackie).—It is safe enough, and quite all right, to leave a Blackbird entirely out of doors, except, of course, during severe frost and cold. He also will require to be well protected from summer storms (cage made rain proof), and be out of reach of marauding cats. You will be exceedingly foolish if you try to keep any other bird along with your Blackie in just an ordinary cage. He would most probably knock out its brains, sooner or later. When endeavouring to change the food of a soft-billed bird, it must be done gradually; the new must be blended with the old in ever-increasing proportion, until the latter is dispensed with altogether. I should think the food you mention last on the list just about the best; but all three are good.

Thrush Not Singing (J. F. Yardley).—As the only certain guide to the sex of Song Thrushes lies in the song, your bird may quite likely be a hen. All Thrushes in cages ought by this—if in good health and condition—to be singing away merrily. Feed your bird a little more generously. Mix half a hard-boiled egg well into its portion of food every day; the unused half will keep until the second day if placed in a teacup and covered with dry soft food or crushed biscuit. Also include a little finely-minced greenstuff in its food. Get the bird a few live blackbeetles, also snails, which should be "cooked" in boiling water, then chopped up, and, if you like, mixed in at top of the soft food. Treatment on these lines will very soon bring the Thrush into full song, if a male.

Waxwing with Worms (F. Chapman).—I have never had a Waxwing which has been troubled with worms. You should get a small quantity of areca nut from a chemist; also some Parrish's Chemical Food. Keep the bird without food for several hours (or clear out the cage at night and treat early next morning) until thoroughly hungry. Then prepare about a dessertspoonful of soft food, into which well mix as much of the areca nut (powder) as half covers a threepenny piece. When the bird has eaten this up, let it have the food as usual. For one day make its drinking water fairly strong with the Chemical Food, a heaping teaspoonful to two tablespoonsful of water. Afterwards, for two or three days give half-a-teaspoonful in the same quantity of water. You will find this see the Waxwing through its trouble, I fancy; if it seems necessary, however, repeat the dose of areca nut after a day's interval.

Wanted, a Softbill (A. R. Coe).—It is not exactly true to say that either Nightingales, Redstarts, or Woodlarks are difficult to keep in captivity. Far from it, in fact, if one buys them "well on food," as fanciers say, and takes the trouble to provide them with a good and suitable diet the year round. The latter, of course, is not so easy as buying seeds; nor is it by any means so cheap. But no one to whom these things are difficulties ought to keep the smaller softbills. Taken all round, I should say the Woodlark is the better songster in captivity of the above trio of birds. A really good singing Nightingale, of course, would beat him; but really good vocalists are not to be met with every day in cages. What I mean to convey is that a really good singing Woodlark is more likely to come one's way—is more easy to obtain—than an equally good 'Gale. Only an experienced fancier or dealer can sex Woodlarks successfully. The hens are somewhat larger and better, both in colour and markings, than the cocks; which, of course, is the reverse of what usually obtains. The Redstart has a very pleasant song—perhaps "warble" would be a better name—and utters it freely when well used to caged life. A hand-reared Blackcap would not be at all likely to sing the true song of its species; therefore one could form no true opinion from it of the pretty babbling melody this bird actually possesses.

Concerning Mule Breeding (B.D.W.).—You need be under not the slightest misapprehension on the points you mention; all may be most easily decided. You say you have a double breeding cage. Well, run the partly wired slide down the centre, leaving the Goldfinch on one side and the Yorkshire hen on the other. If the Goldie is in the fine condition and vigorous song you describe, they will not take long to strike up an acquaintanceship. Probably he will commence to sing to her through the partition wires; also to feed her. These are the first signs of an "understanding." When you notice these things, put a few coarse pieces of material out of a nest-bag into the hen's compartment. If she commences to carry these about in her beak, you can hang in the nest-pan (or box), giving her at the same time a little more nesting material. Should she carry the latter into the nest-pan, and appear bent on nest building in earnest, hang the nest-bag up against the wires, or put it in the nesting rack, if you use those appliances. First thing next morning (the earlier the better) withdraw the centre partition, letting the Goldie run with the hen. If you retire quickly and discreetly to the other side of the room, you will no doubt see the hen "call" to the Finch, and he, if really in breeding condition, is not likely to lose any time in doing the needful towards ensuring fertile eggs. Keep an eye on the Finch at first, until you learn his disposition. Some pull the nest about, and some will put their beaks through the eggs when laid. Such birds should be run with the hens only for an hour or two each morning (for a short time in the evening, too, if desired) being shut off during the day, and entirely (with a solid partition) as soon as the hen commences to sit. That is the whole story, and applies equally well to all Finches, besides Goldies. If birds are in breeding condition they don't want egg food until the evening of the thirteenth day of incubation—when young are expected. Read reply to "New Reader" last week, and feed your Bramblefinch exactly as advised therein.

THE CANARY BREEDING SEASON

Is now with us and everyone who contemplates cultivating Canaries for pleasure or profit, should immediately procure the Standard Work on Canaries :—

HOUSE'S CANARY MANUAL

PRICE ONE SHILLING. Post Free 1/2.

Superbly illustrated by the Champion Canary Artist, Mr. H. NORMAN. EVERY BIRD DEPICTED IS A VERITABLE MODEL, and shows the breeder what to aim for. Some idea of the popularity of this Practical Manual may be gathered from the fact that under the title of "The British Canary," it has passed its Third Edition entering upon a Fourth Edition of 5,000 copies under the new title of "HOUSE'S CANARY MANUAL." The following Summary of Chapters, etc., will show you how completely the ground is covered:

Aviaries and Cages.
Show Cages.
Perches.
Breeding Canaries.
The Young Birds.
Food for Nestlings.
Hens Refusing to Feed.
Sweating Hens.
Young Birds Dead in Shell.
Red Mite.
Clear Eggs.
Moulting.
Exhibiting.
Diseases (treated very fully).
Every variety of Canary is treated upon at length and illustrated.

Mr. HOUSE has thoroughly revised and brought this work up-to-date and incorporated a chapter on the "Roller or Singing Canary."

Send 1/2 now and secure a copy hot from the press.

F. CARL, 154, FLEET STREET, LONDON, E.C.

FIFTY COPIES of the Third Edition slightly soiled—9d. each to clear.

Another Mule Breeder (J.N.C.).—For hints on pairing up muling couples, see reply to "B.D.W." this week. The proper time to pair up is when both birds are ready; and this, of course, can only be told by the person who has the birds under his (or her) control. Obviously it is no use pairing birds which are not in breeding conditiou; and to pair two birds, one of whom is ready and the other not, is even worse, for it leads almost inevitably to fighting when the male is the more forward, and to a nest of clear eggs when the female is the more forward. When a couple open the season by continued squabbling (many will have a skirmish or two just at the start) it often happens that the pair do no good the season through, the memory of the early "hair-pulling" seeming to rankle and sunder two would-be (from the breeder's point of view) loving hearts. It is far from unusual for the hen Canary to be ready for her first nest before the Finch is quite fit to fertilise eggs. Hence the necessity of the beginner to control his anxiety to make an early start, and to keep from "forcing" his hens by liberal feeding with egg food and stimulating seeds. If one has forward Goldfinches or Linnets, etc., of course there is no object in restraining the heu's maternal instincts; let her go ahead. At the same time, the great majority of Finches cannot, no matter what may be said to the contrary, be depended on to get good eggs before April has well turned. You can put the cock Canary and hen Bullfinch together as soon as you like. If they do not agree well, only let them run together occasionally for an hour or two. In a few week's time the day will come, no doubt, when they will settle down quite harmouiously together. A cock Bramblefinch has never yet beeu known to have bred with a hen Linnet, I fancy. It has paired with a hen Chaffinch (see our correspondence columns last week), but from what I have learned the progeny has no song worthy of the name.

Thrush "Bare" (New Reader, Ardwick).—I seem to be continually advising readers about "bald" and "hare" Thrushes, etc.; there have been several answers in the last few weeks, I am sure. See that you prepare its food properly—that it always contains a proportion of vegetable, say cold boiled potato, grated raw carrot, or finely-minced lettuce, watercress, chickweed, etc.; also supply live food regularly—especially mealworms. Give the bird two gentle doses of sulphate of soda, with a two-day interval between them; dissolve as much as just covers a sixpence in every two tablespoonsful of drinking water. Mix into its soft food daily as much flowers of sulphur as will just cover a shilling. If the bird will let you catch it without any fierce struggling (and you are not unused to handling birds), a light dressiug of the bald places with hazeline oiutment, once daily for three or four days, would be calculated to do good. But I don't advise unskilled people to try handling such birds as Thrushes and Blackies.

True Notes of the Linnet's Song (Edward Clark).—I could not undertake to give you the "true notes of a Linnet's song." If I made the attempt I should only bring a hornet's nest about my ears—a fact you would readily appreciate if you had followed the letters on the subject of the song of the contest Linnet which ran through our correspondence columns some few months back. Why, even the "champions" couldn't entirely agree on the point, so I am sure so humble an individual as myself could not hope to give the song "true." You should read up the letters referred to, in our back numbers. An article on Linnet singing contests ran through CAGE BIRDS last August, and the numbers containing it will be sent you by our manager in return for a sixpenny postal order.

Lark's Broken Leg, etc. (A. Novice).—It is not much use setting out to repair broken limbs a week after the accident happens. Why not buy a copy of the ANNUAL, which contains invaluable advice on diseases and happeniugs of this nature? Then you can, as you ought always to do, set to work at once. If the fracture is up in the "thigh" it will quite likely make a perfect heal without any interference (you say "upper part" of leg). To put on a quill you must cut one of suitable size, arrange a pad of cotton wool or lint round the leg (to act as a buffer as it were), put on the quill over this and bind it with cotton or strong worsted just tightly enough to hold firmly. Ants eggs are very good indeed for Larks; you can give them as liberally as your pocket allows. Note my remarks on feeding these birds an issue or two ago. As regards the sexing of Thrushes and giving of snails read reply to "Novice" last week. The general feeding of Thrushes and Blackbirds I am frequently dilating on. Here we are again, however as they say at the pantomime: Go to a good bird-food vendor, and get mixed, by measure, game or pheasant meal, six parts; ants' eggs, dried flies, and meat meal, two parts each. Get the game meal without grit. Damp the quantity required for uso with grated raw carrot, or finely chopped tender dandelion, chickweed, lettuce, watercress, etc., according to season, or cold boiled potato, or even a little ripe fruit, varying it as much as possible. Give a few mealworms daily, and any live foods you can get in season—for instance, smooth caterpillars, flies, spiders, wasp-grub, gentles, earwigs, beetles, cockroaches, and the like. A little ripe fruit and various berries, sweet apple, pear, split grapes, orange, red and white currants, banana, etc., straw, rasp, black, privet, elder, haw, etc., berries are also relished. You need never want for variety. Into the above stock food a proportion of preserved yolk of egg (flake) should be well mixed now and again; or a hard-boiled egg; or a little finely-scraped raw lean meat makes a nice change at times, but should not be overdone.

Chaffinches Breeding in a Cage (H.D.).—A pair of Chaffinches have been known to breed in a cage. It is unusual, however, and I should not like to encourage you unduly in hopes of success; if you are fond of experimenting, though, you should find the attempt interesting enough. I should put in a wood nest-box—rather deeper than those made for Canaries, if you can get such a one. The bird, in a state of Nature, begins breeding operations some time in April—towards the middle or end as a rule. I should say two broods is the normal number in a year, providing nothing untoward happens, such as the destroyal of a clutch of eggs or taking of a nest of the young.

Thrush "Gone Off" (A.W.).—A cross moult, of course, will cause any bird to "go off"—many, in fact, never to return. It is really difficult to account for some of these unseasonable sheddings of plumage. Often, however, a bird will be kept in a heated room; then for one or two days, from some cause or other, no fire will be lighted therein. If the weather happens to be frosty then a "cross moult" is the lot of those poor birds unlucky enough to be in the said room. Feed your Thrush as advised "A Novice" this week. Give a lengthy course of Allen and Hanbury's Byno-phosphates—a small teaspoonful in every two tablespoonfuls of drinking water, fresh daily.

Jackdaw with a Cold (W.F.H.).—I can only recommend you to give the following bronchial syrup a trial: Oxymel of squills, ipecacuanha wine and glycerine, of each one ounce. Put one teaspoouful in each two tablespoonfuls of drinking water fresh daily. Keep the bird out of all draughts, and bathe its eyes two or three times daily in warm water, reddened with Condy's fluid.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S., M.B.N.H.S.

Young Grey Parrot (Brownie).—You have been treating your bird intelligently, and it appears to be doing well. The gnawing of the cotton reels is a healthy sign rather than otherwise. While it is in the moult let it have plenty of cuttlefish to chew up, and every other day well colour its drinking water with Parrish's Chemical Food; or, better, put six dops of same daily on its boiled maize. The bird should certainly talk if you train it; the methods of doing so are twofold, viz., constant repetition, and keeping it where it will hear plenty of conversation. Try both, and your bird should soon talk. Hope it will continue to do well.

Red-headed Lovebirds, etc.—(1) What is the difference in plumage of the sexes of Red-headed Lovebirds? (2) Will the White-headed Blue-wing, and Red-headed Lovebirds and Budgerigars (all cocks) live together in large cage?—AVIARY.

(1) There is no difficulty in distinguishing the sexes, for the male has the under side of his wings black. (2) The Red-head has the reputatiou of being spiteful to other species, but some years ago, in a large room, I kept these species flying together, and never noticed any quarrelling. As you are only keeping males, I should say they would agree well together, providing they are not unduly crowded, and that there is more than one seed hopper; there should also be several perches. The probability is they will all cuddle up together, as lovebirds are supposed to do. However, it will be well to keep a watch on them till their several dispositions are ascertained; these vary considerably in individuals of all species.

Pekin Robins (W. Huckle).—(1) The Pekin requires as its staple diet:—Some good soft food mixture (see advertisement columns), or you can supply the following: Chicken meal, crushed Osborne biscuits, best ants' eggs and dried flies, in parts; make crumbly moist for use. Ripe fruit as in season, and a few mealworms or other insects daily. Most individuals of this species seem to appreciate a teaspoonful of white millet seed twice a week. You will, of course supply grit, green food, and water for drinking and bathing regularly. (2) The Pekin I have always found harmless in my aviary, in fact, permitting itself to be somewhat bullied by quite small birds. However, they have one fault, that is, they are fond of appropriating the eggs of other birds for their own nutriment. At the same time I have never known them to rob Cutthroats; the latter do not give them the opportunity.

Grey Parrot Ill (F. Leonard).—I fear it is a case of paralysis, if so nothing can be done, and if the bird were mine I should chloroform it out of its misery. However, it is possible things are not quite so bad as they appear, and it may possibly be a little better when this reaches you. In that case keep it warm, and put six drops of brandy in two tablespoonsful of water and let it have this to drink. Watch its excreta and if it appears at all stiff give half a teaspoonful of castor oil direct in the mouth. While it is in this weak state give it a little boiled maize on the top of its seed mixture (boiled maize only keeps fresh one day), and place its food where it can readily get at it. If it lives let me have full particulars as to its condition a week hence.

Persian Bulbul (Plencotis).—There are two varieties of the White-eared Bulbul (*Pycnonotus leucotis*), one the smaller race, about the size of a Great Tit, inhabiting North Western India, the other, slightly larger than a Yellow Bunting, but more stoutly built, ranging over Eastern Persia. Save for size there is no difference between the two races, both being similar as to plumage. But for vocal powers there is no comparison the Persian variety being far superior to its Indian cousin; it must be counted amongst the finest of foreign songsters. Occasionally an individual comes to band of limited song capacity, but such are the exception; the same thing prevails among all song birds.

Budgerigar and Blue-wing Parrakeet.—A male Yellow Budgerigar and Blue-wing hen appear to have paired in my aviary. Is it worth while leaving them together, and has the cross ever been bred?—J. SMITH.

As they have gone so far I should certainly leave them together for the season. So far as I know the cross has never occurred, but there is really no obstacle in the way, the diet, etc., of the two species being similar, and there is no great disparity as to size so that there should be a good prospect of success. At the same time, both with British and foreign birds, many species that apparently pair well produce only infertile eggs. I most certainly consider the experiment worth making, and I shall be most interested in same, and trust you will kindly let me have particulars if you succeed.

Amazon and Grey Parrots (New Reader).—You could not have treated the Amazon better than you have done, and I advise you to continue the same till the bird is quite recovered. Do not give any table scraps. Your diet is very good, but I advise the following seed mixture: Equal parts of white oats, wheat, dari and canary seeds, and half a part each of hemp and white sunflower seeds; otherwise your diet cannot be improved upon. When the cold leaves the bird if it appears at all weak just colour the water with Parrish'e Chemical Food every other day for about a month. When the bird has settled down and recovered tone it will undoubtedly talk freely. Try to improve it in this direction by the dual methods of constant repetition and keeping it where it will hear plenty of conversation. As regards the Grey, am glad to hear it is better; continue the treatment till it is quite recovered. As regards the aperient you must be guided by the condition of its excreta—the bowels must move freely, but not be watery loose. Re talking, use the same methods as advised for the Amazon, and should say it will improve in this respect when in condition again. Your information as to age appears to be correct.

Bare-eyed Cockatoo.—What is their general management and diet? What is their value? Do they make good pets, and are they talkers?—F.G.S.

Diet: For your staple food get a mixture of oats, wheat, dari, maize, hemp and sunflower seeds; give a little boiled maize twice a week (this only keeps fresh one day), keep up regular supplies of grit, cuttlefish and clear water for drinking; also give ripe fruit, nuts, plain biscuit (dry), raw carrot, and boiled potato (dry). If you have been giving boiled maize regularly you must continue to do so for a time, but when it is eating the dry mixture freely give it less often till you have brought it down to twice a week. Its value is about 30s., when a good talker much more. Keep it out of draught, and the temperature of any ordinary living room will be ample for them. Keep them where they will hear plenty of conversation, and they will soon pick up words; also teach them by constant repetition. There is a good deal of individualism in Parrots and Cockatoos, but most of them, when properly tamed, make good and interesting pets, and so will yours when it has got beyond the screeching stage. Do not handle it till you have ascertained its disposition. Do not give slops, table scraps, etc.

Striated Finch, Etc.—(1) What is the plumage and sexual distinction of Striated Finches, and are they easily bred? (2) My Cutthroats, which appear in good condition, produce only infertile eggs. Can you give any reason? (3) I have put up an outdoor aviary, 14 by 5 by 8 feet high. How many pairs will it accomodate? (4) Where can I get rice in the husk?—H.G.S.

(1) The Striated Finch (*Urolonchа striata*) is of a dusky bronze-brown colour, merging into blackish brown on the crown, tail, and breast; the feathers of the upper parts have light shaft streaks, and there is a white belt across lower back; the cheeks and abdomen are buffish white. The outward sexual distinctions are infinitesimal, consisting of a slightly narrower and more pointed beak, slightly smaller size, and slightly duller plumage; these distinctions are only comparative, and it is not easy at any time to say of what sex a single bird is. They should breed in your outdoor aviary, but many of the Maunikins are not too ready to breed in captivity. Food: Canary, white and spray millet, green food, etc. (2) Either your Cutthroats are not in breeding condition or their companions interfered with them and prevented thorough copulation. However, in your outside aviary this difficulty should disappear, and later fertile eggs should result. (3) Your aviary should be a success; it appeare to be well arranged. See that it is suitably fitted with perches and nesting receptacles; the latter should always be double the number you have pairs of birds. It will accomodate 60 birds the size of a Norwich Canary, but for breeding purposes I should only put in 10 or 12 pairs. (4) Any of the seed merchants advertising in our columns will supply you.

Red Rosellas Dying (J. Smith).—You have been most unfortunate; these birds are both long-lived and hardy; my birds have been out of doore all the winter and are in splendid trim. However, such mishaps as yours occur, but they are the exceptions and not the rule. Very probably the cause of the trouble many have been congenital. Again, it is possible your birds may have not got sufficient green food and fruit; I find my birds very greedy after lettuce and apple. Is there any possibility of their having picked up any unclean green food, etc., from your potting bench? The male may have bashed his skull against the top of aviary. It is best not to over crowd if you want to get breeding results, and I should recommend you to get another pair of adult Rosellas, and be content with these for the present. Parrakeets like plenty of room when they are breeding, and are often very malicious during this period. The exposure has had nothing to do with your loss. I should keep two mixtures in the aviary—(1) Canary and white millet, equal parts; (2) wheat, white oats, dari, and hemp—one part hemp and two parts each of the other items.

Grey Parrot Falling off Perch (J. Mayor).—It appears as if your bird is afflicted with weakness of the legs (this trouble is mostly congenital). The chemical food will be helpful, but you must get it on to a more wholesome diet, or it will get worse, and you will finally lose it. Half fill its hopper with the dry seed mixture (see recent issues), and on top of this put a layer of the boiled maize (do not give it any other food for the day), and it should soon be eating the dry mixture. When it is eating the dry seed mixture it will take a drink more regularly. I should still tempt it with plain biscuit and ripe apple. For one day only pour half a teaspoonful of tasteless castor oil over its boiled maize. Note.—Boiled maize only keeps fresh one day. Your bird's perch should not exceed in diameter ⅝ to ¾ in. You must persevere with above diet, as the bird will not continue healthy on the diet it is now getting.

POST MORTEMS.

Mr. J. North, 435, Oxford Road, Reading, will examine cage birds for a fee of 1s. 6d. each bird; for a reply direct, 2s. 6d.; analysis, 21s. Subjects for post-mortem examination must be sent packed in a box direct to J. North, with fee. Any sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.

Canary Hen (H.M.).—Inflammation of the oviduct or egg passage caused the death of your hen.

Crossbill (A. J. Senior).—Softening of the liver was the root of the mischief, giving rise to pneumonia and rupture of blood-vessel of the liver.

Buff Norwich Hen (O.B.).—Inflammation of the lungs and liver, with rupture of blood vessel of the latter, together with effusion of blood on the brain (apoplexy) was the cause of the death. It is suggested that too much food of a stimulating nature had been partaken of

GENERAL.

Answered by the EDITOR.

Notes (W.R.).—Many thanks for your kindness.

German Paste (G.D.).—Thanks for recipe; we have already published a similar one.

Cutting (W. Atkins).—Thanks for kindness in forwarding press cutting.

Specimen Copies (J. Dobson).—Thanks for offer to distribute specimen copies; these have been duly forwarded to you.

Taking Birds Out (S.E., Clapham).—We wrote you direct to address given, and letter was returned marked, "Not known."

A Blaze of Colour (H. W. Sheldon).—Thanks for the suggestion, which, we may say, is one we have all along intended to carry out. Specimen copies duly forwarded.

Specimen Copies (F.J.R.).—We are greatly obliged by your offer, and are forwarding you copies, etc. We agree with you that discourtesy does not effectually advertise a paper.

A Variety (J. Steel).—Thanks very much for the contribution, which we shall hope to use shortly; also for your kind remarks. Sorry we added a J too many.

Specimen Copies and New Readers (A. Jones; J. F. Morris).—Specimen copies have been duly sent you. It is very good of you to get us new readers. Help of this nature we most heartily appreciate.

Hybrid Competition (F. Marwood).—Sorry, but your reading does not seem to have been shared by many other competitors, as a look through the coupons reveals practically all with the word Canary on.

Yorkshires (J. Richards).—It is not possible, of course, to pourtray every winner at the Palace; but if our artist happens to have made a sketch of the birds you mention, we will reproduce it with pleasure.

Deposit Rules (E. Wheeler).—Rule 4 does not govern this particular case, but Rule 5, which clearly states that if the receiver of the birds is satisfied with them, he should return deposit receipt, with instructions to pay over the deposit to the seller.

Keystone of the C.B.U. (T. Fairplay).—If you have anything to say, either for or against, on this subject, we shall be glad to publish it; but such an entirely personal letter as the one you now favour us with we cannot take the responsibility of putting into print.

Death of Canary (W.W.).—Your description of the symptoms—"became dull and lifeless"—is insufficient for anyone to base even a guess at the cause of death on. We are afraid every ailing bird, no matter what the complaint, is affected that way. You should have sent the body to our Mr. North for post-mortem examination.

Novice or Champion (G.H.B.).—In all the societies with whose rules we are familiar, the fact of a fancier winning firsts, etc., in Hybrid, British or Foreign classes (either open or members' classes), does not affect his position as a Canary exhibitor—that is to say, until he has won certain prizes with Canaries he is entitled to compete as a novice in that particular section. In all probability, however, different societies have different rulings on this point.

Use and . . Recommend

SPRATT'S

COD LIVER OIL

CAGE BIRD FOOD

FOR

Young Cage Birds from the Nest.

Mr. WM. HIRD writes:

HIGH STREET, HANGING HEATON, / nr. DEWSBURY, *August*, 1906.

"I am highly pleased with your Cod Liver Oil Cage Bird Food. It is a most suitable food for the birds, and gives good results, both in the rearing of the young birds and in the production and quality of the feathers, and I shall recommend it to my brother fanciers.

Sold by all dealers in **3d.** and **6d.** Tins; post paid **6d.** and **9d.**; 7-lb. Bag, **2/6**, or post paid, **3/2**.

Send postcard for Samples, also **Free** Booklet on "Canary and Cage Bird Rearing."

SPRATT'S PATENT, LTD

24 & 25, Fenchurch Street, LONDON, E.C.

IMPORTANT NOTE.

Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together and counted as one advertisement.

THE BOY WHO WENT BIRD-CATCHING.

He pulled a few small branches from the privets in the glen;
He bared their bark, and straightened them, their ends he split again;
He struggled through the snow wreaths—both cold and dark he dares,
Then called at Toshie's threshing mill, and pocketed some tares.
His grandmamma would scold him when he stole in home at night:
"Where the mischief have you been to, such a boy ne'er met my sight;
Since you got that book of Bewick's, you've had birds upon the brain
—Get off to bed, you rascal, there's your trousers torn again."
That night his grandma wakened up, she heard an awesome cheep,
"Oh, goodsake me; the little fool's bird-catching in his sleep!"

He begged a little linseed from the foreman at the mains,
He built with stones a fireplace by the burn, and took great pains
To gather sticks and fir roots, just to keep the fire agoing;
In a "Dougall's Sheep Dip" can, my boys, he made birdlime worth the knowing.
He cared not though the smoke would cause his eyes with tears to well,
Though his grandma said the parish would be poisoned by the smell,
He stirred that awful compound till the fading of daylight,
And his face grew red as harvest moon, his eyes sank out of sight;
Then he tried it in cold water, 'twixt his finger and his thumb,
And gave a yell of triumph, for it held at tight as a drum.

His girdle hoop and riddle he exchanged for Bullfinch hen,
She was old and full of asthma, still but little reck'd he then;
Sammy Bird gave him a Siskin, for a bag of thistle seed,
And he nettles set for Redpoll, catching him upon the feed;
A Goldfinch hen from "Snobby," much the best that he had got,
While pussy caught a Linnet, to complete the happy lot.
He hoarded every halfpenny, and bought a bunch of wires,
While the beggar gave him boxes, and a pair of rusty pliers;
Then he sawed, and bored, and hammered in the hen house morn and night
Till he felt a little "itchy," but his grandma put him right.

He slipped out in the morning, when the rest were sound asleep,
Though the frost was hard as iron, and the snow was lying deep;
He had all prepared and ready, and he hurried down the wood,
While the Lapwings flew around him making all the din they could.
Some wild Ducks cackled loudly, at the mill dam 'mongst the segs,
And a frightened Heron flew away, with stalky, dangling legs.
Then he turned down by the burnside, to the alders at the fall,
There he set his birds on falses, with some bushes cov'ring all;
He put up docks and thistles, and cleared a bit of ground,
Then hurried to a hiding place—he heard the Siskin's sound.

Two Robins and a Fieldfare he caught, and let away,
Three bonnie Bullies landed on, and two he got that day;
A Bramblefinch and Chaffinch were caught below the beech,
A Yellowhammer landed too, but struggled from his reach;
Two Siskins from the alder trees came down, and he got one,
His hands were now so 'numbed with cold, he scarcely felt them on.
So he gathered up his netting, and made straight tracks for home,
As proud as any champion, to know he could catch some;
And he thought he'd try to breed them, up next the pigeon loft,
If his grandmamma allowed him—he'd feed and clean them oft.

The boy's now grown to manhood, and he's famed the country through,
His British, Mules, and Hybrids make the Southern lads look blue;
And his services for judging are requested far and near,
For his knowledge of the species is considered sound and clear.
He has sons now, like their father they are fond of beast and bird,
The eldest on New Year's Day with a "Tit" got first award;
They study well their CAGE BIRDS, and at night around the fire,
They discuss the many beauties that to Palace "firsts" aspire;
And their father tells the story, and they laugh outright with joy,
At that morning by the mill burn, and his first bird-catching "ploy."

The above is the winning contribution of Mr. McAlpine's (Inverness), in our "Scotch Translation" competition. Other matter concerning the various competitions has had to stand over owing to the Easter Holidays.—EDITOR.

The most serviceable, striking, yet tasteful and economical

LIVE BIRD LABELS

are those obtainable from "Cage Birds."

For the convenience of readers we have had printed a quantity of address labels suitable for use when despatching live birds on journeys by rail, etc. These are printed in red ink, on paper gummed at back, and are of most convenient size, 5½in. by 4in. A reduced facsimile appears above. Rates: 24 3d.; 50, 6d.; post free.

CLUB REPORTS.

GARSTON B.B.A.

Meeting held March 20th, Mr. A. E. Crawley in the chair. A British Bird Show was held, and although there was only a moderate number of entries, the quality of the birds made up for this deficiency, in fact, surpassed previous shows in this respect. The judge, Mr. J. Bretherton, invited the members present to ask any question respecting same. Needless to say, this was readily responded to, and it was only the call of time which prevented the discussion being continued. The manner in which Mr. Bretherton answered and explained the different points raised by the members stamped him as being a thorough British bird enthusiast, and one who must have undoubtedly spent a great deal of time with the birds, studying them both in their wild and domesticated states. A vote of thanks to Mr. Bretherton ended one of the most successful meetings of our society.—A. WICKINSON, Hon. Sec.

CUMBERLAND YORKSHIRE C.C.

General meeting, held at Whitehaven, on March 20th. Election of officers for 1907:—Committee: Chairman, Wm. Irwin (Harrington), and Messrs. W. P. Douglas, Joyce, Brown, Lewthwaite, and Jones (Whitehaven), G. Tweedie (Maryport), Jas. Brunton (Keswick), and J. Pattinson (Hensingham). John Ferguson, Hon. Sec. Jos. Stewart, Treasurer. It was decided, after some discussion, to hold the Young Bird Show at Whitehaven on July 12th. The next meeting will be held on Wednesday, April 10th, to arrange for Judge; also to fix dates for Table Shows, Judges, etc. I would like to urge the advisability of joining the Society upon all Yorkshire fanciers in Cumberland, by so doing strengthening the hands of the Committee in their efforts to secure good classification at the forthcoming shows in the district. The hearty co-operation of fanciers cannot be otherwise than beneficial. Annual subscription, 2s. 6d. Applications for membership can be submitted to our next monthly meeting.—JOHN FERGUSON, Hon. Sec., 32, Newtown, Whitehaven.

MIDDLESBROUGH TEE-SIDE C.B.S.

General meeting, March 9th. Mr. R. Wallace presided, and it was unanimously agreed that Mr. Arthur Wade act as secretary, and Mr. G. Harker as treasurer. Messrs. J. Carr and T. Gardner were elected as Chairman and Vice-Chairman respectively. All the retiring members of the Committee were re-elected, with power to add to their number. The report of the Auditors was given upon the balance-sheet. The income was £15/ 16s. 7d., and the expenditure £2 8s. 6d., leaving a balance in hand of £13 8s. 1d., which was considered very satisfactory for the first year. Members agreed to make the Secretary a handsome present, to be chosen at the next meeting, and also that the society have an excursion into the country this summer, time and place to be chosen at the next meeting. Anyone desirous of becoming a member please send name and address to me.—ARTHUR WAKE, Sec., 41, Aske-road, Middlesbrough.

[Please note that communications must be written on one side of paper only.—EDITOR.]

QUEEN'S PARK AND DIS. C.B.A.

Meeting held March 21st, at the Windsor Castle Hotel, Harrow Road, W. After current business had been dealt with, the Chairman introduced Mr. C. A. House, thanking him on behalf of the members for his kindness in coming at very short notice to fill an unavoidable vacancy. He then called on him for his lecture, the subject being, "The Breeding Season, and What it may Yield." Mr. House immediately had the attention of the members and visitors present, and soon made his points thoroughly understood. He gave his reasons for the methods he advocated, sometimes by an old adage, frequently humorous. He is a great advocate of following Nature, and pointed out that we may expect many frosts yet. He advised a watch being kept on the wild birds. His chief points were cleanliness, frequent changing of nest pans, having the stock in tip-top form before starting, and on no account to take more than three nests. He advised the pairing up of only the best birds. After the lecture several questions were put by Messrs. Buckman, Lethbridge, Lewis, and Rogers. A hearty vote of thanks to the lecturer for his instructive lecture was carried unanimously.—J. C. BIRCH, Hon. Sec.

LEICESTER C.B.S.

Table Show, held at headquarters March 13th. Mr. W. Judd judged, and his awards gave general satisfaction. Some grand specimens were staged. A.V. BRIT. FINCH (17): 1, 3, c, Hunt; 2, Ride; extra 3, vhc, Whitmore; hc, Stevens. SISKIN, ETC. (9): 1, vhc, Heighton; 2, West; 3, Edwards; hc, Hartshorn; c, Hunt. A.V. BRIT. SEEDEATER (3): 1, Ride; 2, 3, Hunt.

BORDER COUNTIES N. & B.F.C.C.

The balance-sheet for 1906 has just been drawn up, and although the Secretary, Mr. Hay, was late in taking up his duties last year, he is able to show a balance of 5s. in the club's favour, after paying first, second, and third prizes, cash specials. The books have been audited by J. Patterson (Chirnside), and found correct. The Secretary will be very glad to welcome any new members for ensuing season. Any member not having paid his subscription for coming season will oblige by forwarding same as soon as possible. A meeting is expected to be held in Newcastle in a few weeks' time. The Secretary will supply any information required re membership; fee 2s. 6d.—ANTHONY HAY, Sec., 30, Main-road, Tweedmouth, Berwick-on-Tweed.

SOUTHEND AND DIS. F.A.

First annual supper and concert, held at the Victoria Hall, Alexandra-street, March 19th, Mr. G. Larman (Hon. Treasurer) presiding, assisted by the Committee. About 70 sat down to an excellent repast. The toast, "Success to the Association," was proposed by the Chairman and received with great enthusiasm. A capital programme was afterwards rendered by the following:—Mrs. Cleaver, Mrs. B. Jones, Misses Phillips, Golding, and Bowmaker, Messrs. Sears, Cleaver, Mellor, Bannerman, Miles, Whybrow, and Richardson. Mr. A. Smith proved a most capable accompanist. An agreeable evening was brought to a close by the Wimborne Quartette Party singing "Good Night." This is the third year of the society's existence, and it has a total of 120 members.

SINGING CONTESTS.

BARNSLEY.

Held at the Lock Park Hotel, March 23rd. There was a large attendance, and some good singing. 1st, G. Allot; 2nd, Brushey; 3rd, J. T. Boyles; 4th, J. Coles; 5th, Scamp. Our club sing is April 1st.—W. FRENCH, Sec.

NEWTOWN.

Open Linnet Singing Contest last week end at the Prince Albert Inn, Newtown, when a large company of members and friends were delighted with some real good singing. Eleven picked birds competed for three good prizes. The birds were in the pink of condition, and gave a good account of themselves, to the satisfaction of all present. Judges, J. Binner and B. Jackson. Result.—1, 2, 3, H. Allen.—E. WOOD, Hon. Sec.

WARRINGTON.

Contest held at the Alexandra Vaults, Scotland-road, on March 23rd. Seventeen of the best all-round birds of the town competed for three good prizes, given by Mr. R. Thompson. The room was packed. I was glad to see such a company, and each bird given a fair chance. Judges, Mr. J. Ball and Mr. D. Armitage. Timekeeper, Mr. W. Mather. The judges had their work cut out, as the singing was most excellent. The best break for a bird on the day was that of Mr. Thompson's, scoring 40, a good bird, if he will look after it.—1st, G. Tryner, copper kettle; 2nd, D. Armitage, clock; 3rd, W. Mather, copper kettle. Linuet fanciers wishing to hear some good time singing will be made welcome on Easter Monday.—G. TRYNER, Hon. Sec.

LEEDS.

Week-end contest held at Skinners' Arms, Bushlingthorpe-lane, Leeds, March 24th, when 15 previous winners competed for three good prizes. The house was packed, and the singing excellent. Judges, T. Crane and T. Somers. Result.—1st, Teddy Ridgewell; 2nd, J. Grainger; 3rd, G. Read.—C. HUNT, Sec.

Don't forget our big match on Easter Tuesday, when all the champions of Yorkshire will compete. Judges, T. Crane and G. Towers. Timekeeper, C. Whitaker. Entrance fee, 4d. each bird.—ADVT.

The quality Linnet singing brigade mustered in large numbers to witness a special contest at the King's Head, Shannon-street, Leeds, for four prizes. The singing was worth going a long way to hear. The first prize, a massive family copper kettle, was won by J. Clark, the "Linuet King"; second prize, three large hand-painted ornaments, with clock centre-piece, was won by C. Whitaker; third prize, a handsome silver-plated tobacco pot, by T. Stead; fourth prize, half dozen knives and forks, by P. Hoban. Judges, Messrs. J. Melia, T. Crane, and T. Summers. 23 birds competed. At our usual Sunday contest, 24 birds competed for four good prizes. There was some spirited singing. First, C. Whitaker; second, P. Hoban; third, Sam Hardcastle; fourth, A. Nicholson. Judges, W. Maylor, E. Worth. A Linnet Contest will take place at the above house on Easter Monday.—J. MELIA, Hon. Sec.

"LIVERPOOL" VIRUS

is absolutely harmless to human beings and animals, but is speedily fatal to

RATS & MICE.

It causes **a fatal disease** to spread through a colony of these pests.

They do not die in their holes.

There is, therefore, **no danger of smell** from dead bodies.

FANCIERS' FESTIVITIES.

CRESSWELL C.B.S. ANNUAL DINNER.

Mr. Roslyn on the Anatomy and Physiology of Birds.

The first dinner in connection with the above newly-formed society was held on Saturday evening, March 23rd, and was in every respect a decided success. Although Cresswell is only a village, a company of 50 sat down to the really good dinner provided by the host and hostess of the "Rose and Crown." Several well-known fanciers from the surrounding district were present, and amongst them we noticed Mr. W. Vardy (Hucknall Huthwaite), Mr. John Richards (Sutton-in-Ashfield), Mr. Simpson (Worksop), etc. On the cloth being removed, the chair was taken by Mr. T. Pearson, who announced that the cup won at Carr Vale by those enthusiastic members of the society, Messrs. Leam and Stinson, was to be filled, and then they hoped to listen to the lecture on "The Anatomy and Physiology of Birds," by Mr. W. Roslyn (Mansfield). As an earnest of the good feeling they had always entertained towards that gentleman he hoped Mr. Roslyn would take the first drink from the cup and propose the toast of the evening, "Success to the Cresswell C.B.S." Ho (the Chairman) knew everyone would agree with him that there was no man in the whole district who was so welcome amongst them or whom they were so pleased to meet as the lecturer for that evening. The lecturer, having drunk success to the society, proceeded with his subject, and, aided by some well-executed pen and ink drawings by his son, Mr. Frank Roslyn, he took bone by bone the framework of the bird and built it up anatomically, describing the formation of every bone, with its peculiar joints and functions, until the anatomy, or bony framework, was complete. After an interval the lecturer took the second part of his subject, and, commencing with the head, described the wonderful mechanism of the eye in birds of prey, by which they were enabled to see their quarry, even from a height at which they themselves were almost invisible. He also described the peculiar formation and uses of the nictitating membrane which shields the eye from dust and diffuses the moisture necessary for maintaining its brightness. Birds' tongues also came in for a lengthy description, the tongue of the Woodpecker being shown as one of the most wonderful. Passing on to the bird's body, a drawing was exhibited showing the heart, lungs, liver and intestines *in situ*, and the lecturer dealt very fully with their functions, giving many interesting details about the different organs, the circulation of the blood, and the great importance of a knowledge of the same to the fancier who wished to keep his birds in high condition. The question of ventilation of bird rooms here came in for attention. The importance of good food also was impressed on the audience, and the utter uselessness of expecting good blood from poor food, as this could not be got any more than good steam could be forced out of bad fuel. The uses of the crop and gizzard, and the position and working of the vocal muscles, together with the importance in the bird's system of the liver (an organ which in birds in cages probably takes more keeping in condition than any other), were fully dealt with. Then the lecturer described the formation of feathers, and the importance of the fancier having a knowledge of this before he attempted washing birds for exhibition was impressed on those present. The diversity of feet and wings and the wonderful variety of tails found in different families of birds were also exhaustively treated. The usual votes of thanks brought an exceedingly interesting and agreeable meeting to an end.

NATIONAL BRITISH BIRD AND MULE CLUB.

Annual Dinner.

The second annual dinner of the N.B.B. and M.C. was held on Friday, March 22nd, and proved in every way a thorough success, a most enjoyable time being spent by the company present, numbering upwards of sixty. Quite a gratifying sprinkling of the fair sex graced the festive board, and lent charm and distinction to the evening's proceedings, while several British bird enthusiasts from the provinces also ran up to town for the occasion. The Council Chamber of the Holborn Restaurant—a splendid apartment—was the venue, and Mr. John Robson, the Chairman of the Club, most ably presided. The function was undoubtedly a distinct advance on the initial venture of last season, and will, no doubt, take its place as one of the pleasantest and most eagerly anticipated annual re-unions of bird-lovers.—Mr. Robson proposed the toast of "The N.B.B. and M.C.," and said he considered the objects of the club, noble objects, deserving the support of all lovers of our native birds. He had heard it said that the N.B.B. and M.C. should be the largest Association of its kind, and by the progress they were at present making he believed they would achieve that end. Their annual outings had attracted other societies, and they were always pleased to welcome them.—Messrs. Plumbridge (Joint Secretary) and Trower (Treasurer) responded.—The former spoke of the cheerful outlook since the annual meeting at the Crystal Palace Show, and was optimistic to the extent of prophesying a record year in store. They had made 26 new members in a month.—The Treasurer naturally had something to say on the finances, and those seem fairly satisfactory, both ends meeting, and several good cups belonging to the club. He hoped there would be better competition for the latter next season. He mentioned the hard and good workers among the officials, and concluded by saying that he could imagine no more pleasant hobby for anyone, rich and poor, than the keeping of British birds. "Kindred Societies" were ably toasted by Mr. W. H. Vale, who expressed pleasure at seeing many of their members with them that evening.—Mr. R. L. Crisp responded, and threw out the suggestion that the judges should not be confined to the membership-list of the Club. He eulogised the work of the Club, and mentioned that he did not admire Linnet singers and the way they kept their birds in tiny cages about four inches square; also, he did not think it added to the dignity of the press to report their contests.—Mr. S. A. Sandy toasted the "Ladies and Visitors," and Mr. J. Tyson responded.—"The Press" was in the able hands of Mr. A. Silver, and Mr. S. H. Lewer responded. The entertainment which followed the dinner was excellent, everyone seeming to enjoy it to the utmost, and the arranging of the programme reflected distinction on Mr. W. H. Vale as musical director, who stamped himself as a good judge of things other than birds. Mr. Penyston Miles is a very able pianist, and the Misses Elsa Hope and Gwendoline Phillips charmed all with their sweet vocalism, their excellent soprano and contralto voices also blending beautifully in several duets. Messrs. Walter Douglas, E. Rathbone, and Jack White are very capable humorists, and made us roar with laughter. A clever conjuring exhibition by Si Foo Chung were much appreciated, and we suppose we break no confidences by saying that this "Mongolian Spectacular Conjurer" is the son of Mr. J. Dewhurst, well known to British bird men.

THE REARING OF YOUNG BIRDS.

Lecture by Mr. C. A. House, before the Metropolitan Association of Canary, Mule and Hybrid Breeders, March 14th.

The Metropolitan A.C.M. and H.B. held a meeting on March 14th, Mr. F. J. Martin presiding. Messrs. F. W. Frampton, W. A. Halls, J. W. Burgess, Mrs. Cole, and Mrs. McGregor were elected members, and Messrs. C. Mabey, W. J. Honeysett, and F. Simmonds were nominated. Next meeting takes place on April 11th, and not March 28th.

The Chairman, with a brief introduction, then called upon Mr. C. A. House to deliver his lecture, "The Rearing of Young Birds," who, in the very interesting an instructive discourse which he gave, pointed out that the young fancier of to-day pampered his birds too much. He expressed himself as against the use of heat in the bird room, and a strong advocate of fresh air. The window should be opened top and bottom some portion of the day all the year round, and during the summer months it should be open night and day. He impressed upon every fancier present that fresh air was essential to the successful breeding of Canaries; he also pointed out that the proper way to soak seed was to take a jar and half fill it with equal quantities of canary, rape and hemp, fill it up with cold water in the morning, then in the evening stir it up well, strain off the water, give it one or two good rinsings, fill it up again with water, and let it stand until the morning. Then strain off, give a good rinsing, and it was ready for use. He did not advise the scalding of seed, as he considered that when you pour boiling water on seed it closes it up and you do not draw away the impurities there may be in it. In closing his lecture, he said that for hand feeding there was one food he could strongly recommend, and that was "Benger's Food," mixed in the following manner:—Take half a teaspoonfull of the food and mix with boiling milk into a thin paste. He said he had known very good results from the above.

Mr. W. J. Honeysett: Would Nestles' Swiss Milk do as well as the ordinary cow's milk to mix with the Benger's Food?—I don't see why not, but still should prefer the boiled cow's milk, because of the excess of sugar in the Swiss milk.

Mr. G. Kearney: Would you advise the mixing of soaked rape seed with the egg food when the hen is rearing youngsters?—No, I should not advise the mixing of seeds with the egg food, as it causes it to turn sour much quicker.

Mr. F. J. Martin: What do you consider a good ordinary diet for the birds?—Plain Spanish canary seed, soaked seeds, and egg food, not forgetting the greenstuff. The best way to make egg food is to take a slice of stale bread and soak it in water, squeezing it as dry as possible, then mix with the egg, yolk and white all together.

ILLUSTRATED IDEAS

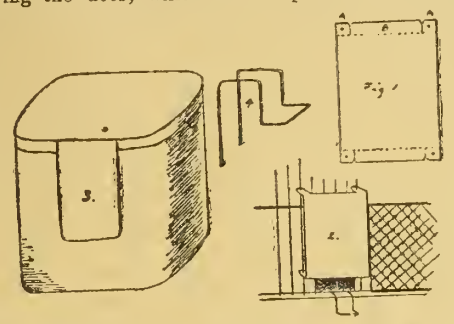
Under this heading we shall illustrate weekly some idea useful to the bird-keeper. Readers are invited to send us particulars of any novel and practical appliance of use in our hobby, either in cage, bird-room or aviary, with a rough sketch of same where possible. Every "Illustrated Idea" used in this column will entitle the sender thereof to a postal order for two shillings and sixpence.

No. 87.

FEEDER AND DOOR FOR A SINGING CAGE.

Sent by T. G. Mandeville, Brookfield, Arnold, Notts.

The enclosed sketch shows a small tin door, which I have fitted to the front of my singing cage, through which I supply seed and water. A piece of tin is cut to shape of Fig. 1, the parts marked A are turned inwards, to dotted line; that marked B is turned over on the outside for convenience of raising and lowering the door, which slides up and down on



Feeder and Door for Singing Cage.

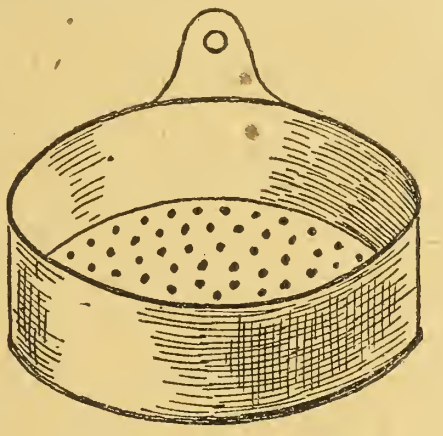
two of the cage wires passed through holes punched in each corner as shown (Fig. 2). My feeders are made of tin (Fig 3). A piece of wire is bent to shape of Fig. 4 and soldered on the back: this serves both to hang feeder on the bottom rail of cage and as handle to remove and replace same. This door gives the cage a neat appearance, and if strips of ground glass are fitted close up to sides of door no seed husks, sand, etc., can be thrown out of cage.—T. G. Mandeville.

No. 88.

A HOME-MADE NEST PAN.

Sent by Ellis Whittaker, 62, Haywood Park, Stocksbridge, Deepcar, near Sheffield.

Enclosed is a sketch of a home-made nest pan, and one which I have used with a good amount of success. It possesses certain advantages which are very essential in the choosing of a good nest pan. I make the pans out of tins which have contained fruit, though some salmon tins will serve the same purpose. The tins are about two inches in depth



A Home-made Nest-pan.

and about five or six inches in diameter, and make a nice, comfortable nest for the young birds. I cut all the lid away, and put a hanger on as shown in sketch, then perforate the bottom for purposes of ventilation. They are very little trouble to make, tins are plentiful, and, when made, will last a life-time. The advantages claimed for this pan are:—They are a protection against redmite, they are easily cleaned, and they are cheap and durable.—Ellis Whittaker.

THE FAMOUS

"Mab Dwarf Razor

The description given of the little "Mab" as the **finest shaving implement in the world** is confirmed in thousands of testimonials.

STRAY NOTES ABOUT BIRDS.

By Claude St. John.

OPENING OF THE CANARY BREEDING SEASON.

True, when these notes appear the real opening of the season, or mating the birds, will already be a thing of the past with many fanciers. But time alone will prove whether these impatient breeders have adopted the wisest course. One thing is very certain: that the birds which have not been forced into condition, and are just now coming into form naturally, are in the very best condition for going to nest quickly and fertilising the first round of eggs. With these birds there will be the least loss of time and waste of energy, and they will in all probability have a good balance in their favour when the results as to numbers and qualities are available at the end of the season. Of course, the breeder should now commence to mate up the birds as fast as opportunities occur.

THE NECESSITY OF "FEEDING-UP."

Perhaps it would be more correct to write the "non-necessity," because, as a matter of fact, "feeding-up" is, on the whole, an unnecessary performance when the birds are properly managed throughout the earlier spring months and kept apart until the natural season for nesting has arrived. Given birds in a healthy, vigorous condition, they will now rapidly be coming into breeding form quite naturally without the aid of any extra feeding or stimulator. There is generally some cause, past or present, to account for the behaviour of those birds which remain out of condition long after the advent of the natural season. The birds that really require feeding-up are those which upon being handled are found to be in a weak, half-starved condition, with flabby, skinny chests, and breastbones as sharp almost as knives. These birds will pay well for two or three weeks' generous treatment prior to being mated. Begin by giving them 15 drops of syrup of buckthorn in each ounce of drinking water for a day or two to clear the bowels. Add a pinch of hemp and a few grains of linseed to the staple diet, and give a teaspoonful of scalded rape, and a little bread and milk (or egg-food if it is prepared) on alternate days. A leaf of dandelion may be given daily, but only in such cases as these, when the birds are out of condition. For the general stock of breeding birds we prefer to give this green stuff a wide berth just now.

OVER-FED BIRDS.

The reverse of the type of bird mentioned above is the one that has fed to repletion on good things throughout the winter, and is troubled with overmuch adipose tissue. He, or she, soon grows lazy as well as fat if given the opportunity, and such birds' value as breeding specimens is practically nil. Their diet should be restricted to canary, with a sprinkling of millet, if one wishes for a change, and green food ad lib. In bad cases the seed may be taken away entirely for a few hours each day, a good supply of green food being given in its place. A large cage, in which the birds can get plenty of exercise, which they will avail themselves of more freely when looking after the good things that are denied them, should be supplied, and the food and water placed in such a position that they will have to go the greatest distance to reach it. Whilst undergoing this treatment the drinking water should be made to taste perceptibly saline with Epsom salts every second or third day. Do not provide too generous a diet for this class of bird after they have been sufficiently reduced, or the chances are that the trouble will recur in a very short time.

ON THE CHOICE OF STOCK BIRDS.

A great deal of attention is paid to a bird's pedigree when making a selection of breeding stock. Of course, this is as it should be. "Blood will tell" is a good and sound maxim. But, in a manner of speaking, it is a two-edged sword, which is apt to play an unwary novice a scurvy trick. Pedigree has just as much power to perpetuate bad qualities as good ones; therefore, wherever any glaring fault exists do not let a long line of blue-blooded pedigree tempt you to waste valuable time in breeding with the bird. Blood you want and must have; but try to get it with as few faults as possible, and those of the minor class only. The latter you can generally keep well in hand by compensating them with extra quality in the same direction on the other side. But to peg away to eradicate great and glaring faults in these days of keen competition is a disheartening task indeed.

"I must state," writes John Towers (Guildford), "that you have made further splendid improvement with your paper, Cage Birds, and am pleased to read that the circulation is on the upward grade, which it deserves to be. We have not many fanciers this way, but with any I do know I always recommend it, especially for the hints it gives one."

SHEFFIELD & DISTRICT AMALGAMATION OF C.B.S.

SIR,—Kindly announce through your columns that our next Conference is to be held at "The Horseshoe Hotel," Wombwell, on March 30th, at 6 p.m. prompt. The agenda is very important. All members and delegates summoned to attend.—W. E. DAYKIN, Hon. Sec.

SOME RECIPES FOR GERMAN PASTE.

SIR,—In answer to G. Hnmphreys I may say German paste is a compound used as a food for Larks, Nightingales and other cage birds. It is made as follows:—2 lbs. peameal, 1 lb. sweet almonds (blanched), ¼ lb. fresh butter or lard, 5 ozs. moist sugar, ½ drachm hay saffron. Beat to a smooth paste with a sufficient quantity of cold water, granulate the mass by passing it through collander, and expose the product to the air in a warm place until quite dry and hard. The addition of two or three eggs improves it.—K. NEWSTEAD.

TO KEEP RED MITES OUT OF NEST-PANS.

SIR,—I think the following remedy might interest those readers who detest red mite. I tried it last year with the best of results, and I can honestly say that I had not a dozen red mites in my nests throughout the season. It is quite simple, and will cost only 2d. for anyone using, say, 10 pans. Get a 1d. packet of borax. Place the nest lining on the table, and sprinkle it with the powder, rubbing it in with the fingers. Then draw the nest lining on the hand, turn the nest pan upside down, and place it on the lining, so as not to shake the powder off. Then press it in the nest pan, and stitch it in if necessary. Repeat the dusting process inside the nest pan and on the edge. You will find it works wonders.—W. ONIONS.

A HOLIDAY IN ROTHESAY.

SIR,—During a recent holiday I called on a friend who proposed I should give his friend, Mr. Lister, a call. I may mention that Mr. L. keeps a fine lot of the four-footed Scoties, and after a careful look over them I was invited into the bird room and asked if I would pair up Mr. Lister's stock for breeding, which I was only too happy to do. First pair, fine buff cock to a nice well-made yellow pied hen; second pair, clean yellow cock to a nice clean buff hen; third pair, grand clean buff cock to a fine solid-backed yellow hen. I noticed that the fancier has a few Norwich also. Later on I gave Mr. Millar Slater a call. He has a very nice bird room at the end of the garden, next the greenhouse, heated with hot water pipes. He has a grand stock of breeding birds, and I notice he goes in for size; he has not a small one in stock. I gave him also a hand in pairing up. First pair, a large clean yellow cock to a buff pied hen, which he procured in Paisley at the New Year Show; second pair, yellow cock and clean buff hen; third pair, buff cock and good large yellow hen. I think this hen was in the prize list at Paisley. I next gave Sergeant Davie a call. I was sorry to find a thorough alteration at the Police Station. The Sergeant has had to dispose of the greater part of his stock. Still, I was pleased to see the Fancy still there. I noticed he had kept his three best birds, and I think he will find a corner in which to breed them.—RAMBLER.

BRITISH BIRDS AT THE PALACE

SIR,—I am sorry to have to trouble you again about my Nutcracker. Mr. Sandy seems to doubt whether my bird was caught in Scotland. I know nothing about the "consignment of six that migrated in Continental cages from the Tyrol"; I only know what I was told when I bought the bird. The initials "W. F." are quite right as those of the person from whom I bought the Nutcracker. If what Mr. Sandy says is correct, then all I have to say is that he knows more about my bird than I do myself. Mr. Sandy does not believe in Nutcrackers as being rare British visitors. Let him go to the Natural History Museum and learn. I don't think a pedigree form, to state where a bird is born and bred, is necessary before you can show it. I still claim the Nutcracker to be a rare visitor to England, and I shall continue to show my specimen as the same, if I have the luck to keep it in good order until the following show season.—WILLIAM COOK.

SIR,—Mr. Birchley still persists in saying he is not a "disappointed exhibitor." Well, I would like to know Mr. B.'s definition of such, if he is not one. I freely admit that I have never kept a Great Grey Shrike, nor am I likely to do so, so I must respectfully decline Mr. B.'s offer of one (even as a gift) with thanks. To my mind they fail in one important show point, and that is beauty. Mr. B. can hardly claim that a Shrike possesses this characteristic. The Wryneck, which was second in the same class, is much more attractive. Prizes are supposed to be awarded for beauty of plumage, quality and high condition, and not for rarity alone, therefore I consider he over-rates his Shrike very much. Because a certain judge awards his bird specials for best in show, over well-known winning Canaries and Hybrids (and six times more valuable), it does not follow that a specialist British bird judge (who is more capable of estimating its merits) should have the same high opinion of it. As to the difficulty of catering for the Shrike, we have the opinion of that well-known fancier, Mr. P. F. M. Galloway, who differs very much from Mr. B. on this point; and I will leave it at that.—J. P. S.

SIR,—Reading with interest in your valuable paper the controversy re Mr. Birchley's Great Grey Shrike, I should like to ask some more experienced British bird fancier than myself if this bird is not a bird of prey? If it is, why debar the Hawk, Owl, and Raven from competition—which are genuine Britishers—and allow this doubtful one?—J.R.H.

SIR,—May I again encroach on your space in self-defence? Some of the writers seem to make personal attacks, and cannot, apparently, write a letter without it. If it is not to the good of the Fancy at large to know what is eligible to compete as a British bird, I should certainly have thought it so. With reference to Mr. Lewis's letter, I shall not attempt to reply to it, as it was not only ridiculous, but, further, it was unsportsmanlike and ungentlemanly from start to finish; hence I pass it by. With reference to our good friend Mr. Galloway's contribution, his letter is of business-like character, and also gentlemanly, and I have nothing to say with regard to his notes further than this, that I feel sure he is one who would uphold the exhibiting of British birds and not imported ones. If a man can prove his bird to be a British-caught specimen, I say show it by all means, and good luck to him; but to show Continental-caught birds in British classes, I say it is unjust to an exhibitor of true British specimens. Had I written my original letter as the "wail of a disappointed exhibitor" it might have been a different matter; but to make personal attacks on a man who is trying to fish out what is eligible to compete as a British bird, and what is not, is, in my opinion, sheer ignorance in itself. Referring to the word "rear," this was purely a slip of the pen; yet, after all, I really don't see why the word rear is not right in this sense, and I didn't state "hand rear." However, I don't wish to argue on that, and I withdraw it willingly.—S. W. BIRCHLEY.

BIRDS' EXPERIENCES ABOARD THE WRECKED WHITE STAR LINER.

SIR,—No doubt you have seen an account of the wreck of the White Star liner "Suevic" at the Lizard, which is close to here (Falmouth). She had a lot of birds on board, mostly Australian, which the passengers—in their hurry to quit the vessel—left behind. A lot of them have flown out of their cages and made their way ashore, and are affording great amusement to the natives in endeavouring to capture them. Several were brought here by the salvage boat last night, and are being taken charge of by the shipping agents, Messrs. Fox and Co. Being a lover of birds, and wishful for their comfort, I wrote them this morning as follows:—"Gentlemen, I see by the paper this morning that a lot of birds were landed here last night from the s.s. "Suevic." Having had a deal of experience with birds, I shall be pleased to take care of them in my bird room for you, gratuitously, until their respective owners are found."—THOS. BURTON.

WORDS OF THANKS.

SIR,—Some time ago I wrote to you concerning a Grey Parrot that was suffering from some illness like asthma. It seemed to me and every person who saw it that it would be impossible for the bird to live, and often, as its breathing was so painful, I thought of destroying it, so as to put it out of pain. When I wrote to you about the bird you very kindly replied to me by letter, and also advised me in your paper re treatment. I followed your instructions, and I am very pleased to inform you that the Parrot has now recovered and looks and talks almost as well as ever. I feel very grateful for your very valuable advice, and trust you will accept my thanks for your kindness and courtesy.—E. W. SMYTH.

SIR,—I am writing to thank you and Mr. Greeves for the kind advice given me re Crest-bred cock bird with paralytic seizure. I am very pleased to say the bird has quite recovered and is anxious to begin parental duties. It hopped on the perch on Christmas Day for the first time, but I have not seen it attempt to sing till last Sunday, when it did a very weak warble; but to-day (March 17th) it sang out quite lustily, and seemed quite its old self. May I ask the favour of your conveying my thanks to Mr. Greeves, as he will most probably be pleased to hear his treatment has turned out successful?—HENRY PREECE.

DOES DOUBLE-YELLOWING PRODUCE MORE HENS THAN COCKS?

SIR,—Your correspondent, H. D. Potter, misread my letter in your issue of March 9th. If he will look again, he will see I did not touch on double buffing at all, as it is Yorkshires I keep, and I don't think there would be anything gained by double buffing with them. The question I asked was: "Do fanciers get more hens than cocks from double yellowing?" In my case they were mostly all hens. Possibly some of our breeders will give their own experiences.—J.A.

THE NETTING OF LARKS.

SIR,—Lark netting in this (Ramsey) district I do not believe to be a thing of the past. It is very rarely, though, that anyone goes out now. In years gone by (say seven or eight) there would be four or five lots of nets out. Catchers then could get about 2s. per dozen for them, and they used to think it was a bad night's work if they did not get 10 or 12 dozen larks, besides other birds. But farmers have of late years got a bit too "old" for them; by cutting some good branches of bushes, and sticking them in the fields, they prevent catchers doing much netting. They have been watched closely also, and have had to bolt for all they were worth; sometimes they have had to leave their nets as bail, and dared not redeem them. During the next two months there will be a lot of netting going on, a sport which is very exciting to the young.—T. H. KINCH.

THE NORWICH PLAINHEAD CANARY AT BOLTON.

A Difference of Opinion.

SIR,—We have read the portion of Mr. J. W. Bancroft's article on the Norwich Plainhead, contained in your valuable paper, and should esteem it a favour if you would allow us space in your columns for an explanation on some parts of the said article. In the first place, we should like to ask Mr. B. what we have done to him that he should so publicly and persistently assail both us and our birds as he has done for the last eight or nine years? We are being constantly told by both fanciers and non-fanciers (in fact, by people who are practically strangers to us) what he, Mr. B., has said to them about us, but have so far been content to remain quiet and see if he would not get tired of talking, and attend to his own business, and not act in such a manner. For example: We do not like being told by a comparative stranger that Mr. B. had said that he had "mopped the floor" with us at the last Scottish National Show, when we only competed against him in one class and beat him out of place. It appears, however, that he intends to force us to say something by his action in reading and afterwards publishing such a boastful and, we may say, insulting paper as the one which is now running through your columns. Everyone who knows us will be able to see what we are complaining about, and what sort of man Mr. B. is. He says in last week's portion of his paper, that he thinks the time most opportune for the lecture, as the society "has been considerably augmented of late by novice recruits." As we have only joined the society this year, and do not know of any others who have since been enrolled, this can only apply to ourselves, and we therefore beg to say that we were not aware we were novices, and he a champion, as it was only in 1905 that he was forced out of the amateur and made to compete in the open champion classes, whereas we have been showing in champion classes for some years. We may only be novices compared with some we could mention, but in comparison with Mr. Bancroft we are not. He also says that he thinks he can "claim without fear of contradiction to be the champion exhibitor" in Bolton and district, having "achieved successes such as have never before been attained by any other single exhibitor or firm in Bolton," having won gold medal at Manchester and first (and with birds of his own breeding) at the Scottish National. Even if being the premier exhibitor in Bolton and district is worth anything, we doubt very much Mr. B's claim to that distinction. We may not have won a gold medal nor achieved such a lucky performance at the Scottish National, but we won more first prizes than he last season, and those with birds really of our own breeding. If Mr. B. will give Mr. W. Shaw (Hyde) credit for breeding the gold medal winner at Manchester, and Mr. Silk credit for breeding the winning buff hen at the Scottish National, and take credit himself for breeding the winning yellow hen at the Scottish National, and the 15s. selling class bird, he will not need to boast so much. Let Mr. Shaw tell us how to breed gold medal winners. The yellow hen is the best show bird, we believe, Mr. Bancroft has ever bred. It best performance was at the Scottish National; since which (the following Saturday) it has got 4th in a class of seven at Manchester Members' Show. Another thing we should like to know is, when did Mr. B. win his first money prize in open Norwich classes (not selling classes), and, leaving out the bird sold to the Northern exhibitor, what other winners has he supplied during the last twelve years? On the other hand, we have won more prizes than he has, as well last season as during the last few years, in addition to running third for the Norwich Plainhead Cup this season with birds all bred by us—with the exception of one—so if we cannot claim to be the premier breeders and exhibitors in Bolton and district, who can? Again, Mr. B. says that those who do not recommend brother and sister, etc., in-breeding, cannot have had much experience. Without entering into any argument on the merits of the case, we say (as Mr. B. knows we have said) that cousins are plenty close enough, and consequently Mr. B. thinks that he will run us down here by telling novices this yarn. If this is the way to breed show birds, and if he has had all the experience he would have us believe, where are all those Palace winners he should have bred by this method? Just another point (and then we will wait and see what he says in the next instalment of his lecture): Don't sneer and run the "nice little Norwich" down so much. This is another direct thrust at us, as our show birds are generally admitted (and we admit them to be) on the small side, but all there for type and quality (see show reports), and we would prefer a nice medium-sized, tight-feathered bird to a big, loose-feathered bird. We admit that a good big one should always beat a good little one, but a good little one should always beat a bad big one; so buck up, Mr. B., and breed a good big one. If Mr. B. should care to reply, we should be very glad if he would confine himself to the several points we have mentioned, and not quibble and say that we have nothing to complain about, or that we were the originators of the bother. Everyone acquainted with ourselves and Mr. B. knows that this is not the case. Although he does not mention us by name in the lecture, they will clearly see whom and what he is driving at. Fanciers have been quite at a loss to understand why we have been quiet so long, and let matters drift as they have done. There is that old saying, "Live and let live." We think Mr. B. would do well to study the meaning of these simple words. We are personally very sorry, Mr. Editor, to be dragged into this, but we cannot help ourselves, as we feel that matters must not be allowed to continue in their present condition, and that Mr. B. must either vouch for or retract the statements he has made. We are in business as bird dealers and seed merchants (independently of being breeders and exhibitors of Yorkshires and Plainhead Norwich) in this town, and the talk which is going on is simply unbearable, besides doing injury to our trade. We do not wish for any unpleasantness, but simply to be put on something like a footing with Bolton and district fanciers, not made to appear a pair of rogues always on the prowl to rob novices and fellow fanciers by selling them birds which are no use to them.—J. and J. HOPKINS (Bolton).

A FEMALE SONGSTER.

SIR,—This true tale may interest your many readers. As all the parties connected with it are alive, I will not mention any real names. This instance occurred in 1887, and came under my ken in referring to an old bird diary. At that time I had a good strain of birds of the even-marked type. I had paired them all up except one bird which had even wings and a beautiful green cap on its head, with no other markings. This bird was two years old, and one of my own breeding from a young bird. It started at once to sing—in fact, before it was six weeks old. I felt sure it was a cock. After its first moult it sang better than any bird I had. Several very tempting offers were made me for it, but I always refused to part with it until, one day, a party came over and saw it. They were in those days exhibitors at the Palace, but have now given up the Fancy. After they saw the bird and heard it sing they insisted upon having it, and took it away with them. I told them I was very sorry to part with it, and if they did not like it, after the season, I told them to bring it back and I would exchange it. I did not hear from them again or see them until the breeding season was over, when they brought the bird back. They freely acknowledged it was the best singer they had amongst their lot, but they could not breed with it, as it would not take to any hen, which they could not understand, for they were quite positive it was a cock. "Well," I said, "you have tried it long enough, but anyway I will exchange it," which I did. As they left me, they said, "Let us know the results, as one fancier who had called on us said it was a hen; but he had not heard it sing. He only judged by appearances." The next year I again sold it for a cock, as the purchasers insisted on the bird, and the people who bought it paired it up all that season. The pair had plenty of eggs, but all unfertile. They were quite satisfied that it was a cock by its song, but had never seen it pair. They thought at the end of the season that they would like to exchange it for another bird, to which I agreed. This bird, when I got it home again, sang so well that I had several good offers for it, but declined them all. I next year paired it up with a hen Canary, and it then gave every sign that it was a cock by singing to the hen. One day, by chance, I saw it on the nest twisting round and round, and it then came off and called to pair. I was now convinced that it was a hen, in spite of all its vocal powers. I at once put it with a cock, and they paired at once, and from the first nest of four young I had two of the most perfect even-marked birds it was possible to breed. There are some who will say that a singing hen is of no use, but this one was and did prove the exception. I kept her until she died, and she bred me, all told, six show birds. Have any of your numerous readers had a hen whose vocal powers were stronger than a cock's? This is the only instance in my many years' experience as a breeder of Canaries where I have heard a hen sing like a cock, and then prove a good breeder.—T. H. KINCH.

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. It kills all insects, harmless to everything else. Sold in tins, 3d., 6d., and 1s each.

THE KEYSTONE OF THE C.B.U.

SIR,—Mr. Wm. Reid makes the following statement in his letter appearing in your last issue:—"While the C.B.U. deems rule 17 necessary to govern the Fancy, it exempts the Palace Show from it! Why so? Simply because the Palace Show won't have it. Surely we should expect the premier show in the country to abide by the rules of the C.B.U., and the fact that it will not should speak for itself." Now, sir, permit me to say that this statement is false. It is absolutely without the slightest foundation of truth. The Palace Show was held under C.B.U. rules—rule 17 included. No exemption from rule 17 was asked for, or even thought of. It would be better for all concerned if Mr. Reid would confine himself to facts within his knowledge.—J. W. RAMSDEN, Manager Crystal Palace Bird Show.

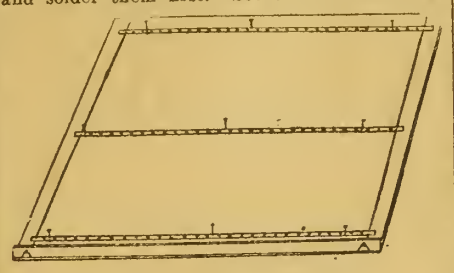
SIR,—In answer to Mr. Robson's letter on the above subject, I should like to say, seeing that he has taken up the cudgels on behalf of Mr. MacPartling, that I don't think Mr. MacP.'s remarks re Gateshead not distributing the C.B.U. rules, etc., are at all fair, and I quite decline to believe Mr. Robson's diplomatic explanation and upholding of same. Does not Mr. MacP. quote, "If those fanciers with fertile brains, etc., would address their inspirations to the C.B.U., they would get every consideration"? Why do you, Mr. MacP. and Mr. R., rush to the Fancy Press? Are you both afraid your luminosity will be lost, or is it that the good ship Union has its full complement already, and that the Fancy Press have to carry crowded-out passengers? Were not the reasons for Gateshead not distributing rules, etc., given in my report of meeting? Had Mr. MacP. or Mr. R. wanted any further information, I would have been pleased to supply it through our own delegate to the C.B.U. And, seeing that Gateshead is affiliated to the C.B.U., have its members not a voice in its management? Do you desire us to be sleeping partners, and allow a party question to creep into the Union? Why should the C.B.U. be allowed to take sides and turn its business over to a second party? Does it not show weakness on the part of the officials concerned? And even though Mr. Robson is against the Gateshead resolution, re distribution of rules, he concedes that for future rules "the C.B.U. offer space to all comers and place the profit for same to the credit of the C.B.U." So far, the objections have apparently struck home, and I am pleased to see that the objections have done some good. With all its objections to rule 17, did not the C.B.U. hold Gateshead up as a model and seek to show that the influence of the C.B.U. had given Gateshead the most successful show in the North?—a record it has always held since its inauguration. Would you have us believe on top of this, Mr. Robson, that Gateshead is not supported in its views? Yes, and by nearly all the best exhibitors in the country, and I trust that no stone will be left unturned to merit their support in the future. Mr. Robson wonders if it is possible for "two fiddles to have the same harsh sound without a rub from the same bow." I am afraid that bow is in great request just now, and it seems to have favoured the last meeting of the N.C.C. with a harsher note—no less than dismembership from the C.B.U. With the large majority of one, the N.C.C floated weakly back to Union waters, so I am told, and that some of the objectors to coercive principles voted in the majority. Truly, Mr. Robson, your mandate to go forth and preach Union matters to Gateshead is a weak one. I have no axe to grind, Mr. R.; my sole object in answering correspondence was to vindicate Gateshead from unfair imputations contained in correspondence under the above heading, and I offer my best thanks to the Editor of this paper for publishing the same and trust that his paper will have the best support of this society in the future, as it has since its commencement. I can safely say that I have never applied unjust means to rob anyone on the show bench, or yet paid fancy prices for winners and sold birds as bred from such; nor yet am I afraid to expose fraud, or to be patronised as Secretary; nor do I object to paying two or three times over to help on good work. I am quite willing, as long as my members wish it, to carry on the work of this society to the best of my ability, without hope of any pecuniary reward. The only reward I wish to see is that this society and the cage bird Fancy in general may be kept in a flourishing condition, not forgetting the Fancy papers as well. The latter are of far more interest to the Fancy, and more popular than any C.B.U. is or ever will be; and yet, Mr. Editor, you use no coercion. Is the working man going to allow his hobby to be dictated to and be made a commercial factor, and be coerced into joining the Union for the sake of the few who benefit by it and seek office through it? It would be a pity if a certain gentleman read Mr. Robson's letter re the many vices of cage bird fanciers; I am afraid his support would be withdrawn. It would actually appear that the cage bird Fancy, instead of being in a better state now than ever it was (and this has been reached without the help of the C.B.U.), is composed of a set of thieves. What prospect have societies of seeing that their money will not be squandered in useless fashion? Have they not enough to do to make ends meet without the putting of further expense on them? Force, or try and coerce fanciers to pay contributions to the C.B.U., and see where the C.B.U. will be (let the societies alone). How many fanciers would join? It is only by boycott that the Union lives.—T. TAYLOR, Sec. Gateshead C.B.S.

SCOPS-EARED OWLS LAYING IN A CAGE.

SIR,—Mr. W. Swaysland has a pair of Scops-eared Owls which have just lately laid four eggs in a very small cage; the eggs are nearly round in shape and much the size of the egg of the Turtledove.—BRIGHTONIAN.

HOW TO FIX WIRE FRONTS.

SIR,—"Mules" should take a piece of board rather larger than the cage front required. Nail a strip of wood to one side, "A" "A." Fasten the punched bars to the board by means of nails. Put the two end wires into position, and solder them first. See that the whole is



How to Fix Wire Fronts.

perfectly square. Now put the other wires into position, and tilt the board slightly. The strip of wood "A" "A" will prevent their slipping through. Solder the bottom bar first, when the other two will be comparatively easy.—COUNTRY LAD.

SIR,—Your correspondent, "Mules," has got by mistake some metal punched bars, instead of wood, and he asks how to fix them. Supposing he wants to make a front for a cage 18 by 12, cut four lengths of bar, 17½ in. long. He should get a piece of flat ½ in. board, and cut four sawgates across it at equal distances of 4 in.; lay bars in the four gates edgeways; put three wires in at each end, and solder them (see my previous letter on the art of soldering). After he has got his three wires at each end firmly soldered, all the rest will be plain sailing; he will do his work very much better by having a pair of wire cutters.—THOS. SOAR.

THE LINNET IN CAPTIVITY.

SIR,—"Bird Lover" desires to know how I steady my Linnets, and though my method is simplicity itself, I trust you will allow me a little space to let him have the benefit of my experience. Too many young fanciers are possessed by the erroneous idea that those who have very steady birds are the holders of a secret, which, if unfolded, would make them equally successful. At the very outset, then, I want to say that there is absolutely no secret connected with the steadying of wild birds, and that ho who approaches the task with commonsense, kindness, patience, and tact will infallibly succeed. Nature and environment have made birds suspicious of, and frightened by man, and it is this fear that has to be overcome. Perhaps the fright and handling they experienced at the hands of the trapper have confirmed them in their suspicion that the thoughts of man toward them are only evil; but the memory of birds is, fortunately for us, a little short, and if they are properly treated they either forget, or begin to believe that their owner is not as other men. First, there is the choosing of a bird; and this is of sufficient importance to demand a line or two to itself. When selecting a bird from amongst a dozen or two, you will notice that some begin to flutter and dash themselves against the wires almost as soon as they become aware of your presence, while others, though they look frightened, seem to be waiting to see how near you will approach before they move; and if you keep a reasonable distance, though constantly watching you, they show no other sign of excitement. The one that from the first plays this "waiting game," if otherwise a desirable specimen, is the proper bird to get possession of. Another important point is never to catch it in your hand, when transferring a bird from one cage to another, but to allow it to run from cage to cage itself. When it has been caught a few times it begins to dread a repetition of the experience every time you put in an appearance, and such an attitude on the part of the bird is detrimental to all progress. The cage I use at first is a small wire one, such as is often used by catchers, and is a little larger than the wicker cages in which dealers send out Roller Canaries; but, as it is placed in a corner, with the back and one end in contact with the wall, it has some of the advantages of a box cage. For the first day or two it may be necessary to cover the top and front of the cage with a sheet of paper, leaving uncovered only the end where the seed box is situated. Where there is no danger from cats, the bird should be kept not more than five feet from the floor, and when possible in the kitchen, where someone is constantly moving about. A good plan is to leave a supply of rape and canary seed constantly in the cage, and when you go to speak to the bird (you should do so very often), always offer it a pinch of inga, maw, hemp, or linseed. This simple expedient has a wonderful effect, causing the bird to form a more favourable opinion of you, and very soon the fear manifested on your approach is replaced by an air of pleased expectancy. By this time you will have removed the covering from the top and front of the cage, and if your progress has been satisfactory the bird will not be greatly excited if you lift the cage cautiously and keep talking quietly to him. Now this is where the advantage of a small wire cage is seen, for you can practically surround it with your fingers, and the bird becomes accustomed to having your hands within an inch or two of it. As a result, when transferred to a larger cage it will be quite steady, and remain on the perch while you move your hand about in the cage beside it. An excellent time to visit and talk to the bird is when it has settled on its perch for the night, but has not begun to sleep. It is thus disinclined to move, and will allow you to take far greater liberties than during the day, and if you are cautious enough you may in a short time have the satisfaction of seeing it peck at your fingers rather than move along a bit. Now, sir, I must apologise for being so "long-winded," but I think it better to give the details, once for all, of a system which, though very simple, gives most gratifying results. If "Bird Lover" will give it a fair trial, he will have the satisfaction his patience merits of soon possessing Linnets that, in respect to steadiness, are second to none.—LINNET FANCIER.

[Don't apologise, please; we are only too happy to receive and publish practical and instructive letters such as yours. We shall hope to hear from you again.—EDITOR.]

WELSH CAGE BIRD CLUB.

ANNUAL GENERAL MEETING.

SIR,—The annual general meeting will be held at the Ship and Bell, Methyr, on Easter Tuesday, commencing at 4 p.m. A portion of the agenda is as follows:—Election of an additional vice-president; election of new members; secretaries' report and balance sheet; alteration of several rules, alteration of the present system of giving specials; the advisability or otherwise of holding a Club Show during the next show season, also several other questions for the welfare of the club. Presentation of medals to the following members:—T. L. Castree, H. Creber, Jones and Davies, J. H. Jones, W. Price-Jones, D. Jenkins, R. W. Jones, S. J. Nicholas, T. Oriel; Cash Special winners: D. Jenkins, J. H. Jones, B. Davies, S. J. Nicholas, W. Price-Jones, Davies and Joncs, R. W. Jones. The Committee hope that the above gentlemen will be present to receive the medals, also the cash specials. It is most important that members be present. The committee and auditors to meet at 3 p.m. Any person who wishes to become a member, who sends 2s. 6d. at once, shall have his name put before the meeting, and if elected he will be elligible to attend.—D. H. TEDSTONE, Hon. Sec., 4, George-street, Brecon.

(Several letters unavoidably held over.)

ESTABLISHED 102 YEARS.

HINDHAUGH'S 'SPANISH' SEED.

Absolutely the finest the World produces—Boldest and Cleanest.

MONEY CAN NOT BUY FINER.

SPECIAL OFFER:—56lbs. for 13/- Carriage paid in U.K. Cloth bag included gross (excepting Ireland).

This very special offer is made to introduce this "GRANDEST OF ALL SPANISH CANARY SEED" to all bird fanciers and includes delivery to any station in England, Wales and Scotland having through communication with the North Eastern Railway from Newcastle, by passenger train.

DISTANCE NO OBJECT.

We quote as follows:—

"Sample A"	Finest obtainable Re-cleaned Spanish Canary Seed ..	10/- per 56 lbs., 2/9 per 14 lbs.
"Sample B"	Very Fine Bold Re-cleaned Spanish Canary Seed ..	9/- " " 2/6 " "
"Sample C"	Really Good Bold Re-cleaned Spanish Seed	7/- " " 2/- " "

Packed in paper parcels up to 28lbs., free. Over 28lbs. should have 3d. extra remitted for cost of cloth bag to ensure safe delivery. *These prices are free on rail.*

Carriage by passenger train (payable by buyer) is only:—(in England, Wales and Scotland)

Above 50 miles and not exceeding 100 miles:—7d. for 14lbs.		11d. for 28lbs.	1/9 for 56lbs.
100 " " " 200 "	10d. "	1/2 "	2/4 "
Over 200 any distance	11d. "	1/6 "	2/11 "

Alderman J. Barker Ellis. Sir Joseph B. Ellis, J.P. William B. Ellis. Joseph Ellis.

Newcastle-on-Tyne.

THE YOUNG NATURALIST.

Prizes of 1s. and two of 6d. each will be given for respectively the best and two second best cuttings or original bits about birds. Competitors must be children under sixteen years of age. All efforts must be briefly and clearly written, and ON ONE SIDE OF THE PAPER ONLY.

Two stars indicate the Winning Contribution; one Star the runners up.

"Which way shall we go?" said Peter as he met his sisters at the garden gate.

"Let us go towards the hills," replied his elder sister, May; "even if we do not reach them we shall find more flowers that way, and I see you have brought your tin, Peter."

"That isn't for flowers though. I want to fill it full of berries and green food for my Bullfinch. See, this ditch is full of dock and sorrel, with their red seeds! I am sure Garibaldi will like them, and they will make his breast red, too. Can you reach those bunches of elderberry, May? They are too high for me. And Kitty," said Peter to his little sister, who was only five years old, "do you gather all the dandelion flowers you can find, and groundsel too. Bullfinches are very fond of them."

"I wonder what the poor Bullies eat in the winter, when there are no blackberries, nor elderberries, nor groundsel, either," said Kitty.

"Oh, in the winter they eat holly berries and ivy berries, and I daresay there is plenty of plaintain and dock seed left," answered May. "In the spring, of course, they eat the buds of fruit trees. But I don't think that even then they do so much harm as they do good, because, you remember how they ate up all those nasty caterpillars that came on our gooseberry bushes when we lived at the farm."

"They were very pretty caterpillars," said Peter. "I kept some in my Noah's Ark and fed them on currant leaves. They turned into shiny chrysalises, striped yellow and black, like zebras. And they all hatched out into 'Magpie' moths. Mamma said it was naughty of me to let them fly away because they would have more caterpillar children to eat the fruit trees next year. But I couldn't keep moths in the Noah's Ark, and I had no Bullfinch then to eat them up."

** Our Two Jackdaws.

Last spring my brother and I had a Jackdaw each given to us, which we were very proud of. We would get up quite early in the morning to dig up worms for them; they would come to us and say "Jack" when they wanted anything to eat; we had to feed them until they were old enough to feed themselves. They were allowed their freedom in the garden all day long, and they used to roost in a outhouse at night. They would come into the kitchen, and we fed them on little tit-bits, which they were very fond of, but they were very mischievous, and would run off with my mother's thimble when they happened to see it. They used to run the chickens all round the garden, but mine came to a very sad fate, for we found him dead in the hen roost, killed by the fowls. My brother's also died.—Sent by GERARD GIBBS (aged 10), near Plush Factory, Shutford, near Banbury, Oxon.

* The Yellowhammer.

The Yellowhammer, or Yellow Bunting, is a common bird, a trifle larger than a Sparrow. It has a handsome appearance in its lemon yellow livery, chestnut brown on back. By March it is in full song. Its song sounds like "little-bit-o'-bread-and-no-cheese," the singularity of which attracts much attention. It is a somewhat inactive bird. Though it stays with us throughout the year, it has a partial migration. The nest is built in a low bush at the roots of a hedge. It is loosely made of dry grass, roots, and moss, lined with horse-hair. The eggs number four or five, and are of a purplish white, streaked with warm purple brown markings. The size of the egg is seven-eighths of an inch.—FRED KIRK (age 12), 156, Evelyn-street, Sankey Bridges, Warrington.

* A Lovely Songster.

The Skylark stays with us all the year rouud. It is a very interesting little bird, because of its being so familiar, so abundant, and because of its lovely song. When out in the country on a spring or summer morning, you cannot fail to hear his delightful song, as he mounts higher and higher in the sky. As he rises, his song gets louder and clearer, but when he descends it gradually dies away. The bird is a light brown in colour, streaked and speckled with deep brown or black, and on its head is a small crest. A striking feature of the bird is its very long hind toe. The nest is situated on the ground in a field, or on the open moor; it is either concealed under a clump of grass or in a slight depression in the earth. Grass and tiny roots are generally used in its construction. The eggs, generally four or five in number, are thickly covered with deep brown spots on a light greenish brown ground colour.—ERIC POCHIN (age 15), 331, Fosse-road North, Leicester.

Pairing Birds for Breeding.

By J. C. Barnes.

Paper Read before the Members and Friends of the Huddersfield Ornithological Society on February 25th.

(Continued from page 288).

KEEP COCK AND HEN TOGETHER.

When the hen has laid her complement of eggs, and has began to sit, some breeders take away the male bird, arguing that the hen sits better and brings up her brood to greater advantage than when the cock is left in attendance. Those fanciers who have followed such a method and proved it a success, I do not wish to advise otherwise. In my own mind I am fully convinced that when both birds are allowed to remain in each others' company (providing they agree amicably) the results are far more satisfactory.

For instance, there are two parent birds at hand to feed the youngsters when they arrive, and a young bird well fed during the first few days of its existence has a sure foundation for greater progress towards success than a young bird poorly fed. A badly fed bird rarely makes anything else but "cage duster," and hardly ever makes up into a show bird or a good stock bird. There are times too, when a hen will not feed her young at first, and here, very often, the cock steps into the breach and proves himself quite a hero, saving what would otherwise have been lost. I have known many instances of this kind crop up among my own birds, therefore I speak from experience. Often a hen will pan too, after seeing the good example set by her mate, and become quite an attentive and excellent mother.

Still further when a hen is not feeding, perhaps may be basking in the sun, or having a stretch, or attending to herself, up goes the cock very often on to the nest pot edge and endeavours to fill up all the "gaps"; surely this is an advantage. Another reason is that sometimes either one or the other of the parent birds go off feed somewhat, and when this happens there is one of the birds still left to assist business along, until the partner returns to the post of duty, whereas if only the hen is left for rearing purposes and she goes wrong at all, well the "door closes." Other reasons could easily be given to support my contention as to the advisability of keeping the cock and hen together, but I think sufficient has been said to substantiate my opinion.

Mind you, although I so strongly favour this procedure, I never hesitate to take the cock away if he molests the hen in her duty. In such a case he is best removed, and you must then trust to your hen proving herself a "lady." Nevertheless, I wish to impress on the novice that without doubt the best, largest and most robust birds are obtained by careful parental attention in their infancy. The old motto is, "Two heads are better than one," in most cases we can say with equal truth that "Two birds are better than one."

HOW TO OBTAIN QUALITY.

Quality of late years has been somewhat overlooked in the rage for substance. I don't think the date is far ahead when we shall see much better quality in evidence. Fanciers have found out that big, coarse birds are not nearly so nice as the medium ones. Therefore, in time quality will be more sought after. I am speaking now from many conversations I have had with fanciers at the various shows I have attended. I like quality in all varieties, and a bird lacking this essential does not appeal to me.

To obtain quality in your birds (supposing you are breeding either Yorkshires or Norwich) a dash of Cinnamon blood helps very considerably. By its aid you procure colour, softness of feather, and silkiness. But if you are breeding with only a few pairs it does not pay you to experiment with the Cinnamon, as it takes a certain amount of time to attain the end in view; therefore, it is far cheaper to purchase a variegated bird, properly bred, from some good breeder to infuse into your stock. If you decide to try your hand at this kind of crossing use discretion.

If you breed Yorkshires, procure a yellow Cinnamon-marked cock; if the Norwich variety, procure a yellow Cinnamon (Norwich type) cock. Whichever you use, run with the best quality yellow hens you have, and keep the tightest and best quality (also the lightest marked youngsters you rear) for future pairing purposes. By this method, and by selecting out, year by year, your best feathered stuff, you will not be far wrong.

GOOD CARRIAGE.

Carriage of birds is of great importance. Always breed with birds that possess good carriage throughout. Discard birds with bad wings, droopy tails, and slovenly outline as much as you can. It is not always one's good fortune to have birds in one's stock without some kind of fault. No bird is perfect, but one may attain near to perfection

In the Norwich I like to see free action; the bird moving from one perch to the other, taking all its belongings in an easy style, and not appearing to drag its hindquarters along. The bird should be, in a manner of speaking, all front, with hardly anything behind; clean underneath, with tail straight and not bending downwards at all.

In the Yorkshire I look for nerve. It should be racy, slim, and not stout chested. The bird should appear wedge-shaped, and be as straight as a rush. Overlapping flights, roughness about the thighs, thick waists or stilty legs are all against good carriage. A hinged tail is a great fault. Bad points are more easily bred in than bred out, so keep your eye open for defects; and when pairing up see that a defect on one side in any point is counterbalanced by special excellence on the other.

PAIRING CLEAR AND TICKED.

When possible it is advisable to pair up a clear to a ticked bird, for several reasons. One is, that by so pairing, you breed both clear and ticked youngsters, and you are able to select birds that are eligible to compete in the various classes that are provided by almost all shows. Should you make a practice of pairing clear to clear, year after year, your birds will throw nearly all clear youngsters, and this will be of a great disadvantage to you.

Again, supposing you are buying a pair of birds, I should recommend you to go in for one clear and one ticked, for the simple reason (apart from advice just mentioned) that by procuring one ticked or marked you know for a fact that there is green blood running in the veins of that bird, and green blood means a lot, especially in the Norwich Plainhead and Yorkshire varieties. Green blood is the fountain-head of colour, and where there is colour quality is not very often deficient. No matter what is said by a few fanciers, who at times express their feelings against green blood, you can take it from me that I have proved it to be a fact that depth of colour is got by the use of dark-blooded birds. Observe for yourself when you are visiting a good breeder's room or a show; take notice which are the hottest coloured birds, and you will invariably find such birds to be either ticked, marked, or variegated, surely a criterion as to the value of green blood.

Still further to substantiate my argument, I may say I have had the pleasure of winning two silver cups (recently) for hottest-fed bird in the show (open competition), and both of these birds were marked. I do not take such a standpoint because of my own success, but by keenly scrutinising many exhibits I am fully convinced of my contention. Fanciers who breed either the Norwich or the Yorkshire "to my tip" (no secrets with me), use marked stuff and it will pay you.

DOUBLE BUFFING.

Double buffing is advantageous in several ways. Say you are a Norwich Plainhead breeder and your stock is inclined to run on the small side, and you wish to procure more substance; double buff a pair or two of your birds. The kind of cock most suitable for this purpose is one that is of excellent feather, carrying no meal, or as little as possible (a bird that looks almost like a yellow, in a manner of speaking), and pair to a hen also devoid of meal, or as near as you can get one. From such a pair of birds you will obtain ususally youngsters of good substance, but at the same time you get some of them with rather more feather than you care to see.

Choose the largest and best quality, and put on one side for future breeding with. These, the year after, can be run into your stock with good results, providing they are paired up to nice quality birds. Double buffing also has a tendency to get your birds thicker in neck, shorter in wings and tail, and thicker through. Some of the very best buffs that are on the show bench to-day are birds that have been got in this manner.

A few seasons ago I bred a clear buff that won on several occasions for me as an unflighted, and sold it to a well-known Norwich exhibitor for a long figure. This bird was "double buff" bred, and for his plucky purchaser he won at least 12 firsts besides other honours in one season. Again, only last season I bred another excellent clear buff, standing first Sheffield with him (only time shown), and with another moult he will be heard of again. I have had £6 offered for him, but refused to sell. You see that when one gets birds of this description, double buffing pays.

Hybrid Breeding.

Some interesting Experiments and Experiences.

By T. H. KINCH.

(Continued from page 233.)

THE THIRD ROUND.

This round started, much to my surprise, in a hurry, and I was afraid that I should not see the results, as I was removing and too ill to give them attention. This may have been the cause of the disasters which followed, which I have not as yet been able to solve to my satisfaction. Now for the facts, from which, I hope, young beginners may learn something.

First pair, Canary and Bullie hen: This Bullie again made a beautiful nest, and not with Nature's materials; these she rejected (probably she thought she was a cage bird now, and not a common wild one), but with pieces of matting, and string pulled to pieces, which she carried to the nest after the Canaries' way. She would then come from building and call to pair, which pairing I carefully watched. Judging from results, I now felt sure that pairing properly took place, the Canary showing every sign. I believed fully that the hen's last four eggs were full, and when the time came I was not disappointed. I tested them after some days. I could not wait any longer, as I had lost all patience. The testing showed me that I had again reason for hope, for two of her three eggs were full and one clear. After giving her the full time, and two days of grace—no results! This time I did take the hump, for both had again died in shell. How to account for it I do not know. She sat well, and was quite tame—in fact, nothing upset her. On after thoughts, it is just possible that my nephew (a boy who fed them under my care) upset them, yet they were not at all frightened at him, for he used to feed them occasionally, and they saw him daily. I cannot really convince myself that this was the cause.

A SATISFACTORY EXPERIMENT.

This round I did wish I had feeders, or any kind of Canary hen which I could use. Only fancy having Canaries for over 25 years (from 50 to 100 at a time) and not a single hen, common or otherwise, to use! I must say that I was pleased and satisfied with this experiment; to have four full eggs from three nests (one egg broken and three clear ones in three rounds) was very encouraging. This, I hope, will induce novices to make a start with birds; never mind them being wild caught, provided they are healthy—nothing venture, nothing have. There is a great opening yet in Mule and Hybrid breeding, and much to learn; but study Nature and try to assist it, for no one can or will improve upon it.

After I had taken the hen's eggs away she was very loth to leave the nest, and I should have let her try again, only the Canary had gone in full moult, but the hen at that time did not show any signs of moult. From this pair my greatest hopes have been dashed this year, which I think makes the twentieth year I have tried for this coveted cross. During that period I have had many a full egg, and young to hatch, but I never got one to live. Shall I ever be rewarded? I can say it will not be from want of trying or patience if I am not. I might as well state that I never took any of the eggs out of the nests and placed them in warm water; this might or might not have helped them, as the latter part of the season was very warm and may have affected them.

Second pair, Canary and Bullie: This pair started on their third nest. After building several and pulling them to pieces. The hen at last built a good nest and laid three eggs. I did not take so much notice of this pair, as they were placed behind my back and I could not see them unless I got up. One day the hen came off, and I thought I would like to know the result. I got a friend to get the nest down and I tested them before him and found two full eggs and one clear. I could not do anything with the eggs except leave them with her. She sat very close, and I had again hopes of yet having a Canary Bullie. But the youngsters died in the shell, like the others, and my hopes were again dashed to the ground—for what cause I cannot say, as the hens were never off long enough for the eggs to get cold. The Canary then started into moult, and the Bullie some time later.

MY CHAFFINCH-BULLIE PAIR.

Chaffinch and Bullie went on better the third round; they were more affectionate to one another than in the second round. The reason of this I attribute to the fact that all the wild Chaffinches had left the garden. I had not seen any for some time, so my birds could not hear them, and so settled down. The hen built a good nest (the best she had made), and laid three eggs; one got broken. As I had not seen them pair, and knowing that the cross is nearly impossible, I did not take much notice of them, and was greatly surprised to find that two nests had young in them which had died. The cause might have been a strange cat coming in and getting upon the cage when I was out of sight. This is the first instance of my having a fertile egg from the Chaffinch, although I have tried this bird for over 20 years, with the cock and hen in various ways; but I never had any results. This pair I shall try and test another year, if possible, in an outdoor aviary, where I can give them more natural foods, and large branches of trees to build in.

GREENFINCH AND BULLIE.

This hen made a good nest this time, the Greenfinch assisting her by carrying up some of the materials. I, at this time, was too ill to pay them much attention, and let them go on as they liked. The result was four eggs, two fertile, and two bad. This cage was next to the Chaffinch and Bullie cage, and both couples had eggs at the same time. In think, in this case also, the cat may have caused the young to die in the shell by frightening the old birds, and it is just possible that the hens did not go on the eggs until they were cold. If the cat theory is not the right one, then I am at a loss to account for them all dying in the shell, as the pair were in good health and plumage. I let them go on as they liked. They again had two eggs; one of them was bad and the other fertile, which got broken by my handling it. Both then started into the moult, the Greenfinch singing well for nearly a month after he had started. Both these birds were exceptionally tame—in fact, all the Bullie hens were. I hope these facts will induce others to try their luck with British birds. The expense is only about 2s. a pair, and anyone can make a cage. I am sure they would be interested if they only studied them and had patience.

(To be continued.)

IMPORTANT NEWS TO BREEDERS

and FLYERS OF PIGEONS and POULTRY, AVIARY KEEPERS and DOG FANCIERS.

All Breeders and Flyers should know that Hall's Sanitary Distemper is the best thing known for ensuring perfect cleanliness in breeding and store cages, show pens, fowl houses, kennels, etc.

It is sold in tins ready to mix with water and is applied with a whitewash brush.

One coating effectually destroys all the insect life and fever germs, etc., which collect in cages and kennels.

At the same time Hall's Distemper is non-poisonous to bird and animal life.

It is made in two qualities; the outside quality is the one specially recommended for the above use, and suitable colours are—

No. 17, Cream. No. 66, Pale Green. No. 47, Pale Blue.

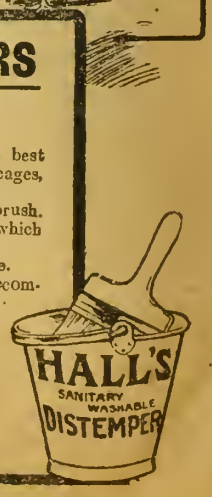
HALL'S DISTEMPER is sold by all Oil and Colourmen, Stores, etc.

Remember to ask for Outside Quality.

Sole Manufacturers—

SISSONS BROS. & Co., Ltd., HULL; 199b, Boro' High St., London, S.E.

Full particulars with sample and shade card will be sent post free on application.



Some Observations on Hard-Billed British Birds.

By S. W. Birchley.

A Lecture delivered February 20th before Swindon C.B.A.

(Continued from p. 261.)

THE SISKIN (Continued).

All oily seeds, such as hemp, linseed, and niger, should be used with caution. It is very interesting to notice him cleaning his feet, which he is very particular with; for this purpose he rests them against the bars of his cage and picks them all over, just as if his life depended on the cleanliness of his feet. He is particularly fond of a bath, when weather permits, and should be supplied with sunflower seed in moderation, together with green food in season.

He makes an excellent mule and hybrid breeder, and will even breed with his own variety in confinement. If you desire to breed with the Siskin, you will find the ones imported better than our natives, as they are not only larger in size but more distinct in markings.

LESSER AND MEALY REDPOLLS.

These very fascinating little birds, which belong to the same group, are nice for exhibitions, but are not birds that I have personally kept for any length of time, as they stand little chance on the show bench against the Linnet and Twite, with whom they have, as a rule, to compete. I can thoroughly recommend them to the novice, as they are hardy birds and not fastidious in their fare; they are very easily steadied, so easy, in fact, they are known to have drawn water in a thimble when thirsty, and open a seed box when requiring food, the whole of this being in some cases accomplished in the short space of time of a fortnight after being caught. They have little or no song, but are very sprightly in their cages, and perhaps in some cases this suffices in place of their vocal power. They are very fond of a bath at all times; also of the various wild seeds, such as plantain, shepherd's purse, etc., together with chickweed, and lettuce when obtainable.

The bright red which adorns the plumage when first caught becomes duller in confinement, and eventually turns to a copper hue. In a show specimen of either of these varieties you need to get birds of a good size, well and distinctly marked, with prominent bib under the lower mandible.

THE BUNTING FAMILY.

The whole of these birds are without a doubt very useful on the show bench, provided good specimens are obtained;; but I must not deal with each one separately or it will take up too much time. You will find generally that the Meadow Bunting will have the better of the competition, if they are all competing together, and are of equal merit; next would come the Snow Bunting, then the Corn and Cirl ditto, and lastly the Reed Bunting, or in other words, the Reed Sparrow.

The Meadow Bunting is very rare, but some excellent specimens have lately been on exhibition, and will, as a rule, hold its own in any A.O.V. Hardbill class.

The Snow Bunting is undoubtedly the prettiest, but after about one season its beauty is lost, as it never moults in confinement as it does in its wild state.

The Cirl Bunting is fairly common in some parts during the hardest of weather and is not unlike the Yellow Bunting were it not for the latter's gay colour. Lastly, we get the Reed Bunting, which is undoubtedly the commonest of these species, it being very plentiful in some parts, particularly in marshy places; it is very like our House Sparrow but for its long tail and black head. The whole may be fed as the Yellow Bunting, about which I have a separate note. The Yellow is a far more popular bird than any of the above named.

THE GARB OF THE CHAFFINCH.

In the breeding season the garb of the Chaffinch is, I think, unsurpassed for beauty, he being one of the many of our native birds which, without a moult, has a great change in its dress in the spring and summer of the year. The male bird, which is the one that is used to-day for exhibition purposes, is one of the most restless of our Finches when caged, and I strongly advise you to get a young bird, as it is a great question if you would ever get an adult cock steady enough for the show bench. Their principal food consists of canary, rape, and linseed and a little hemp, not forgetting a mealworm or two and a few ants' eggs occasionally, as this bird is partly insectivorous. He will also relish a little green food and fruit when obtainable.

The points required in a show specimen are as follows:—Cap and back of head and neck, steel blue; back, olive brown; rump, a beautiful moss green; wings, black; lesser flights, edged with buff; greater ditto, yellow; cheeks, throat and chest, right down to the vent, shading from dull terra cotta to white.

In selecting your bird get one as bold and cobby as possible, and showing plenty of white in the wings; the chest colouring should be as evenly distributed as possible and not patchy, and the other tints also should be well defined. As regards breeding, I think no one has yet been successful with the Canary cross, but I believe it has been known to breed hybrids with other species of Finches. If you can secure a nest I should certainly endeavour to hand rear the young. Take them at about ten days old and feed them on equal parts of hard-boiled egg, soaked ants' eggs, and crushed rape seed, and if this is kept up you will find your birds thrive and should turn out well when moulted.

A FAVOURITE BIRD.

We then come to the Hawfinch, which is a bird I am very fond of, and, I believe, a great favourite with all exhibitors. It has no song, but is the largest of our British Finches. It is by far best caged by itself in a good roomy cage; if turned into an aviary it will be likely to scalp the other birds therein. It is fairly common in some parts of these islands and is a rascal at the time the green peas are fit to pick; it will very often pinch off a half peck with its strong bill, and in all probability not eat the contents of two of the pods. It is a most distructive gentleman and the market gardener makes short work of it if it comes in the reach of his gun, but for all this he is, in my opinion, a truly beautiful bird, and if a good specimen is obtained they have all their own way in the A.O.V. classes at our shows.

When seeking an exhibition specimen go for a bird of great size, with a pale buff crown to head, cinnamon brown cheeks, and well defined bib coming to a fine point at the bottom; back of neck brown, shaded to green, till the beautiful rich brown of the back is reached; the primary flights should be blue black, and the lesser a dirty white or dove colour; rump rich cinnamon; breast and under parts pale cinnamon. There is one thing that makes the Hawfinch a troublesome pet, and that is he is very hard to tame, and sometimes one would think the top of the cage was coming off, seeing how he plunges his hard skull against it. But he is not a hard bird to rear, as he will thrive on such seed as canary, hemp, sunflower, and oats, not, of course, forgetting a feed of green peas when obtainable, which he will greatly relish, as well as juniper berries, haws, and fruits generally.

A most wonderful feat that this bird can accomplish is the cracking of the stone of the hawberry with his powerful beak, and it is only for the stone that he takes to the hawberry at all, as the whole of the fruit portion falls to the bottom of the cage, and he winks his eye as he cracks the stone with delight. Although I have before stated this bird is easy to rear (and such is the case), still great care must be taken with him, as he is particularly liable to colds if allowed to be in a draught, and at the moulting season, too, great care needs to be exercised if one is to get him through a clean moult in good time. The Hawfinch has never to my knowledge been known to breed in confinement with his own, or any other species of wild bird.

(To be continued.)

NOW READY!

AN ENTIRELY NEW SERIES OF

COLOURED POSTCARDS OF HYBRIDS.

On this Series the following are . . . . beautifully portrayed by Mr. H. Norman :—

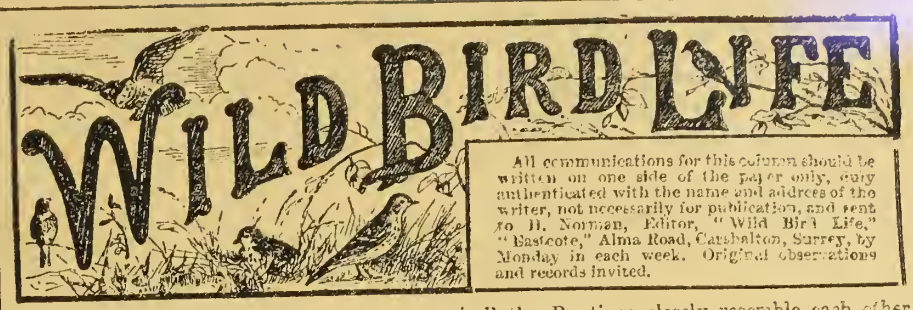
(1) Jonque Four-pointed Goldfinch-Canary.
(2) Goldfinch-Bullfinch.
(3) Goldfinch-Redpoll.
(4) Greenfinch-Bullfinch.
(5) Linnet-Bullfinch.
(6) Jonque Dark Goldfinch-Canary.

Price 1d. each.

Post free 6d. the Set.

On Order from any Newsagent, or from

"Cage Birds," 154, FLEET STREET LONDON, E.C



All communications for this column should be written on one side of the paper only, duly authenticated with the name and address of the writer, not necessarily for publication, and sent to H. Norman, Editor, "Wild Bird Life," "Eastcote," Alma Road, Carshalton, Surrey, by Monday in each week. Original observations and records invited.

The Corn Bunting.

The Buntings are members of a very interesting family. We distinguish them from the Finches by their bulky, somewhat clumsy build, by their peculiar gape, and the bony knob on the palates. Why the Corn Bunting should be called the Common Bunting, when we have a much more common species in the yellow bird, is a thing which I am quite unable to account for, unless the appellation originated in a district where the larger bird is the most plentiful of the family.

The Yellow Bunting may be seen almost anywhere, whereas the Corn Bunting is like some others of the family, locally distributed.

The Corn Bunting.

It is fairly plentiful in Sussex and Norfolk, also in some of the Western and Midland counties. It is rather rare in Essex, Kent, and Surrey. Being a bird of cultivated districts, one can understand its scarcity in Surrey, although I have occasionally seen it upon some of the furze-clad commons of the county.

One can easily identify this bird; he is the largest of the family, his plumage being brown and brownish yellow, with arrow-shaped markings on the breast. His flight is strong, although somewhat laboured. It is curious how all the Buntings closely resemble each other in habits and song. The one we are dealing with both hops and runs when on the ground; this fact often causes it to be mistaken for a Thrush.

No doubt these birds do a considerable amount of damage in corn growing districts; they will feed the clumsy looking young ones on the half-ripened corn, will feast upon it until it is cut and carried, and will rifle the ricks in a manner to put the Sparrow to shame. The farmer stacks the heads of the sheaves inwards, thus exposing the stalks to the weather and the birds, but the strong Corn Bunting will tug at a single straw until he gets at the corn at the other end. It is this greediness for cereals that has given him his name. In some parts I have heard him called the "clod" bird on account of his habit of perching upon clods of earth and anything near the ground. Even in roosting he will keep up this habit, for it is upon some bottom rail of a fence or hedge, or even upon the ground that he spends the night.

This bird loves the wide, open, cultivated lands, for he has no need of trees for his big slovenly nest. This is generally placed upon the ground, among the growing corn, or sheltered by some tall weed, or among a clump of brambles. The structure is composed of coarse grass and roots, a little moss, with a lining of grasses and hair. While the hen bird sits patiently, the male will perch upon some conspicuous position close by, and sing his monotonous song by the hour, so that the locality of the nest is at once given away. If one disturbs him he is back again directly. Fond as I am of all bird life, upon one occasion I had rather too much Bunting. It was while sketching upon the marches in Sussex. Unfortunately my position was close to the singing perch of a fine Corn Bunting, and by the hour he droned out his love song; it was no use driving him away; he simply returned with renewed energy. I am afraid my sketch was rather hurried, and hardly worth the time expended upon it.

Notes and Queries.

The Bold Shrike.

A pair of red-backed Shrikes have been known to attack a domestic cat that had designs upon their young ones.

Spring Migrants.

The first to arrive at Great Yarmouth Golf Grounds was a Wheatear, on May 18th. Four more were seen on the 25th. All were in full spring plumage, and showed up beautifully in the sunshine.—W. Lowne.

Haunts of the Tree Sparrow.

This bird is locally distributed, and practically scarce as compared with the cheeky House Sparrow. He is a much wilder species, and shuns, instead of courting, the haunts of men. I am interested to know how near they get to London. Can any reader give me information upon the subject? The bird is smaller than the ordinary Sparrow, with a chestnut crown to the head, extending to the nape, and has a black and white ear patch. The hen bird is coloured similarly.

Birds Swimming.

Generally speaking, all Birds possessing webbed feet are able to swim, but it is not generally known that others have been seen to do so under special circumstances. The lordly Heron will occasionally make a mistake and get out of his depth, and Crows have been observed to rest for a moment upon the top of a broad sheet of water. Although the Kingfisher is able to dive, come to the surface and fly off at once, yet we never heard of a case of this beautiful bird actually swimming. Can he do so?

The Birds of Burns.

At Dundee Burns Society an appreciative audience assembled recently to hear a lecture by Rev. H. M. Davidson on "The Birds of Burns." The lecturer spoke of the poet's soul being responsive to all the voices of Nature, and the feathered songsters were special favourites. He quoted passages from the songs of Burns to illustrate the moods of the poet when he found himself in harmony with the birds, and when he found himself out of harmony, because of his own troubles. He gave a subtle analysis of many of the passages, which drew forth frequent applause. He pointed out that man and the birds were the only musicians in the world.

Albino Birds.

Pied and albino wild birds have been exceptionally plentiful this winter. Our museums will no doubt add to their stock of rare feathered specimens.

Unlucky Redbreast.

To kill or capture a Robin is considered unlucky, and the evildoer will be sure to come to grief. It is curious how these superstitions originate. The ancients believed that the Robin was a follower of Thor, the god of thunder, and that he who killed one was sure to meet his death by lightning. This has possibly been handed down to us as signifying bad luck.

Habits of Wild Fowl.

As the winter passes and the days lengthen many species of Wild Fowl will be leaving our shores for their distant breeding grounds. Since the fens and marshes near the coasts have been drained the number of wild fowl nesting with us has been considerably reduced. There are still many species that leave behind a few members each season. This is particularly the case with the Duck family. The majority of the Widgeon depart northward, but a few pairs remain and nest among the rushes and coarse sedge bordering inland meres and quiet lakes. The Tufted Duck and the beautiful Teal still breed in some of the Eastern and Northern counties, and many pairs of the Mallard and Sheldrake stay here year after year. It is just possible that these bright-plumaged Ducks are increasing as a breeding species; no doubt the Protection of Wild Birds Act has had something to do with this. The nest of the Mallard is found in many curious and unexpected places; it may be found upon the hillside among the heather; in the woods where the ground is covered with tall bracken, or on the bare ground, with just a few tufts of long grass beside it. The hollow trunk of a tree, the top of a pollard willow, or even the deserted nests of the Hawks, Crow, or Wood Pigeon, have been utilised. The gay Sheldrake is fond of the shelter of a rabbit burrow, or a hole in a wall, or among rocks, in which to hide her creamy-white eggs. This habit is quite different to the usual nesting habits of Ducks.

Advertisements continued from page 301.

MAINLY BRITISH—continued.

EXCHANGE two good cock Goldfinches for good Roller or Yorkshire cock; on approval.—M. Rabey, St. Issey, Cornwall.

EXCHANGE two pair of Bullfinches for one good Norwich cock Canary.—Edward Miles, The Square, Broseley, Salop.

WILL give nice cock Goldfinch, full song, for singing cock Canary, sell 5/-.—George Lambert, Acock's Green, Worcestershire.

COCK Blackbird, white head and neck, in perfect feather and condition, prize winner, exchange feeding Canaries.—Gale, Shoemaker, Ramsey, Man.

GOOD singing Linnet Mule, 7/6, or exchange hen Canaries.—Methven, 2, Market-bldgs., Lancaster-rd., Enfield.

EXCHANGE cock Blackbird, two red-breasted, two house moulted Redpolls, cocks, for good Canary, or anything.—Anderson, Balloch, Culloden, Inverness.

LARGE hen Hawfinch, well on seed, 2/6, or exchange hen Canary or cock Goldfinch.—A. E. Gardner, Parkfield Lodge, Potter's Bar.

HOUSE moulted cock Goldfinch, two cock Linnets, large hen Canary, exchange Foreign birds, sell 10/-.—Isaac Thaw, Ruskin-av., New Sawley, Derby.

EXCHANGE wire breeding cage and Goldfinch or Mule for Norwich cock, or offers.—Harvey, 45, Rotherwood-rd., Putney.

EXCHANGE Chaffinch, Yellowhammer, two Redpolls, all cocks, for good Linnets or Goldfinches.—Smith, 2, Winfield Mount, Leeds.

COCK Goldie, muler, cock Bullfinch, show, exchange two yellow Norwich hens, sell 9/6.—T. Bugdale, Bawdeswell, East Dereham-rd., Norfolk.

SPLENDID pair Bullfinches, one cock Greenfinch, 5/6 lot; exchange anything useful.—H. Land, Neither Green, Bonsall.

BEAUTIFUL spangled Blackbird, nearly white, good condition, and whistling, 12/6, or exchange.—W. Dick, Newtown, St. Boswells, N.B.

WANTED Bullfinches, exchange Linnets, Chaffinches, Bramblefinches, all selected cocks.—Lowne, Naturalist, Yarmouth.

EXCHANGE two cock Linnet Canary Mules, 1906 birds, full song, for hand-reared Song Thrush and cage, or sell 15/-.—Outram, Riber Cottage, Heanor.

EXCHANGE large cock Goldfinch-Canary Mule, 1906 bird, for good green Norwich cock, or sell 10/6.—Outram, Riber Cottage, Heanor, Derbyshire.

ALWAYS USE OUR

DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor for the *bona-fides* of either buyers or sellers. In all transactions the adoption of our Deposit System should be insisted upon.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient, plus the extra postage incurred, has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller, stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from *both* parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has *not* been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or, if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

PREPAID ADVERTISEMENTS

UNDISPLAYED.—Three Words a Penny up to eighteen words, MINIMUM Fourpence. One Half-penny per Word for each word over eighteen.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together and counted as one Advertisement.

Headlines or Footlines 6d., 9d., 1/-, 1/6, according to size.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL. Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London. Terms for Display Advertisements on application.

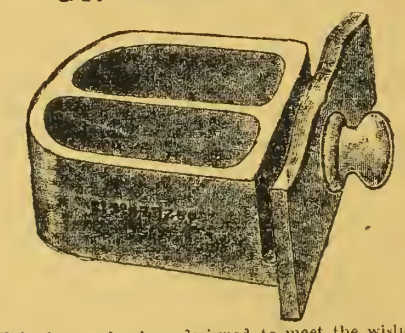
PARR'S POTTERY

NEST PANS, DRINKERS, FOUNTAINS, BATHS (Oval, Round and Square).

"Duplex"
Cut Partition Drawer.



This drawer has been designed to meet the wishes of Breeders so the foods can be separated instead of mixing together. Thus having one drawer instead of two. Made in two sizes.

Mr. C. A. House, Claude St. John and J. North all say it is a good idea.

Wire door falls into the groove and is not in contact with food.

BOOKS.

THE HYGIENE OF BIRD KEEPING.
By W. GEO. CRESWELL, M.D., L.R.C.P., F.Z.S.
Price 1/1, post free from CAGE BIRDS Offices,
154, FLEET STREET, LONDON, E.C.
OPINIONS OF THE PRESS.

LANCET: "This little book will be welcomed by all lovers of birds, whether ornithologists, aviculturists, or the owners of a single pet songster. The author deals with his subject in a thoroughly practical and scientific manner, and the results of his experiments prove the fallacy of some rule-of-thumb theories. . . . The book is well illustrated."

COUNTRY LIFE: " . . . a surprising amount of really valuable advice for all who keep small birds, whether in cages or aviaries. . . . Those who approach the subject with an open mind must admit the cogency of the author's arguments; and these, backed by a very wide experience at first hand, will prove hard nuts to crack for many of the champions of the 'good old methods.' . . . We venture to think that his experience will pave the way for a revolution in the methods of bird keeping in the near future."

ENOCH POWERS,
13, East Road, South Wimbledon, Surrey.

MATTHEWS, LINNET KING.
Linnet singers, are you aware that where my birds are caught, they are the best and keenest singers that it is possible to get. I have sent these Linnets all over England for the last five years for contest birds. All my Linnets are caught from the hills, and not these common little coasters. I have the nicest lot of spring cocks in England. Big fine healthy Linnets, well pencilled, with nut-brown backs, fit for show, 2/6 and 3/-, and a few extra large Linnets, blood-red breast, nut-brown backs, blue beaks, very steady, sure mulers, 2/6. I have a nice lot of steady birds, in grand song, well caged, all taught under my well-known Cheshire champions, real bargains, 2/6. Free sample of my special Linnet mixture sent with every order; mixed by a 40 years' experienced Linnet singer; sold at 3d. a packet; also for making Linnets sing at one another with their wings down. Dandelion seed, 5d. oz., 5/- lb.; Lettuce seed, 3d. oz., 3/6 lb.; Gold of Pleasure, 6d. lb.; or mixed with my best wild seed at 3d. packet, four packets a 1/-. No Linnet fancier should be without my special seed, it is the best in England. Buy from the catcher. Note.—All on approval.—Matthews, Birdcatcher, 44, George-st., Hyde, Cheshire.

OPEN YOUR EYES.
There is something here that will interest you. I have the best stock of British birds in England. Every bird been properly caged since 1906, mostly in full song, singing their pure wild song. Call and inspect them; over 1,000 to select from. No fresh-caught or foreign rubbish here. Red-breasted cock Linnets, 1/- each, three for 2/6, six for 4/6, 8/- per dozen, five dozen 35/-. Do not be gulled with fresh-caught hens for cocks; extra large steady Linnets for show or muling, 1/6, 2/-, 2/6 each; hen Linnets 2/6 dozen, five dozen 9/-; picked hens for muling, 6d. each. Chaffinch cocks, 9d. each; matched pairs 1/-. For other British birds send postcard for my new illustrated list. All birds on seven days' approval.—Miss E. L. Storey, Crowle, Doncaster.

HARRY ALLEN.
Champion of all champions, 1st at Newtown, and 1st, 2nd, 4th, 5th, and 6th prizes, open to all England, at Bank, Leeds. If you want some good birds send to me, as I have the very best. Big fine healthy cock Linnets, well pencilled, very tame, 2/6 each; extra picked birds, sure mulers, 3/- and 3/6, no rubbish, remember the record; cock Linnets, singing grand, in a polished singing contest cage, with a packet of my special mixture and instructions how to feed, 4/6 the lot; young house moulted Linnets, singing hard, and taught by my champion, 8/6, 10/6, 12/6, including singing cage; birds specially trained for contests, 15/- and £1, with cage, these birds will soon make a name for their owners; contest cages, 1/6 each, 7/6 half-dozen; four packets of my special mixture, 1/-. Linnet fanciers wishing to be in the prizes should send for particulars of my book on Linnets, with stamped envelope. "188, Folkestone-st., Bradford Moor. Dear Sir,—The two Linnets I bought from you are singing hard and well, pouring out splendid notes. No one can supply better for the money.—C. H. Bitsen to H. Allen." I could fill a page with testimonials. Gentlemen, I wish to draw your attention that this is the only original Linnet firm. I think I have sufficiently proved that there is only one champion by winning all before me. Everybody is welcome to hear my champions. No delay, no disappointment. Everybody highly satisfied. My method is honest dealing. I see there are a few trying to imitate, so advertisers please copy. See singing results, and look up your back numbers of CAGE BIRDS for testimonials and singing results.—Harry Allen, 42, Brown Hill-eres., Harehills-lane, Leeds.

VARNEY, Stratford. English Cock Goldfinches, 2/-; Cock Linnets, 1/-; beautiful extra special Siberian Cock Goldfinches, 5/6 and 7/6 each. All above guaranteed breeders, and singing stoutly.
Splendid Bullfinches, quite tame, 3/6, Hens, 1/-.

Feb. 14 was the Birds' Wedding Day.

WALLBANK, breeder of champion Norwich, has some of the best stock birds to part with that money can buy. Large yellow cocks from 10/6 to 30/-; extra large yellow hens, 10/6 to 30/-; large buff cocks from 7/6 to 25/6; large buff hens from 7/6 to 20/-; state wants and price; approval first.—35, Withers-st., Blackburn.

ANY of the following on approval with pleasure, all untried:—A few pairs of properly matched Norwich Plainheads at 12/6, 15/-, and 20/ pair; odd buff hens, real good ones amongst them, at 3/6, 4/-, 5/-, and 6/- each; send and give me a trial; you run no risk of being disappointed with rubbish.—F. Yallop, 23, Alexandra-rd., Norwich.

WILLIAM JUDD, Midland Counties' Aviaries, 120, Belgrave-gate, Leicester. The largest stock of high-class Norwich Canaries in the Midlands. Cocks, in full song, 5/-, 5/6; orange yellows, 7/6 and 10/- each; good healthy hens for this year's breeding, 2/6, 3/6; orange yellows, 4/- and 5/- each; pairs, properly mated for this year's breeding, 7/6, 8/6, 10/6, and 15/- pair; most of these birds have been bred in outdoor aviaries. This is no flattering advertisement, but genuine, with 20 years' references. Through my business extending so much, I have had to take larger and more convenient premises. Please note change of address.

FANCIERS NEAR STREATHAM
Can inspect my Norwich any evening. Large typical cocks, 6/6; hens 3/6; better value unobtainable.—Hardy, 24, Pathfield-rd., Streatham.

IMPORTANT NOTICE.

Grey Parrot, £1, 25/-. Everything supplied. Send for list, cages, seeds, appliances, and everything in the Fancy; all on approval.—Smith and Osborne, Dealers and Importers, 26, Wakefield-rd., Normanton, Yorks.

NOTICE, CALL OR WRITE
and inspect my Norwich. I have a splendid collection in all colours, except greens, and every bird is in the primest condition and feathered like silk; cocks, in full song, 7s. 6d., 8s. 6d., 10s. 6d.; hens, 4s., 4s. 6d., 5s., 5s. 6d.; all on seven days' approval; P.O. or deposit; note, inspection invited any time.—William Shaw, 97, Essex Road, Islington, London, N.

WICKS BROS., NORWICH,
offer grand pairs Norwich Plainheads, selected and matched for immediate breeding, 8/6, 10/6, 12/6, 15/-, 21/- upwards; ditto, cocks, 5/6, 6/6, 7/6, 10/6 upwards; hens, 3/-, 4/-, 5/-, 7/6 upwards. All on approval; quality uncqualled compared with prices. Send for current price list and catalogue of live stock and all appliances, post free. Postal and Telegraphic Address: Wicks Bros., Norwich.

EXTRAORDINARY VALUE.
Look round your rooms, and see if you require any of following, which are bargains to clear:—Large buff Norwich hens, 3/6, 4/-, 4/6, 5/-; six yellow Norwich hens, 4/-, 4/6; few splendid yellow Yorkshire hens, 5/-, 5/6, 6/-; Norwich or Yorkshire cocks, splendid songsters, 7/6, 8/6, 10/6; matched pairs, Norwich or Yorkshires, 10/6, 12/6, 15/-, 20/-, all ready to nest, and honestly worth double. Send orders at once and see value. Approval anywhere, deposit.—R. Hanford, Osmaston-rd., Derby.

SILK'S CHAMPION NORWICH.
My name and fame as breeder of Norwich Plainheads is so well known to every fancier that my birds need no paper recommendation. I breed to sell. Most of the leading champions have been bred and sold by me, my vast business having been built purely upon recommendation, not on paper bounce. If you were disappointed last year with Norwich purchased elsewhere, try a pair from a strain of many years' standing. Success certain. Every pair on approval, money returned if unsatisfactory, or deposit with Editor. Satisfaction guaranteed. Champion pairs, 15s. 6d., 20s. 6d., 25s. 6d., 30s. 6d. per pair; some tip-top cocks and hens, yellow or buff, 10s. 6d., 12s. 6d., 15s. 6d. each. Don't risk unreliable strains, but send to the fountain head, or a season's work may be wasted. Remember, all on approval, willingly.
Judge A. E. Silk, *THE AVIARIES,* **Whitstable.**

FOR ONE MOMENT

Just consider what it means to you when selecting birds for your breeding stock. It matters not if you be an experienced breeder and exhibitor, or only an amateur, all have, or should have, one desire—to get the best possible birds at the most reasonable prices. If you have this desire I would remind you that Miss Storey has the best collection of birds in England, birds of the proper type in breeding condition, at reasonable prices. Do not be misled with unshapely rubbish, when you can have the very birds you require at the same price, carriage paid to your address, on seven days' approval and no risk whatever, until you are perfectly satisfied with your purchase. I yearly sell many thousands of birds, and give every customer satisfaction. I guarantee to please you if entrusted with your order. I am now offering exceptional good value in typical Norwich cocks, 6/6, 7/6, 8/6, 10/6, 12/6, 15/-, 20/-, and 25/- each. Hens, 4/-, 4/6, 5/6, 6/6, 7/6, 8/6, 10/6, 12/6 each. Matched pairs, 8/6, 9/6, 10/6, 12/6, 15/-, 17/6, 20/- upwards. I receive many thousands of unsolicited testimonials, of which the following are samples:—"8, Colvil-st., Middlesbro', March 30th, 1907.—Received Norwich hens safe, in splendid condition. They are grand birds, just exactly what I wanted.—C. Clennett, to Miss Storey." "The Pottery, Leotland, March 30th, 1907.—I have instructed Editor to pay you the money for the birds I have received. I am well pleased with them. They are much better than I expected for the money. When I want more birds I shall always send to you for them.—F. Love, to Miss Storey." "11, Pemberton-av., Berry Port, March 30th, 1907.—I thank you very much for the bird, which gives every satisfaction. It is excellent quality for the money. I could not wish for a better.—G. G. Howell, to Miss Storey." "5, Phœnix-st., Newsham, March 30th, 1907. Birds arrived in best of health and splendid condition. Thanks for the honourable way you have treated me. Wishing you every success.—A. Robertson, to Miss Storey." "The Villa, Brucklass, March 30th, 1907.—Birds arrived safe, in pink of condition. Cock commenced singing same day. I can say that your advertisements bear no exaggeration whatever.—M. Laird, to Miss Storey." "Bryn-awel, Trimsaran, March 30th, 1907.—Received Norwich hen, in pink of condition, and am exceedingly pleased with it. Please send me a cock bird to match it.—D. Dunn, to Miss Storey." To make sure of satisfaction, send me your orders for whatever Canaries or British birds you require. Full new illustrated list post free. All Canaries sent carriage paid, on seven days' approval, at my risk. Note the old and only address: Miss E. L. Storey, Bird Specialist, Crowle, Doncaster.

LATEST OPINION OF MACKLEY BROS.' BIRDS.

"High Street, Uppingham, Rutland. Jan. 12th, 1907. Dear Sirs,—The two Birds arrived safe, in the PICTURE OF HEALTH; they are the BEST TYPE of Norwich Plainhead I ever saw. I am HIGHLY DELIGHTED with them. I shall certainly recommend you to all I have the opportunity of so doing. I never had the favour done me from any one FIRM but yours by sending birds on approval without the Deposit System. Trusting the Firm of MACKLEY BROS. may live and reign for the sake of their customers.—Yours faithfully, J. Waddingham to Mackley Bros."

Postal and Telegraphic Address: MACKLEY BROS., (Jacob Mackley), NORWICH.

TEN high-class Seifert Roller Canaries, purity guaranteed and proved, will sell 3/- each, or 25/- the ten to clear; sent on approval.—Clarke, 34, Bailey's-lane, South Tottenham, London.

IMPORTANT NOTICE.

Notice, another consignment of St. Andreasberg Rollers has arrived; they are constant day and gaslight songsters, with all the sweetest, softest, and most musical changes of song; water-bubbles, runs, silvery trills, piccolo, harp, and deep bass rolls, etc.: all on six days' approval on receipt of P.O., or deposit the amount with the Editor; 8s. 6d., 10s. 6d.; perfection. Schoolmasters, 12s. 6d., 15s. 6d., 18s. 6d., 21s.; inspection invited any time.—William Shaw, 97, Essex Road, Islington, London, N.

ENOCH POWERS.

Just arrived; my last consignment of Bohemian Roller Canaries, the finest and sweetest melodious song birds of the world. Every bird sings on demand. Finest Schoolmasters money can buy, 9/- each; hens 3/- each. Having in stock twenty St. Adreasburgh Rollers, beautiful low song birds, every bird having 25 changes of song, 12/6 each; hens 3/6 each. Hartz Mountain Rollers, daylight and gaslight singers, only 6/- each, or stick of seven, £1 18s. Wanted, for export, 1,000 Norwich and Yorkshire Canaries, also 500 Goldfinch Mules.

ENOCH POWERS,
13, East Road, South Wimbledon, Surrey.

HARTZ MOUNTAIN

Roller cock Canaries, direct from Hartz, beautiful birds, only 3s. 9d. each; 21s. a stick, try one.—Varney, Stratford.—"The Elms, 18, Whitehouse Loan, Edinburgh, January 1st, 1907.—Hummell arrived safely, and sings lovely; it is a pretty bird, and gives satisfaction.—N. Turnbull."—"January 2nd, 1907.—Birds arrived, are singing well.—R. M. Lee, 79, Mill Street, Crewe."—"Broom, Newton Mears, Glasgow.—The birds arrived in good condition; I am well pleased with such value.—J. Broom."—"January 2nd, 1907, 32, Easson Road, Darlington.—Bird to hand. I like the song wonderfully well, and thank you for your prompt delivery and attention to my instructions.—H. Hutchison."—Send all orders to Varney, Stratford, London.

Hummel Rollers.

Finest Rollers imported. To speak well of the Hummel is to gild refined gold. Testimonials from customers who say the Hummel is still singing as sweetly as when purchased four, five, six, and seven years ago. All Hummels have delightful, deep, delicate bow roll, hollow roll, hollow bow roll, du pipe, hollow bell roll, grand round bass roll, vibrating hollow roll, and charming water bubble roll; one price only, 12s. 6d.; no fancy prices; Hummel hens, 3s. each; a beautiful pair of Hummels for 10s. St. Andreasberg Rollers, 5s. and 7s. 6d. each. Hummel Schoolmasters, 20s. each, better than can be obtained elsewhere at treble the price. Thousands of testimonials have been published by me in CAGE BIRDS from satisfied customers, I guarantee strictly honourable trading and satisfaction to all.—Varney, sole proprietor and importer of this remarkable Roller Canary. Twenty years advertiser.—Varney, Stratford, London. Export a speciality. "The Schools, Overton, Ellesmere.—Hummel arrived, it at once commenced to sing—yes, a song worth listening to. It is the most exquisite songster I ever heard—decidedly a perfect Roller. I may say I never expected such perfection; they are worth all you charge for them. I must thank you for your courtesy, and shall be able to recommend your firm to those who require birds and not rubbish."—F. Robbins, to Varney, Stratford, London, Sole Proprietor and Wholesale Roller Canary Importer and Dealer.

MISS STOREY.

Miss Storey has the finest and purest collection of genuine trained Rollers in England, every bird in full song by day and artificial light, singing their pure Roller song. Every bird is cold room bred and kept. These are the genuine Rollers (not cross-bred rubbish). My stock consists of high-class British bred Rollers, bred from and related to the best of contest singers and winners. Cocks, in full song, 15/6, 17/6, 20/-, 25/-, 30/-. A few extra special at 40/-, 50/-, and 60/-. Hens to match same, 4/6, 5/6, 6/6 each. Genuine trained St. Andreasberg Rollers, with full change of song by day and artificial light (no common German rubbish these), 8/6, 10/6, 12/6, 15/-. Pure Roller hens, 3/-, 3/6 each. Hartz Mountain Roller cocks, in full song by day and gaslight, very loud free songsters, 6/-, 6/6, 7/- each. Matched pairs for breeding songsters, 8/6, 9/6. The quality of my birds speaks for itself. I have many thousands of testimonials open for inspection, of which the following are a sample:—"11, Summerson-st., Hetton-le-Hole, March 2nd, 1907. Received Roller safe, in pink of condition. He commenced singing as soon as put into cage. He is really a beauty. I am more than satisfied with him.—R. Allen, to Miss Storey." "Front-row, South Shields, March 2nd, 1907. Received Roller in splendid condition. I am highly pleased with him. He is a beautiful singer.—J. Printers, to Miss Storey." "18, George-rd., Birmingham. Received Roller safely. I am more than pleased with it, being a very nice bird, and lovely singer.—T. Nuttall, to Miss Storey." Allow me to send you one or more birds on approval. You will then be convinced that I supply genuine birds at reasonable prices. New illustrated price list post free. Travelling cages, 2d. each. All Canaries sent carriage paid, on seven days' approval, at my risk. —Miss M. L. Storey, Crowle, Doncaster.

BUY DIRECT OF

Breeder and Trainer. Finest strain of Rollers in the country; trained to perfection, 7s. 6d., 10s., 12s. 6d., 15s. upwards; hens 2s. 6d., two for 4s. 6d.; cash or deposit.—F. Cartwright, 15, Farfield, Kidderminster; established 1888.

DAME FORTUNE.

is said to knock at every man's door at least once in his lifetime. If ever she knocked at the door of Roller fanciers she does so now. I have just concluded the purchase of 100 pairs of the highest class "Trute" Rollers that Germany could boast of. These birds are the whole breeding stud of one of the most successful breeders in Germany, and many actual contest winners are among them. In order to effect a speedy clearance I am offering the cocks at 12/6 each, hens 3/6 each, or properly matched pairs, ready for immediate breeding, 15/- per pair. I also have a few others, cocks, not quite so good, at 8/-, and 10/- each. All cocks guaranteed in full song, day and gaslight, and are guaranteed absolutely free from any harsh notes whatever. Full week's approval allowed with every bird sent out, either cash or CAGE BIRDS' deposit system. This is an exceptional opportunity for anyone to obtain birds of the truest blood at a moderate price, and as the supply is strictly limited to 100 pairs, early application is imperative. See following few testimonials:—"35, Swan-st., Congleton. March 1st, Sir,—Roller gives every satisfaction. It commenced singing as soon as unpacked. It is a gem. I like it for its sweet mellow rolls.—Yours, F. Robinson." "10, Kimberley-rd, Astley Bridge, Bolton. March 3rd. Sir,—Received Roller on Saturday, and am well pleased. It started singing as soon as uncovered. Thanks for prompt attention.—Yours, D. Tonge." "7, Richard-st., Llanelly. March 3rd. Sir,—Received contest master Thursday week in grand condition. It sang as soon as unpacked. Many thanks for same. Please send following.—Yours, John Williams." "3, Teal-place, Holbeck, Leeds. March 5th. Sir,—I am highly satisfied with Roller you sent on trial, and have instructed Editor to pay you deposit. Thanking you for your straight dealing.—Yours, W. Rowe." "Anthony-ter., Llansaint, near Kidwelly. March 10th. Sir,—Received Roller safely, and am well pleased with it. He is a splendid singer, and well worth the money. Thanking you for your honest dealing.—Yours, W. Williams." "79, King-st., Tunstall. March 11th. Sir,—Received Roller in good condition, and am highly pleased with it.—Yours, C. Tatler." "53, Tunstall-lane, Pemberton, Wigan. March 26th. Sir,—Contest master arrived in pink of condition. He is a grand bird, both in song and plumage. I am highly pleased with him. Please send following. Thanks very much for such a grand bird.—Yours, John Webster." "Rock House, Mill-st., Bakewell. April 1st. Sir,—Please send following Rollers. I am highly pleased with the one you sent me a few weeks ago. It is a much better bird than others which I have paid a higher price for elsewhere.—Yours, H. Howard." Please note.—I have some splendidly made singing box cages, 1/3 each; also Roller song cabinets, with folding doors, made specially for my Rollers, 2/3 each.

W. GORE, Direct Importer, 131, Gooch Street, Birmingham.

HARTZ ! HARTZ !! HARTZ !!!

Worth Attention.

About One Hundred Home-bred Rollers left. These are well-bred, few better, **some of the original Stock Cocks costing 30/- and £2.** But, unfortunately, the breeder has not had the time to give them the training they deserved. They will therefore be **sold for stock at the absurd prices of 7/6 and 8/6 each.** Apply at once, if required.

Hens, both imported and Home-bred, in the finest breeding condition. I have the Largest Collection of **Choice Pedigree Roller Hens** ever got together in one lot. They comprise pure Seifert and Trute Hens, and I can honestly recommend these to all breeders wanting Reliable Breeding Stock to produce the best money can buy. You can give 10/6 or more, and cannot get better blood or stock. Can be seen.

IMPORTED—Trained Cocks, 8/6, 10/6, 12/6, 15/-, 20/- and upwards; Hens, same strain, 3/6 and 5/- each, pairs 10/6, 15/-, 20/-. All on seven days' approval, cash or deposit.

HARTZ SINGING COCKS 6/6; Extra selected, with better notes, 7/6; pairs, 9/6. Strong Hens 2/3 each.

TRUTE and SEIFERT COCKS, 10/6, 12/6, 15/- and 20/- each; HENS, guaranteed same strains, strong, healthy and in the best of breeding condition, 4/6, 5/- each. Remember, it is no use breeding from good Cocks and common Hens if you want good results.

Full printed instructions, how to keep in health and song, sent with every bird as for the past 30 years. Beware of copyists and their "catch" methods.

W. RUDD, THE Bird Specialist, NORWICH

Scotch Fancies.

SCOTCH Fancies.—Buff cocks from 10/-; stamp, reply.—Sloan, Abbey-st., Carlisle.

MR. MARSH invites you to call and inspect his Yorkshires, all cold room bred; cocks 7/6, 8/6, 10/6, hens 3/-, 3/6, 4/6, 7/6; no rubbish; sent carriage paid on seven days' approval.—Freemasons' Aviaries, Mercerou-st., Brady-st., Whitechapel-rd.

YORKSHIRES.—M. Cooper, 85, Taylor-st., Batley, Yorkshire, Wholesale Dealer, trade supplied; price lists on application; all orders receive prompt attention; or will exchange for scrap copper or brass, minimum 20 lb.—Established 1890.

LEACH AND SON have a few extra good pairs of Yorkshires left, ready for breeding, from 10/- per pair, good chance for novices; stamp for reply; four days' approval, deposit.—41 and 42, Market-pl., Keighley, Yorkshire.

SELL following long slim classical Yorkshires:—Two yellow cocks, 10/6 each; one clinking buff cock, 12/6; two buffs, 8/6 and 10/6 each; two splendid yellow hens, 7/6 each; warranted in nesting condition; no better blood obtainable.—Mr. Dodgson, 40, Priestman-ter., Bradford, Yorkshire.

CHAMPION leggy, upstanding Yorkshires, all cold room kept, and bred from best winning blood in Yorkshire, cocks, 7/6, 8/6, 10/6, 12/6; hens 7/6, 8/6, 10/6; properly mated pairs, 15/-, 17/6, 20/-; approval cash or deposit; 21 years breeder.—Frank Stevens, Great Ayton, Yorkshire.

POWICK'S champion Yorkshires in all classes, the same strain as the winners at all leading shows, cocks, 7s. 6d., 10s. 6d.; hens 5s. 6d., 7s. 6d. each; pairs mated to breed winners, 12s. 6d., 15s. 6d., and 20s. per pair; no rubbish; ten days' approval.—Wm. Powick, Eastfield House, Dewsbury, Yorkshire.

JOHN C. BARNES, 149, Duncombe-st., Walkley, Sheffield.—Having paired up, find I have the following to spare:—Buff cock, 10/-; buff cock, 15/-; yellow hen, 10/-; cinnamon marked buff hen, 10/-, lengthy and stylish, worth double; approval with pleasure.

IF you want Yorkshires to breed winners, buy from the breeder. Twenty pairs for sale, including pairs that have bred winners at Otley, Bradford, Keighley, Palace, etc., from 12/6 to 25/- a pair; single cocks, 6/6, 8/6, 10/6, 12/6; hens, 4/6, 6/6, 8/6, 10/6; all cold room bred and ready for breeding; approval.—W. H. Berry, Ingrow, Keighley.

MESSRS. AMBLER'S Yorkshires.—As we are reducing our breeding stock, we can offer a few topping yellow and buff cocks at 10/-, 15/-, 20/- and 30/- each; also few choice hens, perfect type, and feathered like wax, at 7/6, 10/-, 15/- and 20/-; these are all the best quality and type it is possible to buy, and are worth double for anyone wanting classical Yorkshires. We have sold more noted champion winners than any firm in the world the last 24 years; approval; stamp particulars.—17, Lytton-rd., Bradford.

Shackleton's Yorkshires.

£21 Challenge Cup, 1903-4-5, £25 Challenge Trophy, 1906, four championship diplomas Crystal Palace, 1903-4-5-6. Having selected my breeding stock, I have for disposal some choice stock birds, cocks, hens, or pairs; prices reasonable; three days' approval; cold room; stamped address, particulars.—The Paragon, Girlington, Bradford.

KNIGHT'S YORKSHIRE AVIARIES.

Having finished pairing up for new season's breeding (50 pairs), have surplus equally good stock birds, about 60 cocks and 30 hens, for disposal, every one guaranteed untried. Can match unrelated pairs at 12/6, 15/-, 20/-, 25/- to 30/-; singles, cocks, 8/-, 10/-, 12/6, 15/- to 20/- each; hens, 6/- 7/6, 10/-, 12/6, to 15/-. All cold room bred, reared, and kept. All approval, cash or deposit. Price list, together with booklet, "The Whole Art of Colour-feeding and Training Yorkshires," post free 2d. stamps.—Jonas Knight, Allerton, Bradford, Yorkshire.

BENNETT'S

Champion Yorkshires, highest awards, ten guinea challenge and other cups, Palace, etc.; finest strain in the world; few properly-matched pairs cheap, same blood as those supplied by me to England's most successful exhibitors of Yorkshire Canaries; price list free.—59, Waverley-rd., Great Horton, Bradford.

STAND OR FALL!

E. TAYLOR, BIRD SPECIALIST,

3 & 7, Thornton Road, BRADFORD.

I will stand or fall by the result of fair and unprejudiced public opinion on my system of doing business. My birds and bird appliances are no "catch-penny" items of trade. Everything I sell is sound and genuine. I give you the opportunity of a fair and honourable trial. I want no man's money with any man's grumble. I **make** my business friends; and (what is not always quite so easy) **I KEEP THEM!** My Specialities in Cages, Aviaries, Appliances, Foods, &c, for all Cage Birds have something more than merely "a local habitation and a name!" They are known all over the globe. They please all, and disappoint none. My Foods for Cage Birds are ever sound, serviceable, and satisfactory, and my prices all-round are based on terms of both merit and moderation. I sell no rubbish. I have neither time nor room for that class of business. It will afford me pleasure to send you, on receipt of 2 stamps to cover postage, my new Illustrated Catalogue; and, if you are interested in Bird Life, this work will aid that interest.

Remember that I send every Bird out on one full week's approval.

My enormous stock of Canaries includes the largest collection of TYPICAL YORKSHIRES to be seen in any one establishment in the world. The recognised Headquarters by Fanciers, Dealers, etc., for Prize-bred Yorkshires.

Yorkshire Cocks.

Clear Yellow, 6/-, 7/6, 8/6, 10/6, 12/6, 15/-, 20/-, 25/-. Clear Buff, 6/-, 7/6, 10/-, 12/6, 15/-, 17/6, 20/-. Ticked or Variegated, 5/6, 7/6, 10/-, 12/6, 15/-, 20/-. Cinnamon Ticked, 6/6, 7/6, 10/-, 12/6, 15/-, 20/-

Yorkshire Hens.

Clear Yellow, 4/-, 5/-, 6/-, 7/6, 10/-, 15/-, 20/-. Clear Buff, 3/6, 4/-, 5/-, 6/6, 8/6, 10/-, 12/6, 15/-. Ticked or Variegated, 3/6, 5/-, 6/-, 7/6, 10/-. Cinnamon Ticked, 4/-, 5/-, 7/6, 10/-, 12/6, 15/-. Pairs properly matched for breeding Yorkshires, 10/6, 12/6, 15/-, 21/-, and upwards.

TRAVELLING CAGES, with Food and Nourishment for the journey, 3d. EXTRA.

Full Detailed Bird Price List free on application of Norwich Plainheads, Cinnamons, Lancashires, Crests and Crest Breds, Lizards, Rollers, Mules, etc., etc.

E. TAYLOR,

Bird Specialist,

3 & 7, Thornton Road, BRADFORD.

SAMUEL DEAN, 24, Crossley Street, Gt. Horton, Bradford, Breeder and Exhibitor of high-class Yorkshire Canaries, including Greens. x259

WILCOCK'S YORKSHIRES, NORWICH.

I can supply you with either Yorkshires or Norwich Plainheads, for either stock or the show bench, all bred from my winners at all the leading shows, no better blood in the Fancy, pairs from 12s. 6d., 15s., 20s., 30s.; cocks or hens, from 7s. 6d., 10s. 6d., 15s., 20s. each; 3 days' approval.—14, Chapel Street, Eccleshill, Bradford, Yorkshire.

WINNER SILVER CUP.

Mr. S. Smith, Whitehouse-st., Newcastle, wins five 1sts and cup; Mr. Williams, Chessell-st., Hull, wins 1st, three specials, and gold medal; scores other testimonials. Same as these birds sent on week's approval at my own risk; cash or deposit. Yorkshires, feather like wax, standard length, cocks, 6/6, 7/6, 10/6, 12/6, 15/-, 20/-; hens 3/6, 4/6, 5/6, 6/6, 7/6, 10/6, 12/6. Norwich, Bullfinch type, cocks, 6/6, 7/6, 10/6, 12/6 15/-, 20/-; hens, 3/6, 4/6, 5/6, 7/6, 10/6, 12/6 15/6; matched pairs, selected for amateurs, 10/6 upwards.—C. Baker, Herbert-st., Bedminster.

Hudson's Champion Yorkshires

are what you want to breed your own winners. Bred from or related to winners. Few green marked, Cinnamon marked, and clears, in matched pairs, at 10/6, 12/6, 15/-, 17/6 per pair; single cocks, for stock or song, at 7/6, 8/6, 10/6; hens, yellow and buff, 5/6, 6/6, 7/6; all cold-room bred and kept, ready for breeding. Remember my terms, four days' approval; stamp reply.—Hudson, Confectioner, Thackley, Bradford.

CHAMPION YORKSHIRES.

SPECIAL Notice.—Write or call at any time and see my splendid lot of long, slim, straight, upstanding Yorkshires; every bird in the primest condition, with plumage like silk; every cock warranted singing; all cold room bred and kept. I have them in all colours except Greens, and all on seven days' approval; cash or deposit; Yellow cocks, orange-yellow, 8s. 6d., 9s. 6d., 10s. 6d.; Buffs, cocks, 7s. 6d., 8s. 6d., 10s. 6d.; Orange-Yellow hens, 4s. 6d., 5s., 5s. 6d.; Buff hens, 3s. 6d., 4s., 4s. 6d.; inspection invited.—Shaw, 97, Essex Road, Islington, London,

WHAT WINS.

What wins your confidence, the confidence of your friends, and the good faith of every bird lover at home and abroad, is the genuine straightforwardness and honest dealing of the Lady Bird Specialist. Why not favour her with your order? If it be for one bird or one thousand, you will be sure to be perfectly satisfied with your purchase. She sends all her Canaries carriage paid, on seven days' approval, taking all risk during the time of approval, guaranteeing you sound, healthy birds of good quality at reasonable prices. Her stock of high-class Yorkshires is undoubtedly the best and one of the largest in England (no half-bred and crossed foreign rubbish here); over 10,000 birds to select from. Tight-feathered up-standing Yorkshire cocks, in full song, 6/6, 7/6, 8/6, 10/6, 12/6, 15/- each. Racy Yorkshire hens, 3/6, 4/6, 5/6, 6/6, 7/6, 8/6, 10/6 each. Properly matched pairs, 8/6, 10/6, 12/6, 15/-, 17/6, 20/- per pair. A few winners at reasonable prices. A trial order will convince you and your friends that for good quality, at low prices, it is impossible to equal Miss Storey. Every customer sends an unsolicited testimonial. Note the dates. These are not old, but new. "24, North-at., Hugglescote, March 30th, 1907.—Received the Yorkshire cock safe. Am very pleased with him; he is such a beauty. Thanking you for such a beautiful bird.—T. Golsby, to Miss Storey."

Thomas-st., Gorey, Ireland, March 30th, 1907.—Received the two hens, in splendid condition. I am very pleased with them. They are a marvel of beauty. I really do not know how you can sell such birds at so low a price. The day after they arrived here I could have sold them for 15/- profit, but I would not take it. You will by this post also receive orders from some of my friends.—P. Cartou, to Miss Storey." (I have received seven orders from Ireland, all mentioning Mr. Carton.) "Ship Inn, Fraserburgh, March 30th, 1907.—Received the birds. I am delighted with them. Please send me another for enclosed amount.—J. Craigie, to Miss Storey." "West Cornforth, March 30th, 1907.—I am well pleased with the birds. I consider they are well worth double the price you charged for them. The cock is an extra good one. You are undoubtedly an honest, straightforward dealer.—M. Joyer, to Miss Storey." "4, Hamilton-st., Glasgow.—It is my duty to thank you for sending me such a fine bird. It far exceeds my expectations.—W. Hayes, to Miss Storey." "93, Wise-mere, Walsall, March 30th, 1907.—I am more than satisfied with the hen you sent me. It is exactly what I required. I find your birds as good as you advertise, and your straightforward, honest way of dealing is certainly a credit to the trade.—J. Carnkill, to Miss Storey." "Erdigg Park, Wrexham, March 30th, 1907.—Received bird safe. I am very pleased with it, and thank you for your straightforward dealings, and for sending me such a good bird at the price.—J. Jones, to Miss Storey." "Langwith, Mansfield, March 30th, 1907.—The hen safe to hand. For quality and price combined it is far superior to any bird I have ever bought before. Thanks for your honest dealing.—J. W. Sadler, to Miss Storey." I could fill the whole of this paper with such letters as the above. If you want good reliable birds at reasonable prices, send your order to Miss Storey, who has a large stock of Norwich at the same prices as Yorkshires. All Canaries are sent to your address, carriage paid, on seven clear days' approval. New up-to-date illustrated price list post free. Note the old and only address: Miss E. L. Storey, Bird Specialist, Crowle, Doncaster.

Under all Headings.

For testimonials, see page **273** of this paper, March 23rd. **Remember,** I send fully **Extended Price List free.** Unlike many imitations of this List, **it is genuine,** because I possess the birds there mentioned and **challenge denial.** They can be seen, not on paper but in reality, as I do not choose to give **myself** away in that style.

NOTE.—For **three stamps** I will send my **Amateurs' Guide and Breeders' Handy Diary,** containing over **250 Illustrations.**

NOTE.—All Amateurs should try my Special Matched Pairs of Prize-bred Norwich Plainheads at 10/6, 12/6, 15/-, and 20/-. Crested ditto, 15/-, 20/-, 25/- and 30/-. Yorkshires, 12/6, 15/-, 20/-. These are the *Best Value* ever offered.

FEEDING HENS PROPER, not little German wasters or Antwerp do., 3/-, 3/6; large 4/6.

Travelling Cages, 3d. extra.

"EGGERTINE."

It is the best, purest, and greatest bone and muscle forming food ever known, as the analytical reports of most eminent authorities prove. It will bring hens into sound and robust condition for breeding as nothing else will. This during the past twenty years has been proved by thousands. It is a genuine egg food made with fresh laid English eggs, with white, of course, included (and NOT foreign preserved yolk of egg) with other valuable properties combined. Tins, post free, **1s. 3d.**; large size, **2s. 6d.** There is a saving in the larger size.

W. RUDD,

THE Bird Specialist,

NORWICH.

UNEQUALLED QUALITY.

I THANK all those that purchased birds from my last advertisement in CAGE BIRDS. I give them a chance again to purchase good birds at a low price. I have only 12 cock Canaries to part with at the old price, 6/6 each.—O. Booth, Thrapston, Northants.

GOLDFINCH cock and Bullfinch hen, Greenfinch cock and Bullfinch hen, Goldfinch cock and hen Canary, matched for muling, 5/6 pair; two cock Bullfinches, 4/- each; house moulted Linnet, 2/6; Goldfinch Mule cock, 4/6; beauties; no rubbish; 28/6 the lot.—Wilcock, Kidsdale-st., Darlington.

"POPULAR Mules" and "Popular Hybrids."—Two charming coloured plates, illustrating choice Canary and British bird crosses respectively, sent post free, carefully packed, on receipt of ninepence (postal order); or either plate separately in return for sixpenny postal order.—F. Carl, 154, Fleet Street, E.C.

HIGH-CLASS Sibs.—Few grand hens, also cocks, for light muling, 39 years inbred, warranted, 10/- each; breeder Mr. Jones's champion light Mule, "Kitchener," winner 57 firsts and special prizes; also bred 1905 clear Mule and eight lightly marked, bred 1906, ten light Mules, including even-marked; 40 years breeder high-class birds; approval.—Samuel Sperry, 133, Curzon-st., Leicester.

LIGHT Goldfinch mulers; grand four-pointed hen, a clinker, 5/-; nearly four-pointed cock, a real good one, both can win, 10/6; 3 by 6 white-legged Goldie cock and big yellow Norwich hen, 7/6; large white-legged cock Goldfinch and bend-reared Bullie hen, 7/6; the above birds are in grand breeding form and anxious to breed; sent on approval on receipt of P.O.—Ainge, Cage Maker, 16, Stanley-st., Melton Mowbray, Leicestershire.

Advertisements continued on page 327.

CLUB REPORTS.

GREAT HORTON GOOD INTENT.

Monthly meeting, March 30th, at the Church Schools. A lecture on "Pairing of Yorkshires" was given by Mr. R. Halliday. The way he gave it, and the practical knowledge he brought before the hearers simply kept them spellbound for a considerable length of time. Questions were asked and answered in a masterly fashion, and each one present went away satisfied, feeling that the evening had been a profitable one. It undoubtedly gave each one encouragement to press on towards the mark of perfection. The usual vote of thanks to the lecturer brought a most enjoyable evening to a close.—A. HOLDEN, Sec.

OSWESTRY F. & F.A.

Annual meeting held at the Queen's Hotel on Thursday, Mr. R. E. Hughes presiding. The Secretaries presented the balance sheet, which showed a profit of £13 1s. 4d. on the show held November 1st, 1906. Mr. A. Wynne Corrie was elected president, and the Mayor of Oswestry, Mr. W. H. Plimmer, vice-president. Mr. Morris Smith having resigned the office of hon. secretary, Mr. G. A. George was appointed to fill the position. A hearty vote of thanks was accorded Mr. Smith for his valuable services to the association. Mr. G. A. Doody was re-elected secretary. A strong working committee was elected, and the date of next show was fixed for October 31st. The radius for exhibitors in local classes was altered from fifteen miles to ten miles.

BRADFORD (EAST) O.S.

Mr. R. Halliday gave an interesting lecture on the "Pairing of Yorkshires," on March 19th. There was a very good turn up, considering the weather was so bad. Mr. Halliday dealt with the subject in a masterly manner, proving to those present, by answering all the questions that were put to him, that he was well versed in what he was talking about. He bore strong testimony to the fact that it was nearly an impossibility for a man to be successful in building up a reliable strain, if he resorted to haphazard methods in pairing his stock; that the man who ultimately reached the goal of success was one who studied for himself the various points which tend towards the ideal, and worked on those lines accordingly. An enthusiastic vote of thanks to Mr. Halliday for his kindness brought a most instructive evening to a close.—H. HILL, Hon. Sec.

DERBY C.B.C.

Meeting on March 23rd, at Victoria-street Congregational Schoolroom, Mr. Jos. Hill presiding. Messrs. J. Harlow, Geo. Wharam, and Horace Mann were elected members. The feature of the evening was an address by Rev. S. Lawdon Platt. The speaker chose for his subject "Inbreeding," and the way in which he dealt with it proved that he had practical experience, and believed that inbreeding was beneficial to a certain extent. His address was listened to with much interest, Messrs. Thos. B. Evans, W. Ely, T. Hayes, J. Pegg, etc., joining in the discussion which followed. The Chairman proposed a hearty vote of thanks to Mr. Platt for his instructive address, and this was seconded by Mr. J. C. Barnes. A most pleasant evening then closed. We hope that another lecture will be delivered on April 27th, by a well-known fancier.—W. H. RAMSEY, Hon. Sec.

JUDGES OF CAGE BIRDS.

Address: The Manager, CAGE BIRDS, 154, Fleet Street. London, E.C.

November 20th and 21st next are the dates fixed for the show of the Northampton Good Intent O.S.—G. M. LARKMAN, Sec.

Mr. J. J. Brain (Glastonbury) writes:—Kindly thank all who have at different times answered my adverts. and not had a reply from me. They have always been so numerous. I have sold more seeds and Canaries through CAGE BIRDS than through any other journal, and shall in future always advertise in same when I have anything for disposal.

Chesterfield and District F.A. Open Show is fixed for October 25th and 26th, the judge elect being Mr. J. C. Barnes (Sheffield).

F. W. Barnett, Esq., of Fakenham, has been elected a vice-president of the Northern Crest Club, writes Mr. T. Robson, the hon. sec.

Prize money has been paid and prizes distributed in respect of our Show, writes Mr. A. R. Wiseman, Secretary of the Forres and Northern O.S. If anyone has been overlooked, kindly communicate.

In informing us that his address in future will be Olive House, Southcoates Lane, Hull, Mr. D. Hope says: I have built myself new aviaries, having bought the house, in which I hope to pass the rest of my days.

Mr. A. J. Davies, of Lyham Road, S.W., writes:—Kindly thank all who answered my small advertisement. I had over 35 applications, and could not reply to all. This shows what a splendid advertising medium CAGE BIRDS is.

At a meeting of the Potteries and District C.B.A., held March 30th, writes Mr. J. Simcock, the Sec., it was decided, as so many shows were being held on November 7th, to alter their date to October 31st, when Mr. W. Vardy will judge.

Mr. C. A. House is to lecture on "The Lancashire" before the London and Counties A.C.B. on Thursday next, April 11th, at the "Bay Malton," Great Portland Street, W., at 8.30 p.m., when fanciers and others are cordially invited.

The prize drawing of the Crewe Ornithological Society has been held over for a week, writes Mr. A. Wilkinson, the sec., owing to the counterfoils and unsold tickets not being sent in. I hope all persons holding same will return them to me, so that the draw may be made on Monday, April 8th.

A capital programme is that issued by the Dulwich and Peckham C.B.S. It contains lectures and discussions on several most interesting subjects; particulars of the society's shows, rules, list of officers and members, etc. The latter, we are pleased to note, is moving upward. The hon. sec. is Mr. W. Hodson, 209, Crystal Palace Road, East Dulwich, S.E.

A Balloch gentleman writes to the "Glasgow Evening Times" stating that he was agreeably surprised the other day to find in his garden the nest of a Mavis with three eggs in it. He thinks this is exceptionally early. Information comes also from Lockerbie stating that a nest, with four young Starlings, has been found under the roof of Lochmaben Parish School; while the Cuckoo was heard near Shillahill on March 25th.

Mr. Allen, of 2, Wood Terrace, Park Street, Abergavenny, who is bringing a new food for Canaries before the Fancy through the medium of CAGE BIRDS' advertising columns, has sent us a sample of the same. It is claimed that it does away with the trouble of preparing egg food, and that birds can be both reared and moulted successfully upon this food, which is a steam-cooked preparation containing 50 per cent. of ground seed. Bird keepers should send for a sample.

At the Annual General Meeting of the Northampton Hand-in-Hand C.B.S. a balance-sheet was submitted showing a balance in hand of £1 3s. 11d., or £3 less than last year. A Show of Young Birds will be held on June 15th, Mr. J. Robson judge. The following officers were elected for 1907:—Chairman, J. Martin; Vice-Chairman, A. Burrows; Treasurer, G. Brown, sen.; Secretary, J. Nason; Committee, Barwell, G. Swingler, A. G. Brown; Collector, G. Jeffs.—J. NASON, Sec.

Then you Laugh.

Evidently the holiday spirit is abroad, for a Folkestone correspondent fires the following conundrum at us:—What is the difference between a Robin and a toastrack? We presume the answer to be that one is a Red-breast and the other a Bread-rest.

The Crested Canary Club.

An extraordinary general meeting will be held at the Napier Tavern, 25, High Holborn, London, W.C., on Wednesday next, April 3rd, at 8 p.m. (and not on the 10th, as announced in error), to reconsider the resolution carried at the annual general meeting, February 16th, that the C.C.C. becomes affiliated to the C.B.U., as well as other business.—R. L. CRISP, President. (The above notice reached us on Tuesday morning last, April 2nd. The previous announcement of the meeting being due on April 10th was not an error of ours.—EDITOR, "C.B.").

Grateful—Comforting.

EPPS'S

A welcome delicacy for

COCOA

Breakfast and Supper.

Mr. G. H. Barnwell, the hon. sec. of the Harrogate C.B.S., has removed to 6, Providence Terrace, Harrogate.

Wellingborough C.B.S. Annual Show will be held on October 30th and 31st. We wish your paper every success.—W. H. HOWES, hon. sec.

Mr. S. Skelton informs us that Pendleton and Salford O.S. Show is fixed for December 13th and 14th. The judges will be Messrs. Battye and Booth.

Hayle and District F.A. have fixed their Annual Show for October 16th and 17th, and have affiliated to the C.B.U., writes Mr. W. Paull, Hon. Sec. Mr. J. H. Roe will judge.

Irish fanciers will note from a letter in our Correspondence columns this week that a testimonial to the Hon. Sec. of the Yorkshire C.C. of Ireland is on foot.

We have decided to alter the date of Wolverhampton and District C.B.S. Show to October 30th and 31st, writes Mr. F. Howes, the hon. sec., when Mr. J. Robson will judge.

I deeply regret to inform you, writes Mr. D. H. Tedstone, that Mr. J. B. Rees, of Abercanaid, Merthyr, has had the misfortune to lose his beloved mother, after over 12 months' painful illness. She passed away on Good Friday morning. I am sure all fanciers that know him will sympathise with him and the family.

Mr. J. H. Booth, of Shaw, writes:—"The result of my 2s. advertisement has completely cleared me out of over forty birds, and fifty breeding and show cages. I am off to Canada early in May."

The Annual Finch Show of the City and Suburban A.C.B. takes place at the Church Institute, Paddington Street, Marylebone, W., on Monday evening next, April 8th, from 7 to 11 p.m., when fanciers are invited to pay a visit.

The Social Evening at Newcastle.

Mr. J. R. Slack writes that the rhymed report of the recent social evening at Newcastle, which we quoted in a recent issue, was not sent us by himself, but by the Chairman or the Secretary of the society. Mr. Slack's humorous lines were written for the amusement of his fellow-fanciers; but, having thus done good by stealth, as it were, we trust he does not blush to find it fame.

Interesting Event at Bradford.

On Saturday, April 6th, at 8 p.m., a smoking concert, arranged by the societies of the late Amalgamated Yorkshire O.S., will take place at the Market Tavern, Godwin Street, Bradford. The principal event of the evening is the presentation to Mr. F. Hammond, Sec. to the Amalgamation, of a splendid brass timepiece, subscribed for by the societies and friends in appreciation of his valuable services. All fanciers and friends are earnestly invited to attend.—S. DEAN (convener).

A Society for Southend.

A meeting was held in the Alexandra Hotel, Southend-on-Sea, on March 27th, Mr. A. E. Pattrick in the chair. It was decided to form a cage bird society, to be named the Southend and District Ornithological Society. There was a good attendance of local and well-known fanciers, and a healthy tone was given to the discussion which followed. The introduction and explanation of the business of the evening was given by the conveners of the meeting, Messrs. J. Dobson and W. D. Franks. Rules were drafted and the following officers elected:—Chairman, Mr. A. E. Pattrick; Vice-Chairman, Mr. J. Farrar; Sec., Mr. J. Dobson; Assistant Sec., Mr. D. Franks; Trustees, Mr. H. Phillips and Mr. J. Webb; Committee, Messrs. Scudder, Youngman, Fortunato, Parrish, H. Phillips, W. J. Webb. It was decided to make the Alexandra Hotel the society's headquarters.—Sec., J. Dobson, 42, Queen's Road, Southend-on-Sea; Assist. Sec., W. D. Franks, 36, Campbell Road, Southend-on-Sea.

Thoroughly Done!

Commenting on the Starling's remarkable powers of mimicry, a writer in a Scottish journal says:—Last summer I witnessed an amusing incident in which a Starling positively manifested the powers of the ventriloquist. A tired-out collie, lying on the kitchen floor of the farmhouse, suddenly pricked up its ears, and then I heard a distant shepherd's whistle on the hillside. The collie listened again, and then bolted out to answer what it thought was a call to duty. In a minute or two it came back with a sort of disgusted air and lay down again. Then once more it pricked its ears. Again hearing the distant whistle, I assumed that two of the men who had gone out to check off some newly arrived restless cattle, wanted the dog. So I went out, the collie following me. I paused in the yard, and again soon heard that distant whistle repeated twice, when, to my surprise, the dog, instead of showing any further interest, went in again. It was only on a third repetition of the whistle that I became aware that it came from a Starling, sitting up on the roof close behind me. The collie had discovered the deception first; but we had both been thoroughly done.

SHOW DATES FIXED.

To secure insertion in this column a guarantee that the show will be advertised in "C.B." to the extent of at least 25/- must be sent to our manager.

* Under the Rules of the C.B. Union.

*Oct. 4 and 5.—**Burnley.**
*Oct. 11 and 12.—**Great Harwood.**
Oct 12.—**Crook.**
*Oct. 16 and 17.—**Grimsby & Dis. C.B.S.** (J.C.B.)

A BOON
AND A
NECESSITY TO EVERY FANCIER.

"Cage Birds" Stud Register
and BREEDING CAGE LABELS.

THE STUD REGISTER.

No breeder of high-class birds can afford to be without **"Cage Birds" Stud Register** hanging in his birdroom. Printed on suitable stiff card, it is ruled to hold a complete record of the breeding results of six pairs of birds; invaluable for future reference, to ensure that knowledge of one's stock so essential to pedigree breeding.

Post free, 2d. each; 4 for 6d.; 9 for 1/-

THE BREEDING CAGE LABELS.

The Breeding Cage Labels are neatly printed in sets of twelve, on perforated gummed paper, and can be torn off and affixed to the cage in a moment.

Here is a reduced fac-simile, which will serve to show their utility.

Post free, 2d. per dozen; four dozen for 6d.

CAGE No......

COCK..... **HEN**.....

Issued by "Cage Birds."

Postal Orders only, where possible.

Address, **Manager, "Cage Birds," 154, Fleet Street, London, E.C.**

The Morpeth and District O.S. has engaged Messrs. W. Vardy and J. Patterson to judge the sixth annual show, to be held on Saturday, November 16th, writes Mr. A. Dippie, the Sec.

Oswestry F. and F.A.'s eighth Annual Open Show will bo held on Thursday, October 31st, write Messrs. George and Doody, Hon. Secs.

The judges engaged at Cupar Show on December 7th next, writes Mr. W. Ruddiman, the Sec., are:—Scotch Fancies, Mr. E. G. Wright (Edinburgh); Norwich, Mr. J. McLay, (Kirkintilloch); Border Fancy, Mr. Henry Bennet (Kelso); Mules, British and Foreign, Mr. P. McQuiston (Ayr).

Unity at Hastings.

We learn that at a meeting held recently at the Royal Oak Hotel, the two Hastings and St. Leonards Cage Bird Societies, viz., the Hastings and St. Leonards C.B.S. and the Hastings Central C.B.S., decided to amalgamatt, and in future be known as the Hastings United C.B.S. They will start with £5 in hand, and a membership of nearly a hundred. Officers were elected as follows:—President, E. E. Clarke, Esq.; Chairman, J. Stevens; Treasurer, H. Godden; Managing Committee, Messrs. T. G. Coombs, . H. Bellamy, H. Bond, A. W. Warr, R. Cragg, G. H. Stubberfield, J. Dawson, C. Nagel, A. George, G. Barham, H. Morris, C. Wappett, J. Shuler, W. Upton, C. Chantler, L. T. Samways, W. Button, H. L. Harris, A. S. Clarke, and R. Harris. Annual subscription, 2s. 6d.; entrance fee, 1s. All new members must reside within a radius of 20 miles.—Joint Secretaries: Messrs. A. E. and J. H. Godden, Ceylon House, Earl Street, Hastings.

THE
APRIL NUMBER
OF THE
Bird World
Magazine
IS
NOW ON SALE EVERYWHERE.

The frontispiece, in colours, depicting a dainty Spring migrant, is one of the most effective and charming plates ever issued, and will be voted by all a beautiful piece of work. There are many other splendid illustrations, and the literary contents are of great interest to all sections of bird-lovers.

Order it at once.

It is selling faster than Hot Cross Buns.

Single copies **3d.**, from your booksellers or railway bookstalls; post free **4d.**, from

IN THE COURTS.

Alleged Fraud by a Nottingham Bird Dealer.

Henry Tindall, alias Swift, a bird dealer, of Nottingham, was charged at Chesterfield on March 26th with obtaining credit to the amount of 19s. by fraud from John Burge, Whittington Moor, on November 12th, 1906. Formal evidence was given that Tindall had an establishment in West Street, Nottingham, where he traded under the names of Miles and Tindall. It was alleged that the prisoner was in the habit of obtaining birds, for which he paid a deposit, but failed to remit the balance.—Superintendent Faulkner asked for a remand until Thursday week.—Mr. Smith, solicitor, Nottingham, on behalf of the prisoner, asked for bail.—The remand was granted, bail being allowed.

A Question of Terms.

A case came before his Honour Judge Dodd, K.C., at Scarborough County Court, in which George Simpson, jeweller, St. Thomas Street, sued George Wressell, bird dealer, of Crowle, for £3 5s., balance on the sale of birds. On plaintiff's sido it was contended that he advertised 59 Canaries for sale: Defendant replied, and plaintiff offered the lot at £15. Defendant replied that he did not think the birds would fetch as much, but he would do the best he could. Mr. Simpson sent on the birds and said that there would be a reduction of ten shillings. The defence was that the price offered by defendant was 8s. per pair, and £11 5s. had been paid.—His Honour took the view that defendant had accepted the birds on plaintiff's terms, and as he had not returned them he must pay the balance. Judgment accordingly.

THE YOUNG NATURALIST.

Prizes of 1s. and two of 6d. each will be given for respectively the best and two second best cuttings or original bits about birds. Competitors must be children under sixteen years of age. All efforts must be briefly and clearly written, and ON ONE SIDE OF THE PAPER ONLY.

Two stars indicate the Winning Contribution; one Star the runners up.

The Crested Tit.

I was sitting on the grass under the shade of a Rita nut tree in our "compound" (garden) in India, watching the Green Paraquets busily feeding their young, when a pair of small birds in a tree on my right attracted my attention. I got up and approached them to see more clearly what they were, when one of them flew and alighted on my "sola topi" (sun hat). I think this is a striking instance of the tameness of the Tit family.—Sent by J. C. Joubert (age 14), Wellington College, Berks.

*The Peasant and the Parrot.

There was in the city of Macon a parrot which had learned to say continually, "Who is there? Who is there?" This Parrot escaped one day from its cage in the garden and soon flew into a wood near by, where a peasant saw it and began to chase it. The peasant had never seen a Parrot in all his life. He approached the tree where the bird was, and was going to kill the poor bird with his gun. At that moment the Parrot began to repeat the usual question, "Who is there? Who is there?" The peasant, terrified at these words, let his gun fall from his hands. Then, taking his hat off, he said, very respectfully: "My dear sir, I pray you to excuse me; I thought that it was a bird."—Colin Munro (age 13), 165, Bellfield Street, Dennistown, Glasgow.

*Two Pet Thrushes.

My father and I were spending a day in the country last spring, when I found a Thrush's nest with two young ones and one bad egg. The parents fed them until noon, and then they disappeared altogether, and I watched the nest until dusk, but still the old birds never returned; so my father brought them home, reared them, and now they are two lovely birds, very tame. I bake them a peameal cake every week.—Queenie Abell (age 10), Mandale Road, Thornaby-on-Tees.

**Our Pet Canary.

My elder brother had a very tame hen Canary, which could whistle, and it was a great favourite with all in the house. My brother would open the cage door and hold out a long cane and say, "Sweet, sweet," and it would come on the cane, fearing nothing; it would also perch on our shoulders and on our heads. One day our Canary got out of her cage and flew into the yard, and my brother thought he had lost it, as it got on the house tiles; but, on seeing the kitchen door open, it flew in the house again and soon found its cage, which was open, and it flew inside, there to remain. However, one day the hook out of the ceiling on which the cage was hung gave way, and it came down. The cage was then placed on the dresser for the time being, but next day, when mother was in the yard, a wily black cat came in the front door, which was open, and, on seeing the cage, sprang clean on it, opened the cage door, and our poor Canary was killed before mother had time to realise what was the matter.—Sent by Olive Jaques (age 12), 5, The Villas, Hexthorpe, Doncaster.

CLUB NOTICES.

No charge is made for notices of forthcoming meetings, but they can only be inserted once. Should secretaries desire to secure immediate insertion of their announcements **exactly as written** they can do so by prepayment at the rate of three words a penny.

Accrington C.B.S.—April 11th, at Central Conservative Club, 8 o'clock. Discussion re Young Show; also lecture on "Breeding and Management of Canaries," by Mr. A. Hirst; all fanciers are cordially invited.—D. Harwood, sec.

Attercliffe and Dis. C.B.S.—April 11th, at Horse and Jockey Hotel, Attercliffe Road, 8 p.m. Lecture by Mr. H. Taylor, "The Norwich."—W. Richinson, sec.

QUESTIONS & ANSWERS

DOUBTS AND DIFFICULTIES SOLVED BY SPECIALISTS.

Queries will be answered under the following conditions:—

(1)—*All questions must be clearly written in ink (or typewritten) on one side only of paper, and must conclude with either the correct name of querist, or a pseudonym, or initials.*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper and enclosed with the query. In no case must the address appear on the query.*

(3)—*Queries intended for different specialists must not be written on the same sheet of paper.*

(4)—**Queries must not include** *or be included in orders for books, instructions re advertisements, or any other matter for publication.*

(5)—*The department to which the queries refer must be stated in bold letters on the left-hand corner of the query.*

(6)—*If an answer in the same week's issue is desired, queries must be posted to reach us by* **Monday's first post** *at latest. Queries will be dealt with in the order in which they are received, and only as space permits. The earlier queries are received the better attention they are likely to have.*

(7)—*Queries relating to illnesses of birds, except enquiries as to cause of death (for which see Post Mortems) will be answered by return of post on receipt of a postal order for sixpence and an addressed stamped envelope. Queries of an ordinary nature will be answered by post, if desired, on receipt of a postal order for one shilling and a stamped addressed envelope.*

(8)—*All who require letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence to pay postage expenses, &c., otherwise their letters will not receive attention.*

(9)—*All queries must be addressed* **the Editor, "Cage Birds,"** *154, Fleet Street, London, E.C. Only queries so sent will be answered. Postcards are not admissible.*

NOTE.—Readers are requested to carefully study past numbers and current issue before submitting questions. By doing so they may save trouble and unnecessary repetition.

THE following gentlemen represent CAGE BIRDS staff of **ADVISORY EXPERTS.** Queries must in no case be addressed to any of them individually, but to the Editor.

CANARIES.

NORWICH PLAINHEADS.

Answered by J. H. PAYNE.

Loss of Feather (F.H.C.).—Your Norwich hen has evidently got surfeit. Put a little sulphur ointment on the affected part, with your finger tip, two or three times. Give a little egg food twice a week, to which add a pinch of magnesia instead of the Chemical Food. Put a piece of apple between the bars of the cage for it to peck at, and also give two or three times a week a few dandelion leaves and a sprig of watercress. You need have no fear of contagion. The cistern in your room would make no difference. Should the hen continue to make the slight noise you mention, then give in the drinking water every day for a week, and afterwards every alternate day for a fortnight, 15 drops of syrup of tolu and 10 drops of paregoric.

First Steps (E. Wood).—As you are quite a novice it is a pity you did not buy another cock and make two pairs, as the running of two hens with one cock is best left to fanciers of some experience. I should advise you to purchase another cock, if you can do so, as I feel certain you will get more satisfactory results. If you do not do this, then pair up the cock to one of the hens, and when she has laid her fourth egg, take the cock away and put him with the other hen about a week after. By the time the first hen has her young partly reared you should be able to take him away from the second, as she should be sitting hard if all has gone on well. When the first hen's youngsters can do for themselves, then put the cock with her again. Egg powder is very little good for rearing young Canaries on. Mix equal weight of hard-boiled egg and crushed biscuits (or home-made bread) and give when the hen has young three times a day, if you can. This must be made fresh daily. When the young are a week old, you may scald a little best German rape seed and add it to the egg and biscuit. Pour boiling water over the rape seed, and let stand for a few minutes. Then put it in a strainer, and let the tap run over it for a minute or two, the object being to take away the acidity. Use the seed when the water has all run away. Put a tablespoonful to one egg. When the hens are feeding their young, give plenty of hemp seed and a liberal supply of green food. Chickweed, when in seed, I think is far and away the best green food, and this you may give ad libitum. When you cannot procure it, give lettuce and watercress, or dandelion, all of which you may use freely when the birds have young.

YORKSHIRES.

Answered by H. W. BATTYE.

Died When About to Nest (J.G.C.).—You paired your birds too early. Your hen seems to have gone on all right until she became with egg; probably the cold nights were too much for her, and she may have died egg-bound. Or from what you say in regard to her not laying an egg last season, she may have been a weak hen constitutionally. It is a difficult matter for me to say definitely what was the cause of death, but I may say this:—If breeders would wait patiently till the first or second week in April before pairing their birds there would be fewer hens go amiss and die, or, in other cases, be of no further use during the season. But it does not seem to be any use telling people to wait; and, that being so, they must take the consequences. My own hens are still in flight cages, and will remain there for some time yet.

Hen "Gone Wrong" (Amateur).—Give your hen ten drops of glycerine and ten drops of whisky in her drinking water. As you have removed her out of cold room into the kitchen, you had better keep her there till the weather is warmer, or she will probably drop into the loose moult. Give the cock bird that is off song, but seems in good trim, the same treatment as to its drinking water, and give, in addition, fresh daily, a little egg food—just about the quantity you think he will eat during the day, say a small teaspoonful. Well mix with the egg food eight drops of Parrish's Chemical Food, and then sprinkle a pinch of maw seed over it. Try this for two weeks, when by that time I think you will see an improvement.

BORDERS.

Answered by J. PATTERSON.

Buff Hen Poor in Feather (A.B.).—Your feeding is a little at fault. If I understand you rightly, you say you give rape one day, hemp the next, and so on. Stop the hemp entirely until the hen is feeding young. Give, once a week, among the gravel, a little mixed seed, as sold in packets by dealers. Let her now have twice a week half a teaspoonful of egg-food, with three drops of Chemical Food added. Give, in drinking water for three days, half a teaspoonful of magnesia. Catch her, and examine under the wings, and at base of neck, and see is she is not infested with canary lice. Should you see any trace of them, dust a piece of cloth, one foot long by six inches broad, with Keating's insect powder; roll her up in this (only leaving her head out) for ten minutes. Have a clean cage to run her into, wash out the one you took her from with warm water, ammonia, and a little carbolic. Rinse, and put out in the fresh air for twenty-four hours. Rub on bare places a little hazeline ointment daily for a week. Keep out of draughts. After the three days with magnesia in drinking water, replace it for the next twelve days with 12 drops tincture of quinine. Give occasionally a small piece of sponge cake, with two drops of sherry wine on it; and a small piece dandelion every day, free from frost.

MISCELLANEOUS CANARY QUERIES.

Answered by J. NORTH.

Canary Bare on Back.—Cock Canary bare on back, and continually pecks it; is otherwise apparently healthy, and always singing. Have rubbed sore place with vaseline and given him a quassia bath. Cannot trace any red mite.—TOLLCROSS.

The red mite, being "beasts of prey," secrete themselves during the day, but can easily be discovered by candlelight at night. Have you so examined them? I feel sure that these parasites are at the root of the mischief. If you can find these pests, proceed to their undoing with freshly ground pyrethrum insect powder peppered on bird and cage, after which the application of the following cooling lotion may help to cure it:—Take one teaspoonful of precipitated sulphur and one teaspoonful of glycerine; rub them together in a cup, and add two tablespoonfuls of fresh milk. The bare place should be bathed once or twice a day with this.

Seed Samples (Æolus).—I agree with your disapproval of No. 3 rape; it is hot and strong in flavour. No. 1 is also rather coarse, but No. 2 is superior. It is of the right size, colour, and mild taste. No. 4 Spanish canary is a tempting sample, bold, clean, and bright; but No. 5, although the same sort of seed, is not so taking in appearance. One would imagine the sample had been skilfully extracted from the bulk and had received an extra brush through the polishing machine.

Owing to the Easter Holidays many Queries have necessarily had to remain unanswered until our next issue.—Editor.

BRITISH BIRDS, MULES AND HYBRIDS.

Answered by G. E. WESTON.

British and German Hen Bullfinches (Muler).—There is practically no difference in looks between the British hen Bullfinch and the hen Bullfinch fanciers term a German. Some will tell you the latter is larger; but this is not so. I have seen genuine Britishers quite as large as any Germans. Russian hen Bullies and Siberians are, of course, a size or two larger than either, some of the latter being monsters. When fanciers refer to "German" hen Bullies, however, they generally intend to convey the "hand-reared" kind—that is to say, steady birds, a lot of which are imported every season, many being "broken pipers," or birds which have been under tuition, but have failed to learn the desired tune. Most of these German hens are a trifle paler in colour than English hens caught in the open, though deep-coloured specimens are not at all uncommon. A Bullie hen lets one know when she is in condition for nesting in just the same way as a hen Canary; she will "call" for the attentions of the male bird, and carry nesting material about in her beak.

Redstart Short of Feathers (James George).—It is quite likely that the head feathers of your Redstart will be reproduced this spring. If not, they are certain to be so at the next moult. I take it they were knocked off during the steadying process, after the bird was caught last autumn. I don't think I should attempt any interference; they are not the kind of bird to stand much handling. Besides, there is no object in risking it, as shows are few and far between 'twixt now and next season.

Linnet Mule Weak (Anxious to Know).—If your Mule is now only five months old, it must have been an exceptionally late-hatched bird, and the weakness of which you speak may quite likely be due to this fact. I advise you to try a lengthy course of a good "building up" medicine; also to feed generously. Get a bottle of Allen and Hanbury's Byno-phosphates, and for a fortnight mix a teaspoonful with every two tablespoonfuls of drinking water, fresh daily. At the expiration of that period, give it at daily intervals (plain water in between). Let the bird have a little maw, hemp, and cracked sunflower seed daily (in addition to its usual seed, of which you make no mention). Also give a little egg-cake (see the various recipes given lately in CAGE BIRDS), moistened with a spot or two of new milk and well sprinkled with maw seed. Gather it a few young dandelion leaves frequently, and offer seeding shepherd's purse and chickweed as soon as you can lay hands on any.

Lacks a Toenail (B. Wheatley).—It is a pity your Bramblefinch has a nail missing, as in any case it is almost certain to handicap him on the show bench. I can quite believe he has won several times subsequent to its loss, as much difference of opinion exists amongst judges with regard to the precise handicap a missing nail entails. Some seem to take very little notice, or none whatever, of such a point; some peg a bird back a little on account of it; others throw them out of competition altogether. Personally, I think the latter rather too drastic a position to take up.

Puppy Biscuits, a Lark, and a Blackbird (H.C.).—Good puppy biscuits make an excellent basis for the stock food of a Blackbird. They require other ingredients mixed with them, of course, on the lines so frequently advised in this column. Some fanciers believe in soaking the soft food with hot water—or, rather, adding sufficient of the latter to cause it to swell—giving it to the birds when cold; others give it dry except for the admixture of grated raw carrot, chopped green stuff, cold boiled potato, etc. I have tried both methods with success. I always added hot water in the early days of my bird-keeping experiences, and found it quite all right. Of late years I have moistened the stock food with the vegetable ingredients only, and been equally successful. The latter method, however, is considerably the more cleanly, and very considerably lessens the danger of sour food; hence, in my own opinion, it is considerably the better one to adopt. Your Lark ought to sing out strongly now the sunshiny days of spring seem to have settled on the land. From your letter, however, it would seem as though you are feeding it entirely on seeds; this, of course, is wrong. Skylarks want a good soft food as their staple diet, with a daily feed of seed as a secondary item only. Let him have a few mealworms every day.

Moulting and Mating of a Chaffinch (J.M.).—Your Chaffinch will by now be well on with the shedding of its feathers, and you can do nothing to stop the latter falling. It would probably be unwise to do so, indeed. Did the bird moult last autumn? I expect he did, and, if so, you have by some unfortunate means or other got him into a cross moult. Keep him out of draughts, feed him well, and wait patiently for him to get it over. Purchase a pennyworth or two of citrate of iron from a chemist, and every second day dissolve a tiny pinch (a few granules only) in its drinking water; give plain water in the intervals. I doubt whether it would be any good pairing him with a hen Greenfinch, even if he were in the best of health. The cock Chaffinch is now generally accepted as having bred with a hen Bramblefinch; it is also said to have produced young when mated with a hen Canary. Otherwise its score-sheet is a blank one, so to speak. Still, it leaves you with all the wider field for experimentation.

Goldfinch Losing Flight Feathers (E.W.H.).—I should say the annoying frequency with which your bird loses its flights is due to its temperament. Some Goldies are curious little birds, and hard to "reckon up," as any old fancier of the species will tell you. I have had birds which, though to all appearance as "steady as rocks," at times had fits of mad fright (if it is really fright), especially during the night, when they would dash themselves about the cage, and seldom without more or less serious damage to their plumage resulting. Possibly your bird is in the habit of roosting on the wires up at the top of its cage front. It often happens that Goldies and other birds which do this, are found minus their flights. Doubtless they get the wing locked in some way between the wires, and when they go to fly down, out come the flight feathers. And the oftener the latter are knocked out the less it takes in the way of a wrench to fetch them out afterwards. The fact of a Linnet being a "twirler" does not necessarily make it useless for Mule-breeding; such a bird would be as likely as any (all other things being equal) to fertilise eggs. Hen Canaries which have been used for Mule breeding can most certainly be used for Canary breeding the season following, if desired. In fact, they will produce both Mules and Canaries in the same season (and even in the same nest) if paired to that end.

"Black-headed" Bunting (T.W.).—I presume by "Black-headed" Bunting you mean the Reed Bunting—especially as you say it was caught some few days back. The Black-headed Bunting proper is only an accidental (very rare) straggler to these shores. A really good Reed Bunting makes a nice exhibition bird. When fresh caught, their value is but small—from 1/- to 5/-, according to the particular excellence of the specimen. Feed him as you would any of the Bunting family, who care for little in confinement except good sound canary seed. This should be varied with lightly-cracked hemp, shelled and smashed sunflower, groats, small wheat and oats, crushed, if necessary, summer rape, maw, etc. The bird must also have live (insect) food three or four times weekly; mealworms in the winter, flies, smooth caterpillars, spiders, and anything similar in the summer, or as obtainable. If the bird will eat a little good insectivorous food, containing plenty of ants' eggs, as often as you like to give it, so much the better for its chances of thriving. Damp it with a little summer rape which has been soaked in cold water until just beginning to sprout; or a very little grated raw carrot or finely-minced lettuce, or other green food. A good diet is needed, as many Buntings are apt to go off in a "decline."

MICE

IN THE BIRD ROOM.

Rats, Mice, Field Mice, &c.,

EXTERMINATED BY DANYSZ VIRUS

Discovered and Prepared by
Dr. DANYSZ of the Pasteur Institute, Paris.

When affected with the Virus the Vermin leave their usual haunts and die in the open. The remedy is harmless to other animals and human beings and may be used everywhere with absolute safety.

For MICE only, 1/- per tube.
RATS & MICE, 2/6 ,,

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S., M.B.N.H.S.

Parrakeets with Finches.—(1) What kind of Parrakeets could I put in with Finches and Waxbills for breeding in outdoor aviary? (2) Would Red-rumps do? (3) Do all Parrakeets destroy conifers?—J. H. ADAN.

(1) This is a difficult matter to decide. Parrakeets and even Budgerigars are most unsafe company for Finches and Waxbills, as I know experimentally to my cost during the past year. The only species I can with any confidence recommend is the Turquoisine (*Neophema pulchella*). It is harmless among small birds, and when acclimatised is hardy and enduring, if you provide against the hen becoming egg-bound. Unfortunately these birds have not been imported to this country for some years; but perhaps you are more fortunate on the Continent, and if you can get a pair they are beautiful and desirable birds, and will not harm your smaller birds; otherwise I do not recommend you to put in anything other than Cockatiels. (2) No; Red-rumps are absolutely demons during the breeding season, even to other Parrakeets. (3) Yes; but you will find the Turquoisine less destructive than any in this respect; in fact, I do not anticipate they would do them much material damage.

Birds for Outside Aviary.—(1) In my aviary, 16 by 6 by 9 ft. high, I have two pairs Budgerigars, one pair Java Sparrows, and two Weavers. Could I put with these a pair of Bullfinches? (2) I have a Pin-tailed Whydah with bad feet, toe broken or bitten off each foot; he used to be in aviary with the others. How can I treat? (3) Please name a suitable selection for my other aviary, and what would be their average value?—A.R.W.

(1) There is always a danger in keeping Budgerigars with Finches, though in an aviary the size of yours the risk should not be an unduly large one. However, you may take it the Bullfinches will be as safe as your Java Sparrows and Weavers. (2) This is a fair illustration of the Budgerigars' mischief. It is these birds that have bitten off the toes of your Whydah. As your bird objects to be handled, unless its feet are very dirty, or there is a festering sore, I should leave it as it is. The only other method is to catch it, well soak its feet in warm water, and gently press any matter out, or in case of any bleeding, lightly paint with Friar's Balsam, keeping the bird in the hand till it is dry. (3) This aviary would accommodate twenty small Foreign Finches, but what I advise you to do is to catch up your Budgerigars and put them in the small aviary, and retain your large aviary for the Finches. You could put twenty pairs of small Finches in with your Weavers, etc., as under:—Zebra, Orange-cheek, Grey and St. Helena Waxbills, common and green Avadavats, all 3/6 to 4/6 a pair, Ribbon, Zebra, Striated and Spicefinches, all 3/6 to 4/6 a pair, Parson (10/-), Diamond (10/-), Ruficauda (10/-), Long-tailed (10/-), Gouldian (20/-), Chestnut-breasted (10/-), Pectoral (10/-), and Yellow-rumped Finches (10/- about), all per pair. Also Silver bills, Bengalese and Mannikins, in variety, average 3/6 to 4/6 a pair. I may say that a Pin-tailed Whydah when in breeding plumage is very frequently dangerous to birds weaker than itself.

Waxbills and Mannikins.—Can I keep a pair each in a cage 2 by 1 by 1½ ft. high? Will they breed together, and what is their diet?—J.B.

It is useless attempting breeding Foreign birds with more than one pair in such a cage. Waxbills are shy breeders, and seldom attempt to nest in captivity, such events being quite uncommon even in large aviaries. You do not say what species of Mannikins you intend keeping, the larger species though usually amiable in any company, yet in the narrow confines of a cage, if a quibble did arise over a favourite perch, etc., a blow from their powerful beaks would be fatal to a bird even their own size. If you desire to breed, be content with one pair, either Zebrafinches or Cutthroats would be almost certain breeders in such a cage. Get one of the Hartz travelling cages (any dealer will let you have one for a few coppers), take out the fittings and cut out two of the bars to form an entrance hole; hang this up at end of the cage, against the back and as high as possible; supply hay and long grass for nesting material. Diet: Canary, white and spray millet, green food, grit, cuttlefish, ants' eggs (cocoons), and water for drinking and bathing. When they are rearing young supply a little of some good soft food mixture; several good ones are advertised under "Foods" in our columns.

Birds for Box Cage.—(1) In a box cage, 2 by 1½ by 2 ft. high, how many small birds would live amicably with a pair of Golden-breasted Waxbills? (2) What kinds would be suitable, and what is their diet? (3) Could I substitute glass ends to prevent it looking quite so ungainly?—E.F.

(1 and 2) You could keep six to eight pairs of small Waxbills in your cage, provided it is cleaned out daily, and that at least two seed hoppers are supplied. The following would make a handsome series of interesting, pretty, and active, little birds:—Common Avadavat, Orange-cheek and Grey Waxbills, one pair of each, their average value is from 3/6 to 4/6 a pair. Diet: Canary, white and spray millet, green food, grit, cuttlefish, and water for drinking and bathing. Though not really necessary, a few green fly (*aphidæ*), or any kind of plant live from rose, fruit, and any kind of vegetable growths will keep them in finest condition, also happy and contented. (3) The principle of a box cage is to secure its inmates from draught, this is attained by having it only open at the front; what the ends consist of is immaterial, in fact, a matter of taste. Give the birds fresh air (no draughts) and sunshine.

GENERAL.

Answered by the EDITOR.

Cuttings (J.F.S.).—Accept our thanks for an interesting item of news.

Lines by Burns (G. Raeside).—We are much obliged to you for the trouble taken in copying out the extracts, and shall hope to make use of some of them as space permits.

Show Dates Fixed (A.S.).—Thanks for your kind offices on our behalf. We wish your society every success, and congratulate it on the possession of members who recognise value for money when they see it.

Advertising Matter (T.B.).—Thanks for the batch of advertising matter you send on to us. We venture to think there are many more sane persons like yourself around, who will not be blinded by mere lavish circularising into mistaking the dross for the gold.

After the Crystal Palace.

My visit to the Crystal Palace, and subsequent events, have made a happy change in my life, writes Mr. J. H. Verrall (Hove). It was a treat to see the white Bullfinch; I had a chat with the gentleman who reared it from a weakly nestling. If ever I should commence Canary breeding again, I would go in for Borders and try for Cinnamons. With six Canary-Bullfinch Mules, one cannot longer consider them rarities. The Finch Hybrids are too dark in colour, either from having too much hemp seed or something else. I thought the Chaffinches poor in colour; nothing like the wild Chaffinches at liberty on the same date. I call the price limit Finch class a capital idea. With such an excellent report as appeared in CAGE BIRDS, if I wrote any more it would be merely repetition.

THE CANARY BREEDING SEASON

Is now with us and everyone who contemplates cultivating Canaries for pleasure or profit, should immediately procure the Standard Work on Canaries :—

HOUSE'S CANARY MANUAL

PRICE ONE SHILLING. Post Free 1/2.

Superbly illustrated by the Champion Canary Artist, Mr. H. NORMAN. EVERY BIRD DEPICTED IS A VERITABLE MODEL, and shows the breeder what to aim for. Some idea of the popularity of this Practical Manual may be gathered from the fact that under the title of "The British Canary," it has passed its Third Edition entering upon a Fourth Edition of 5,000 copies under the new title of "HOUSE'S CANARY MANUAL." The following Summary of Chapters, etc., will show you how completely the ground is covered:

Aviaries and Cages.
Show Cages.
Perches.
Breeding Canaries.
The Young Birds.
Food for Nestlings.
Hens Refusing to Feed.
Sweating Hens.
Young Birds Dead in Shell.
Red Mite.
Clear Eggs.
Moulting.
Exhibiting.
Diseases (treated very fully).
Every variety of Canary is treated upon at length and illustrated.

Mr. HOUSE has thoroughly revised and brought this work up-to-date and incorporated a chapter on the "Roller or Singing Canary."

Send 1/2 now and secure a copy hot from the press.

F. CARL, 154, FLEET STREET, LONDON, E.C.

FIFTY COPIES of the Third Edition slightly soiled—9d. each to clear.

ILLUSTRATED IDEAS

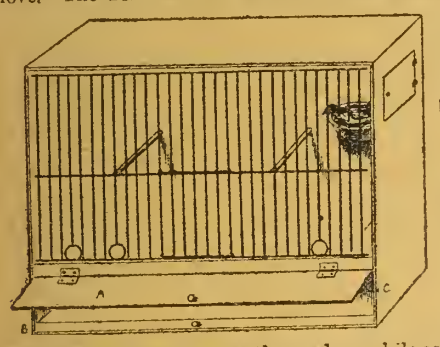
Under this heading we shall illustrate weekly some idea useful to the bird-keeper. Readers are invited to send us particulars of any novel and practical appliance of use in our hobby, either in cage, bird-room or aviary, with a rough sketch of same where possible. Every "Illustrated Idea" used in this column will entitle the sender thereof to a postal order for two shillings and sixpence.

No. 89.

EASY METHOD OF REMOVING SAND-TRAY.

Sent by C. Crook, 12a, Little Ealing Lane, Ealing, W.

I enclose a sketch of a Breeding Cage showing an easy method of removing the sand tray, for use in the case of nervous hens, when sitting, as sometimes grit gets under the tray, making it fit tightly, and therefore hard to remove. The noise it then makes is sometimes



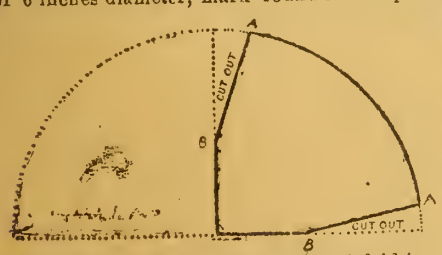
enough to put your own teeth on edge, while as often as not it comes out with a jerk, and serves to upset the eggs as well as the hen. A is a 3-inch flap; B is the draw-board; C is a wire nail going through a hole made with a bradawl from the outer side of the cage, passing into the flap when closed, for fastening purposes.—C. CROOK.

No. 90.

TO MAKE NEST-PAN LININGS.

Sent by Sidney Parkins, 57, Collingdon Street, Luton, Beds.

Herein is a sketch with instructions for making nest-pan linings, which probably may be of use to many of your readers. For use with a 4-inch nest-pan take a breakfast saucer of 6 inches diameter, mark round it on a piece



of white paper, cut the latter out and fold it as shown in sketch. Cut ½ inch off corners, from A to B, which are 2 inches apart. Open the paper (when you have a Maltese Cross) and use it as a pattern. In fitting to nest-pan, use *strong* paste and apply to one side of lining only and be sure to overlap the cut out parts, say ½ of an inch, which will prevent the nesting material from shifting during incubation. Press down very firmly and dry well.—S. PARKINS.

CLUB REPORTS.

MORECAMBE F.A.

Annual meeting, March 20th, 1907, Mr. Edmondson in the chair. The balance sheet was adopted, and showed a balance of £5. At the election of officers Mr. Edmondson was again chosen Chairman and Mr. Nutter Treasurer, with Mr. John H. Ireland as Secretary of the Cage Bird Section. The next Show will take place on October 30th, 1907, under C.B.U. rules.—JNO. H. IRELAND.

WESTERN COUNTIES O.S.

The election of officers and committee for the ensuing year took place on March 26th, and resulted as follows:—President, The Mayor of Plymouth, R. F. Winnicott, Esq. Chairman, Mr. C. Dart. Vice-Chairman, Mr. W. G. French. Hon. Sec. and Treas., Mr. T. Pope. Hon. Assist. Sec., Mr. W. A. Dyer. Auditors, Mr. H. A. Clear and Mr. W. Spillman. Committee, Messrs. J. Ryder, S. Tucker, C. Garland, W. H. Tottle, C. Reed, T. Deeble, C. Hoar, E. Skey, J. H. Full, R. Browning, F. G. Snell, A. E. Cheney, and G. A. Hamilton.—T. POPE, Hon. Sec.

LAISTERDYKE B.F.A.

The members and their wives held their annual tea and concert at Royal Oak Hotel, when 60 sat down to a most excellent repast. After tea a splendid concert was given in the large concert room, and was much enjoyed. Mr. Robinson, the popular tenor, was given rousing applause for his rendering of "Marguerite," "Flight of Ages," "Ora pro nobis," etc. The comic side was taken care of by Mr. Parker, who brought down the house with "Tin Tacks," "A silly thing to do," "A very foolish thing to do," etc. The other artistes were Messrs. Shoesmith, Pounall, Hall, Bottomley, and Miss Richmond, of Rodley. Eleven o'clock came all too soon; all expressed themselves satisfied when we adjourned for home.—J. POUNALL, Sec., 69, New Hey-road, Bradford.

RUTHERGLEN AND DIS. O.S.

Meeting held on 18th March, Mr. Wm. Moffat, M.A., in the chair. Dr. Manson then made reference to the deaths of some of his young Canaries, which seemed to be due to some form of brain mischief. A discussion followed, and as a result of the various opinions, it was decided to hand over two of the avine corpses to Dr. Gray (a pathologist of some note) for examination. The result of Dr. Gray's investigations will be put before the members at next meeting, on 15th April. The next business was the defining of the radius within which members must reside. It was decided to fix no limit, and to make all fanciers of good repute welcome. It was also decided that members should bring friends who were interested in natural history in general, and ornithology in particular, to the meeting. The following gentlemen were then proposed and accepted as members:—Dr. George Gray, M.B., Ch.B., Councillor D. C. Dawson, Messrs. Smart, Carruthers, sen., Livingstone, Munro, Lindsay, and Ross.—F. WILSON, Sec.

"LIVERPOOL" VIRUS
is absolutely harmless to human beings and animals, but is speedily fatal to
RATS & MICE.
It causes a fatal disease to spread through a colony of these pests.
They do not die in their holes.
There is, therefore, no danger of smell from dead bodies.
Mice Virus, 1/6 per tube.
Rat Virus, 2/6 and 8/- per tube.
Prepared in Liverpool. Of all Chemists.
EVANS, SONS, LESCHER & WEBB, Ltd., Liverpool and London.

SANDY LANE C.B.A.

There was a good turn up of members and friends of this young, thriving society to hear a lecture from that old fancier, Mr. R. Halliday, on March 21st. Mr. Halliday spoke about three quarters of an hour on the Pairing of Yorkshires, and seemed to have a good grasp of his subject. His speech was greatly enjoyed by all present. There was some good round table talk. The older members of the society, Messrs. Wilson, Bailey, Milburn, Hodgson and Whatmough, took part in a lively discussion on the breeding of Cinamon Marks which was very interesting to the young members. Altogether a most enjoyable evening was spent, closing with a vote of thanks to the chairman and lecturer.

CHELTENHAM C.B.S.

Annual supper and smoking concert, held at headquarters (Sydney Arms Hotel) on Wednesday evening, when a good number of friends and visitors sat down to an excellent repast provided by Host Shinton. The President, Mr. T. J. King, proposed the loyal toasts. Mr. H. Boulter next proposed "The Society and its Officers," to which the President, Vice-President, Mr. Grant, and Hon. Sec., Mr. A. S. Treasurer responded. Mr. Grant then proposed "The Visitors," coupling with it the names of Messrs. H. Boulter and E. A. Evans. The rest of the evening was devoted to harmony. Songs were sung by Messrs. King, Lewis, Harvey, Boulter, etc., and were interspersed by some maudoline solos, given in capital style by Mr. C. Knight. A gramophone kindly lent by Mr. J. Hands, who brought some first-class records with him, also gave great pleasure.

LANCASHIRE C.A.

Meeting, March 16th. Mr. J. Nadin occupied the chair. It was resolved that 10s., the loss incurred at the Crystal Palace, be paid at once. A letter received from the L.C.B.A., applying for our support at this show, was left over. Then came a suggestion from Mr. Laycock as to ringing young birds and guaranteeing classes for same. This was well discussed, but it was deemed inadvisable to proceed in this direction at present, as it would not be possible to procure rings, etc., in time for fixing on birds this coming season. This discussion will be on the agenda for next meeting, and no doubt some satisfactory arrangement will be come to, and will be in working order for 1908. It was resolved that we ask Mr. Robert Barrass to give a lecture on the Lancashire Canary. A suggestion that seemed to be favourable to all present was a ramble to the Trout Fisheries at Skye, and then return to the Rochdale O.C. to hear the lecture by Mr. Barrass. Next meeting at Textile Dining Rooms, Oldham, on June 15th, at 7 p.m.—JAMES LAW, Sec.

Y.C.C. OF IRELAND.

Annual general meeting, held at Dublin, on March 11th, for the election of officers. As all the offices were vacant, it was proposed that Mr. Taylor take the chair, Messrs. Kenny and Cloke to act as scrutineers. Twenty-eight voting papers were received, and the following were declared elected:—President, Major Trotter (25). Vice-Presidents, J. D. Rowe (20), J. M. Barclay (17), J. Reilly (11). Chairman, R. Devitt (26). Treasurer, R. F. Duignau (24). Secretary, W. C. Sholedice (27). Committee (Dublin and County), W. H. Sheridan (23), P. H. Kenry (23), F. R. Fry (21), J. J. Cloke (20), J. Huggard (19), T. Farrell (13), J. R. Hennessy (11), P. Gillen (11); (Country), C. J. Mulligan (25), N. Thompson (23), F. O'Neill (21), W. Hawkins (21), J. McQuaile (21), A. South (20), H. Fulton (20), J. Short (7). Auditors, G. Bray and J. Emoe. A vote of thanks was proposed to Mr. Taylor for the courteous manner in which he occupied the chair, and also to the scrutineers. Mr. R. Devitt, the elected Chairman, then took the chair, and adjourned the meeting until the 18th inst.

At the adjourned meeting, on March 18th, the following alterations were made in the Bye-laws and Rules of the Club:—To Bye-law 2, the following addition was made: "No novice can compete oftener than three successive seasons. Points to count the same as for Challenge Cup; said rule to be retrospective, and to date from first showing." Bye-law 4, governing cups, the word "Secretary" to be struck out, and the word "Treasurer" substituted. After a long discussion about non-feds competing for cup, it was agreed that in the future non-feds can compete for cups as heretofore. The following were admitted members:—Messrs. Crawford (Bray), Devins (Sligo), Graham (Bootherstown). The Chairman then presented Mr. Fortune (Sligo) with the Challenge Cup; a letter was read from Mr. C. A. O'Rielly stating his inability to attend to receive the Novice Cup. Mr. Gillen was presented with medal as runner-up of the Novice Cup. Mr. Devitt then left the chair, and Mr. Fortune presented Mr. Devitt with medal for runner-up of the Challenge Cup. This brought the annual meeting to a close.—W. C. SHOLEDICE, Hon. Sec.

DALKEITH AND DIS. C.C.

Special meeting was held on March 30th, Mr. W. B. Smart, president, in the chair. Several new members joined, making in all 35, the largest number we have had for years.—T. BRIGGS, Sec.

SUNDERLAND C.B.A.

Show fixed for November 22nd and 23rd. Judges, Messrs. G. E. Russell and J. Cameron. Messrs. Young, Stewart, and Page were elected members. New rules and cards distributed to members.—F. GORDON, Sec.

ROTHERHAM C.B.S.

Special meeting was held on Saturday at College Inn, when our old friend, Mr. J. Atter, after a long illness, took the chair. Three new members made. The society is in a good financial position, having a balance of over £5. The date for Open Show is December 6th and 7th. Nest Feather Show, June 29th. Next meeting we are to have a lecture by one of our old members.—J. E. HAYES, Sec.

SALE OPEN O.S.

Meeting, held March 25, Mr. C. H. Smith presiding. Mr. Thos. Harrison, of Altrincham, gave a paper on "Seeds and Other Foods," which was listened to with great attention. At the close the Chairman invited questions and general discussion. After answers had been given, Mr. Harrison received the thanks of the meeting for his very able paper, many of our members receiving very valuable hints. Four new members were made.—GEO. F. HARDCASTLE, Sec.

Use and . . Recommend

SPRATT'S

COD LIVER OIL

CAGE BIRD FOOD

FOR

Young Cage Birds from the Nest.

Mr. WM. HIRD writes:

HIGH STREET, HANGING HEATON, nr. DEWSBURY, *August*, 1906.

"I am highly pleased with your Cod Liver Oil Cage Bird Food. It is a most suitable food for the birds, and gives good results, both in the rearing of the young birds and in the production and quality of the feathers, and I shall recommend it to my brother fanciers."

Sold by all dealers in **3d.** and **6d.** Tins; post paid **6d.** and **9d.**; 7-lb. Bag, **2/6**, or post paid, **3/2**.

Send postcard for Samples, also **Free** Booklet on "Canary and Cage Bird Rearing."

SPRATT'S PATENT, LTD

24 & 25, Fenchurch Street, LONDON, E.C.

Y.C.C. OF IRELAND.

Proposed Testimonial to the Honorary Secretary.

SIR,—Kindly give me a little space in your next issue to announce that it was proposed at the annual general meeting of the Yorkshire C.C. of Ireland that a presentation be made to our Hon. Sec. (Mr. W. C. Sholedice) in appreciation of his services towards the success of the club, and in putting it into its present flourishing condition. You might also mention that the committee have appointed me Hon. Sec. of the fund, and that I would be glad to receive donations from members towards the same.—CHAS. J. MILLIGAN, Holborn Street, Sligo.

EGG CAKE RECIPE.

SIR,—"G.W." asks for the egg cake recipe mentioned in my article before the members of the Rochdale Good Intent C.B.S. This, as well as being a splendid cake for using with colour feed, I find very good for young birds after weaning them, in place of egg food, until they get on hard seed. The cake is made as follows:—Eight eggs, ½ lb. pure lard, 1½ lbs. castor sugar, 1½ ozs. baking powder, 1½ ozs. salt, 3½ lbs. flour. Allow the loaves to stand about a week, and then rub them up as fine as possible; mix the colour feed to what you consider a nice strength, adding a little more sugar.—J. LEES.

DOES COLOUR FEEDING SHORTEN THE LIVES OF CANARIES?

SIR—May I ask Canary breeders whether colour feeding tends to materially shorten life? I have just had a most lamentable experience in the death during this passing month of every cock in my bird room (except one, a green). They were all picked birds, large and handsome, in full song, and to all appearance in splendid condition until (in each case two or three days before death) the song suddenly ceased, the bird sat thick, and the droppings were milky. I take a great interest in this hobby, have leisure to devote to it, am scrupulously clean, and have a large airy room, with cages of approved make and up-to-date appliances. It has been my boast that, during the three years I have been breeding, I had never lost a bird after getting it on the perches. I am at a complete loss to account for all this sudden misfortune. The birds dying in this way were those picked for this year's work, and were just those which had been colour fed last year. The hens, retained for breeding, were not fed, and are well and hearty. The green cock, unfed, is also well, and has a hen on six eggs. I may add that I buy the best seed, and follow closely all instructions given by experts in CAGE BIRDS. I shall be only too grateful for advice or suggestions from any experienced breeders.—ANNA DUKE.

THE SQUARE FEATHER CONTROVERSY.

SIR,—Since the spirited discussion at the C.C.A. rooms, when Mr. Ramsden attended, I have had the opportunity of examining a number of birds showing these "trimmed" feathers. At the time, after carefully examining the feathers from the disqualified Palace birds, I fully agreed with the conclusions arrived at by certain ornithological experts, that the feathers had been cut or damaged by some means, but not by scissors, because under a strong glass a distinct fringe could be seen along the cut edge, formed by the little barbs (barbules), projecting over the cut end of each barb. I made the suggestion at the meeting that the damage might have been caused by an instrument like a bird's beak. I received invitations from several Green Canary fanciers to visit their rooms and examine some of these feathers in situ. I have availed myself of this opportunity, and I am astonished to find so many birds with apparently "trimmed" feathers, and in each case chiefly upon the bird's back. Mr. Benson, of New Brighton, has given me a bird to make what use I can of to discover the cause of these damaged feathers. This bird (which is not a show specimen) has, speaking roughly, about fifty of these feathers, with their ends, to all appearance, nipped off in exactly the same manner as the birds I saw disqualified at the Palace Show. I intend to breed with this bird, to observe whether there is a hereditary taint running through some of these Green birds. I shall also carefully moult this bird, and watch for results. I may add that this is an unflighted bird, and most of these feathers are found upon such. I am entirely unbiassed on this question. I am neither a Green Canary fancier nor a lover of the variety (I have bred a few only), my sole object is to try and solve this mystery. It certainly ought to be cleared up scientifically; and no hasty decision ought to be taken concerning the Palace disqualifications, because, in my opinion, no living man can say for certain that these feathers have been cut or trimmed by human hand.—J. W. CUTMORE.

THE NORWICH PLAINHEAD AT BOLTON.

A Difference of Opinion.

SIR,—In reading through my copy of this week's CAGE BIRDS, I notice an effusion from the pen of Messrs. Hopkins, under the above heading, in the form of an attack upon the lecture delivered by myself at Bolton, which, for sheer audaeity and cheek will, I think, be hard to beat. I would like to remind them that I am not in the habit of making statements other than truthful ones, when giving lectures on any subject whatever. I was totally unaware that I had been publicly assailing either themselves or their birds for the last eight or nine years. Were this true, I should have had to begin almost before they commenced keeping cage birds at all. It cannot be more than five years or so since they used to come to me to solicit advice, at the time they were first getting the rudiments of bird keeping—advice, which I offered freely and willingly, as I am always pleased to do, either to beginners or any others in our hobby. Before affecting such an injured tone, I would advise them to look nearer home, and remove the mote from their own eye before looking for it in others; also to study well the old saying, "That people who live in glass houses should not throw stones." The remark that they don't like being told by a comparitive stranger that Mr. B. had said that he had "mopped the floor" with them at the Scottish National, savours very much of the vapourings that have reached me, purporting to have come from their quarter, in allusion to my own birds and person. I am positive that they feel sure in their own minds that I did not make it. Surely the remark referred to must have been made by this comparative stranger in a bantering mood? They characterise the lecture as being boastful and insulting. This I most strongly refute, and contend that there was nothing, either over boastful or in any way insulting in its composition, and that the lecture was a common-sense one, calculated to be of benefit to the novice and beginner. They take exception to a passage in which I make the statement that I consider the time most opportune for such a lecture "as the society has been considerably augmented of late by novice recruits." The above remark with characteristic conceit they take as applying to themselves. Perhaps it may be news to them to learn that the greater part of the lecture was prepared some time previous to their joining the society, the remark being made in all good faith, without a thought of these clever youths in any shape or form. Most of our members being novices, the remark was quite in order, as the lecture was prepared and delivered chiefly for the benefit of such. I should certainly have given them credit for more commonsense than to imagine that I should have classed them in this category. They doubt my claim to be the champion exhibitor of Norwich Plainheads in the district, and go on to state that they won more prizes than I last season. This I do not deny; but in what competition did they win these prizes? I base my claim to the title of champion exhibitor on the ground that I have won higher honours and in far hotter competition than any exhibitor in the town. There are prizes and prizes, you know, Messrs. H. Don't forget that I did not in any way claim to be the only exhibitor in the town who had won prizes in champion classes. Regarding their remark of giving credit to the gentleman from whom I bought two of my birds, they know full well that I have always done this. But surely I am entitled to a little credit? In the first place, on my astuteness as a buyer, and in the second on my ability to moult and stage to perfection the yellow I purchased from Mr. Shaw. The said gentleman himself complimented me on this point when I exhibited the bird at Manchester in 1905. If they themselves practised what they preached, they would have given Mr. W. Vardy credit for breeding the yellow cock they were showing in season 1905 to 1906; also the breeder of the 3rd prize in selling class at Scottish National 1906 Show (and which they claimed in the selling class at Wigan) instead of boasting that they had bred all the birds they won with. They allude to the 15s. selling class bird at the Scottish National, but, of course, omit to state that this bird stood first in a class of 44 entries, forty different exhibitors competing, many of these being leading lights in the Fancy, which fact points to the bird being something above the average. Not only this, but the bird was sold at 30s. Did you ever experience the like of this with any of your boasted specimens, Messrs. H.? They also remark that the yellow hen was the best show bird I ever bred. What a senseless remark to make, as I have bred many grand birds which they have never seen or heard of. And they go on to state that her best performance was at the Scottish National, since which (mark the sarcasm) the following Saturday she got 4th in a class of seven at Manchester Members' Show. As usual, they fail to state the reason, which was that the bird was soft and out of condition—the effect of her journey to Edinburgh. She cannot be such a duffer, however, having won 1st Altrincham, 1905, also in 1906, 2nd Barrow, vhc Altrincham (in which class the best yellow hen they ever exhibited stood cardless), also 1st Scottish National. These are the only times she was shown at open shows. Could Messrs. H. mention any single one of their own birds which has done so well? They may easily find out when I first won a money prize in open Norwich classes, by scanning the show catalogues. And as they ask this question, will they kindly explain how they reconcile themselves to the statement made by the brother, John, when giving a paper on the Norwich last year before the Bury C.B.S., where he made use of the expression that they had been breeding, and he thought he might say exhibiting successfully the Norwich Plainhead for the last ten years. As a matter of fact, they had not been in the Fancy for so long a time as that, and the first time they won a money prize whatever in open competition was about 1902 or 1903, when they won a 3rd in a 12s. 6d. selling class. This is a sample of their bluff. Again, they take exception when I state that those who do not recommend inbreeding cannot have had much experience. Dear, dear; do they imagine that they are the first persons who have depreeated the practice? This was discussed long before they left their cradle. They also say: Don't sneer at the nice little Norwich—taking this as another thrust at them. I might inform them that I have been in many breeders' rooms in Lancashire (and out of it) and have there seen these little good ones I refered to. Lots of fanciers possess such besides Messrs. Hopkins, and lots of them are anxious to possess larger and better specimens. As regards what other winnners I have supplied during the last twelve years, I may inform them that I don't boast the names of my clients, the letters received from them being satisfaction enough for me. As regards the bother they hit at towards the latter part of their letter, I must confess entire ignorance. This must surely exist in their own imagination. I am not aware that I have by word or deed done anything to injure their business. Far from this being any wish of mine, I have on several occasions (although they may not be cognisant of the fact) recommended different persons to deal with them. Their letter throughout has been actuated by one motive—that of jealousy. At the conclusion of the lecture, I invited all present to ask any questions they wished, and I would do my best to answer them. Mr. John Hopkins was present, yet he answered never a word. I think this was the time and place to air his grievance. In conclusion, I would advise the Bros. Hopkins to mind *their* own business, to take less heed of the tales of the scandal monger, and, in future, to refrain from making insinuations similar to some of those contained in their letter, unless they are fully prepared to substantiate them.—JOHN W. BANCROFT.

ALLEGED REFUSAL OF MEMBERSHIP THROUGH ASKING FOR PRIZE MONEY.

SIR,—I saw a letter in your paper of March 16th with the above heading. As our society (the Bath and Dis. F.A.) is the society alluded to, I am instructed by my committee to reply and say that the statements in the said letter are incorrect. The writer of it knows well why he was asked to resign. The committee has the power and reserve the right to expel or to ask any member to resign.—H. TURTLE, Hon. Sec. Bath and District F.A.

YELLOW HENS v. BUFF HENS.

SIR,—I have noticed of late what a craze there is for yellow hens. The question has very often crossed my mind—Why? I have been asked several times for yellow hens. They must be yellow or they are no use to me—so say my enquirers. I always try my best to put forward the good qualities of buffs, but no one will have them at any price. For Mule breeding, I prefer a good-sized buff before a yellow, provided the buff has plenty of green blood in her. I find that by using a large buff hen for Mule breeding the majority of the young ones take the finest shape, i.e., the Bullfinch shape—a lemon with a head and tail stuck on is the shape I am alluding to. And, after all, is it not the shape which makes an exhibition bird, or should do so? I am bound to admit that you do not get such a blaze of colour by using such a hen; but colour food does a lot in that direction. If I were judging a class of birds, I should go for shape first. I do not think it possible to get the type of bird I have mentioned from a yellow hen. I know there are exceptions, but I am speaking of the majority of Mules that are bred. Those that are bred from yellow hens run slimmer in the body; at least that has been my experience. I once ran a Greenfinch with a buff hen. Two young ones were hatched, and they both turned out cocks, heavily variegated. I exhibited one of these, an exceptionally fine bird, at Winchester Show, and was awarded first prize. CAGE BIRDS report said, "Such size!" I afterwards sold the two to a well-known exhibitor, and he exhibited the same bird at Bournemouth, and was awarded first prize. I next ran a Goldfinch with this hen for the finish up of the season, and two young ones were hatched—both turned out cocks. One had just a tick of light feathers on its head, and the other was dark throughout. I colour-fed them, and exhibited one at Walthamstow, class of 18, and got vhc. I showed it again at Newport, and was awarded second prize, and I showed it again at the Crystal Palace, 1907, limit class of 22, and secured vhc. This same buff hen, who was mated with the Greenfinch I have been speaking about, is now sitting on four eggs, and is due to hatch. All her eggs appear to be fertilised. These are the crosses I am trying for this year:—Canary-Bullfinch, Chaffinch-Canary, Greenfinch-Chaffinch, Goldfinch-Greenfinch, Greenfinch-Canary, Linnet-Canary, Goldfinch-Canary.—W. WHITE.

THE KEYSTONE OF THE C.B.U.

SIR,—Mr. Ramsden states in your last issue that my statement re Palace Show and Rule 17 is "false, and absolutely without the slightest foundation"; he further says that I should confine myself to "facts within my knowledge." Mr. Ramsden tells us that the Palace Show was held under C.B.U. rules, but I would like to point out that nothing to the contrary was stated in my letter, the particular subject under discussion being Rule 17. Accepting Mr. Ramsden's statement that the Palace Show was held under C.B.U. rules (although I fail to find it recorded in any of the adverts. in the Fancy press) we will return to Rule 17, and to prove that I do "confine myself to facts within my knowledge," I would respectfully refer your readers to CAGE BIRDS' report of the meeting of the C.B.U. delegates at the late Palace Show, in issue of February 23rd, page 178, columns 2 and 3, wherein Mr. Ramsden is reported to say: "I say this, that it is impossible to run a National Show unless you get the Crystal Palace to agree with you, and the condition under which a National Show is to be held is that it is open to all, and as long as I have anything to do with it, it will be open to all." I think the above statement by Mr. Ramsden coincides with the portion of my letter which he objects to; and if Mr. Ramsden prefers to take his statement from another point of view, it simply shows how inconsistent he is regarding Rule 17, inasmuch as that while he objects to affiliated members of the Union exhibiting at non-affiliated shows, he does not wish to prevent non-affiliated exhibitors from exhibiting at affiliated shows. This is proved by his objection to having Rule 17 amended, for had Rule 17 been amended as was proposed in the first instance, the Palace Show would perhaps have lost the future support of the majority of the 140 exhibitors residing within a short distance of the Palace mentioned by Mr. Ramsden at the delegates' meeting. Was that the cause of the objection by Mr. Ramsden? If so, it would appear that in the opinion of Mr. Ramsden the Crystal Palace comes first and the great body of fanciers last. And yet we are to believe that the Union was formed for the benefit of the Fancy! These things appear to be straightening themselves out at last.—WM. REID.

SIR,—Would a body composed of sectional representatives better raise the cage bird fancy by investigating cases of doubtful honesty and punishing guilty offenders—or, in short, doing what the present C.B.U. can do with the help of all those individuals who are anxious to have "things done," and who say the Union is not a representative one? To talk of the C.B.U. not being representative, when it is composed of so many societies, whose members keep the different varieties of birds, is, to say the least of it, a gross libel on the great number of keen and successful breeders and exhibitors who send their experiences to the Press, and lecture throughout the country on their particular Fancy for our instruction and delight. The fact that a fancier belongs to a specialist society does not necessarily make him better fitted to be an administrator or judge on all the affairs pertaining to the well-being of the Fancy. Neither does it follow, because the Union has certain rules in its constitution, that all the specialist societies are to be wrecked and their secretaries deposed. Perhaps it is policy to shout with fear, but would it not be more fancier-like to wait and see what mischief the Union intends before concluding that destruction is inevitable? I have read nothing in the rules, or in the Press, from the officials which states it to be the intention of the Union to be "detrimental to the Fancy." Every man is entitled to his opinion, but he has no right to condemn on supposition. No club will become a "nonentity" on joining the Union, which will build societies up and draw them together by compelling all who keep cage birds and aspire to win prizes to become members of some society, as it is only by the efforts of such that prizes are to be obtained. As matters are at present, a judge has no protection. If one disqualifies a bird to-day he is in danger of not being engaged by another society, as his action makes him unpopular, and fanciers will not show under him. Thus the society appreciating a good, honest judge risks a financial loss; therefore, in self-defence, they (both judge and society) are compelled to pass glaring cases of stained birds, instead of carrying out to the letter the rule that all responsible societies consider needful for the good of the Fancy. If fanciers had not grievances that have so long been in their midst, I could understand the uselessness of a body with the objects of the C.B.U.; but when there is, and fanciers are willing to pay one shilling each to have them remedied, there is need for the Union with rule 17, as such an injury may fall on any or every exhibitor or breeder who makes use of the railway. There can be no such thing as a "boycott" when every society has the same opportunity, and it is no fault of the Union if each fancier or society will not, or cannot, see that it is the duty of each to protect and raise the whole. To make us perform our duty coercion in some form or other is necessary. It is an obligation on every one to get rid of grievances. If it is evident the Union is not to blame, but those who refuse to perform their duty by joining the Union. When all become members the hardship will cease, and what was looked on with hate will be the saving link—rule 17.—G. W. MACPARTLING.

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. It kills all insects, harmless to everything else. Sold in tins, 3d., 6d., and 1s each.

PRESENTATION TO AN OLD BRADFORD FANCIER.

SIR,—"Bill" Horsman is as well known, I think, as any Canary fancier in Bradford, or I might say in Yorkshire, and, although he has not exhibited much of late, he still takes a keen interest in anything pertaining to birdie matters. He was a most successful breeder and exhibitor of the Norwich Canary in the days of the late Jack Thackray, Ben Exley, Pete Rawnsley, etc. He is also now a breeder of prize dogs, and was the proud possessor of that renowned Airedale Terrier, "Briar Test," now defunct. He is the owner also of that famous Fox Terrier dog, "Briar Tackler," a great winner, but now at stud. "Bill" is landlord of "The Travellers' Rest," headquarters of the City of Bradford O.S., and he is the oldest licence-holder in the neighbourhood. Fanciers come from far and near to have a chat with him, and to ask his advice, which he is always ready and willing to give. To show their regard and esteem the fanciers of both sections (bird men and dog men) entertained him at dinner the other evening, after which he was presented with a beautiful marble time-piece and two bronze ornaments. A social had been arranged, and some excellent local talent was got together. Mr. A. M. Harris, chairman, made the presentation, and in so doing said he had known Mr. Horsman for a good number of years, and it had always been a pleasure to him to be in his company. He trusted that he and Mrs. Horsman might long be spared, and that on looking on those beautiful things now before him, it would remind him in after years of the good feeling that existed between himself and those that came to that house. Mr. Horsman, in response, thanked all that had so kindly subscribed to the presentation, also those who had so ably contributed to the evening's entertainment.—F. LUDBROOK.

BRITISH BIRDS AT THE PALACE SHOW.

SIR,—Surely your correspondent, Mr. W. Lewis, in your issue of March 23rd, must be suffering from a very much swollen head, caused possibly by his anxiety to rush into print over my letter about the Great Grey Shrike. I am also afraid his eyesight is defective, as on referring to my letter I find no suggestion that I contemplate exhibiting my Shrike at the Palace next year; so neither he nor the Palace authorites need worry about "upsetting" my plan. Perhaps Mr. Lewis may have had more experience in grinding axes than I. He says I "take the biscuit" for daring to say I had a Great Grey Shrike in my possession, but I notice my friend Mr. Galloway also says he has a specimen of that species, so perhaps we had better divide the biscuit between us, and subscribe for a cake for Mr. Lewis! My Shrike is undoubtedly a British-caught specimen, although purchased from the shop of a dealer and importer. It might surprise Mr. Lewis to learn that the present price of Great Grey Shrikes on the Continent is well over 25 marks and carriage (25s.), so that obviously no dealer could import them and make a profit by selling them for a few shillings. If Mr. Lewis has ever kept a Great Grey Shrike—or a Red-backed Shrike for that matter—(which I very much doubt) and steadied it down, I should be very pleased to know how he did it. I might also mention that the price quoted for Treecreepers is 5 marks (5s.), so that one may fairly assume that the latter are considered common in captivity as compared with the former.

I quite agree with Mr. Galloway in what he says on the difference in feeding the Shrike and the Treecreeper. But I think he must have overlooked the fact that to keep up a constant supply of mice, birds, etc., would be a somewhat difficult task except to a fancier residing on a farm or some such place, while it is well within the reach of most fanciers to get a good food suitable for Treecreepers and the like by simply glancing through the columns of "C.B." and picking out some known advertiser. On the point of rarity, we see probably 50 Treecreepers on the show bench to every one Great Grey Shrike.

Regarding Mr. W. Cook's letter in your last issue, I an sorry he persists in his assertion that the Nutcracker he exhibited was caught in Scotland, when it could, if necessary, be so easily proved where it came from. It strikes me that if so rare a bird as the Nutcracker were seen wild in Great Britain, the "man with the gun" would soon sally forth to shoot it. I am quite aware that the species has been known to visit our shores, but in very small numbers. Mr. Howard Saunders, in his Manual (published in the early nineties) says there are some 30 recorded instances. The columns of the Fancy Press are a very good guide as to how such rarities as Nutcrackers, Waxwings, Meadow Buntings, etc., arrive. We see advertisements on the lines of "Waxwings expected shortly," etc. I don't suppose there is one Waxwing in 50 actually caught in England.

I am sorry, Mr. Editor, you found it necessary to delete part of my last letter under this heading, and as your comment that the deleted portions referred to Mr. Sam Cook, the judge, might give that gentleman a wrong impression of their purport, permit me to say that I was simply trying to reason why he should have passed the bird in question in its class, and then awarded it the special as the rarest British bird. From your editorial note I now see that the other two judges had a finger in the pie. But why I fail to see—at any rate, so far as Mr. Weston is concerned—as he had nothing to put forward as rare in his classes. The show authorities' instructions that the British bird judges were to award the specials jointly could only possibly mean that, if they each had something rare in their respective sections, they were to agree upon the award. Therefore, it must follow that if Mr. Sam Cook was the only judge who had rarities he had the right, and he alone, to award the special. I now understand he protested against the award, and very rightly so. I have discussed this point with several prominent exhibitors, and they all take my view—hence my putting it forward here. What is a rare bird? Is it one that is difficult to keep in captivity, and therefore not generally kept, or is it one not often seen? I venture to think the latter.—S. A. SANDY.

SIR,—Mr. Birchley meets my letter with hard words such as "ridiculous," "unsportsmanlike," and "ungentlemanly." I believe readers will not be deceived, however, by what seems to me to be simply bluff to cover his inability to reply to it. He would have us believe now that he is an injured person—simply "a man who is trying to fish out what is eligible to compete as a British bird and what is not." Why didn't he keep to that point in the first place, then? Twice before when his Great Grey Shrike was put back (at Gateshead and the Swansea Fanciers' Show) he wrote letters complaining of the judges' decisions. He repeats this conduct over the Palace Show awards. If this is not the action of an annoyed and disappointed exhibitor, what is it? Anyone who reads his letters in CAGE BIRDS for March 2nd can see plainly that he is getting at the judges, and trying to make them appear incompetent. Is that "sportsmanlike," I should like to know? He grudgingly admits the winning Treecreeper was a good one, but saw fit to add that his own had beaten it "under the self-same judge this season." Is this not holding the judge up to ridicule? Now, I asked him to tell us where this happened, saying I could find no record of it. Mr. Birchley does not reply. Therefore we can only assume Mr. Birchley stated what was not true. Is that "gentlemanly" conduct? I should think the least he can do would be to apologise to Mr. Sam Cook—if, that is, he made an unintentional misstatement. Let us have fair play, at any rate. Now, Mr. Birchley also states in his last letter that "to show Continental-caught birds in British classes . . . is unjust to an exhibitor of true British specimens." Why, he himself has been showing and winning last season with a Blue-headed Wagtail which was imported from the Continent! Is this "ridiculous" enough for him? When he has had a little more experience in the British bird Fancy he will know more about such matters, and, like other old hands, say less—they know better. Mr. Galloway's remarks are very sensible; he knows what he is talking about.—W. LEWIS.

[We have had to "tone down" this communication somewhat. Correspondents must please keep their "hard words" within bounds.—EDITOR.]

A FAMOUS LORIKEET.

SIR,—Many thanks for fine drawing of my Lorikeet in a recent issue of your grand paper. I may tell you it has been on the show bench now for eight years. Mr. Duncan (Glasgow) bought the pair from Mr. Dewar (Edinburgh), and after having them in his possession for about six months, I got him to try and breed them in an aviary. But after having them for about a year the cock bird put his hill through his tongue, which caused his death. I have had the hen in my possession ever since. Two years ago it laid two eggs, and I thought they might be of some use for the museum at Carlisle, but they did not accept them. It has won between forty and fifty firsts and seconds at various shows throughout Scotland, and is well known, especially among children, as it has a very amusing way of dancing and carrying on, especially if you take notice of it. It is very easily kept on canary seed, and hemp and sunflower, and is very fond of a piece of biscuit. I have never come across one to mate to it, but I believe they would breed in an aviary. Glad to see CAGE BIRDS taking such strides. I had a week-end ramble last week in Northumberland; if I can spare time I will let you know what I saw on my travels.—GEORGE MCWILLIAMS.

THE POINTS OF AN EXHIBITION LINNET.

SIR,—I notice in CAGE BIRDS of March 23rd you publish a paper given by Mr. F. Marwood before the members of the Darlington C.B.S., in which he describes his idea of what a Linnet should be to enable it to have a winning chance on the show bench. Seeing that Mr. Marwood is a judge of British birds, I should like to ask him, and other lovers of the Linnet, if they really think a bird such as is described would stand any chance at all if shown in good company? If it really would do so, then I for one have been labouring under a delusion for years. Mr. Marwood says that the Linnet should have a light throat, continuing light down the centre of the breast, and running off to white at the vent. Now, my contention is that he should be sound nutty-brown from back to tip of tail, except the white in wing and tail. So one of us must be wrong. Then, again, Mr. M. tells us that the Linnet should show a distinct black spangle on sides of head, breast and neck, but does not mention the ticking or pencilling on front of breast, without which a Linnet, in my opinion, can never be a real tip-top specimen. Mr. M. also says that a Linnet should stand as erect as possible, which I think rather misleading, because I have seen a few as straight up as a good Yorkshire Canary, and surely Mr. M. cannot wish to give the impression that the position of the Yorkshire is the correct one for a Linnet? My reason for writing you, Mr. Editor, is that I think it high time something was done in the way of fixing a "standard of perfection" for the Linnet, and for some of the other most popular British birds. If only the judges knew what was wanted, then the exhibitor would have a chance. But, as things are at present, you may win one week and be cardless the next under the same conditions, but with different judges.—F. KING.

IN MEMORIAM.

Mr. H. Howe, Wellingborough.

SIR,—By the demise of Mr. H. Howe, of Wellinghorough, the Fancy has lost another of its old pillars. The deceased gentleman was, years ago, known to most fanciers under the style of Howe and Rohinson, and at one time was the talk of the exhibition world. Well do I remember in the eighties a show which was at Wellingborough—Mr. W. A. Blackston was the judge—when friend Howe won with a very heavy Green Crest, which was purchased with others of the same stud, at a big figure, by a well-known exhibitor. At that time there was always a good Cinnamon or two to be seen in the Wellinghorough aviaries. His noted yellow, and an extra large Buff, were both winners at several leading shows, including the Palace. At that time it was K.N. fed classes. Mr. Howe was also a keen fancier of Norwich Plainheads, the even marked—a bird that found great favour in those days—being a special favourite of his. When I paid my visit I also found him a keen fancier of Hamburghs and Bantams. Taking his life throughout, it was full of interest. At the late Wellingborough Show I paid, at his special request, a visit to his bedside to have a chat on birdy matters. Poor old Harry was a true-hearted fancier in every sense, and I trust that the mantle so ably carried by him for so many years may be successfully borne by the fancier sons left behind—Mr. W. H. Howe, who is a keen fancier of Norwich Plainheads; Mr. A. Howe, of British bird fame; Mr. F. Howe, a lover of Foreigners; and Mr. R. J. Howe, whose achievements at the last Palace Show are so fresh in the minds of fanciers of British. These, with two daughters and widow, mourn his sad loss. The funeral took place on Monday last, amidst many signs of respect shown by the townsfolk. Leading tradesmen and fanciers walked at the head of the procession. The first portion of the service was held in St. Luke's Church, being conducted by the Rev. R. W. Wynter, the last rites taking place at the cemetery. May the turf lie lightly upon one who held the respect of a great many fanciers and friends, including—J. NASON.

A CURE FOR COLDS AND WHEEZING.

SIR,—A short time ago one of my birds, a Yorkshire hen, was taken very ill with asthma, and it got so bad, and she used to sneeze for so long, that I have seen her fall off the perch in doing so. I tried all kinds of remedies, but nothing eased her for long. Several of my friends told me that I could only destroy her, but I hardly liked doing that, and kept giving the bird another chance. Well, one day, whilst in the market, I came across an old book on birds, and giving diseases and cures. Needless to say I immediately bought it, and, to my delight, I found several remedies, one of which took my fancy, as it seemed so strange. It was: Drop a few drops of coal tar in the drinking water each morning. The writer said he had never known it fail except in the last stages of "consumption." By this time my bird was in a very bad state, so I thought I would give it a trial. I can assure you that in a few days I saw a change for the better, and in a little over a week the sneezing and coughing had ceased. Now you would not know her for the same bird—she is so well and lively. I am sorry I cannot tell you the name of the author, as the book is so old; his name is completely obliterated. The spelling is very ancient. I write you this letter hoping that some of your readers may also find it beneficial. I may say that I am only a new reader of your valuable paper, and find it most interesting and useful. I think CAGE BIRDS a wonderful pennyworth, and wish it good luck. —JOHN PATRICK.

SCOTCH FANCY INQUIRY.

SIR,—Some weeks ago I noticed a letter in CAGE BIRDS inquiring what has become of "One anxious to learn"? I at once asked myself the motive of such an inquiry. Was it with a view of writing up the S.F.N.D.O., or was it to write up that improved photo of Jackson's huff cock, that quite an army of photographers have had a hand in improving? Surely such cannot be claimed a model, or no such farce as three champions in one? "St. Bride" says the Edinburgh fanciers in future aim at producing in life the model. Surely he has not the impertinence to say that men who clearly stated at the meeting they did not believe in models, and refused to take part in such, except to oppose the whole farce, as it was termed, are now breeding to a photo that is so out of proportion that it is impossible to produce in life? I for one do not believe this. The Edinburgh fanciers know a good bird, and we have had it clearly stated they would not confine themselves to this, or any model, at present. Was it to bring to mind those meetings of last year? Surely not. The sub-committee meeting for instance, when only four out of that committee assembled to discuss this vexed question, the model, and when that altered photo of Jackson's huff cock was beaten. It had added substance without length, and what a model it was!—deformed feet, eye closed—merely a patch of outline. I venture to suggest the owner learned a lesson at that meeting of four in number, for he afterwards altered it by adding length, such as neither of the three champions in one never had, and also put back on, without adding substance all over. As it is now produced it is quite out of balance. Was it to revive the memory of that general meeting of last year, with its many heated discussions? Surely these badly-managed affairs were not in the mind of this person when he wrote that letter. Perhaps he will more clearly state his reasons for such a letter, and I will answer him.—BELGIAN.

CHAFFINCH-BRAMBLEFINCH HYBRIDS.

SIR,—For the benefit of your readers let me give you my experience with the above cross. I have tried for several years to obtain Hybrids from these varieties, and have had fertile eggs on several occasions. This last season I had the good luck to hatch out four from six fertile eggs in one nest, but lost them all in two days. Now, I want to give warning to anyone who has the luck to get fertile eggs from this cross. Leave them alone with the parents, as I am convinced they cannot be reared with Canaries. I placed mine under a splendid feeding hen, and she did her best to feed them, but they pined away in two days. I gave the same hen (after the Hybrids died) three young Canaries, and she reared them splendidly. Now, when I took the eggs away from the hen Bramble she went wild, and flew against the wires of the aviary for two days. I tried to pacify her by giving her some Canary eggs in the nest, but she went to the nest and pulled them out on to the floor and broke them. If I have the good fortune to get any this season I shall leave them with the parents; they are looking very likely for going to nest soon this season. I shall try and follow Mr. Howe's advice. I thank that gentleman for his information. We are never too old to learn. I also had two nests from the Greenfinch-Bullfinch—four eggs in the first nest and three in the second, all fertile. Four hatched of these. How is this for a record? I only had 13 eggs from my Hybrid breeding pairs last season—every egg full. Eight hatched out of 13, which I have all preserved in spirits, if anyone would like to see them. I might say I am going in largely for breeding this season, having 15 pairs up for Hybrids of various crosses. I have four flights or aviaries, two 6 ft. square, and two a little smaller. These are in a top attic, which is well lighted and ventilated. I shall let your readers know results after the breeding season is over.—J. R. SLACK.

ESTABLISHED 102 YEARS.

HINDHAUGH'S 'SPANISH' SEED.

Absolutely the finest the World produces—Boldest and Cleanest.

MONEY CAN NOT BUY FINER.

SPECIAL OFFER:—56lbs. for 13/- Carriage paid in U.K. Cloth bag included gross (excepting Ireland).

This very special offer is made to introduce this "GRANDEST OF ALL SPANISH CANARY SEED" to all bird fanciers and includes delivery to any station in England, Wales and Scotland having through communication with the North Eastern Railway from Newcastle, by passenger train.

We quote as follows:— DISTANCE NO OBJECT.

"Sample A"	**Finest obtainable Re-cleaned Spanish Canary Seed**	..	**10/- per 56 lbs., 2/9 per 14 lbs.**	
"Sample B"	**Very Fine Bold Re-cleaned Spanish Canary Seed**	..	9/- ,, ,,	2/6 ,, ,,
"Sample C"	**Really Good Bold Re-cleaned Spanish Seed**	.. ..	7/- ,, ,,	2/- ,, ,,

Packed in paper parcels up to 28lbs., free. Over 28lbs. should have **3d.** extra remitted for cost of cloth bag to ensure safe delivery. *These prices are free on rail.*

Carriage by passenger train (payable by buyer) is only:—(in England, Wales and Scotland)

Above 50 miles and not exceeding 100 miles:—7d. for 14lbs.	11d. for 28lbs.	1/9 for 56lbs.
100 ,, ,, ,, 200 ,,	10d. ,,	1/3 ,,	2/4 ,,
Over 200 any distance	11d. ,,	1/6 ,,	2/11 ,,

My Norwich Plainheads.

How I Breed, Moult and Exhibit Them.

By JOHN W. BANCROFT.

Lecture before the Bolton and Dist. Progressive C.B.S., March 5, 1907.

(Continued from page 287.)

Erratum: In the last instalment the word "exhibition," in line 25, should have read, exhibitor.

DOUBLE YELLOWING AND BUFFING.

With regard to this method of pairing, I should not advise the novice to attempt it. No doubt certain advantages may be gained when the breeder knows his stock, as for instance, you possess some yellow birds, good in type, size, etc., but possessing a trifle too much feather. These paired together, sometimes hit it off all right, at other times, again, they don't. I have produced some smart birds occasionally from double yellow, and also bred weeds at others. Some have been beautifully tight and nice feathered, others have been open and slovenly in feather. You are also apt to get birds hollow in neck and long in barrel by breeding this way.

In double buffing, unless the birds are both short and very silky in feather and clean cut about the waist, you are going to get youngsters long in flights and tail, with lovely breeches (as the loose feathers hanging about the thighs are sometimes termed) in addition. Never on any account double buff more than once. The idea of double buffing is to improve the shape and increase size in your birds. It is a moot point whether any real advantage is gained, and I would therefore advise the novice to stick to the more natural mode of pairing, viz., yellow to buff or buff to yellow, until he has gained some experience.

The buffs which come from the double yellows, I consider valuable, and are in my idea the birds to use on one side, when double buffing, for in these you have shortness of feather, and lovely quality and colour as a rule. I have yet to see a real short-tailed and flighted buff Norwich the produce of two buffs. I have seen double buffs shown and win prizes, but they have been far from my idea of what a typical Buff Norwich ought to be. There is one way in which I believe this double breeding is beneficial, and that is in case, say, we are losing colour and quality in our stock, then by pairing up two yellows of extra good colour, nice size, and with good broad heads and short full necks, also two Buffs of extra good quality and fine feather, clean cut about the waist and with plenty of substance, and by pairing the following season the yellows from the double yellows, to the buffs from the double buffs, we shall improve the colour and quality of feather in the yellows and the colour and meal in the buffs. This I have amply proved in my own experience.

GREEN BLOOD.

Often we are recommended to use green blood, to get colour into our stock; more often, I think, than is necessary. If we must be constantly introducing green or marked birds into our room, the percentage of clear birds is going to be small, and we must not overlook the fact, that to breed a typical clear yellow Norwich show bird, is to attain to the highest standard of excellence in the breeder's art.

If discretion be used in the selection of stock birds (choosing the very hottest coloured cocks), the breeder may pair clear birds together, for several generations, without having the need to resort to the marked birds for colour. Personally, I do not consider too many of these "circus horses" (as I once heard a fancier term the variegated birds) any ornament to the bird room. I don't use a very great deal of the green blood myself, yet each season I have birds as high up in colour as anyone I know.

When one has really got short of colour in his birds he should either introduce a yellow variegated cock or two from some fancier he can depend upon, as high up in colour as possible, or else work on the lines recommended by that great authority on the Norwich Plainhead, Mr. J. H. Payne, in his clever and classic article, viz., the pairing of two variegated yellows together. Some breeders use a yellow self-green cock to a clear buff hen, but the former plan is preferable as the greens from the variegated pair break up much quicker than those from the pure green, with the result that clear birds are bred all the sooner.

CINNAMON BLOOD.

The introduction of cinnamon blood in the Norwich as a means of improving the quality of feather I do not advise, as quality and silkiness of feather is one of the chief characteristics of our highly bred Norwich specimen. I contend that we have it at present, without the necessity of an outcross amongst the different breeders' stocks, which is easily available if one desires to acquire it. Moreover, the present day cinnamon is far removed in regard to quality of feather from the old Dun Canary of years ago. When the craze for size and colour began different varieties were grafted into the cinnamon in order to gain these requirements. With what results? An increase of size and colour certainly, but at what a cost! Where was the lovely feather and shape of the old variety? "Gone!" In place of them we had got those Crestbred-cum-Lancashire-cum-cinnamon; and what sights some of them were! Large and hot coloured, I admit, but what length of barrel, flights and tails, browy heads, harsh and open feather, with bad carriage and type—in fact, any other than the Norwich type! It is true that during the last few seasons great strides have been made in this variety, and it is very pleasing nowadays when visiting a decent show which has provided a good cinnamon classification to see the wonderful improvement in the bird as regards feather and type, some of the gems shown by such exponents of the art as Messrs. Dormer, Godley, etc., being perfect models of Norwich type.

As a means of obtaining colour in the Norwich Plainhead the introduction of the cinnamon blood will, I think, prove very disappointing; I have known of several fanciers who, acting on the advice so often offered regarding the use of green blood in order to increase colour, have procured a cinnamon-green bird, and although they have produced variegated birds in abundance, they have had no increase in real colour in their stock. The birds bred thus are only fit for exhibiting in natural colour classes, as their plumage simply would not take the colour feed sufficiently well to render them hot enough for present day colour fed competition. Of course the birds used for the natural colour classes must not be placed on colour food at all.

INTRODUCTION OF SIZE.

I would strongly advise the Norwich breeder never, upon any account whatever, when desirous of obtaining size in his stock, to resort to the Crestbred for the purpose, as the addition of size by this means is greatly out-weighed by very serious faults which the Crestbred cross will possess, viz., sour look, browing, long flights and tail, looseness of thighs and waist, etc. There is now no necessity for this course, nor yet having recourse to the double buffing to gain size. There are many Norwich breeders' rooms in and about Lancashire where one may acquire stock birds, as large as it is possible to breed them, which, in addition to their great size, possess good quality of feather. Personally, I like to breed from a yellow cock and buff hen, and find that I can breed birds this way large and good enough for all practical purposes. I bred a clear buff hen this last season from a monster clear yellow cock and a ticked buff hen, which is the shortest and thickest bodied as well as the largest clear buff hen I have seen for some time past; she is also equal in quality of feather, shortness of wing, flights and tail to any buff hen I have seen staged during the last show season.

PURCHASE OF STOCK BIRDS.

I should strongly advise the beginner when purchasing his birds for breeding purposes to procure the very best his pocket will allow, even though it be only a solitary pair, for the breeding of even one decent show specimen will add more lustre to his name than the production of a roomful of second or third raters. Don't notice those advertisements which offer pairs matched to breed winners at, say, 12s. 6d. per pair. No sane person with any knowledge of the Fancy could reasonably expect to get such for anything like so small a sum. The 12s. 6d. pairs are all right for a first beginning, just to get one's hand in, as it were, but when you go in for the breed in real earnest I consider from 30s. to 40s. each for the cocks and 20s. each upwards for the hens a fair price to pay for decent stock birds from a successful breeder who has the right stuff. Of course, cheaper may be bought, but if the purse will allow of it, this is about the figure you might reasonably expect to get stock birds at, which, under ordinary circumstances, ought to breed you something fit to place on the show bench.

A word of advice to purchasers. Before you buy a bird handle it to see that it possesses real substance. Many a time you may inspect birds in a breeder's room which, when viewed from the breeding cage or flight, appear thick set and full of substance; in fact, so far as outward appearances go, very desirable; but handle some of these birds and they prove scarcely anything but feather. They may appear all right in the breeding cage, showing no looseness at thigh or body whatever; but run them into a show cage, and if they have not been previously trained and steadied they have more the appearance of Crestbreds than Plainhead Norwich. I need scarcely tell you that this class of bird is useless for stock purposes. If a bird handles well, and has plenty of real body substance, we may expect to get body and chest properties reproduced in its offspring.

Now, when I say substance I mean flesh and bone, not fat. Some strains of Norwich are very prone to lay on this fatty accumulation; avoid this if possible. When handling, blow up the feather from about the crop, just on the front of the chest, when, if the bird be too fat you will notice a round lump in evidence; blow also the feathers from the abdomen, the fat will be noticeable there as well. Now this excessive lump of fat certainly makes a bird appear to have a good deep chest, yet if at all overdone entirely spoils the contour of the bird, and tends to make the head appear out of all proportion to the bird's body. Some people go so far as to assert that this fattiness is a disease, and that you cannot breed from birds so affected, maintaining that clear eggs are certain to be the result in case such birds be used in the breeding cage. Whilst allowing that such birds are to be avoided if possible, I cannot wholly admit the truth of these assertions, and will point out cases which have come under my own experience as being exactly the reverse of the statements previously quoted.

Firstly, I have bred from pairs, both cock and hen of the fatty persuasion, and amongst their progeny only a slight percentage have taken after the parents in regard to this fatty growth, the majority of the offspring being entirely free from this undesirable acquisition. Secondly: I have known the very fattest of hens lay fertile eggs and prove most exemplary mothers. One I have in my mind's eye at present with which I supplied a fancier in this town; I had got her for an experiment, and had tried all sorts of dodges to get her fat down, as she was without doubt the fattest Canary I have ever handled. But it was all of no avail. No matter how I fed her she managed to keep her fat up. Well, the fancier referred to took a liking to her, and after I had explained her state to him, stating that I hardly thought she would be of any use to breed from, he took her away, paired her up to a lively, vigorous young cock, when in due time she built, laid five eggs, hatched from them (one being double-yolked) six healthy youngsters and reared them all, two of which were of great size for yellows. So you see, gentlemen, appearances are at times very deceptive.

(To be continued.)

PAIRING BIRDS FOR BREEDING.

By J. C. BARNES.

A Paper read before the Huddersfield O.S. on February 25th.

(Continued from page 310.)

In the Yorkshire variety double buffing is not practised so often; still, it is very useful to help to rectify thin necks. Should your birds have a tendency to run somewhat thin in neck (a common failing), you can double buff a pair or two, and amongst the youngsters you get, you no doubt will find several of them with very full necks. Choose from these the best hens by pairing them up next season to the best quality cocks you have; you will help to remedy the fault of thin necks.

DOUBLE YELLOWING.

Double yellowing can be resorted to should your birds lack quality somewhat, but must not be overdone. When pairing two yellows together let them both be of close feather, and at the same time be as thick in neck as possible, whether you are breeding Norwich or Yorkshires. Double yellowing reduces feather, and youngsters bred in this fashion are exceedingly useful to run with birds that are possessed of more clothing than one cares to see.

At times good birds are got by this process, and I know one fancier who swears by it, and says that the best, or some of the best birds he has ever bred, were procured this way. I cannot go so far as to say that from my own experience; in fact, I would say rather the contrary, as I have bred birds with feather of a very open or wavy description from double yellows. Therefore, I cannot recommend pairing yellow to yellow except for the purpose of toning down feather in one's stock, and not with the idea of breeding show birds.

GREEN BLOOD.

For the improvement of colour in your birds, green blood, of the proper quality, is necessary. In dealing with quality, I made mention of the use of Cinnamon blood, and in the pairing up process I stated that one bird should be clear and the other ticked, the latter showing that a certain amount of dark blood ran in its veins. Now, to make this a little more clear, I will describe how to procure suitable birds of the variegated stamp.

Supposing you are breeding the Norwich variety, obtain a yellow Cinnamon cock (Norwich type), and pair up to a dark-eyed yellow hen. From this cross, the youngsters will vary very much. Some will come almost green, others heavily variegated, others lightly marked. Most of these birds will have a bronze appearance with their markings, and my advice to you is to select the most typical and keep for the following season's use. Should you desire to breed birds for show purposes, keep the lightly marked youngsters, and pair up to clear birds another year. By so doing you will not get your birds too heavily marked for the show bench.

If your stock runs pretty well clear throughout, and has been bred so for a fair length of time, you can keep with advantage one or two of the most heavily marked ones, and pair them up to clear birds. In due course the colour in your stock will be improved.

You will notice that in pairing up a yellow Cinnamon cock, I advise the same to be put to a dark-eyed yellow hen; both birds yellow, mind you. My reason for advising this is, that in the rage for substance in the Cinnamon, the Crestbred has played a rather prominent part, which means more feather than is cared for; therefore, by utilising a yellow Cinnamon cock with a yellow hen (double yellowing) it somewhat does away with abundance of feather which would have a great tendency to crop up were you not to double-yellow.

As regards the Yorkshire, you can use either a yellow Cinnamon marked cock, or a buff one (Yorkshire type, of course), and pair up to a dark-eyed Yorkshire hen of the opposite colour.

I might mention here, that by breeding with marked cocks, you are apt to get more marked youngsters than you would if you utilised marked hens. Hens breed out the markings quicker than do cocks, so your own judgment must be brought to bear on your needs. Again, double yellowing is inclined to get your birds thin in neck, a thing most undesirable, and should you be breeding the Norwich variety, you will be likely to get them too long in barrel, also a great detriment.

GETTING BIRDS INTO CONDITION.

A few weeks previously to pairing up some of your birds may require a little assistance as regards their condition. As I have said, I am not one who cares to force Nature, but, at the same time, Nature calls for help occasionally.

To get my birds into the form essential for success, I provide them with the following:—Egg and bread crumbs (eggs to be boiled about fifteen minutes and allowed to get cold previously to chopping up), with a little castor sugar and maw seed mixed with it. To this I add the following liquid, just enough to make it fairly moist:—Procure 1 lb. of best honey, 1 pint best port wine, and 1 oz. citrate of iron and ammonia. Heat the wine, mix the honey and citrate well with it, and, when cold, bottle up, and it is ready for use. Supposing you have only a few birds to feed up you need not make up so much of the mixture.

Another good conditioner is, Allen and Hanbury's "Byno-Phospates"; a teaspoonful in every ounce of water or thereabouts every day. This preparation also acts wonderfully for bowel complaints and so forth. A few drops of Parrish's Chemical Food given in the birds' drinking water (as much as turns the same port wine colour) is likewise very beneficial.

INGA AND OTHER SEEDS.

Inga, or niger, seed I use pretty freely during February and March especially with my hens. It has a soothing influence, and it is a capital preventive of egg-binding. Many fanciers fight shy of this seed altogether, labouring under the impression that it is a liver destroyer. No doubt if the seed is abused it may cause ill effects, but given judiciously, it is of great value. I highly recommend its use, with discretion.

Hemp seed I use in great quantity during the breeding season, and find the birds thrive on it equally as well as on egg and bread; I would not like to be without it, and I give ad lib. German summer rape is also good. This I boil for about fifteen minutes, then rinse and strain, and provide each pair of birds with a little, along with the egg food and hemp, at least once a day, twice if convenient.

Green food: Watercress, dandelion, and lettuce all come in useful, with dandelion for preference. A change is good, so all three are valuable.

I might just say that, whichever I use, I make a practice of procuring young leaves, washing same before giving to the birds. Gritty sand is an essential, also cuttlefish bone is useful for the shelling of the eggs.

HOW TO MAKE LIGHT BUNS.

By using Eiffel Tower Bun Flour the most inexperienced person can make *light* Buns and Cakes with certain success. Try a 1d. packet. Save Eiffel Tower Labels for 10/6 picture free.

SOME OBSERVATIONS ON HARD-BILLED BRITISH BIRDS.

By S. W. Birchley.

A Lecture delivered February 20th before Swindon C.B.A.

(*Continued from page 311.*)

YELLOWHAMMER AND CHAFFINCH.

The hen Chaffinch was the one before mentioned, which used to come nearly into the house. I used to feed it on the steps, which was the cause of my upsetting my Chaffinch. She had not mated, or else would not have been about so much and so tame. The Yellowhammer was a stranger. I had never seen one before in the garden. I think it could not have paired, for it was the beginning of July when I caught them. I placed the pair in a large cage out of doors, quite away from the house and out of reach of cats and the hearing of my other birds, so they could not influence each other. I did not expect to get any results from these, and I could not watch them or feed them. They were left entirely to a boy. He procured a Chaffinch's nest and placed it in a box in some branches. The hen at once took to the nest and laid two eggs, which I did not take the trouble to test, but let her sit the full time, and at last got my nephew to bring them in. They turned out as I expected to find them—both clear. By some means or other they did not go on again, or show any signs of building afresh.

THE BEST OF THE BUNTING FAMILY.

The Yellow Bunting, or Yellowhammer, as it is commonly called, is the brightest and best of the Bunting variety, but even at that, to my mind, its attractions are few compared with other birds I have named. Like all the Bunting tribe, it is very hard to steady, and is a great bird to sulk. It very often tries one's patience, and frequently one feels inclined to give it liberty rather than be pestered with it. Even then it is a great chance if its tail and wing flights are not badly damaged through mad rushes to regain liberty.

It is by no means a hardy bird (just the reverse in my experience), and if a few mealworms and an insect or two are not in evidence when first caged, there is a great chance if the bird lives. You will find it rather fond of rape seed and chickweed, also the majority of other wild herbage when ripe.

An exhibition specimen should be well defined in head markings (particularly the eye streak), and the yellow on head, chest, etc., should be as bright a yellow as possible. The cinnamon and brown on the body should be of a good sound colour. Get as large a bird as possible, after the Bullfinch type of body, with good headpiece, and not pinched in the skull. I strongly recommend the bath, as the long tail is very apt to get soiled in the excreta. Feed him on ordinary stock mixture, not forgetting, as before stated, a mealworm or caterpillar occasionally.

OUR LITTLE FRIEND THE TWITE.

I would like to say a few words on our sweet little friend, the Twite, which is apparently the connecting link between the Linnet and Redpoll. He is to my mind one of our most fascinating friends, and is not found, like the Linnet, in any part of England, but mostly in the more desolate parts of our islands, particularly on the mountain sides. He is by no means hard to steady, and, if treated with care, will soon prove a most docile little chap. A good show specimen should be as follows:—The whole of the upper part of the body should be striped lengthways with a darker shade. The flights and outer feathers of tail (as in the Linnet) should be marked with white. Rump should be crimson on a fresh-caught bird, changing to a crimson gold when house-moulted. The throat should be of a mixture of cinnamon and white, chest pale cinnamon, and should be well ticked lengthways down the sides and throat. The belly and under parts a dirty white colour.

Of course, size in this case, as in all others, is a great factor, not forgetting a good, rich, sound colour throughout. The feeding is practically the same as the case of the Linnet. Don't forget the bath; give wild seeds when obtainable.

HINTS ON COLOUR FEEDING.

I think, before I finally close, it would be helpful and interesting if I were to give you a few words on the colour feeding of the species I have described to you. I would like you to understand that I do not agree with the colour feeding of many, if not all, of our native birds that are very hotly fed to-day. For instance, take the Yellow Bunting, Siskin, and Chaffinch, as cases in point; also the Goldie and Bullie; these birds are most beautiful in the colours Nature has painted them, and I really fail to see where colour feeding enhances their beauty; but it is done, and will be, I suppose, until a league is formed to condemn it.

As regards the colouring agents themselves, I recommend the darkest possible pepper, as the majority of the colours to be improved are Browns and Cinnamons; this dark red pepper has a better effect. I do not believe in using colour food at all for Yellows and Greens, but the flowers of the nasturtium and marigold will be found far more beneficial; throw these into the cage, and the birds will eat them when they feel inclined. As regards the administering of the powdered colouring agent, the best way to give it is in the form of a soft food. Mix two parts Osbourne sweet biscuit (powdered) to one part ants' eggs and dried flies to measure, and gradually increase the amount of pepper from practically none till you get it the same colour as the pepper itself; continue this on until quite three weeks after the bird has apparently finished casting its feathers, and then gradually reduce the same as you began. Great care must be taken not to miss one single day, or your bird will probably become blotchy. The best time to commence colour feeding is about the third week in July for Britishers, but this must be regulated a little by the state of the weather.

THE NORWICH PLAINHEAD AND ITS CRITICS.

A Lecture by Mr. C. Gardner.

At a meeting of the London and Counties Association of Canary Breeders, at the Bay Malton, Great Portland Street, Mr. Tringham in the chair, there was a capital attendance of members to listen to a lecture by Mr. Geo. Gardner on "The Norwich Plainhead and its Critics." The Chairman, in introducing Mr. Gardner, said no words of his were needed for that purpose, as the lecturer was known far and wide as an authority on the subject he proposed to speak upon, and no doubt they would hear something of benefit to them from his lips.

Mr. Gardner first described what he considered an ideal Norwich Plainhead, and in doing so said he could not accept the illustration by Mr. Bancroft as that of a typical living bird. Chest was needed, but he thought Mr. Bancroft had overdone it. Proceeding to remark upon the history of the Norwich Plainhead during the past few years, Mr. Gardner said possibly there were more coarse-feathered larger birds than there used to be in the old days, but, while these birds were to be deprecated, it had also to be borne in mind that the Norwich Plainhead had been passing through what he might call improvement phases. A bigger bird than the dapper little close boxwood-feathered bird of the days of Adams and Athersuch was sought for, and the process of bringing this about had led to the introduction of Crestbred blood, and that often of ill-selection. Consequently, coarse feather, long flights and tails and other defects had crept in. But it was not well to criticise too closely. One thing was certain—breeders of the Norwich Plainhead were aiming at a bird larger than of old, but of equally grand feather, and if they persevered they would one day get it. Mr. Gardner alluded in somewhat critical terms to the remarks of Mr. F. White, of Melbourne, in his article on the Norwich Plainheads at the Crystal Palace Show, and said he thought it a somewhat difficult task to draw a comparison between the Australian and the English birds, with the ocean in between. It was only by close comparison, side by side, that we could correctly guage the relative merits of the birds of either country. Mr. White said we had colour and size in our birds, but ours failed in shape beside the Australian birds. Our birds were not cut away clean enough underneath, and were not long enough in the leg! Mr. Gardner jokingly opined that he would have the chairman chiding him for poaching on the Yorkshire preserves if he claimed that an ideal Norwich Plainhead should be long in the leg and clean cut away underneath! We should call such a bird "stilty" or Yorky in type. But wherefore this severe criticism of Mr. White? If our Norwich were so bad by comparison, it seemed strange that Mr. White should single out the ideal medal winner at the Palace—the bird which an English judge selected as the acme of perfection of all the Norwich at the great national show—and declare that he would like to take it home with him. It did not look from that as if the English breeders or the English judges were travelling so far wide of the mark in their race after perfection, even when their work was seen through Australian eyes! It appeared that an ideal English-bred bird was good enough to fill Mr. White's eye and cause him to long to take it to Australia, and it occurred to him (Mr. Gardner) that it was, perhaps, cause for congratulation that so able and caustic a critic as Mr. White could even find an English bird good enough to fill his eye. There was little need for heart-searching over the secondraters, when it was admitted that the champions met the wishes of the New World critics. Passing on to note the many contradictory views of the different writers recently in the cage bird papers on the Norwich Plainhead, Mr. Gardner said it might be that in the multitude of counsellors there was wisdom, but there might also be confusion. He recommended his hearers to study well the remarks of Mr. Vardy on the Norwich bird, and closed with a few hints on the use of colour, blood and other points.

The chairman, in moving a vote of thanks to the lecturer for his able lecture, gave an instance in which, last season, he had proved the soundness of Mr. Gardner's arguments as to green blood and what it would produce. The vote was seconded, heartily carried and replied to, and the meeting terminated, Mr. Gardner having spoken for about an hour.

All communications for this column should be written on one side of the paper only, duly authenticated with the name and address of the writer, not necessarily for publication, and sent to H. Norman, Editor, "Wild Bird Life," "Eastcote," Alma Road, Carshalton, Surrey, by Monday in each week. Original observations and records invited.

Early Arrivals.

The Cuckoo was reported to have been heard here on Friday, March 29th, and on Easter Sunday, March 31st, a solitary pair of Sand-martins arrived at their old haunts in Ashbourne.—J. H. Henstock.

Concerning the Teal.

The male Teal is one of the handsomest of the Ducks, while his partner is just as sober-coloured as she can possibly be. Many breed in this country, but the majority of the birds killed for market are no doubt of foreign origin. When settling, Teal will often pitch into a reed bed, apparently head foremost.

Early Youngsters.

In a certain old-fashioned garden in a village surrounded by an ancient wall (with ivy creeping over it) a pair of Thrushes started nesting some time ago. They have now four youngsters. In a day or so these will be venturing into the big world on their own account. They have already feathers upon their wings and bodies.

Freakish Blackbirds.

A white Blackbird is reported to have been seen at Newcastle-on-Tyne. It is described as pure white, except the tail, which is black with a single white feather down the centre. The curious Blackbird, half white and half black, reported as having been seen at Headingley, was still in that locality up to a few days ago.

Quick-change Artistes.

The Chaffinches in the London parks, says "G. B. D.," in the "Daily News," have grown so bright in their rosy plumage with white spangles, that everyone notices them as they flash about with their undulating flight. There is no more striking phenomenon than the rapidity with which birds acquire their best plumage in spring. These Chaffinches were all young birds apparently, and they flashed from a sober, henlike garb into full cock plumage in the space of about forty-eight hours. The Redwings also are twice as handsome as they were a week ago, and the Gulls on the river are putting on their black caps almost as though they had been carrying them in their pockets ready for the first warm day.

A Note on Owls.

Owls swallow their prey whole, and cast up the indigestible portions in the form of pellets, which may be seen in quantities near their retreats. Careful examination of these pellets will often reveal the nature of their food.

Rough on the Kestrel.

All species of Hawks lead a very hazardous life. They are the natural enemies of smaller birds and have a right to exist as decreed by Nature. Man is their greatest enemy, and generally destroys them at sight—especially if they are seen anywhere near game preserves. In this matter all Hawks fare alike. A Kestrel is shot down as quickly as a Sparrow Hawk; there is no "First Offenders Act" to give him a chance. To be seen anywhere in the vicinity of a hen coop is quite sufficient to sentence him to death. There is not the least doubt but that many inoffensive birds have been wantonly destroyed, for it is well known that mice frequently visit the coops to feast upon the scattered corn, even in broad daylight. I once saw the remains of a Kestrel that was actually shot with a mouse in its possession.

Rooks.

Where one has the opportunity of watching certain birds all the year round one is able to note peculiar habits that may escape the ordinary observer for the want of opportunity. Perhaps there are no birds more easy to watch than the Rooks. They live in trees that are always conspicuous. This makes it an easy matter to find them. On the other hand, among a community of birds, all of the same colour, it is a difficult matter to watch individuals. So that, although we are able to study and record the doings of the rookery, we are not able to say much about single birds.

Do they or do they not pair for life? During the present breeding season they are so mixed up that it is impossible to make out individual pairs (although they may exist). If one considers how a pair takes possession of a certain nest (while the others allow them to retain it, without any dispute or squabble), it appears to the observer that the birds have every right to the structure. In that case one would unhesitatingly say that Rooks pair for life.

Advertisements continued from page 319.

FOREIGN BIRDS.

BUDGERIGARS.—Send for list before purchasing elsewhere.—Broxup, 8, Pendle-st., Burnley.

GREY African Parrot, red tail, acclimatised, 30/-; worth £3.—Harvie, Basket Maker, Sheffield.

PAIR adult Budgerigars, nesting, in splendid feather, 7/6 pair, or exchange pair Canaries or three hens.—W. H. Bardner, Ribbleton Aviaries, Preston.

MAGNIFICENT strong, healthy white Lemon-crested Cockatoo, exceedingly rare bird, £2, worth £3 10/-; approval, deposit.—A. Crookston, 11, Eddlewood, Hamilton.

"FINCHES from Afar."—A superb-coloured plate of fascinating Foreign Finches sent post paid, carefully packed, on receipt of sixpenny postal order.—F. Carl, Cage Birds Office, 154, Fleet Street, London, E.C.

"A GORGEOUS Quartette."—A magnificent coloured plate of Parrakeets, by Mr. H. Goodchild, sent post paid, carefully packed, on receipt of three penny stamps.—F. Carl, Cage Birds' Office, 154, Fleet Street, London, E.C.

HANDSOME Australian Grey Galah Parrot, finger tame, properly acclimatised, whistling and chattering well, and will make grand talker, accept 15/-, month's guarantee given; also large brand new Parrot cage, cost 7/6, accept 4/6.—Gore, Gooch-st., Birmingham.

C. H. ROW.

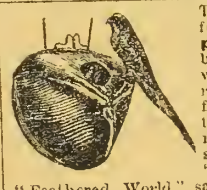
An acclimatised South African Black-headed Oriole (*Oriolum larvatus*), very rarely imported, perfectly tame, in grand colour and health, price 60/-.—C. H. Row, Cornard-rd., Sudbury, Suffolk.

BOOKLET FREE.

FINEST Talking Parrots. I only deal in Parrots that will make first-class talkers; no rubbish. I am willing at all times to send my Parrots on four weeks' trial and three months' talking guarantee. Why? Because all my Parrots are young, strong, and reliable. My lifetime has been spent among grey Parrots, both at home and abroad. I guarantee every customer every satisfaction. Grey Parrots are my special fancy. I have trained them, know their wants, and can give every purchaser a bird that will please him in every way. I can supply grey talkers, not thinkers, that will say almost anything, at reasonable prices. Before you purchase a grey or green Parrot, send for my Booklet, entitled "Talking Parrots." All my birds are sent on four weeks' trial, at my risk. Send postcard for catalogue.—Mrs. Forster, Princes Park Aviaries, Violet Street, Liverpool.

POSTAL ORDERS, PLEASE.

Owing to the new Post Office Regulations respecting the use of stamps upon Postal Orders, we are reluctantly compelled to state that in future our rule re **sending Postal Orders as far as possible instead of stamps** *must be strictly enforced. Advertisers unable to obtain Postal Orders must remit an extra halfpenny with every four penny stamps.*



To breed Budgerigars successfully you must have the **"Improved Secure" Husks,** because they don't fall to pieces when in use as others do. They remain unequalled, and are different to any others. Individual testimonials don't count for much, so listen to what experts say:—Cage Birds says they are "far superior to the old husks." "Feathered World" says: "Undoubtedly, the new husks are very superior to the old." Again "Exchange and Mart" says: "You had better order the improved form; even if it is a little dearer than the old-fashioned sort, it is cheaper in the long run." "Fur and Feather" tells its correspondents: "They have distinct advantages over the old sort." "Poultry" has said: "For Budgerigars we advise the use of the improved style of husks. Surely these are convincing testimonials. They are 4/6 dozen; smaller quantities, **5d.** each. Interesting pamphlet, entitled "Budgerigar Breeding," free on application. Superior box nests for Cockatiels, etc., 1/6. Send for the pamphlet now.

HARPER, Upper Villiers Street, WOLVERHAMPTON

PARROTS. FOREIGN BIRDS. PARROTS.

Grey Parrots, full wing and tail, perfect health, 21/- each; Amazons, 30/- each, finger tame, and started talking; Indian Plains Parrots, 5/6 each; Cockatiels, 10/6 pair; Rosy Cockatoos, 8/6 each; Budgerigars, 6/6 pair; Yellow Budgerigars, 10/6 pair; Zebra Finches, 5/6 pair; Fire Finches, 5/- pair; Saffron Finches, 7/6 pair; Weavers, 3/6; Bishops, 3/-; Cutthroats, 3/6 pair; Hill Mynah, 21/-; all fit for aviaries. Norwich and Yorkshire Canaries, Cages, etc

WEST RIDING AVIARIES, CASTLEFORD.

R. Shelly, 534, High Rd., Chiswick, W.

Cheapest and most reliable shop in West London, cages, birds, and seed. Prize-bred white Fantail Pigeons, 5/- pair; white Java Doves, pink eyes, 7/6 pair; large buff hen Canaries, for mating, 4/6 each; Crested hens, Bennett's strain; Parrots, green Avadavats, 4/6 pair; red Linnets, for mating or song, 1/6; thistle seed, 6d. per oz.; Id. fare from Hammersmith and Shepherd's Bush.

C. A. LUER.

Cordon Bleus, 2/- pair; Fire finches, 2/6 pair; Waxbills, 2/- pair; Green Avadavats, 2/6; Saffron finches, Zebra Doves, 2/6 pair; Cockatiels, 7/6 pair; Siberian Cock Bullfinches, 4/6 each; Nestling Cock Bullfinches, 5/6 each; Hartz Roller Hens, 3/6 each; Orange Bishops in colour, 5/- each; Zebra finches, 3/6 pair; Seed Eaters, 7/6 each; Cape Canaries, 5/- each; Red Shouldered and Collared Whydahs, 7/6 each; Whydahs Paradise, 2/6 pair; Lavender finches, 3/6 pair; Siberian Cock Goldfinches, last lot this season, 5/6 each; German Cock Linnets, 1/- each; Talking Grey Parrots, 90/- each; Tame Amazon, 30/-; Leadbeater Cockatoo, mimics the cat and fowls, etc., 40/-; large Lemon Crested Cockatoo, 40/-, tame.

FOREIGN BIRDS—continued

PARROT LOVERS

Should send post-card immediately for our new enlarged book entitled "Parrot Prattle" (registered copyright, infringers and imitators will be proceeded against). This book contains 120 pages of very interesting facts, and gives valuable advice and hints to all parrot buyers. Full details of our original system of selling Parrots on four week's trial, at our risk, which we were the first to introduce. We sell Parrots of all descriptions on four weeks' trial, at our risk, before settlement. Cheapest and best in the Kingdom, and any Parrot sold by us, and not giving full satisfaction, will be exchanged any time within twelve months. Remember we lead and others try to follow. Write to other dealers as well as us, and judge for yourselves. Lists of Parrots for sale and above book post free on receipt of postcard.

PARROT AVIARIES, MORECAMBE.

PAYNE & WALLACE,

TRAPPERS OF AUSTRALIAN BIRDS,

The Little Zoo, BATH.

AND AT WILD DOG CREEK, EAST KIMBERLEY, N. W. AUSTRALIA.

Our Shipment of Birds & Animals

Arrived this week per s.s. "Salamis."

BUY DIRECT FROM THE TRAPPERS.

The following are the birds which have arrived; prices for SINGLE PAIRS:—

ALWAYS USE OUR

DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor for the *bona-fides* of either buyers or sellers. In all transactions the adoption of our Deposit System should be insisted upon.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient, plus the extra postage incurred, has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller, stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from *both* parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has *not* been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or, if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

PREPAID ADVERTISEMENTS

UNDISPLAYED.—Three Words a Penny up to eighteen words, MINIMUM Fourpence. One Halfpenny per Word for each word over eighteen.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and, after the first eighteen words, are charged at two words a penny.

Headlines or Footlines 6d., 9d., 1/-, 1/6, according to size.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL. Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, Loudon. Terms for Display Advertisements on application.

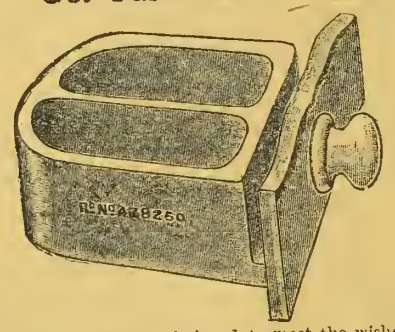
PARR'S POTTERY

NEST PANS, DRINKERS, FOUNTAINS, BATHS (Oval, Round and Square).

"Duplex"

Cut Partition Drawer.



This drawer has been designed to meet the wishes of Breeders so the foods can be separated instead of mixing together. Thus having one drawer instead of two. Made in two sizes.

Messrs. C. A. House, Claude St. John and J. North all say it is a good idea.

Wire door falls into the groove and is not in contact with food.

J. SANDIFORD, Bird Specialist,
PRESTON, Lancs.

ARRIVED! ARRIVED!

10 Tons of SANDIFORD'S Famous ROYAL RED FEED. The Best in the World, Bar None.

I am sorry to inform my numerous customers that I am only able to import this season ten tons instead of twelve, this being all I can produce through such great scarceness of the best Pimento, or Royal Red Feed, from sunny Spain. This also has caused prices to do a jump. So those requiring a good supply must be sure and order enough early on to see them right through the season. I guarantee it won't go bad if kept in an airtight tin, and will be as good in five years if kept airtight. I need hardly point out that the success of Royal Red Feed has been even greater than ever during this last season. I will just point out the great show, Crystal Palace, 1907. Clear yellow, Norwich, Class 21—1st, 2nd, 3rd, 4th, vhc. Clear Buff, Class 18—1st, 2nd, 4th, vhc. Tick. Yellows, Class 19—1st, 2nd, 3rd, 4th, vhc. Tick. Buffs, Class 20—1st, 3rd, 4th, vhc. Unflighted Yellow, Class 30—1st, 2nd, 4th, vhc. Yellow Hens, Class 20—1st, 2nd, 3rd, 4th. Buff Hens, Class 25—1st, 3rd, vhc. Champion Cinnamon Classes. Yellows—1st, 2nd, 3rd, 4th. Buffs—1st, 2nd, 3rd. Unflighted—1st, 2nd, 3rd. Hens—1st, 2nd, 3rd, 4th. I have only pointed out the great show of the world. Every one of above winners were moulted on Sandiford's Royal Red Feed, these being classes where you can't win without colour. I think above enough to prove to anyone that there is only one colour feed in this world; that is Sandiford's famous Royal Red Feed. Send stamp for samples.

Prices this season:—**1 lb., 2/-; 2 lbs., 3/5; 5 lbs., 7/6.** Hot Natal **2/- lb., 2 lbs. 3/8.** Note, these prices are carriage paid. Agents and Wholesalers send for this season's prices.

THE HYGIENE OF BIRD KEEPING.

By W. GEO. CRESWELL, M.D., L.R.C.P., F.Z.S.

Price 1/1, post free from CAGE BIRDS Offices,
154, FLEET STREET, LONDON, E.C.

OPINIONS OF THE PRESS.

LANCET: "This little book will be welcomed by all lovers of birds, whether ornithologists, aviculturists, or the owners of a single pet songster. The author deals with his subject in a thoroughly practical and scientific manner, and the results of his experiments prove the fallacy of some rule-of-thumb theories. . . . The book is well illustrated."

COUNTRY LIFE: ". . . a surprising amount of really valuable advice for all who keep small birds, whether in cages or aviaries. . . . Those who approach the subject with an open mind must admit the cogency of the author's arguments; and these, backed by a very wide experience at first hand, will prove hard nuts to crack for many of the champions of the 'good old methods.' . . . We venture to think that his experience will pave the way for a revolution in the methods of bird keeping in the near future."

MEDICINES.

DIARRHŒA. Inflammation cure in Canaries, British, Parrots.—I supply most of the leading breeders; 7d., ounce free; advice given free.—Mather, 65, Albert-rd., Widnes.

TUSSILINE.—Don't forget to give the young birds a few drops of Tussiline in their drinking water, and feed according to my instructions, then you won't lose any with inflammation just as they commence feeding alone. I have cured hundreds. Bottles, 7d., 1/-, 2/-.—J. Palmer, Chemist, Gamlingay.

Use our Picture Postcards.

BRONCHORINE.

Ideal tonic, cold, wheezing, asthma, brings birds into breeding condition, invaluable for young; original testimonials.—Apply, Crawley, 112, Radford-boulevard, Nottingham, 9d., 1/6, and 3/-. "Forward 1/6 bottle Bronchorine. Find it excellent tonic.—211, St. Albans-rd., Watford. March 14th, 1907."

PANNASSINA.

A medicinal preparation for Canaries and all kinds of cage birds, prevents and cures asthma, wheezing, loss of song and all diseases caused through damp and cold; is an excellent stimulant, and takes the birds easily through their moult. This speciality has built up a 30 years' reputation entirely on its own merits, invariably effecting a cure after every other remedy has failed. In 6d. and 1s. tins, postage 1d. extra. If you cannot obtain it from your tradesman, apply direct to W. J. Hammond, 19, Anstey Road, Coldharbour Lane, Camberwell, London, S.E. Agents wanted.

OPEN YOUR EYES.

There is something here that will interest you I have the best stock of British birds in England. Every bird been properly caged since 1906, mostly in full song, singing their pure wild song. Call and inspect them; over 1,000 to select from. No fresh-caught or foreign rubbish here. Red-breasted cock Linnets, 1/- each, three for 2/0, six for 4/6, 8/- per dozen, five dozen 35/-. Do not be gulled with fresh-caught hens for cocks; extra large steady Linnets for show or muling, 1/6, 2/-, 2/6 each; hen Linnets 2/6 dozen, five dozen 9/-; picked hens for muling, 6d. each. Chaffinch cocks, 9d. each; matched pairs 1/-. For other British birds send postcard for my new illustrated list. All birds on seven days' approval.—Miss E. L. Storey, Crowle, Doncaster.

YOUR LAST CHANCE.

This advertisement may not appear again, so be on the safe side by purchasing now. Few choice Worcestershire cock Goldfinches, steady, and in full song, 4/- and 5/- each. Grand stock of inland country-caught cock Linnets, all steady, well caged birds, not fresh caught sea-coast rubbish, 1/- each, three 2/6, six 4/0, or 8/- dozen. Specially selected cock Linnets, warranted in full song, in large cage, 2/- lot. These Linnets are guaranteed exactly the same as those supplied by me to the Linnet singers of Leeds, Hull, Leigh, Skinningrove, Keighley, and all parts of Yorkshire and Lancashire. Hundreds of contest singers have been sold by me during the last 16 years, so why pay big prices when you can buy first handed at moderate price? Few very steady picked Mealy Redpolls, ideal for hybridising, guaranteed cocks, 2/6 each; hens, 1/- each. Hand-reared cock Blackbird, finger-tame and in full song, 5/- each. Hand-reared cock Thrushes, warranted in song, 4/- each. Very large new cottage-topped Thrush or Blackbird cages, 2/6 each. Cock Goldfinch Mules, extra free loud singers, 7/6 each. Cock Linnet, mated with muling hen Canary, 5/- pair; cock Mealy Redpoll, mated with hen Canary, 6/- pair. All birds are guaranteed well on seed, steady, and well caged, and can be seen at any time, all separately caged, on my premises. All sent on approval, cash or deposit rules of CAGE BIRDS, and money freely refunded if every satisfaction not given. Largest wild bird dealer in England. Established 1891.

W. GORE, 131, Gooch Street, BIRMINGHAM.

HARRY ALLEN.

Champion of all champions, 1st, 2nd, and 3rd prizes again this week, and 1st open to All England at Hunslet last week. I have the finest lot of Linnets ever seen. Big, fine, healthy cock Linnets, well pencilled and very tame, 2/6 to 3/-; extra picked birds, sure mulers, real beauties, 3/0 each. Cock Linnets, singing beautifully, in a polished singing contest cage, with a packet of my special mixture and instructions how to feed, 4/6 the lot; real bargains. Young house moulted Linnets, singing hard, in a singing cage, 7/6, 8/6, and 10/6 each. These birds I can recommend to any gentleman. They are fit for any window, finger-tame, and taught by my well-known champions. Birds specially trained by myself for contest singing, 15/- and £1, with cage; no rubbish. Singing contest cages, 1/6 each, 7/6 half dozen. Four packets of my special mixture, 1/-. Those wishing to know how to make Linnets sing at one another with their wings down should send stamped envelope for particulars of my book on secrets, etc., of Linnets. I am selling my secret to encourage Linnet singing, which I see is being taken up all over England, Scotland, and Wales by the numerous letters I have received. "Ellesmere Port, Chester. Sir,—The bird arrived safe all right. With thanks.—Fenton to H. Allen." "68, Woodhouse-st., Nottingham. Sir,—Bird arrived safe, for which I am well satisfied.—F. Swain to H. Allen." "13, Smeaton-gate, North Oswestry, Middlesbro'. Sir,—I received seed and was very pleased with it. I see in CAGE BIRDS others are imitating you as the Linnet King, but I think you are the original.—I. Willson to H. Allen." Gentlemen,—I wish to draw your attention, that this is the only original Linnet firm, and, moreover, I thoroughly understand the Linnet song, thereby knowing I have the finest lot of Linnets ever seen; for instance, gaining five prizes out of six at the Fisherman's Hut, Ellerby-lane, Leeds, and being congratulated on my good birds by the Hull party who were present, which goes to show that I am speaking the truth. Only honest dealing done here. All birds safely packed and sent day after ordered. (See Singing Results.).—Harry Allen, 42, Brown Hill-cres., Harehills-lane, Leeds.

VARNEY, Stratford.

English Cock Goldfinches, 2/-: Cock Linnets, 1/-; beautiful extra special Siberian Cock Goldfinches, 5/6 and 7/6 each. All above guaranteed breeders, and singing stoutly.

Splendid Bullfinches, quite tame, 3/6, Hens, 1/-.

Feb. 14 was the Birds' Wedding Day.

HOW BIRDS PROPOSE

Six artistic postcards showing the positions of some familiar British birds in courting poses. Specially drawn by well-known artists for the publisher, Mr. F. Finn.

Price 6d. per Set.

F. CARL, 154, FLEET STREET, LONDON, E.C.

MATTHEWS, LINNET KING.

Linnet singers and Mule breeders. My Linnets have stood for the last five years. Have sent them all over England for contest singing and Mule breeding, and they are acknowledged the keenest and best noted birds you can get. If you want a good bird, try one of mine. They are all good large birds, having been caught in the hills and fields, and are not imported birds or common little coasters. I have the largest stock of Linnets in England; some good birds, in full song, all taught under my noted Cheshire champion, been caged since November, and very steady, 2/- and 2/6. Also a grand lot, well caged, nicely on song, 1/6 each, 8/- half dozen, 15/- dozen. I have also a splendid lot, ready for Mule breeding, big, fine healthy Linnets, good nut-brown backs, blood-red breasts, blue beaks, in grand song, 2/-; special birds, 2/6. A few large birds, well marked for moulting for show, 2/6. A free sample of my special Linnet mixture sent with every order, also sold at four packets for 1/-. No Linnet fancier should be without it, as it is the best mixture in England. Gentlemen, read these:—"41, Maidstone-st., Bradford, Yorks. Sir,—I have very great pleasure in thanking you for the Linnet you sent me. He is singing well. Wishing you every success, and thanking you for your honest dealing.—J. Thompson, to Matthews, Birdcatcher." "Ruskin House, Westhoughton. Sir,—The Linnet is singing splendidly, and is very steady. Thanks for sending such a good bird. Wishing you every success.—James Lee, to Matthews, Birdcatcher." "27, Dean's-row, Port Glasgow. Sir,—The bird arrived safe, and I am highly pleased with it. Will know where to send for birds after this.—J. Brown, to Matthews, Birdcatcher." Similar testimonials coming every post. Inspection invited. All birds sent on four days' approval at my own risk, cash or deposit. Buy first hand; no fancy prices.—Matthews, Birdcatcher, 44, George-st., Hyde, Cheshire.

Softbills.

FOR show, cock Wheatears, 2/6; Whinchats, 2/-; tame pairs Bluetits, 1/-; Wheatears, 2/-; exchange.—Fenn, Station-rd., Isleham, Cambs.

ONLY a few on hand.—An extremely artistic plate of British Softbills by H. Goodchild, a unique specimen of this artist's work, sent post free, packed flat in boards, for six penny stamps.—F. Carl, CAGE BIRDS, 154, Fleet-st., E.C.

TO clear.—Golden Crested Wrens, cocks, 8/6 each; Blackcap Warbler, 5/6; Treecreeper, 8/6; fine Bearded Tit hen, 4/-; Cole Tit, 2/6; Long-tailed Tit, 3/6: all in fine feather; room wanted.—Apply, P. F. M. Galloway, Caversham, Reading.

NIGHTINGALE traps, elliptical shape, with self-acting spring nets, best ever seen, 8,000 sold, catch all kinds small birds, 1/9 each, post free; fresh-caught migratory birds will live if fed on gentles and nothing else for short time, 2,000 1/3.—Fishburn, Entomologist, Silsden, near Keighley.

NIGHTINGALES.

Fine birds, 7/6, two 13/6; safe delivery, my risk; cages to order.—Gosling, 74, High-st., Pimlico, London.

NIGHTINGALES.

Genuine imported, fully guaranteed, 10/6, and some chosen for song and exhibition, 15/-; personal selection after 6.30 p.m.—Lelong, 6, St. Anne's-gdns., Queen's-cres., Hampstead, London.

COCK SKYLARKS, FREE!

Yes, free. They are not hand-reared nor house moulted. They have been caught this year, and they are singing their pure wild note from daybreak till sunset. I am sending these gems out on seven days' approval, complete, with cage, fountains, and food to last seven days, at the following prices, 4/-, 5/- each. I sold a hundred of these songsters last spring. Did not have one returned, as the Editor can prove. I have also about 40 hen Canaries. I will accept 2/6 each; cock, 6/6. Every description of cages, wire fronts, baths, bow-front Lark cages, 2/6; Blackbird cages, 3/-. For anything you require send to William Pimm, 229, Icknield Port-rd., Birmingham.

LATEST OPINION OF MACKLEY BROS.' BIRDS.

"High Street, Uppingham, Rutland. Jan. 12th, 1907. Dear Sirs,—The two Birds arrived safe, in the PICTURE OF HEALTH; they are the BEST TYPE of Norwich Plainhead I ever saw. I am HIGHLY DELIGHTED with them. I shall certainly recommend you to all I have the opportunity of so doing. I never had the favour done me from any one FIRM but yours by sending birds on approval without the Deposit System. Trusting the Firm of MACKLEY BROS. may live and reign for the sake of their customers.—Yours faithfully, J. Waddingham to Mackley Bros."

Postal and Telegraphic Address: **MACKLEY BROS., (Jacob Mackley), NORWICH.**

Most of these birds have been bred in outdoor aviaries. This is no flattering advertisement, but genuine, with 20 years' reference. With my business extending so much I have had to take larger and more convenient premises. Please note change of address.

HAVING PAIRED BIRDS,
can spare two tick yellow cocks, grand birds, 30/- and 40/-; stamp, reply.—Breitenfeld, 69, Allen-rd., Northampton.

WANTED, A CLERK !!!

Writing on April 8th, Mr. H. Booth, of Thorne, says: "I sold all the birds advertised in one lot. Please thank all applicants for same through 'Cage Birds,' they are far too numerous for me to do so. I had replies from all over the country, sadly too many. One wants a clerk after an advertisement in "Cage Birds."

FOR ONE MOMENT

Just consider what it means to you when selecting birds for your breeding stock. It matters not if you be an experienced breeder and exhibitor, or only an amateur, all have, or should have, one desire—to get the best possible birds at the most reasonable prices. If you have this desire I would remind you that Miss Storey has the best collection of birds in England, birds of the proper type in breeding condition, at reasonable prices. Do not be misled with unshapely rubbish, when you can have the very birds you require at the same price, carriage paid to your address, on seven days' approval and no risk whatever, until you are perfectly satisfied with your purchase. I yearly sell many thousands of birds, and give every customer satisfaction. I guarantee to please you if entrusted with your order. I am now offering exceptional good value in typical Norwich cocks, 6/6, 7/6, 8/6, 10/6, 12/6, 15/-, 20/-, and 25/- each. Hens, 4/-, 4/6, 5/6, 6/6, 7/6, 8/6, 10/6, 12/6 each. Matched pairs, 8/6. 9/6, 10/6, 12/6, 15/-, 17/6, 20/- upwards. I receive many thousands of unsolicited testimonials, of which the following are samples:—"8, Colvil-st., Middlesbro', March 30th, 1907.—Received Norwich hens safe, in splendid condition. They are grand birds, just exactly what I wanted.—C. Clennett, to Miss Storey." "The Pottery, Leotland, March 30th, 1907.—I have instructed Editor to pay you the money for the birds I have received. I am well pleased with them. They are much better than I expected for the money. When I want more birds I shall always send to you for them.—F. Love, to Miss Storey." "11, Pemberton-av., Berry Port, March 30th, 1907.—I thank you very much for the bird, which gives every satisfaction. It is excellent quality for the money. I could not wish for a better.—G. G. Howell, to Miss Storey." "5, Phœnix-st., Newsham, March 30th, 1907. Birds arrived in best of health and splendid condition. Thanks for the honourable way you have treated me. Wishing you every success.—A. Robertson, to Miss Storey." "The Villa, Brucklass, March 30th, 1907.—Birds arrived safe, in pink of condition. Cock commenced singing same day. I can say that your advertisements bear no exaggeration whatever. —M. Laird, to Miss Storey." "Bryn-awel, Trimsaran, March 30th, 1907.—Received Norwich hen, in pink of condition, and am exceedingly pleased with it. Please send me a cock bird to match it.—D. Dunn, to Miss Storey." To make sure of satisfaction, send me your orders for whatever Canaries or British birds you require. Full new illustrated list post free. All Canaries sent carriage paid, on seven days' approval, at my risk. Travelling cages, 2d. each. Note the old and only address: Miss E. L. Storey, Bird Specialist, Crowle, Doncaster.

CHAMPION NORWICH.

E. CODLEY, Rishton, nr. Blackburn,
Breeder & Exhibitor, has a few choice birds for sale. Also **Cinnamons.**

NORWICH HENS. BARGAINS.

Absolutely one of the best collections of untried hens in Norwich, many so-called Bullfinch type. You run no risk by sending to me, as every bird sent on approval. Buffs, clear or slightly marked, 4/-, 5/-, 6/-, 8/-, 10/-, and 12/- each; yellows, a grand lot, 5/-; a few specially selected pairs, prize strain, at 20/-. Amateurs note, if you want to breed for show. As before stated all on approval with pleasure.—F. Yallop, 23, Alexandra-rd., Norwich.

SILK'S CHAMPION NORWICH.

My name and fame as breeder of Norwich Plainheads is so well known to every fancier that my birds need no paper recommendation. I breed to sell. Most of the leading champions have been bred and sold by me, my vast business having been built purely upon recommendation, not on paper bounce. If you were disappointed last year with Norwich purchased elsewhere, try a pair from a strain of many years' standing. Success certain. Every pair on approval, money returned if unsatisfactory, or deposit with Editor. Satisfaction guaranteed. Champion pairs, 15s. 6d., 20s. 6d., 25s. 6d., 30s. 6d. per pair; some tip-top cocks and hens, yellow or buff, 10s. 6d., 12s. 6d., 15s. 6d. each. Don't risk unreliable strains, but send to the fountain head, or a season's work may be wasted. Remember, all on approval, willingly.

Judge A. E. Silk, *THE AVIARIES,* **Whitstable.**

REMARKABLE BARGAINS

HARTZ MOUNTAIN ROLLERS.

Cocks and hens.—For best value procurable, see my free list.—W. Rudd, The Bird Specialist, Norwich.

HARTZ MOUNTAIN

Roller cock Canaries, direct from Hartz, beautiful birds, only 3s. 9d. each; 21s. a stick, try one.—Varney, Stratford.—"The Elms, 18, Whitehouse Loan, Edinburgh, January 1st, 1907.—Hummell arrived safely, and sings lovely; it is a pretty bird, and gives satisfaction.—N. Turnbull."—"January 2nd, 1907.—Birds arrived, are singing well.—R. M. Lee, 79, Mill Street, Crewe."—"Broom, Newton Mears, Glasgow.—The birds arrived in good condition; I am well pleased with such value.—J. Broom."—"January 2nd, 1907, 32, Easson Road, Darlington. —Bird to hand. I like the song wonderfully well, and thank you for your prompt delivery and attention to my instructions.—H. Hutchison."—Send all orders to Varney, Stratford, London.

DAME FORTUNE.

is said to knock at every man's door at least once in his lifetime. If ever she knocked at the door of Roller fanciers she does so now. I have just concluded the purchase of 100 pairs of the highest class "Trute" Rollers that Germany could boast of. These birds are the whole breeding stud of one of the most successful breeders in Germany, and many actual contest winners are among them. In order to effect a speedy clearance I am offering the cocks at 12/6 each, hens 3/6 each, or properly matched pairs, ready for immediate breeding, 15/- per pair. I also have a few others, cocks, not quite so good, at 8/-, and 10/- each. All cocks guaranteed in full song, day and gaslight, and are guaranteed absolutely free from any harsh notes whatever. Full week's approval allowed with every bird sent out, either cash or CAGE BIRDS' deposit system. This is an exceptional opportunity for anyone to obtain birds of the bluest blood at a moderate price, and as the supply is strictly limited to 100 pairs, early application is imperative. See following few testimonials:—"35, Swan-st., Congleton. March 1st, Sir,—Roller gives every satisfaction. It commenced singing as soon as unpacked. It is a gem. I like it for its sweet mellow rolls.—Yours, F. Robinson." "10, Kimberley-rd, Astley Bridge, Bolton. March 3rd. Sir,—Received Roller on Saturday, and am well pleased. It started singing as soon as uncovered. Thanks for prompt attention.—Yours, D. Tonge." "7, Richard-st., Llanelly. March 3rd. Sir,—Received contest master Thursday week in grand condition. It sang as soon as unpacked. Many thanks for same. Please send following.—Yours, John Williams." "3, Teal-place, Holbeck, Leeds. March 5th. Sir,—I am highly satisfied with Roller you sent on trial, and have instructed Editor to pay you deposit. Thanking you for your straight dealing.—Yours, W. Rowe." "Anthony-ter., Llansaint, near Kidwelly. March 10th. Sir,—Received Roller safely, and am well pleased with it. He is a splendid singer, and well worth the money. Thanking you for your honest dealing.—Yours, W. Williams." "79, King-st., Tunstall. March 11th. Sir,—Received Roller in good condition, and am highly pleased with it.—Yours, G. Tatler." "53, Tunstall-lane, Pemberton, Wigan. March 26th. Sir,—Contest master arrived in pink of condition. He is a grand bird, both in song and plumage. I am highly pleased with him. Please send following. Thanks very much for such a grand bird.—Yours, John Webster." "Rock House, Mill-st., Bakewell. April 1st. Sir,—Please send following Rollers. I am highly pleased with the one you sent me a few weeks ago. It is a much better bird than others which I have paid a higher price for elsewhere.—Yours, H. Howard." Please note.—I have some splendidly made singing box cages, 1/3 each; also Roller song cabinets, with folding doors, made specially for my Rollers, 2/3 each.
W. GORE, Direct Importer, 131, Gooch Street, Birmingham.

£860. STOCK. £860.

Miss Storey has just secured the best and most desirable stock of genuine highly-trained Rollers that has ever been imported into England. These are not a lot of wasters picked up in German markets, but the whole stock of one of the most noted Roller breeders. Every bird is cheap at 20/- each; but as I have bought them right I offer these high-class birds at about half their value. Genuine highly trained cocks, in full song, by day and gaslight, 8/6, 10/6, and 12/6 each. Picked contest and Bandmaster songsters, 15/-, 17/6, and 20/- each. Pure Rolier hens, of same breed, 3/6, 4/6, 5/6 each. For loud songsters that will make the place ring with their song, you want my untrained Hartz songsters. These are good loud free songsters, at a low price. Cocks, in full song by day and gaslight, 6/-, 6/6, 7/-, and 7/6 each; matched pairs, to breed songsters, 8/6, 9/6, and 10/-. The quality of my birds speaks for itself. I have published many thousands of unsolicited testimonials in this paper, and continually receive dozens by every post. Following are a sample of those received this month:—"5, Fair View, Gilfach, Bridgend, April 6th, 1907.—Please send me one pair of birds for the enclosed. There is much credit due to you for your straightforward dealings. I have dealt with you for four years now, and cannot praise your birds too much. I have still the first bird you sent me, and I am open to sing any bird in our valley. Although I have had it four years, I would not now take ten times the price you charged for him. I, as an old fancier, find you are the straightest person to deal with.—C. Mills, to Miss Storey." "10, Brunswick-pl., Blackfriars, London, April 6th, 1907.—I am highly satisfied with the Canaries you sent me. I could not match them in London for anything like the price. I and my friends consider them splendid birds. With thanks.—W. Hyam, to Miss Storey." "Summer Villa, Llandudno, April 6th, 1907.—Received the Roller in sound, healthy condition. I am highly satisfied with the bird; its song is splendid.—L. Wans, to Miss Storey." I could fill this page with such letters of praise. All I ask is let me send you one of my birds, carriage paid, on seven days' approval, at my risk, and you will be convinced that the quality of the bird is the best, and the prices are the most reasonable. Send postcard for my new illustrated list. Neat travelling cages, 2d. each; all birds carriage paid, on seven days' approval.—Miss E. L. Storey, Importer and Breeder, Crowle, Doncaster.

IMPORTANT NOTICE.

Notice, another consignment of St. Andreasberg Rollers has arrivcd; they ars constant day and gaslight songsters, with all the sweetest, softest, and most musical changes of song; water-bubbles, runs, silvery trills, piccolo, harp, and deep bass rolls, etc.; all on six days' approval on receipt of P.O., or deposit the amount with the Editor; 8s. 6d., 10s. 6d.; perfection. Schoolmasters, 12s. 6d., 15s. 6d., 18s. 6d., 21s.; inspection invited any time.—William Shaw, 97, Essex Road, Islington, London, N.

Hummel Rollers.

Finest Rollers imported. To speak well of the Hummel is to gild refined gold. Testimonials from customers who say the Hummel is still singing as sweetly as when purchased four, five, six, and seven years ago. All Hummels have delightful, deep, delicate bow roll, hollow roll, hollow bow roll, du pipe, hollow bell roll, grand round bass roll, vibrating hollow roll, and charming water bubble roll; one price only, 12s. 6d.; no fancy prices; Hummel hens, 3s. each; a beautiful pair of Hummels for 15s. St. Andreasberg Rollers, 5s. and 7s. 6d. each. Hummel Schoolmasters, 20s. each, better than can be obtained elsewhere at treble the price. Thousands of testimonials have been published by me in CAGE BIRDS from satisfied customers. I guarantee strictly honourable trading and satisfaction to all.—Varney, sole proprietor and importer of this remarkable Roller Canary. Twenty years advertiser.—Varney, Stratford, London. Export a speciality. "The Schools, Overton, Ellesmere.—Hummel arrived, it at once commenced to sing—yes, a song worth listening to. It is the most exquisite songster I ever heard—decidedly a perfect Roller. I may say I never expected such perfection; they are worth all you charge for them. I must thank you for your courtesy, and shall be able to recommend your firm to those who require birds and not rubbish."—F. Robbins, to Varney, Stratford, London, Sole Proprietor and Wholesale Roller Canary Importer and Dealer.

Having finished pairing up for new season's breeding (50 pairs), have surplus equally good stock birds, about 60 cocks and 30 hens, for disposal, every one guaranteed untried. Can match unrelated pairs at 12/6, 15/-, 20/-, 25/- to 30/-; singles, cocks, 8/-, 10/-, 12/6, 15/- to 20/- each; hens, 6/- 7/6, 10/-, 12/6, to 15/-. All cold room bred, reared, and kept. All approval, cash or deposit. Price list, together with booklet, "The Whole Art of Colour-feeding and Training Yorkshires," post free 2d. stamps.—Jonas Knight, Allerton, Bradford, Yorkshire.

WINNER SILVER CUP.

Mr. S. Smith, Whitehouse-st., Newcastle, wins five 1sts and cup; Mr. Williams, Chesseli-st., Hull, wins 1st, three specials, and gold medal; scores other testimonials. Same as these birds sent on week's approval at my own risk; cash or deposit. Yorkshires, feather like wax, standard length, cocks, 6/6, 7/6, 10/6, 12/6, 15/-, 20/-; hens 3/6, 4/6, 5/6, 6/6, 7/6, 10/6, 12/6. Norwich, Bullfinch type, cocks, 6/6, 7/6, 10/6, 12/6 15/-, 20/-; hens, 3/6, 4/6, 5/0, 7/6, 10/6, 12/6, 15/6; matched pairs, selected for amateurs, 10/6 upwards.—C. Baker, Herbert-st., Bedminster.

HUDSON'S CHAMPION YORKSHIRES

Are what you want. They are bred from or related to winners at most of leading shows, and in breeding condition. Matched pairs at 10/6, 12/6, 15/-; cocks, 6/6. 8/6, 10/6; hens, 5/-, 6/-, 7/6. Dozen singing cocks, one lot, cheap. Stamp reply.—Hudson, Confectioner, Thackley, Bradford.

Shackleton's Yorkshires.

£21 Challenge Cup, 1903-4-5, £25 Challenge Trophy, 1906, four championship diplomas Crystal Palace, 1903-4-5-6. Having selected my breeding stock, I have for disposal some choice stock birds, cocks, hens, or pairs; prices reasonable; three days' approval; cold room; stamped address, particulars.—The Paragon, Girlington, Bradford.

CHAMPION YORKSHIRES.

SPECIAL Notice.—Write or call at any time and see my splendid lot of long, slim, straight, upstanding Yorkshires; every bird in the primest condition, with plumage like silk; every cock warranted singing; all cold room bred and kept. I have them in all colours except Greens, and all on seven days' approval; cash or deposit; Yellow cocks, orange-yellow, 8s. 6d., 9s. 6d., 10s. 6d.; Buffs, cocks, 7s. 6d., 8s. 6d., 10s. 6d.; Orange-Yellow hens, 4s. 6d., 5s., 5s. 6d.; Buff hens, 3s. 6d., 4s., 4s. 6d.; inspection invited.—Shaw, 97, Essex Road, Islington, London,

WHAT WINS.

What wins your confidence, the confidence of your friends, and the good faith of every bird lover at home and abroad, is the genuine straightforwardness and honest dealing of the Lady Bird Specialist. Why not favour her with your order? If it be for one bird or one thousand, you will be sure to be perfectly satisfied with your purchase. She sends all her Canaries carriage paid, on seven days' approval, taking all risk during the time of approval, guaranteeing you sound, healthy birds of good quality at reasonable prices. Her stock of high-class Yorkshires is undoubtedly the best and one of the largest in England (no half-bred and crossed foreign rubbish here); over 10,000 birds to select from Tight-feathered up-standing Yorkshire cocks, in full song, 6/6, 7/6, 8/6, 10/6, 12/6, 15/- each. Racy Yorkshire hens, 3/6, 4/6, 5/6, 6/6, 7/6, 8/6, 10/6 each. Properly matched pairs, 8/6, 10/6, 12/6, 15/-, 17/6, 20/- per pair. A few winners at reasonable prices. A trial order will convince you and your friends that for good quality, at low prices, it is impossible to equal Miss Storey. Every customer sends an unsolicited testimonial. Note the dates. These are not old, but new. "24, North-st., Hugglescote, March 30th, 1907.—Received the Yorkshire cock safe. Am very pleased with him; he is such a beauty. Thanking you for such a beautiful bird.—T. Golsby, to Miss Storey." Thomas-st., Gorey, Ireland, March 30th, 1907.—Received the two hens, in splendid condition. I am very pleased with them. They are a marvel of beauty. I really do not know how you can sell such birds at so low a price. The day after they arrived here I could have sold them for 15/- profit, but I would not take it. You will by this post also receive orders from some of my friends.—P. Carton, to Miss Storey." (I have received seven orders from Ireland, all mentioning Mr. Carton.) "Ship Inn, Fraserburgh, March 30th, 1907.—Received the birds. I am delighted with them. Please send me another for enclosed amount.—J. Craigie, to Miss Storey." "West Cornforth, March 30th, 1907.—I am well pleased with the birds. I consider they are well worth double the price you charged for them. The cock is an extra good one. You are undoubtedly an honest, straightforward dealer.—M. Joyer, to Miss Storey." "4, Hamilton-st., Glasgow.—It is my duty to thank you for sending me such a fine bird. It far exceeds my expectations.—W. Hayes, to Miss Storey." "93, Wise-mere, Walsall, March 30th, 1907.—I am more than satisfied with the hen you sent me. It is exactly what I required. I find your birds as good as you advertise, and your straightforward, honest way of dealing is certainly a credit to the trade.—J. Carnkill, to Miss Storey." "Erdigg Park, Wrexham, March 30th, 1907.—Received bird safe. I am very pleased with it, and thank you for your straightforward dealings, and for sending me such a good bird at the price.—J. Jones, to Miss Storey." "Langwith, Mansfield, March 30th, 1907.—The hen safe to hand. For quality and price combined it is far superior to any bird I have ever bought before. Thanks for your honest dealing.—J. W Sadler, to Miss Storey." I could fill the whole of this paper with such letters as the above. If you want good reliable birds at reasonable prices, send your order to Miss Storey, who has a large stock of Norwich at the same prices as Yorkshires. All Canaries are sent to your address, carriage paid, on seven clear days' approval. Travelling cages, 2d. each. New up-to-date illustrated price list post free. Note the old and only address: Miss. E. L. Storey, Bird Specialist, Crowle, Doncaster.

YORKSHIRES.

ARTHUR THOMPSON,

197, Bradford Road, Frizinghall, BRADFORD.

STAND OR FALL!

E. TAYLOR, BIRD SPECIALIST,

3 & 7, Thornton Road,

BRADFORD.

I will stand or fall by the result of fair and unprejudiced public opinion on my system of doing business. My birds and bird appliances are no "catch-penny" items of trade. Everything I sell is sound and genuine. I give you the opportunity of a fair and honourable trial. I want no man's money with any man's grumble. I **make** my business friends; and (what is not always quite so easy) **I KEEP THEM!** My Specialities in Cages, Aviaries, Appliances, Foods, &c, for all Cage Birds have something more than merely "a local habitation and a name!" They are known all over the globe. They please all, and disappoint none. My Foods for Cage Birds are ever sound, serviceable, and satisfactory, and my prices all-round are based on terms of both merit and moderation. I sell no rubbish. I have neither time nor room for that class of business. It will afford me pleasure to send you, on receipt of 2 stamps to cover postage, my new Illustrated Catalogue; and, if you are interested in Bird Life, this work will aid that interest.

Remember that I send every Bird out on one full week's approval.

My enormous stock of Canaries includes the largest collection of

TYPICAL YORKSHIRES

to be seen in any one establishment in the world. The recognised Headquarters by Fanciers, Dealers, etc., for Prize-bred Yorkshires.

Ungarnished AND Undeniable.

ORIGINALS open for inspection, bearing **Official Post Marks.** In these days of misleading advertisements and empty bounce, this latter is an important matter in the case of Testimonials. Since last Testimonials were published by me, I am open to show anyone favouring me with a call hundreds, besides which appear below, that bear similar dates. I am fully alive to the fact that it is as easy to write thousands as hundreds, and hundreds as units—but not quite so easy always to prove. To prove my assertion, I will give **£50** to any person if I fail to produce the numbers above stated upon request.

A Beauty.

86, Pilgrim-st. Chambers, Newcastle-on-Tyne, March 26th, 1907.—I am pleased to inform you the Canary arrived in fine condition, and am very well pleased with the "beauty" you have forwarded me. It is just the bird I wanted. Thanks for prompt attention.—J. Hall, to W. Rudd.

Can Confidently Recommend, etc.

Snowdon View, Harlech, N. Wales, March 25th, 1907.—The bird arrived safely. Am more than pleased with it. It's a wonder to me how you sell such birds for the money. I feel I can confidently recommend you to any person wishing to purchase birds.—J. E. Jones, to W. Rudd.

I Shall With Confidence, etc.

5, Chester-st., Caversham, Reading, March 19th, 1907.—Bird arrived safe, and I am very pleased with your treatment of my order. I shall with confidence recommend you to my friends.—W. H. J. Smith, to W. Rudd.

A Champion.

Tatfield-sq., Washington, March 26th, 1907.—I received the bird all right. He is a champion, and started to sing soon after arrival.—J. Burton, to W. Rudd.

Did Not Expect Such Value.

134, King-st Govan, Glasgow, April 2nd, 1907.—I did not expect such good value for the money. Thanks for your prompt attention to such a small order, for birds arrived safe and in good condition.—P. Lamb, to W. Rudd.

Best Ever Seen for the Money.

411, Stonehroom, Alfreton, Derbyshire, March 21st 1907.—The birds have landed safe and I am more than pleased with them, for they are a treat to look at—the best I have ever seen for the money.—Jno. Greensmith, to W. Rudd

If as Good, etc., Must be Grand.

Glasslough-st., Monaghan, Ireland, April 19th, 1907.—Please forward as soon as possible one bottle of Asthmarine. If Asthmarine is as good as your Diarrhœa Cure, it must be grand, as it cured my bird in four doses.—T. Denton, to W. Rudd.

A Sure Cure.

4, Homerule-cottages, Poundfield, Crowborough, March 21st, 1907.—Please send one bottle of Asthmarine, price 9d. Please send it at onee, as I have a bird with a cold, and I find it a sure cure.—C. Hatch, to W. Rudd.

Just What Wanted, But Better Than Expected.

59, Whitworth-rd., Dublin, March 25th, 1907.—The bird arrived safely, and gives every satisfaction. He is just the bird I wanted, and better than I expected.—H. Bowesman, to W. Rudd.

A Surprise—Never Thought Would be Near as Good.

Fire Station, Mill-st., Bradford, March 23rd, 1907.—The pair of birds arrived in perfect condition, and are quite satisfactory, in fact, a surprise to me. I never thought they would be near as good.—A. H. Walmsley, to W. Rudd.

Not a Bit the Worse, etc.

High-st., Tullamore, Ireland, March 28th, 1907. Bird arrived safely, and does not seem a bit the worse after its long journey. She was so well packed that I am sure another 24 hours would have made no difference to her.—A. G. Gardiner, to W. Rudd.

Dozens of People, etc.

8, Gibraltar-hill, Lincoln, April 5th, 1907.—Bird arrived safe and sound, and very pleased with it. Dozens of people have been to look at it, and all going to give you an order.—G. Guntborpe, to W. Rudd.

Worth Double the Money.

Gilbert-st., Hucknall Torkard, April 3rd, 1907.—The bird arrived safe. He is just the bird I want. He has been whistling all the day long. Such men as you ought to get on for sending such good value. He is worth double the money.—J. Hardstaff, to W. Rudd.

Did Not Think it Possible.

94, Allison-st., Glasgow, April 5th, 1907.—The bird I got from you a fortnight ago has turned out a grand songster. I did not think it possible to get such a bird for the money.—J. Buchanan, to W. Rudd.

Could Not Have Picked Better.

Violet Bank, Denny, March 25th, 1907.—I am pleased to say I received the pair of Yorkshires and Goldfinch all right, and I am very pleased with them. I don't think I could have picked better had you given me permission from your large stock. I thank you for your kind attention and straightforward dealing.—R. Marshall, to W. Rudd.

One Worth the Money Alone.

28, Tontine-st., Swansea, March 28th, 1907.—I am pleased to let you know that the Goldfinch and hen Canary arrived this morning. I am very pleased with them. I was surprised to see them looking so well after their long journey. A friend of mine says I can get what I paid for them any time for the Goldfinch alone. Allow me to thank you for the way you have dealt with me.—A. Phillips, to W. Rudd.

Feeding on Nothing but Eggertine.

Shoeburyness, March 28th, 1907.—Will you please forward another tin of Eggertine. I have two nests of Canaries out, and am feeding on nothing but Eggertine for soft food, as I find it has kept my stock of birds in fine fettle during the winter, and whilst laying.—A. V. Rumsey, to W. Rudd.

A Good Advertisement.

Consett, co. Durham, March 26th, 1907.—I received the birds on Saturday morning, and I must tell you that I am very pleased with them. I have had a lot of men to see them, and I will take care they are a good advertisement for you.—C.L., to W. Rudd.

Pleased to Recommend.

Hilda-terrace, Carlton, March 30th, 1907.—I am pleased to let you know that the bird arrived safe. It started singing in ten minutes after it was unwrapped, and it is giving every satisfaction. I shall be pleased to recommend.—H. Fellowes, to W. Rudd.

See W. Rudd's Advertisements under other headlines.

Remember, I send fully **Extended Price List free.** Unlike many imitations of this List, **it is genuine,** because I possess the birds there mentioned and **challenge denial.** They can be seen, not on paper but in reality, as I do not stoop to such tactics.

NOTE.—For **three stamps** I will send my **Amateurs' Guide and Breeders' Handy Diary,** containing over **250 Illustrations.**

NOTE.—All Amateurs should try my Special Matched Pairs of Prize-bred Norwich Plainheads at 10/6, 12/6, 15/-, and 20/-. Crested ditto, 15/-, 20/-, 25/- and 30/-. Yorkshires, 12/6, 15/-, 20/-. These are the *BEST VALUE* ever offered.

FEEDING HENS PROPER, 3/-, 3/6.
Travelling Cages, 3d. extra.

"EGGERTINE."

It is the best, purest, and greatest bone and muscle forming food ever known, as the analytical reports of most eminent authorities prove. It will bring hens into sound and robust condition for breeding as nothing else will. This during the past twenty years has been proved by thousands. It is a genuine egg food made with fresh laid English eggs, with white, of course, included (and NOT foreign preserved yolk of egg) with other valuable properties combined. Tins, post free, **1s. 3d.**; large size, **2s. 6d.** There is a saving in the larger size.

"ASTHMARINE."

This remedy has the largest sale of any similar article by far. Beware of imitations! For all lung affections it is marvellously efficacious—not a liver burner, but both soothing and healing, 9d. and 2s. 6d. per bottle, post free. One used, always kept ready for any sudden attack.

After the stress of the Show Season your birds naturally require a pick-me-up. There is nothing in the Bird World that can compare with RUDD'S

CELEBRATED TONIC DROPS,

The Most Invigorating Preparation on the Market.

W. RUDD,

THE Bird Specialist,

NORWICH.

Telegrams—"CANARIES, NORWICH."

UNEQUALLED QUALITY.

Wicks Bros, Norwich Breeders, Exhibitors, and Exporters of high-class Canaries, in all varieties, have now for disposal grand pairs of Norwich Plainheads, selected and matched for immediate breeding, 8/6, 10/6, 12/6, 15/-, 21/- pair upwards; ditto, cocks, 5/6, 6/6, 7/6, 10/6 upwards; hens, 3/-, 4/-, 5/-, 7/6 upwards; Yorkshires, 9/6, 10/6, 12/6, 15/-, 21/- pair upwards; pairs selected and matched for Crest breeding, 12/6, 15/-, 20/-, 30/- upwards; genuine Norwich songsters, specially selected from our enormous stock for the purpose of song, 6/6, 7/6, 10/6, 15/-, and 21/- each; also Scotch Fancies, Lizards, Cinnamons, Belgians, Lancashires, Border Fancies, Hartz Mountain Rollers, etc., at all prices consistent with quality; travelling cages, 3d. extra. K. DALEY, 95, TITHEBARN STREET, **LIVERPOOL.**

To breed Budgerigars successfully you must have the **"Improved Secure" Husks,** because they don't fall to pieces when in use as others do. They remain unequalled, and are different to any others. Individual testimonials don't count for much, so listen to what experts say:—CAGE BIRDS says they are "far superior to the old husks." "Feathered World" says: "Undoubtedly, the new husks are very superior to the old." Again "Exchange and Mart" says: "You had better order the improved form; even if it is a little dearer than the old-fashioned sort, it is cheaper in the long run." "Fur and Feather" tells its correspondents: "They have distinct advantages over the old sort." "Poultry" has said: "For Budgerigars we advise the use of the improved style of husks. Surely these are convincing testimonials. They are **4/6** dozen; smaller quantities, **5d.** each. Interesting pamphlet, entitled "Budgerigar Breeding," free on application. Superior box nests for Cockatiels, etc., **1/6.** Send for the pamphlet now.

HARPER, Upper Villiers Street, WOLVERHAMPTON

Nests! Nests! Nests!

FOR FOREIGNERS.

We are the largest manufacturers and importers of these nests. If you want the best and cheapest trade or private apply to us. Our unbreakable cokernut husk nest. These do not fall to pieces in transit, as we have known some wonderful husks do. Just read this:—"I shall not require any husks this season, as those I had last year are just as good as ever.—Vernon Sowter, The Poplars, Bass-st., Derby."

Don't take any notice of private users, or trade advertisers, just send for a sample set. Three sizes. One quality, the best, for 1/-, and test them yourself; 3/-, 4/-, 5/- dozen. I guarantee my smallest size equal to the largest sent out by other makers. Cokernut shell nests, The Cosy, for small Finches, Canaries, etc., many styles and patterns, 4/-, 6/-; with perches, 0/- dozen. The Ideal nest-box for Cockatiels, Parrakeets, Parrots, etc., 1/-. Equals any on the market at greater price. Another sort, superior, varnished, 1/6. German rush nests from 6/- dozen; round chip nests, 2/- dozen. These are both suitable for aviary cages.

PEARSON & Co.,

PARROT LOVERS

Should send post-card immediately for our new enlarged book entitled "Parrot Prattle" (registered copyright, infringers and imitators will be proceeded against). This book contains 120 pages of very interesting facts, and gives valuable advice and hints to all parrot buyers. Full details of our original system of selling Parrots on four week's trial, at our risk, which we were the first to introduce. We sell Parrots of all descriptions on four weeks' trial, at our risk, before settlement. Cheapest and best in the Kingdom, and any Parrot sold by us, and not giving full satisfaction, will be exchanged any time within twelve months. Remember we lead and others try to follow. Write to other dealers as well as us, and judge for yourselves. Lists of Parrots for sale and above book post free on receipt of postcard.

YORKSHIRE hen (yellow) and cage, 12 months, 5/6; exchange curtains, boy's boots.—Mrs. Gregg, 19, Scotia-rd., Tunstall.

Advertisements continued on page 352.

IN THE COURTS.

ALLEGED FRAUD BY A NOTTING-HAM BIRD DEALER.

At the Chesterfield County Magistrates' Clerk's Office, on April 4th, before Ald. Johnson Pearson, Henry Tindall, alias Swift, of 31, West Street, Nottingham, was charged with obtaining credit to the amount of 19s. by fraud other than false pretences. Mr. W. B. Smith, solicitor, Nottingham, appeared for the prisoner.

John Burge, of Whittington Moor, grocer's assistant, said that he was a bird fancier. On Nov. 10th last he had an advertisement in CAGE BIRDS as follows:—"Two cocks, six hens, accept 20s. or separate." In reply to that advt. he received a postcard on Nov. 13th offering him 19s. from "H. Tindall, Notting-ham." He sent the birds off at once by the Midland Railway. The day after he received a letter from the defendant enclosing a P.O. for 5s. and in the letter he stated that he would send the balance at the end of the week. On Nov. 23rd he received a postcard from Tin-dall to the effect that the cocks had not sung yet, and he was afraid that they were all hens, but as soon as he was satisfied they were cocks he would send the balance. Witness replied: If not satisfied with the birds send them back, and he would return the 5s. In reply to that prisoner wrote stating that there was not one of the birds which had sung, and that he did not think there were any cocks amougst them. He had not had any communication from the prisoner afterwards, and had never received the balance of 14s.

Mr. Smith: What do you say is the fraud that has been perpetrated upon you? Wit-ness: He got the birds upon a promise to pay for them, and he has not paid for them.

You say another pretence was that he said they were all hens?—Yes.

And this is the reason why you took out a warrant for him, and had him arrested?—I believe I had another communication from Mr. Tindall, saying that two of them died.

Was it after the end of November that you had this communication to say that these birds were dead?—Possibly so.

And then you leave the matter from the end of November until the end of March before you take any proceedings at all?—That is so.

You are a bird fancier, an amatcur bird fan-cier?—Yes.

Could you tell a cock from a hen?—Yes, I think so, but I am not an expert at it.

At this point a cage containing eight birds was produced, but witness was unable to pick out a cock from amongst them, although prisoner stated that there were two cocks amongst them.

Mr. Smith: What did it cost you to put this advt. in CAGE BIRDS?—About fourpence.

Have you sold many birds in this way?—I have sold a tidy few.

Do you breed them simply for the purpose of making profit on them?—No; simply a hobby.

Do you know that Tindall has kept a stall in the Market for 40 years?—I have heard that he has kept one for a number of years.

The Chairman: I think you said that you wrote to him to send the birds back if he was not satisfied?— Yes. The Chairman (to prisoner's solicitor): You did not ask any question on that? Mr. Smith: Oh, no; it is admitted.

The Assistant Magistrates' Clerk: The ques-tion has been asked why you did not take action sooner? I suppose you were making enquiries in the meantime?—That is so.

P. Kerry, E. Evans, and C. F. Tranter, proved delivery of the birds, the latter, a vanman employed on the Midland Railway at Nottingham, stating that he had delivered many birds to Tindall, and apparently he did a large trade.

Arthur William Goddard, detective sergeant of the Nottingham City force, said he knew the defendant well. Witness had visited him many times respecting complaints made as to the manner in which he conducted his busi-ness.

Mr. Smith: I object to this. I say that in a charge of false pretences undoubtedly evi-dence is allowed to be given of other offences of a similar character, but this is a charge under the Debtors Act. The Chairman: Your complaint is that we have no right to enquire into the method in which the man con-ducts his business? Mr. Smith: That is so.

The Assistant Magistrates' Clerk made a note of the objection, but the Chairman al-lowed the evidence to be taken.

Witness added that he had complaints from people all over the country, and that invaria-bly after sending birds to Tindall they re-ceived a communication back that either some of the birds had died or that there was some-thing wrong with them. Generally prisoner sent some money on account.

The Assistant Magistrates' Clerk: You have cautioned him about his mode of procedure?

Witness: Yes, but he said it was no matter of ours and that it was a case for the County Court.

At this stage the prisoner's solicitor put in a number of letters, one from the Chief Con-stable of Nottingham (Mr. Samuel Stevens) and one from the Nottingham Coroner, tes-tifying to witness's good character.

Inspector Sharpe gave evidence of the arrest. In reply to the charge, prisoner replied, "It is not fraud; it is a debt."

The Magistrates' Clerk: That completes the case so far as Burge is concerned. We now propose to call others who have had similar dealings with the prisoner. No doubt Mr. Smith will object to this evidence. Mr. Smith: I do object to all this evidence.

Geo. Brockbank, of Kirkby Stephen, West-moreland, said that he advertised some Pome-ranian puppies, and amongst the replies he re-ceived one from Tindall, of Nottingham. Wit-ness wrote and agreed to sell two at 32s. 6d. each. On Oct. 20th he received a postcard from Tindall: "Puppies safe to hand. Send me lowest price; you know I have to sell them again." On Oct. 24th witness received £1 on account, leaving a balance of £2 5s. which he had never received, although he had written for it.

Walter Hughes, of Oswestry, grocer, stated that he advertised in CAGE BIRDS on Nov. 24th some birds for sale, and amongst the re-plies he received an offer of 9s. for them from Tindall. Witness sent them on, and a few days later he received the wing of a bird back which Tindall said belonged to one of his birds which had died. The wing produced was not the wing of his bird, as it was of a different colour. Witness wrote him and asked him if he had not made a mistake, and the prisoner replied that he had not and that two of the Bulfinches had also died. He had not received any money yet.

Henry Hardacre, 23 New Scarboro' Road, Guiseley, near Leeds, woollen spinner, said he advertised 30 pairs of Canaries in CAGE BIRDS on Jan. 12th last, and he, like the others, had received a reply from Tindall, and he subse-quently sent him ten pairs at 7s. a pair. Prisoner sent a pair back and asked him to send another pair, but he did not do so, and he wrote him to send on his money at once, but he got no reply.

Wm. Haywood, carpenter, of Bath, stated that he also advertised in CAGE BIRDS, and had a reply from Tindall amongst others. As a result he sent him eight birds, and sub-sequently received 10s. on account. On Nov. 13th witness received a postcard from Tindall that he had not forgotten about the balance, but that he was also waiting to hear tho birds sing. Two days later he got another postcard which said, "It seems strange the Mules sang with you; they have never sung with me." On Jan. 30th witness received another com-munication from the prisoner, in which he said with reference to the birds witness had sent to the following effect:—"I found four hens amongst them. Do you call that a fair way of dealing? I still have them by me. I have seen my solicitor and he has told me what to do."

Prisoner pleaded not guilty, and reserved his defence. Mr. Smith said that as a ques-tion of law would arise as to the legality of taking some of the evidence that had been given, he would press for the case to go before a Judge of Assize.

Prisoner was accordingly committed for trial at the next Derbyshire Assizes, bail being allowed.—From the "Derbyshire Times."

CLUB REPORTS.

SCOTTISH B.B.M.C.

The Sub-committee met the General Committee, on April 2nd, at Edinburgh, and the trophy pro-posals submitted by Mr. Livingstone, with Sub-committee's amendments were read. The following were unanimously agreed upon:—(1) That it be competed for annually; (2) that it shall be competed for at four open shows annually. Exhibitor gaining most points to he the winner, and to receive a gold medal of a different design from club medal; also to have his name inserted on the trophy. Runner-up to have silver medal, but this medal not to count for gold medal (this last clause open for dis-cussion). (3) The four shows to be fixed at the September meeting, and that Edinburgh and Glas-gow National Shows be included annually. The other two shows selected not to be the same the following year. Mr. C. S. Crockatt, the well-known exhibitor, sent a handsome donation to the Fund, along with two proposals, one of which was unani-mously agreed upon—namely, "That members must nominate not more than six birds at the time of making their entries, and that points gained by those birds count for the trophy." Further sub-scriptions have been promised, and the matter will be on the agenda for next meeting to decide future action.—R. FARMER, Sec.

GLASGOW, WEST OF SCOTLAND N.M.B.F.B.C.

Show of British birds and monthly meeting, held in the Club Rooms, on 26th ult. There was a large turn out, and six new members were added; 99 birds were staged in the nine classes, and the judges, Messrs. George Henderson, T. Erskine, and R. Watson, jun., had a difficult task in selecting the best birds. The awards gave great satisfaction. LINNET (17): 1, spl, G. Henderson; 2, Watson, jun.; 3, Abercrombie; 4, Graham; vhc, A. Henderson; hc, Craig, McCallum. SISKIN (7): 1, G. Henderson; 2, Eastman; 3, 4, spl, Craig; vhc, McLintock; bc, Crawford; c, spl, Jas. Graham. TWITE (5): 1, Craig; 2, 3, Ward; 4, G. Henderson; vhc, Thaw. BRIT. GOLDFINCH (12): 1, spl, Erskine; 2, hc, Jas. Graham; 3, Alexander; 4, Smith; vhc, Todd; c, G. Henderson. FOR. GOLD. (13): 1, hc, G. Hender-son; 2, Jas. Graham; 4, spl, P. Thaw; vhc, Todd; c, D. Graham. BULLFINCH HEN (10): 1, McLin-tock; 2, Erskine; 3, Craig; 4, Abercrombie; vhc, G. Henderson; hc, Jas. Graham; c, spl, Hendry. GREENFINCH (18): 1, spl, Erskine; 2, Craig; 3, Watson, jun.; 4, Scott; vhc, Todd; hc, Ward; c, spl, McLintock. REDPOLL (9): 1, Watson, jun.; 2, Scott; 3, Erskine; 4, spl, Ward; vhc, Hendry; hc, McCallum; c, Craig. A.O.V. BRIT. HEN (8): 1, c, Scott; 2, Watson, jun.; 3, 4, Craig; vhc, McCallum; hc, Donaghy.—R. A. BROWN, Sec.

GLASGOW & WESTERN COUNTIES N.C.M.B. & F.B.C.

Monthly meeting, held in the Good Templars' Hall on 30th March. Mr. Peter Pettigrew presided. The following were nominated for membership:—Messrs. Cassels, Wilson, Lister, Davis, Brawley, Henderson, Montgomery, Stewart, Duddie, Hayes, Gordon, Riley, Thomson, Hayworth, Aitken, Begg, Fulton, Wm. Craig, Prentice, Kilpatrick, McIloy, Sharkey, Bran-nigan, Buchanan, Dick, W. Murdock, Hardie, John-stone, Whiteford, Murray, Sinclair, Sorley, Lawson, Bald, Livingstone, Fernie. It was agreed to give the following classes at next meeting, 27th April:—Greenfinch, Chaffinch, Bramblefinch, Bullfinch, with numerous specials. The following gentlement adjudi-cated, viz.: Messrs. Morrison, Murray, Kilpatrick, Park, and Weir. The judging competition resulted in Messrs. Young and Brannigan securing first and second prizes respectively. BRIT. GOLDFINCH (19): 1, Lawson, grand rose and condition, inclined to be unsteady; 2, Craig, excellent blaze, rich colour; 3, Marlin, nice rose, rich plumage, well on legs; 3, Renfrew, neat rose, very clear in colour; vhc, Brownlie; hc, Fulton; c, Young. Money specials: 1, teapot (£1 10s.), Ogden Bros., 74; 2, £1, W. H. Shackleton, 69; 3, 15s., J. Wilcock, 59; 4, 10s., Sutcliffe and Sons, 47. Novice competition: 1, cup (£2 10s.), Ogden Bros., 74; 2, teapot (£1 10s.), W. Wads-worth, 40; 3, 10s., E. B. Denton, 34. Taylor's £10 10s. cup competition: 1, £10 10s. cup, G. W. Cuthbertson, 110; 2, painting (£2 10s.), W. Brough-ton, 65; 3, medal (10s. 6d.), A. Hirst, 34; 4, medal, J. F. Gibbons, 29. A meeting will be held on April 27th, at 4 p.m., at Oddfellows' Hall, Thorn-ton-road, Bradford. Mr. Brotherton will preside, and present to successful members trophies and money specials. Mr. Cuthbertson, having won the Taylor challenge cup outright, it now becomes his own property. Members and friends kindly attend. If any errors regarding points, will members please notify before the meeting, and then they will be rectified.—MUNDELL and BROADLEY, Hon. Secs.

SWINDON AND DIS. C.B.A.

Meeting held March 20th, a goodly company of members and friends assembling to hear Mr. P. F. M. Galloway, of Reading, lecture on "The Keeping and Management of British Softbills in Captivity." Mr. Galloway is well-known as one, if not the most, successful of present day Softbill experts, and his lecture fully justified the high expectations formed. In introducing his subject he mentioned that the Blackcap Warbler was about the best bird for a beginner to start with, as being a great berry eater its natural food could be provided with very little trouble all the year round. Mr. Galloway described his methods of hand-rearing, interspersing these with anecdotes of various strange happenings that has befallen him on several occasions. Continuing, he described the correct manner of feeding and caging, etc., also giving hints with regard to their manage-ment during that most trying period—the moult. In conclusion he trusted that although the majority of those present were Hardbilled fanciers, his remarks might have been interesting and instructive to them, and he assured them that in his opinion once a man took up Softbills he never went back on them. His favourites required more attention, yet he asserted that this was more than repaid by their almost human intelligence. A hearty vote of thanks was accorded Mr. Galloway. This lecture will live long in the memories of those present. Delivered in faultless style Mr. Galloway handled his subject perfectly, and while it was thoroughly instructive the matter was such as to keep everyone interested for over an hour. A discussion took place with re-gard to a country ramble, and, providing proper ar-rangements can be made, this will take place on Whit Monday. Then came the outline of a scheme probably unique in the history of the Fancy. Briefly put, the scheme is as follows: That three cups be obtained for competition amongst the members, one for Canaries, one for British Birds and Mules, and one for Foreign Birds. The cups to be won by the member gaining the highest number of points at guaranteed Shows outside of those belonging to a society of which he is a member. This is to en-courage the members to send out their birds. Whether it will materialise or not depends upon the members themselves, for everyone has equal share in the management of the Club's affairs, but the idea has caught on, and the matter will be settled later on. A cup has already been promised by the President, but this is for the best bird bred by a member during the current season. Three more members were elected. Next meeting, April 17th, when the Rev. D. P. Harrison will deliver a lecture entitled "Some Problems to be Solved which can only be Solved by Careful Observation of Birds in Captivity."—JAS. T. EDMUNDS, Sec.

Many reports unavoidably held over.

DULWICH AND PECKHAM C.B.S.

A large number of members and friends met at Headquarters, on April 4th, to hear Mr. J. Robson lecture on the breeding and exhibiting of Canaries. The subject proved to be a most interesting one, Mr. Robson dealing with the various points in a very able and thorough manner, much valuable information being gained by those present. At the close of the lecture the Chairman, Mr. G. J. Woolhouse, invited anyone to ask questions, the lecturer being only too pleased to answer any questions that might be put. Much enthusiasm was here evinced, the questions coming thick and fast for a long time, which kept the lecturer continually on his feet answering same, much valuable information being here again obtained by the answers given. The Chairman moved a hearty vote of thanks to Mr. Robson, which was carried unanimously. Mr. Robson briefly replied.—W. HODSON, Hon. Sec.

BORDER COUNTIES N. & C.C.

Meeting held at 37, Clayton Street, Newcastle, April 6th, at 6 p.m., Mr. A. Brown in the chair. The balance-sheet, showing a balance of 5s., was adopted. Election of officers: President, J. McDonald; Vice-presidents, J. Robson, A. Grey, A. G. Cameron, and T. Floyd; committee, J. Stanger, R. S. Bewick, J. Brown, T. Taylor, T. Winter, T. Dixon, R. Rowell, J. S. Wilson; Chairman, A. Brown; Auditor, J. Paterson. It was agreed that club's patronage be given to the following societies, providing their judge becomes a member of club:—For silver bowl competition—Shields, Wallsend, Gateshead, Hawick, and Sunderland. At these cup shows a gold medal is to be given for most points gained by a novice, providing sufficient novices join the club. A novice to be a member that has never won a first prize in open competition in Norwich or Cinnamon classes previous to season 1907. Will all novices please take note and join as soon as possible, so as to be entitled to compete for medal? Annual subscription 2s. 6d., payable now. Other shows receiving patronage are Morpeth, Kelso, and Newcastle. Will all secretaries see that their judge become a member, otherwise patronage will not be given?—ANTHONY HAY, Scc., 30, Main Road, Tweedmouth, Bewick.

BLAYDON AND DIS. C.B.S.

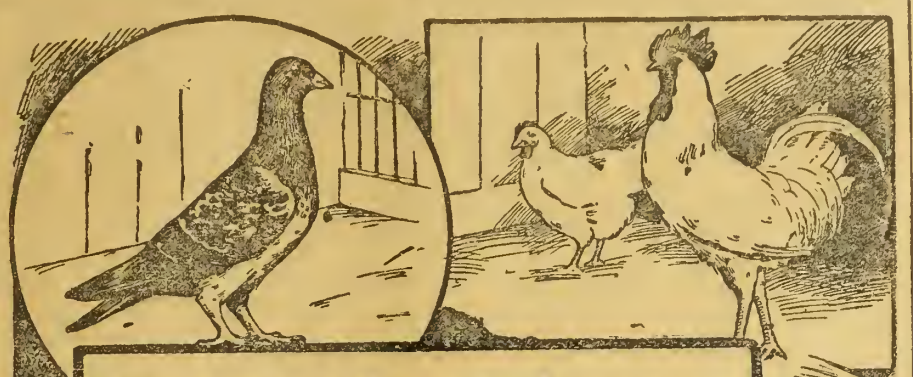
Meeting held 6th inst. Mr. J. Maddison, of Mule fame, gave a most efficient and instructive exhibition of the art of washing cage birds. I say instructive, for Mr. Maddison was most particular in explaining every detail of the whole business as he went along. He said there was no correct way. Some fanciers thought one way the best, and some another, of attaining their object—i.e., getting out the dirt without leaving any sign of soap behind, and went on to explain other known methods of handling and washing. He gave good reasons in favour of the method he had adopted, and which he must have given a fair trial, having washed every one of his own birds from beginning of his career as a fancier. This, I think, is enough to justify not only his method, but himself as an exponent of same in the eyes of all who are accustomed to see the splendid manner in which our genial friend's birds are always staged. Mr. Maddison then suggested someone else have a deal, and, at request of those present, our Chairman, Mr. J. Hands, well known as a Crest fancier and capable washer to boot, put a brace through the lather in workmanlike fashion, the difference between the two methods being very slight indeed. A hearty vote of thanks was accorded Messrs. Maddison and Hands, to which both suitably replied. Two new members were enrolled, and then concluded the most entertaining and edifying meeting in the history of our society.—D. A. OGILVIE, Hon. Sec.

BRISTOL C.B.S.

Meeting at Crown Hotel, April 3rd. The members and friends turned up in large numbers, and a most enjoyable evening was passed, Mr. Manley giving his lecture in a most business-like manner, proving that he was thoroughly up to the work of breeding and managing Canaries, giving a number of useful wrinkles to both young and old. Eight new members joined, bringing the number up to 78, proving that a cage bird society, run in a good and business-like manner, giving plenty of interest, advice, and encouragement to its members fills a long-felt want in this large city, where a good number of bird fanciers abound. It is hoped in the near future to have the greatest experts to lecture at our meetings. Mr. H. Fowler has kindly consented to give some practical instruction in cage making at our next meeting. It was carried that the society join the Cage Bird Union, and that the Open Show be held in the Engineers' Drill Hall (lent by kind permission of Colonel C. C. Gibbs, V.D.) on November 20th and 21st, two well-known and popular judges, Messrs. C. A. House and H. Norman, being engaged to officiate. It was decided to hold a Members' First Feather Show and Judging Competition, for which suitable prizes will be given, on July 3rd. A large number of ladies and gentlemen (prominent citizens) have given and promised their support to the society. Anyone desiring information regarding membership, etc., should apply to the Secretary, J. Munro, Pretoria Villa, St. John's-lane, Bedminster.

NEWCASTLE C.B.S.

Meeting held Lockhart's Cafe, 4th April. Mr. Currah presided. The esteemed President of the Society, A. J. Haggie, Esq., J.P., honoured the company with his presence. Several new members enrolled. Heated discussion took place as to what should constitute a novice. Mr. Slack proposed and Mr. Scott seconded that a novice be a person who has never won a first prize in novice competition, and that an amateur be a person who has never won a first prize in open competition. Mr. Crawhall proposed and Mr. Hutchinson seconded, as an amendment, that a person be a novice until he has won three first prizes in novice classes, or one first prize in open competition. Mr. Crawhall's amendment was carried. Mr. Maddison said things were being arranged just to suit a few, and it appeared to him the older fanciers were to be boycotted. Mr. Hutchinson said as our society was a new one composed largely of young fanciers he thought it only fair that there should be better classification for them, as it was very disheartening for novices to have to show year after year in members' classes and never get a prize, as they had the same birds to meet as if they were showing in open competition, and it caused a good many of them to give up in disgust; if they only got a card it would incite them to try again. Mr. Crawhall said he was sorry he was one of the boycotted, but his chief desire was to further the interests of the society. Mr. Haggie then said that as it has now been finally agreed as to what constitutes a novice it would afford him great pleasure to present a piece of silver worth £2 2s. to the member of the society who exhibited the best bird in the novice classes; to be won outright, for he thought that the novice was the backbone of all societies. A hearty vote of thanks was given to Mr. Haggie, who suitably responded. Members are reminded that schedule for show will be drawn up at next meeting, May 2nd.—CURRY and HUTCHINSON, Hon. Secs.



Important News to Breeders

AND

Flyers of Pigeons and Poultry, . .

Aviary Keepers and Dog Fanciers.

All Breeders and Flyers should know that Hall's Sanitary Distemper is the best thing known for ensuring perfect cleanliness in breeding and store cages, show pens, fowl houses, kennels, etc.

It is sold in tins ready to mix with water, and is applied with a whitewash brush.

One coating effectually destroys all the insect life and fever germs, etc., which collect in cages and kennels.

At the same time Hall's Distemper is non-poisonous to bird and animal life.

It is made in two qualities: the outside quality is the one specially recommended for the above use, and suitable colours are—

No. 17, Cream. No. 66, Pale Green. No. 47, Pale Blue.

HALL'S DISTEMPER

is sold by all Oil and Colourmen, Stores, etc.

Remember to ask for Outside Quality.

Sole Manufacturers—

SISSONS BROTHERS & CO., LTD., HULL.

199B, Boro' High Street, London, S.E.

Full particulars with sample and shade card will be sen post free on application.

SINGING CONTESTS.

BLACKBURN.

The Small Bird Protection and Linnet F.A. held their contest on March 30th at Old Red Lion, Blackburn, when there was a record entry of 57 birds. 1, spl, 5, Topping; 2, Heaps, 3, Barker; 4, Barnes; 6, Rostrow.—R. HAYHURST, Sec.

WARRINGTON L.S.A.

The above held Easter contest April 1st, at the Alexandra Vaults. Twenty-four members competed for twelve good prizes, to the value of £6. The birds were in splendid order, and some good singing was heard, everybody present being well satisfied. The room was crowded. Judges, Messrs. J. Lanten and T. Crawford; timekeeper, Mr. W. Leah. The members were well satisfied with their decisions. After the contest Mrs. Thompson kindly handed the prizes to the winners:—1st, Stanway; 2nd, Leigh; 3rd, Ball; 4th, Leah; 5th, Tryner; 6th, Hallbrook; 7th, Richardson; 8th, Armitage; 9th, Bowers; 10th, Archer; 11th, Turner; 12th, Spencer. After the contest members and friends sat down to tea, which was very much enjoyed. Songs were given by W. Drury, J. Jones (Leigh), J. Cox, and R. Clare, who sang "Little Billie," which was very much applauded. Result of Novice Class, held April 6th:—1st, Mather; 2nd, Drury; 3rd, Robinson.—G. TRYNER, Hon. Sec.

LONDON & COUNTIES ASSOCIATION OF CANARY BREEDERS.

A Successful British Bird Show.

This new and successful society have inaugurated a new Spring Show of British Birds, Hybrids, and Foreign Birds, which has proved a very instructive and attractive venture. Some 90 entries were staged at the new headquarters, The Bay Malton, Great Portland Street, W., on March 23rd. The management of the concern was under London's senior secretary, Mr. R. J. Pretty, and the association is to be congratulated upon having such a secretary, whose experience of eleven years' continuous service is worth having. He was ably assisted by his assistant, Mr. Ransley, also by various members of the committee, Messrs. Williams, Morrison, G. Elgar, T. Kelly, H. J. Pearce, P. Adamthwaite, etc. The classification provided was extended to nearly every kind of Finch, Bunting, and also classes from both cage moulted and field moulted birds. The absence of Mr. J. Goodall's team was disappointing, as it robbed the foreign section of its attraction (perhaps Fulham was a bit too much for Watford. Eh! John?). Goldfinches were not very numerous, but were of good quality, and Mr. Bell's field moulted bird scored a victory over his cage moulted brethren by capturing the special. He was not a big one, but of good colour, and had a nice square blaze, and, with a good moult, he has the making of a champion. One of the surprises of the show was a team of six birds, shown by that staid old Nottingham Canary breeder, Mr. Bell; they were a credit to his judgment and selection. The Redpoll and Twite class was exceptionally strong; 15 entries, 14 of which were Redpolls. Mr. Williams took first with a field moulted bird of nice colour and markings. The Linnets were of a goodly number, Mr. Adamthwaite being first in the field moulted with a finely-marked bird, but he was beaten for the special by the cage moulted exhibit of Mr. Sparkes'. Greenfinches were weak, but some good coloured specimens were shown by Messrs. Morrison, Hammant, and Heine. Chaffinches were also very fine, but the pick was shown in the field moulted class, the winner being of splendid colour and markings, owned by Mr. E. Pretty. The A.O.V. class consisted principally of Bramblings, with a Hawfinch and Red Bunting, and Yellow Bunting. Mr. Allen Silver judged, and gave every satisfaction.

GOLDFINCHES, CAGE MOULTED (6): 1, Heine; 2, Hawes; 3, Sparkes; 4, R. J. Pretty. FIELD MOULTED: 1, spl., Bell; 2, Thorpe; 3, Clark; 4, W. Elgar. BULLFINCHES, COCK: 1, R. J. Pretty; HENS: 1, Morrison; 2, Adamthwaite; 3, Thorpe; 4, W. Elgar; vhc, G. Elgar. LINNETS, CAGE MOULTED: 1, spl. Sparke; 2, Morrison; 3, Kelly; 4, W. Elgar; vhc, Heine. FIELD MOULTED (13): 1, Adamthwaite; 2, vhc, Clark; 3, Bell; 4, hc, c, and spl, Hawes. GREENFINCHES, CAGE MOULTED: 1, Morrison; 2, Heine; 3, Hammant. FIELD MOULTED: 1, Hammant; 2, Hawes; 3, Bell. CHAFFINCHES, CAGE MOULTED: 1, 2, R. J. Pretty; 3, Heine; vhc, Goodall. FIELD MOULTED: 1, E. Pretty; 2, Bell; 3, 4, Adamthwaite; vhc, R. J. Pretty. REDPOLL AND TWITE (15): 1, spl, Williams; 2, c, R. J. Pretty; 3, Morrison; 4, hc, Hawes; vhc and spl, G. Elgar. SISKIN: 1, G. Elgar; 2, Thorpe; 3, E. Pretty. A. O. FINCH, COCK: 1, Williams, Bramble; 2, Thorpe, do.; 3, Heine, do.; 4, c, Hawes, Hawfinch; vhc, R. J. Pretty, Reed Bunting; hc, Morrison. HENS: 1, Morrison, Yellow Bunting; 2, Hawes, Greenfinch; others absent. INSECTIVOROUS, LARGE (3): R. J. Pretty, absent. FOREIGN: Goodall, all absent. CANARY, HYBRID DARK: 1, R. J. Pretty, Greenfinch; 2, W. Elgar, Linnet.

JUDGES OF CAGE BIRDS.

The attention of Show Secretaries is directed to the following list of gentlemen willing to act as Judges. Terms for insertion on application.

A. AMBLER, 17, Lytton Road, Bradford. Judge of Canaries and Cage Birds. Life experience. 11 years reporter to the Fancy Press.
H. W. AXE, 55, Market Place, Doncaster. Judge of Canaries and other Cage Birds. Practical experience (Norwich and British speciality).
W. O BARLOW, The Aviaries, Malpas, Cheshire. Judge of Canaries, British Birds and Mules. Terms moderate
J. C. BARNES, 149, Duncombe Street, Walkley, Sheffield. Judge of Canaries and Cage Birds. Long practical experience. Terms moderate.
W. P. BARNES, Judge of Canaries and Cage Birds. Life practical experience. Breeder and exhibitor. Reporter for Fancy Press. Commercial Road, Grantham.
GEO. BENNETT, 46, Wenlock Street, Luton, Beds. Judge of Canaries and Cage Birds. Thirty years' experience. Terms moderate.
W. A. COWGILL, 115, Washington Street, Girlington, Bradford. Judge of Canaries and Cage Birds. Over twenty years' experience. Terms moderate.
A. G. DAVIS, Judge of all Classes of Cage Birds. Long practical experience. Terms moderate. 110, Tib Street, Manchester.
T. DIXON, Pioneer Terrace, Bedlington Station Northumberland. Judge of Canaries and Cage Birds. Life experience.
J. DOBSON, 14, East Road, London, N. Judge of Canaries and Cage Birds.
J. W. DRIVER, (Adnitt & Driver), Gladstone Street, South Normanton, Alfreton. Judge of Cage Birds.
GEO. GARDNER, 11, Haverstock Road, London, N.W. Judge of all kinds of Cage Birds.
C. A. HOUSE, 82, Upper Walthamstow Road, Walthamstow Judge of Canaries, Mules, British and Foreign Birds.
W H. LINDLEY, 4, Summer Lane, Wombwell, near Barnsley. Judge of Canaries and Cage Birds only.
E. A. LOVELL, 19, Islington Road, Southville, Bristol. Judge of Cage Birds (all varieties). Life experience.
F. MARWOOD, 1, Barnard Street, Thornaby-on-Tees, Mules, British and Foreign, a Speciality. 17 years exhibitor. Terms moderate.
W. R. MILES, The Aviaries, Chichester. Judge of Canaries and Cage Birds. Life experience.
W. MUNDELL, 6, Carlisle Place, Bradford. Judge of Canaries and Cage Birds.
J. NORTH, 435, Oxford Road, Reading. Canaries, British and Foreign Birds. Author of "The Common Sense of Canary Rearing."
J. PATTERSON, Chirnside. Judge of Cage Birds. All varieties. Wide practical experience. Specialist Border Fancy Judge.
J. H. PAYNE, 17, Northgate Street, Gloucester. Judge of Canaries, British and Foreign Cage Birds.
PARKER ROBINSON, N.B.B. & M. Club, 1, Back Hartington Street South, Barrow-in-Furness. Cage Birds, all Varieties.
J. H. ROE, 167, Clarence Rd., Derby. Judge of Canaries and Cage Birds. Twenty years' practical experience.
WILLIAM J. ROSS, 19, Haulgh Road, Inverness, N.B. Judge of Pigeons, Canaries and Cage Birds. All varieties. Life experience.
C. E. SILK, The Aviaries, Emsworth, Hants. Judge of Canaries and all Cage Birds. Life experience.
HENRY TAMS, Orchard Place, Longton, Staffs. Judge of Canaries, British and Foreign Birds. Twenty-five years Breeder and Exhibitor.
R. B. TOPE, Hoe Street, Plymouth. Judge of Cage Birds, Rabbits, Cats, and Cavies. Twenty-five years' experience.
J. WILCOCK, 14, Chapel Street, Eccleshill, near Bradford, Yorkshire. Judge of Canaries and Cage Birds. 25 years Breeder and Exhibitor leading shows.
J. C. WILMOT, 17, Sandhurst Road, Bedford. Judge of Canaries & British Birds. Thirty years' experience.
J. H. WINN (of Winn & Hinde). Freehold Aviaries, Lancaster. Judge of Canaries and Cage Birds.
H. WRIGHT (WRIGHT & SON), 84, Heath Road, Norwich. Judge of Cage Birds. Life experience.

LLANDUDNO.

This Show, held April 4th, in connection with dogs and pigeons, was a very attractive one. Seven classes were provided for cage birds, some of which filled well. The quality, except in a few instances, was not up to the average for North Wales, but we anticipate a great future for this show, visitors being numerous. Special mention may be made of the following:—Mr. Davies' King Parrot, a wonderful bird, and must have run a tight race for best in show; Mr. Sheldon's buff Norwich, which stood first, is a gem, but could just do with a little more size. Mr. E. J. Jones won cup for best in show, guinea special, and special for best Norwich, with a good clear yellow; the same owner's head marked buff was a clinker, too. The winning Hybrids are well known and need no comment. Mr. W. C. Roberts judged, and Mr. Sheldon represented the C.B. Union. NOR. CL. (11): 1, 2, Sheldon, buff, beautiful type, grand head, nice short bird all over, exquisite colour and full of bloom, second a good yellow, built on slimmer lines, neat head, fair body, crosses wings, good feather; 3, vhc, Sedgewick, buff, fine head, neck, and body, rather long in tail; res., Vaughan, extra large, really choice, fine stamp; hc, Walker. TKD., ETC. (17) 1, 2, Sedgewick, grizzle neck yellow, good head and body, very nice colour, second cap marked buff, fine quality, not so pleasing in shape; 3, Brown, moderate specimen, foul green; hc, Walker. YORKS. (9): 1, 2, Ellis, fair variegated buff, coarse and frilly, good shape, second a much better clear yellow; 3, vhc, hc, Alcock, neat and stylish, wings well braced, nice pipe tail, stands well. CANARY, A.O.V. (11): 1, res., Fisher, silver and gold Lizards respectively, both well capped and full of work; 2, Jones, very fair green Crestbred; 3, Leigh, dark Crest, a real good bird; vhc, hc, Sheldon, very good Borders, well-known winners. MULES (8): 1, spl, Leigh, well-known Greenie-Bullie; 2, Davies, equally well-known Linnet-Bullie; 3, res., Hughes, very pretty variegated Goldie-Canary, reserve good dark buff Goldie-Canary; vhc, Morris, Jones; hc, Relf. BRITISH GOLD. OR BULL. (23): 1, spl, vhc, hc, E. R. Owen, Bullie leading, good size and shape, somewhat smoky in colour; 2, Davies, another Bullie, better colour, good cap, beaten in size; 3, W. P. Jones, very good Goldie, rather brassy in blaze; res., Jones and Owen; vhc, Alcock; hc, Jones. FOREIGN (3): 1, 2 spls, Davies, 2, 3, Roberts.

SHOW DATES FIXED.

To secure insertion in this column a guarantee that the show will be advertised in "C.B." to the extent of at least 25/- must be sent to our manager.

I sold every bird from my advertisement last week.—H. C. Ainge (Malton).

Will you be so kind as to stop my advertisement in Cage Birds, as I am pleased to say I have sold all out but my breeding stock.—J. Wilcock (Eccleshill).

Thanks for splendid plate of Canaries; it is a masterpiece. What should we fanciers do without Cage Birds? I opened the paper in front of one of my cock Canaries; he started calling directly. He saw it, and then burst into song.—Hy. Pettit (Horley).

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. It kills all insects, harmless to everything else. Sold in tins, 3d., 6d., and 1s each.

I might say that with the advertising I have done, I have had a great deal of success with advts. in your paper.—W. M. Catt (Hailsham).

Mr. A. Wilkinson, the Secretary of the Crewe O.S., wishes to thank all who have so kindly assisted in the sale of tickets for the recent prize drawing.

The Nest-feather Show of the Birmingham C.B.S. has been fixed for July 17th, with Mr. J. E. Russell as judge, writes Mr. H. C. Wilkins, the Hon. Sec.

Mr. W. Garthwaite, of Lifebelt fame, writing April 8th, says: My business has been established entirely through Cage Birds. I am astonished at the result of my last advertisement.

Mr. W. Brotherton, of Rotherham, is to lecture on the breeding and rearing of Canaries on April 13th before the Goldthorpe, Thurnscoe and District C.B.S., writes Mr. W. Jackson, Hon. Sec.

The Sunderland Show Committee having engaged a member of Border Counties Norwich and Cinnamon Club as judge, will receive club's patronage for silver bowl and novice gold medal competition.

Mr. J. D. Hamlyn, the well-known dealer, of St. George's, E., sends us his April price list, which is a very comprehensive one, and comprises a goodly list of Foreign and British birds, Waterfowl, etc.

Broughty Ferry C.B.S. held a well-attended meeting on April 3rd, with Mr. Carmyllie in the chair, when the date of the Open Show was fixed for October 12th. Selection of judges was delayed until next meeting, May 1st.—Chas. Muir, Sec.

We have fixed the dates of Whitehaven Annual Show for Nov. 15th and 16th, writes Mr. W. J. Douglas, the hon. sec., and will send names of judges later. We have departed from our old date to avoid Preston and other shows in the North.

Our country ramble, writes Mr. W. Hodson, Hon. Sec. Dulwich and Peckham C.B.S., 209, Crystal Palace Road, S.E., has been fixed for Sunday, May 12th, and we invite any fancier to join us. All information regarding same can be obtained from myself.

The Falkirk and Dis. C.B.S. now numbers twenty-eight members, several being enrolled at the last meeting. It has been decided to give a medal to the best bird in each section at the annual show. The secretary is Mr. W. Chubb, 14, Cockburn-street, Falkirk.

Mr. A. E. Bailey (late of Bristol), who sails on the "Empress of Britain" on the 19th inst. for Canada, would like to know of any cage bird fancier sailing on the same boat, second class. Address immediately to A. E. Bailey, c/o "The Cottage," Shirley, Southampton.

Mr. H. Booth, of Thorne, writes: I sold all the birds advertised in one lot. Please thank all applicants for same through Cage Birds. They are far too numerous for me to do so. I had replies from all over the country, sadly too many. One wants a clerk after an advertisement appears in Cage Birds.

I feel justified in giving a word of praise for the knowledge on birds which I have received by reading Cage Birds. Though this coming season is practically only my second, I begin to think I know something, for a breeder actually asked my advice re pairing some of his birds only last week. I feel assured by that I *must* know something!—C. T. Mansfield (London, S.W.).

A well-known Norwich dealer writes us in reference to a canard about the German Canary industry, which appears in another paper, and says: What about the estimated 4,000 breeders in Norwich alone? Suppose these breed on an average 10 to 20 pairs each, what becomes of the boasted 50,000 bred in the Hartz Mountains? England, not Germany, controls the Canary industry of the world.

What are Norwich breeders doing? In sending us the report for the year, Mr. J. Raynes regrets that the Norwich Plainhead Club has again an adverse balance, and that there is a falling away in the membership, the latter totalling 141 against 158, and the adverse balance £4 10s. 2d. It is difficult to assign a reason for this state of things, the club having been most energetically managed. The present state of affairs is really serious, and the members should rally round the committee and help them to put things on a better footing.

Over fifteen years ago I was an enthusiastic aviculturist, but dropped out of the Fancy. About two years ago I saw a copy of Cage Birds (I had been reading — and — in the interval) and bought it. The replies to the various questions I found given in a gentlemanly, generous-hearted way, that showed a living, lively interest taken in them, and after reading a few of the articles, I then and there decided to get your paper every week. Now I have a large aviary with Madagascar Lovebirds, Green and Yellow Budgerigars, Java Sparrows, Cockatiels, and Red Rosellas, and this week I have got a pair of Blue Mountain Lorrikeets and Moustache Parrakeet, so that I think I am gradually coming round again.—M. Brown (Belfast).

Through advertising in Cage Birds I quickly sold all my birds that I had to spare.—John Angus (Falkland).

We are quite satisfied with the results of advertising in Cage Birds.—Midland Cage Works (Nottingham).

Allow me to congratulate you on the rapid strides and success of your excellently got up Cage Birds.—R. H. Jones (Swansea).

Replies re my Goldie-Bullie Hybrid keep pouring in though the bird has been sold some little time now.—W. Andrew (Olney).

The dates of the next Great National Crystal Palace Cage Bird Show have, we learn, been fixed from January 31st to February 4th, inclusive.

At our last meeting several new members were enrolled, and Mr. H. W. Battye selected to judge the cage birds, writes Mr. A. Bowes, Sec. of Crook C.B.S.

At the last meeting of the Bristol Cage Bird Society, writes Mr. J. Munro, the hon. sec., it was unanimously carried that the society join the Cage Bird Union.

There was a large gathering at the last meeting of the Edinburgh Norwich and M.B.S., writes Mr. W. Dunlop, the Secretary, and four new members were elected.

I beg to return thanks to Mr. J. Lees, writes "G. W.," for his very ready reply in giving recipe for egg cake. It saves a lot of trouble to have a good food ready at hand.

The Wibsey and District Cage Bird Society has arranged two First Feather Shows and four Second Feather Shows during the year, the judges elected being Messrs. C. Stebbings, J. Hartley, J. Townend, S. Dean, F. Benn and L. Bolton.

Will all members of the Leeds Cage Bird Society, write Messrs. Stephenson and Hornby, the Secretaries, who intend being present at the dinner and smoker on Friday, February 19th, please send in their names to us not later than Monday, April 15th (tickets, 1s. 6d.)?

Writing, March 22nd, from 463, Langside Street, Winnipeg, Canada, Mr. J. Wenham says:—Please thank all your readers who answered my advertisement. I could not attempt to answer them all by letter. This speaks well for Cage Birds as an advertising medium.

We understand that the Crystal Palace Company has paid up all monies due from them to date in connection with the L. and P.O.S. (Great National) Cage Bird Shows for 1905-6-7. This is a pleasing reform from last year's experiences, and seems to augur a bright future for exhibitions at the Great Glass House.

At the last meeting of the West London F.A. there was a very large attendance to hear Mr. Allen Silver's lecture on the "Range and Distribution of British Birds." It was a most interesting lecture, and much appreciated by the members. The discussion after the lecture was also very instructive, and the members spent a very enjoyable evening. A hearty vote of thanks to Mr. Silver closed the evening.

Capt G. A. Perreau, writing from Bakloh, Punjab, India, on March 11th, says of Cage Birds and "The Bird World Magazine":—I must say your publications give uncommon good value even to me, who take little interest in Canaries and living at a distance. To those keen on Canaries and British birds in England the value must be greatly increased. You seem to find excuse for giving an extra good number at short intervals.

Mr. W. Mundell writes that he is resigning the office of Secretary and Treasurer to the Yorkshire Canary Club, which he has held for nine years. His judging engagements take him away from the Bradford district (the home of the Yorkshire) during the show season, and he thinks it would benefit the club to have a secretary who could attend the shows and mix more with the fanciers in the district. Members of the Y.C.C. are asked to note this in sending in their nomination papers.

A cheery note is struck by Mr. Robinson, of the Eastern District O.S., Edinburgh. He says: Our Annual Club Show will be held on November 9th, in Free Gardeners' Hall, Abbey Mount. Mr. John M'Lennan will judge the Scotch Fancy classes, and Mr. George Scaife, Fauldhouse, the Norwich. We have added two classes for British birds this year for the first time, and have also added two more classes to the Borders. Our membership has increased this year, and at present things look all right for the Eastern District Club.

We had our first show at Llandudno on April 4th, writes Mr. C. Brown, and I cannot tell you how pleased I am at the success achieved. It opened my eyes to see so many beautiful birds. I entered a pair of my Canaries just to help the show, and was surprised to find that one, a variegated hen, had the third-prize card. I have read Cage Birds for two years now, and find it most useful and instructive. It has always something fresh and interesting, and I must thank you for the great help it has been to me.

We hope to complete our scrutiny of the "Rhyming," "Blaze of Colour" and "Hybrid Guessing" Competitions in time for next week's issue.—Editor.

A New Orleans judge has just fined a merchant £10 or 60 days for selling Aigrette plumes.

Please thank readers of Cage Birds for the number of answers I had to my advertisement last week, as I am quite unable to answer all. J. Maynard (London, W.C.).

Local Names.

The Blackcap and Garden Warblers are sometimes called the Hay Jack, it is supposed on account of the flimsy, hay-like nests they build.

An International Barter.

The Royal Menagerie at Schoubrunn has made an exchange with the New Zealand Government, Austria sending out a consignment of Chamois in return for some rare Antipodean birds, including Kuvis and Weka Rails.

Wholesale Bird Slaughter.

One thousand eight hundred and sixty-eight packages of Osprey feathers were sold in six "plume-auctions" at the Commercial Sale Rooms, London, in 1906. This probably represents the feathers of nearly 150,000 birds.

Yorkshire Canary Club.

The nominations of officers for the season 1907-8, which closed March 31st, have been extended until April 27th, as so few papers have been sent in. Members please note that I am resigning the office of Sec. and Treas. at the end of this season (June).—W. Mundell, Hon. Sec.

Jarrow's New Society.

At the meeting of the Jarrow and District C.B.F.S., held April 3rd, writes Mr. J. T. Carrick, Sec., it was decided to change our show dates to November 29th and 30th. Several new members have been elected, and the outlook is very promising. Meeting night, first Wednesday in every month, at 7.30, at Lockhart's Cafe, Ormond Street; yearly subscription, 2s. 6d.

The "Bird World" to be Enlarged.

In order to justify an enlargement and further improvement which we contemplate making in our attractive little magazine, "The Bird World" monthly, we are, after the next issue, raising the price per issue to sixpence. We find that this publication is reaching the hands of those to whom sixpence is no consideration, providing a good article be given. And we cannot find room in "The Bird World" for all the interesting matter which reaches it at the present price. Hence our decision.

Spratt's Cod Liver Oil Food.

Ever abreast of the times, Messrs. Spratts are continually putting on the market some new speciality appealing to cage bird lovers. One of the latest is their Cod Liver Oil Cage Bird Food, which is a most efficient substitute for the old-fashioned hard-boiled egg and biscuit. It possesses several very strong claims to recognition on the part of cage bird lovers. It is not expensive, it is easily prepared, it is far more digestible than egg—therefore more easily assimilated by the young birds—it is strong in the properties which make flesh, bone and feather, and, whilst giving strength and tone to the system, does not unduly stimulate. We can recommend it, not only as a reliable food for young birds, but also as a valuable pick-me-up for birds out of condition.

Where Sparrows are Encouraged.

3000 cases of fruit grown in America recently landed in Sydney, and were greatly admired when exhibited. Mr. Wagner, who grew the apples, came to Australia with the fruit. Referring to the codlin moth and the Sparrow pest Mr. Wagner said—"I encourage the Sparrows and other birds by all means in my power. For the winter I plant China lettuces, which grow about 2ft. high, shelter the Sparrows from the snow, and provide them with food, in the shape of seed similar to that of rape, so that there is no necessity for them to migrate. I also run 1000 chickens in the orchard, and the result is that the codlin moth has not the slightest chance. Immediately it appears it is destroyed by my feathered friends. When I find that the birds eat too many cherries I plant more trees for their benefit."

Items from Gateshead.

The judges appointed for Gateshead Show are Messrs. Vardy, G. Gardner, J. Robson and G. E. Weston, writes Mr. T. Taylor, the hon. sec., and perhaps we will require another judge for Border Fancies, as we hope to get the International contest between England and Scotland. But this is not to be settled till July, therefore we are holding back till we see. We have every hope of getting it, as Gateshead is a most convenient centre both for exhibitors and railway facilities, and my committee are equally willing to give the classification required—namely, 14 classes—also to provide a specialist judge. We are prepared to give every encouragement to hold the contest at Gateshead. The weather here has been exceedingly fine lately, the birds are in a most forward condition, and breeding operations have already commenced, some youngsters, indeed, being reported. But an easterly wind has just set in, and breeders will have to move with caution. I hope the weather will keep fine, though, as we have had enough winter for once.

Grateful—Comforting.

THE PALACE SHOW DISQUALIFICATIONS.

Cut or Natural?

The London Centre of the C.B.U. Upholds the Judge's Decision.

A meeting of the committee attached to the London centre of the Cage Bird Union was held at the "Raglan," Aldersgate-street, E.C., on April 4th last, to consider the disqualification of Messrs. P. Clayton (Halifax), and C. Stewart (Liverpool) for exhibiting Green Canaries at the recent Crystal Palace Show with alleged cut feathers. After a lengthy and thorough thrashing out of the case, it was decided unanimously to uphold the judge's (Mr. T. Heath's) decision.

There were present Messrs. A. W. Curtis (in the chair), Tyson, Dewhurst, R. J. Pretty, Morris and Ramsden (committee), Lambert-Brown (representing the L. and P.O.S.), and Fisher (representing the exhibitors).

The disqualified exhibitors have appealed to the Council of the C.B.U. against the verdict.

Points about the Cases.

It was pointed out that the question was not "whether Canaries had square feathers naturally," but "whether those particular feathers disqualified by the judge were natural." The said feathers were seen by two fellow judges (Messrs. Robson and Mundell) who agreed with the disqualification; they were shown to the authorities at two leading natural history museums, who agreed they were not natural; other experts, including Mr. E. J. Parry, B.Sc., F.C.I., public analyst, also advanced the same opinion.

At a certain museum numerous skins were examined, and on only one were blunt-ended feathers found—that of a Madeira Canary in nesting season, and the abrasion to be seen was assumed to be due to nesting duties.

It was said that the effect as seen on the two Canaries could be produced with forceps, or nail clippers, or similar instruments, but not with sharp scissors.

A lot of square (or blunt) ended feathers had been received by the Crystal Palace show manager since the case came on, and these were allowed by the authorities who saw them to be natural.

Mr. Tyson produced a jagged feather to the meeting which he had that morning taken from the neck of a green Crestbred hen in his own room.

The feathers taken from the back of Mr. Clayton's bird had grown again with the usual rounded ends. The tips had come quite sound in colour, though now rounded where previously square or jagged.

The feathers in Mr. Stewart's bird had also grown with rounded ends. It was alleged in a certain place they had come with bronzed tips. This bird, it was said, had previously been disqualified when the property of another exhibitor of Greens, and was sent to the Palace by Mr. Stewart (who in the meantime had bought it), he relying on the G.C.A. resolution that square-ended feathers were a natural growth.

It was thought the G.C.A. resolution tended to put all on a footing—i.e., if square-ended feathers were to be ignored, a deliberately faked bird could come in and beat a non-faked one.

Mr. Fisher expressed himself as quite satisfied at the impartial and thorough manner in which the evidence had been put forward and sifted; naturally he was disappointed at the result, being firm in his stand that all Greens are liable to come with square-ended feathers, also that birds might well bite and jag their own plumage, or have the latter affected in the moult. Those present quite agreed with his conclusions, but said, of course, that they had only to consider the particular feathers disqualified by the judge.

THE

Next Number of the

BIRD WORLD MAGAZINE

will be the last of the series to be published at Threepence.

The price in future will be

SIXPENCE

per Month, with the following Subscription Rates:

Six Months - - 3/-, Post Free.

Twelve Months - 5/-, Post Free.

APRIL Number still selling, but only a few copies left.

The frontispiece, in colours, depicting a dainty Spring migrant, is one of the most effective and charming plates ever issued, and will be voted by all a beautiful piece of work. There are many other splendid illustrations, and the literary contents are of great interest to all sections of bird lovers.

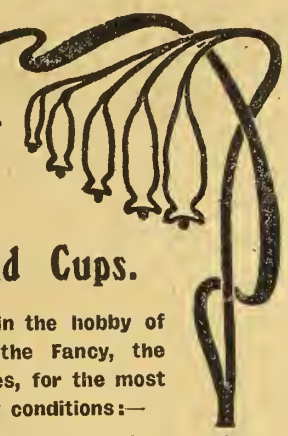
£15 IN PRIZES.



GREAT

Canary Breeding

COMPETITION FOR NOVICES.

£15 in Prizes, Cash and Cups.

With the idea of stimulating the interest of outsiders in the hobby of Canary Breeding, and so provoking new recruits for the Fancy, the Editor of "CAGE BIRDS" has decided to offer £15 in Prizes, for the most successful Novice Breeder of Canaries, under the following conditions:—

1. Only Novice Breeders are eligible for the Competition, a "Novice" to mean anyone who has never bred Canaries before.
2. The Prizes will be: **A**, Cup, value £5, First Prize; **B**, Cash, £3, Second Prize; **C**, Cash, £2, Third Prize; and **D**, Five £1 Cash Prizes for the next best in succession.
3. Prizes to go to the "most successful" breeders, meaning those of the competitors who are most successful in satisfactorily rearing the largest number of healthy young birds during 1907 Canary breeding season now in progress.
4. The young Canaries must be bred by the competitors on or before July 15th, 1907, next. None bred after that date will be eligible.
5. Competitors must have the results of their breeding operations attested to by two responsible officials of any recognised Cage Bird Society, or may swear a declaration attested to by two responsible witnesses (form on application).
6. From now till the date of the Competition closing, August 3rd, each issue of CAGE BIRDS will contain a Conpon, and when sending in the declaration competitors must enclose the whole series of coupons to show that they have been during the period regular readers of CAGE BIRDS. The first Coupon appears at the foot of *this announcement.*

Secretaries and Officials of Societies are invited to communicate with our Manager, when a scheme of co-operation by which new recruits for their Societies may be enlisted, will be forwarded.

Persuade all Young Friends to enter our Great Breeding Competition.

Canary Breeding Competition.

APRIL 13th, 1907. Coupon No. 1.

THE CRESTED CANARY CLUB AND THE C.B.U.

Extraordinary General Meeting.

At the extraordinary general meeting of the C.C.C., convened for Wednesday evening last, April 3rd, the resolution passed at the annual meeting held at the Crystal Palace Show, by which the C.C.C. became affiliated to the C.B.U., was unanimously rescinded, and it was decided to refer the question to a vote of the whole of the membership of the Club.

Mr. R. L. Crisp presided, and he was supported by Messrs. J. Tyson (Secretary), Compton, Dobson, Oldaker, Horton, Mason, Turner, Franz, Stevenson, Prance, Willis, Robson, Bloomfield, Broad, Lazarus, Johnson and Braund. Mr. Tyson read the proposition carried at the annual meeting, and said he had received well over the 40 letters necessary to the convening of an extraordinary general meeting to consider the question of its rescinding. Mr. J. Broad proposed, and Mr. Stevenson seconded, that the resolution deciding to join the C.B.U. be rescinded. Mr. Crisp proposed, and Mr. Dobson seconded, that the whole question be referred to the whole of the members to vote upon. Both propositions were carried without dissent. It was also decided that the auditors of the C.C.C. receive the voting papers and bring them to a specially convened meeting to be opened and counted.

During the discusion many and varied views were expressed. The proposer of the resolution (Mr. Broad) said that he at present belonged to no society affiliated to the C.B.U., and that, if the C.C.C. joined, it would prevent him showing at the many small shows in his district (Kent, we believe), which were neither licensed nor affiliated. Mr. Stevenson said he saw no reason why the C.C.C should support the C.B.U., as it could do nothing to help them. He didn't even see that it was any good to the ordinary exhibitor. It had not protected himself in the least. He exhibited at Ealing Show, where, according to the catalogue, the second prize was awarded to a bird which had never been in the show at all. As winner of third, he claimed the second prize; but although he had had considerable correspondence with the show authorities and the C.B.U. secretary, and had written to a Fancy paper, the tangle had never been unravelled. Mr. Bloomfield said he had been waiting five or six months for prize-money for a show held under C.B.U. rules, which should be paid out in 28 days. He afterwards admitted it was a society of which he was a member, and that he had not reported it to the C.B.U.

Mr. Tyson read letters from Messrs. Colledge (Derby), Rev. Joyce (Wellington), R. B. Tope (Plymouth), Roberts (Blackpool), Miles and Spencer (Trowbridge), Lilley (London, S.W.), and Greeves (Wrentham) supporting the rescinding of the resolution, and said further that considerably more than half of those who had written him on the matter (including the 40 aforementioned) had threatened to resign if the resolution to affiliate were adhered to. Mr. Dobson characterised this as childish and unsportsmanlike. He himself was in favour of a governing body, and thought past happenings proved such to be badly needed. He, however, did not think a specialist club like the C.C.C. needed "governing," and he should not resign if the resolution to affiliate were thrown out. He considered it shabby and childish to hold out any such threats. Several others present also said they were not opposed to the C.B.U. in principle, but thought the C.C.C., as a body of Crest specialists, was able to look after the bird it fostered without being under the control of any other body. Mr. Compton said it was "like throwing dirty water in the face of Mr. Crisp and Mr. Tyson to place someone over them." This view of the matter was promptly disclaimed by Mr. Crisp. Mr. J. Robson said his chief objection to affiliation was that it "tied the hands of the club in dealing with the interests of the bird it represented." Mr. Stevenson considered it would be a retrograde movement, as the C.C.C. would be unable to give its patronage at other than C.B.U. shows. It was pointed out that, as most members of the C.C.C. were already affiliated to the C.B.U. through other societies, they themselves would be unable to exhibit at such shows. This gave rise to the interesting point whether the C.C.C. competitions could rank as "members' shows," so that members could exhibit anywhere for the club specials if they took no prize-money from the non-C.B.U. fixtures. No one seemed able to give an authoritative opinion on the point. Mr. Crisp pointed out what he considered were undoubtedly advantages to be obtained from such a body as the C.B.U., but did not think specialist clubs stood in the same position as ordinary societies.

C.C.C. Business.

Considerable business connected with the C.C.C. was transacted. The question of awarding the specials seemed a particularly knotty one, the chairman (Mr. Crisp) giving it as his emphatic opinion that no really satisfactory system of points specials could be devised. The novice cup question was also troublesome, Mr. Stevenson pointing out that he was probably debarred from winning one owing to not being able to compete as a novice to the end of the season, the Crystal Palace Show rules throwing him out, the officials declining to take his entries. Mr. Crisp thought the best way out of the difficulty was to give every novice a guinea teapot, or any other selected special to value, when he qualified for champion rank by winning three firsts at three separate shows. This was eventually carried, as a recommendation to the committee. Another recommendation was that 10 one-guinea specials be offered for competition at 10 separate shows for the best young Crest or Crestbred, no member to win more than one of the said specials, and not less than four members to compete. The usual votes of thanks closed the meeting.

At the close of the recent summoned general meeting of the Crested Canary Club a pleasant surprise was provided those present by the offer of the proprietor of the "Old Napier" (the meeting house) to present a silver cup, or other trophy, to the club. A very hearty vote of thanks was accorded Mr. Shepherd for his generosity.

CLUB NOTICES.

No charge is made for notices of forthcoming meetings, but they can only be inserted once. Should secretaries desire to secure immediate insertion of their announcements **exactly as written** they can do so by prepayment at the rate of three words a penny.

Welsh National C.B.S.—April 16th, at Mansel's Arms Hotel, 7 p.m. Table Show of British birds.—S. J. Nicholas, hon. sec.

BLACKBURN C.B.S.

There was a good attendance at the Melioria Restaurant, on Thursday night, to witness the bird-washing exhibition. The operators were Messrs. R. Howarth, S. Tweddle, W. Dormer, and J. Walsh, who successfully "tubbed" one bird each in a very short space of time, and judging from the number of questions asked both during and after the performance, it must have been very interesting, especially to the novice section of the gathering. A hearty vote of thanks to the above-named gentlemen closed one of the most enjoyable evenings spent at the club.—J. W. MARSDEN, Sec.

WALLSEND & MID. TYNE C.B.A.

Monthly meeting, March 28th. A large number of members and friends turned up to hear a lecture by Mr. Thos. H. Welch. Mr. J. M. Macdonald presided, and introduced Mr. Welch as an able keeper and exhibitor of British Softbills, who had achieved very considerable distinction on the show bench. After election of new members, the Chairman intimated that Mr. Percy Hood was intending to give, for open competition, a very handsome marble clock, worth from £7 to £10. Hearty cheers were raised for Mr. Hood. We now have for next show the clock and two silver cups, with the prospect of another cup. Mr. Welch's lecture was indeed a treat to listen to. He spoke of the various species of Magpie. The Jay, said Mr. Welch, when two years old, is in the best show condition. Speaking of the Woodpecker, Nuthatch, Redwing, and Thrush, he told how he hand-reared them, feeding from the small hours of morning and all day. His recital was very amusing, whilst also showing what an amount of trouble is needed to succeed in rearing young wild birds. His homely anecdotes, in trying to rear Treecreepers and caging them, were fine. Mr. Welch considers the maggot is the best for rearing young on, and he fully described how to get both them and the ants' eggs. He also strongly recommended the novice to start with a Blackcap, as being easy to keep, and an engaging pet. At the close a hearty vote of thanks was accorded Mr. Welch, and a most pleasant discussion went round the table on questions of feeding, caging, and staging. At this meeting a lady was accepted as a member. We mean to have many more, as we believe that ladies have a fine influence in the Fancy, and make grand exhibitors. It was settled to go on with our trip to Whit Monday. Mr. Crawhall will lecture at our next meeting, April 25th, on "A Novice's Experience of the Yorkshire Canary." We invite all local fanciers to hear him.—JOHN R. EVANS.

QUESTIONS & ANSWERS

DOUBTS AND DIFFICULTIES SOLVED BY SPECIALISTS.

Queries will be answered under the following conditions:—

(1)—*All questions must be clearly written in ink (or typewritten) on one side only of paper, and must conclude with either the correct name of querist, or a pseudonym, or initials.*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper and enclosed with the query. In no case must the address appear on the query.*

(3)—*Queries intended for different specialists must not be written on the same sheet of paper.*

(4)—**Queries must not include** *or be included in orders for books, instructions re advertisements, or any other matter for publication.*

(5)—*The department to which the queries refer must be stated in bold letters on the left-hand corner of the query.*

(6)—*If an answer in the same week's issue is desired, queries must be posted to reach us by* **Monday's first post** *at latest. Queries will be dealt with in the order in which they are received, and only as space permits. The earlier queries are received the better attention they are likely to have.*

(7)—*Queries relating to illnesses of birds, except enquiries as to cause of death (for which see Post Mortems) will be answered by return of post on receipt of a postal order for sixpence and an addressed stamped envelope. Queries of an ordinary nature will be answered by post, if desired, on receipt of a postal order for one shilling and a stamped addressed envelope.*

(8)—*All who require letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence to pay postage expenses, &c., otherwise their letters will not receive attention.*

(9)—*All queries must be addressed* **the Editor, "Cage Birds,"** *154, Fleet Street, London, E.C. Only queries so sent will be answered. Postcards are not admissible.*

NOTE.—Readers are requested to carefully study past numbers and current issue before submitting questions. By doing so they may save trouble and unnecessary repetition.

THE following gentlemen represent CAGE BIRDS staff of **ADVISORY EXPERTS.** Queries must in no case be addressed to any of them individually, but to the Editor.

CANARIES.

NORWICH PLAINHEADS.

Answered by J. H. PAYNE.

Various Matters (Trio).—Give your hen, in the drinking water, twice in a week, just sufficient Epsom salts to make it slightly taste. Put a piece of apple between the bars of the cage for it to peck at, and also give it a few dandelion leaves, and a spray or two of watercress. (2) From your variegated buff cock and clear buff hen you will probably get some clears, lightly marked and ticked. They should be good in shape and size. (3) When the young are hatched, let the parents have some crushed biscuit, or well crumbled home-made bread, and equal weight of hard-boiled egg. This should be well mixed together, and if you can manage to do so, let your old birds have this put to them three or four times a day, together with plenty of hemp seed, dandelion leaves, lettuce, watercress, or chickweed.

Tail Feathers Missing (T.J.J.).—Are you quite sure the tail feathers of your bird are missing, or are they only broken off? I fancy if you examine it you will find the stump there. Had you said it had dropped some of its body feathers, I should have said it was in a soft moult; but as you say nothing about this, it makes me think the tail feathers are only broken off, as birds do not throw tail or wing feathers without shedding some body feathers as well. The roughness at the tips of the wings may be caused by the hen biting them, a thing they will frequently do when they are ready to go to nest. Put her with a cock at once.

Dropping Feathers (A.W.S.).—The change of room, and also being transferred from a box cage to an open wire one, is the cause of your bird dropping feathers. Cover him over at nights with a warm cloth, and during the daytime keep him in a cosy corner away from all draughts. Give him, in his egg food (which you may now give three times a week instead of twice), five drops of Parrish's Chemical Food. Let him have, in his drinking water, every other day for a fortnight, ten drops of tincture of quinine. Put a piece of apple between the bars of the cage for him to peck at.

Fighting Couples (Phœnix).—I should advise you to put the two birds you say fight when you put them together, so that they may see each other, and let them remain so for a full week. In the meantime feed them up well. Give the hen some dandelion leaves and a pinch of maw seed three times a week. There is no accounting for some birds fighting (as yours have done), but I have had them fight right through the breeding season, yet breed and bring up their young well. I think you will find if you do as I suggest that they will settle down eventually and live a quiet and peaceful life.

Pulling Nest About, Etc. (A.R.W.).—You can procure nest pans lined with a good nesting material, and if you search these columns you will find what you want. No doubt many hens will pull their nest to pieces again after making it; this shows they are not quite in tip-top breeding condition. When yours are ready, you will find they will make their nests and settle down to business. Give your hen, in her drinking water, for a fortnight, 15 drops of syrup of tolu, and ten drops of paregoric.

In Outdoor Room (C. F. Hayman).—I should say you may keep your Canaries in your wooden structure all the year round, as I should imagine, from your description of it, that it is a very cosy place. Canaries can stand the cold, but not draughts. Cover over your cast window well in the winter at nights. (2) As you say your hen is quite well and lively, she is simply not quite ready for breeding. Feed her as you are doing, and give in addition a pinch of maw seed two or three times a week, and a few dandelion leaves. I should advise you to whitewash the top of your house just before the heat of the summer, as you will find this will make several degrees difference to the temperature inside.

Cock Bird Stopped Singing (H. B.).—As you say your bird is quite lively and appears thoroughly healthy, you may rest assured that there is no cause for anxiety on your part, notwithstanding the fact that he has not sung a note since you put him with the hen. Such cases are of frequent occurrence, and old breeders take no notice of same. So you see there is no need for you to give him anything beyond the ordinary food used in the breeding season.

Breeding Difficulties (D. O'Connor).—By this time you will, of course, know whether you have had any young from the first hen. Should you have any, and you find she is feeding them all right, I should advise you not to return the cock to her, but keep him with the dark green hen you now have with him. The latter is probably not quite in breeding condition, but if she is healthy she will no doubt soon be. If you have no chicks from the hen you say had five eggs, then you may return the cock to her, if the hen he is now with does not show any signs of nesting. Probably, by the time the first hen has another clutch of eggs, the green hen will then be eager to nest. Give your birds, when they have young, equal weights of hard-boiled egg and biscuit, or, for preference, if you can procure it, good home-made bread. When the young are a few days old you may give them, with the egg food, a little German rape, which should be scalded and afterwards rinsed with cold water, which is best done by putting it in a strainer and allowing the tap water to run through it for a minute or two. Put a good tablespoonful to one egg, and the usual quantity of biscuit. Let your old birds have, during the breeding season, as much hemp seed as they will eat, and also plenty of green food, dandelion, lettuce, watercress, and chickweed. I have known hens, when the latter has been ripe and in seed, to feed almost exclusively upon it.

YORKSHIRES.

Answered by H. W. BATTYE.

Cock Too Forward (Hopeful).—I should advise running the cock with the hen morning, noon, and night, say, for five or ten minutes at a time until you see them pair, when you may try letting him stay with her again. Some cocks are very peevish until they have paired with the hen, yet after that become very kind and friendly. If this is not the case with yours continue running him in two or three times a day, and, as you say he feeds her, I don't think you need be afraid. He will probably fertilise the eggs. When the hen has laid her third egg, you can set her, and if they are not by that time on friendly terms with each other take him away, and let the hen have the cage to herself. Keep her on canary seed during the time she is sitting, giving in addition, separately every day, half a teaspoonful of summer rape until she hatches. Are you sure the hen is as forward in condition as the cock is?

Hen with Sore Foot (C.G.L.).—Separate the birds until the hen's foot is better, as with her foot in the condition you describe I don't think she will have fertile eggs. If she had you could hardly expect her to hatch them, as in building her nest, and afterwards in turning her eggs, she would not give the foot a chance to get better. If she did hatch out her eggs it is very doubtful about her rearing the young. Wash the foot and anoint it with a little Homocea, and then put a little soft rag over it in the form of a bag, fastening the ends round the leg just tight enough to keep it on. Wash and dress it every two days. When you pair her up again, if she still wants to build in the water vessel, take it away, letting her have it on three or four times a day for a minute or two, taking it away again as soon as she has had a drink.

Birds Not Mating (Trumpeter).—You do not say if your two year old cock is in song or not, but I think he will not be. I should take him away and let the hen have a day to herself. Then put the year old cock in with her in place of his father. Give them a few leaves of young dandelion, taking care to wash it well before giving it to them. Your other feeding is all right. You need have no hesitation about asking questions, as this portion of CAGE BIRDS is set apart for the purpose of answering them.

CRESTS AND CRESTBREDS.

Answered by W. E. GREEVES.

Crestbred not Shelling Seed (Gooseberry).—Birds, especially those highly bred, have their idiosyncrasies. I have a very valuable hen which will only take her seed out of a water tin hung inside the cage. A friend of mine has one which will not eat canary seed. As your bird can shell maw seed, I should consider it capable of doing it with other seeds. If in good health, I should continue to treat as you have been doing. I know of no mill which shells seed only, but would advise you to apply to Messrs. James Carter and Co., 97, High Holborn, London. I remember some time ago seeing a sample of canary seed from this firm from which the husk was removed without breaking the kernel. Many Crests and Crestbreds—more so the big heavily-feathered birds—are very sluggish, and instead of singing out boldly make only a gutteral noise. If in sound health, neither of the defects mentioned would interfere with its breeding.

CINNAMONS.

Answered by J. NORTH.

Mishap with Hen (J. Clarke).—Your Cinnamon hen, which has been paired two weeks, and has laid seven eggs by dropping them from the perch, and which also will not agree with the cock that you have run her with (although she was free at responding to the singing of the cock birds), may very likely have chosen by the voice a different cock from the one you have paired her to. You cannot do better than feed the couple up and try again; but you would find it a good plan to divide them by a sliding partition for a few days. There is plenty of time yet for better luck; in fact, the birds were probably paired some little time before they were ready.

BORDERS.

Answered by J. PATTERSON.

Cock Bald (G. G. Hay).—I am pleased to have a little more information from you. Wash the head with permanganate of potash as advised every morning, anoint it with a little of the following, which you can prepare yourself: ¼ oz. beeswax, 1 oz. lard, ¼ oz. flour sulphur; put all into a saucer together, place in oven for five minutes till melted slightly, stir till well mixed, let it stand till cold when it is ready for use. (2) Wash the cage with warm water to which a little ammonia and carbolic have been added, and go carefully into all crevices and scrub them out, rinse in clear cold water, let stand in open air twenty-four hours to dry. Give bird a good dusting all over the body with insect powder. Place a little soft soap on the end of perches so as they may rest on the soft soap and the wires of cage. (3) Your feeding has been a little too heating. Give plain canary seed (best Spanish) as staple diet, every other day a pinch of German rape, half a teaspoonful egg food, with a pinch of maw seed and three drops of chemical food added. Don't give any hemp till the hen is feeding young, and be sure to give the young dandelions every day now as advised. If he is otherwise in good health and song you need not annoy yourself about the disfigurement.

Cock Out of Song (New Reader).—I am a little afraid the bird you have bought will turn out a hen, from the description you give. As you don't mention anything regarding its health I take it to be in good order. Let some experienced fancier see it, and at this time of the season he ought to be able to tell you at a glance whether it is a cock or hen. Should it be a cock and down in condition feed as advised to G. G. Hay, and add to the drinking water for the next ten days ten drops tincture of gentian; after replace it with six drops syrup of buckthorn. Give a bath twice a week on warm days early in the morning.

Various (Redrob).—Let their stable diet be the finest Spanish canary seed, every other day add half teaspoonful German rape per bird, give a little egg food once a week with a pinch of maw seed added to it. It is very difficult to advise the exact proportions allowable to each individual bird. Birds are like ourselves, they vary very much; no hard and fast rules can be laid down. The best plan is to fill up their seed hopper fresh in the morning, after blowing out husks pass the seeds through a seive once a week so as to clean out all dust. (2) Spanish canary seed and rape, and mix together ½ lb. maw, ½ lb. hemp, ½ lb. linseed, a pinch of niger; let them have have a teaspoonful of this every other day. Give half teaspoonful egg food with three drops chemical food added on the days you do not give the seed mixture; a piece of boiled carrot twice a week after they are half-way through the moult, as I take your query to apply. Give the bath early in the morning on warm days. (3) Canary and rape as a seed diet, egg food—one egg to three Osborne biscuits—with a pinch of maw seed added to each egg three times a day freshly made. Crushed hemp every morning; increase the quantity of each every day as the young get older. Give a clean nest after the young are six days old. I give green food twice daily, early in the morning for the first feed and not later than three o'clock in the afternoon for the last. I prefer dandelions for the first feed, young tender lettuce for the second, and all kinds of ripened seeds such as chickweed, shepherd's purse, mouse ear for the last round.

LIZARDS.

Answered by BARKER CLEGG.

Are Lizards Good Feeders? (T. Kay).—What you have heard is very misleading. No doubt you may at times get a Lizard hen that does not feed her offspring. But this occurs in all varieties; many fanciers express themselves, however, simply upon their own experiences. The trouble may sometimes be the result of unhealthy conditions of the stock. I can assure you that Lizards compare favourably in their feeding propensities with any variety. I was in a Lizard breeder's rooms, in June last year, who was separating the pairs, as he had so many young birds he could not find cage room for them. I venture to wish you similar success.

ROLLERS.

Answered by F. A. LESTER.

Wire Cages for Breeding Rollers (A.T.K.).—The advantage claimed usually by those who advise breeding in all wire cages is freedom from red mite, but, personally, I do not see what it matters whether you use the most elaborate cage that is made, or the rough box with front in it, the results will be much the same, and the principal influence at work is your own fancy and the depth of your pocket. I cannot agree that the water and seed should be always inside, as they get very badly fouled that way. This again is a matter of fancy, the Roller Canary not needing this precaution any more than any other variety. He is one of the hardiest and yet folk pamper him more than any other.

No Benefit Follows Treatment Prescribed (J. Mc.).—We are sorry to hear that your bird is not any better, and I suppose it is one of those frequent cases where nothing will help. The difference there should be between the Hartz and the St. Andreasburg is that the Hartz is the ordinary German Canary with a free, loud song, and the other is a partially trained Canary at the higher scale of song. The Hartz are usually sold at from 5/- to 7/6, and the St. Andreashurg from 7/6 to 21/-, according to the dealer's estimate of their abilities. Yes, you will get a fair bird for that price; use the deposit system, and try a week's approval. You will not get a home bred bird at your price now I fear.

Difficulty with Feeding while Crossing (B. Wharton).—You need anticipate no difficulty with your feeding, as the green Yorkshire hen will take just as readily to the German rape if good and sweet, and will derive a benefit from the change. I should always use that mixture whatever Canaries I kept. You should breed some fine large free singers from this cross.

Hens Backward in Coming into Breeding Condition (W.H.C.).—There may be several reasons for your hens being backward. You may have late hatched birds from last year; they are perhaps in cold room; have they plenty of room for exercise? Your feeding is generous, and if you will have patience all will soon be well. If you have nests any time this month you will be plenty early enough. It is not always those who start early that finish well.

MISCELLANEOUS CANARY QUERIES.

Answered by J. NORTH.

Hen Puffed Out.—Hen sits on perch all puffed out, and at other times is quite lively. Fed on plain seed and bread and milk sop. The excreta is very soft.—A.L.

This hen would seem to have got liver trouble, and if it has not assumed a chronic form may yield to a diet consisting of seed and sop as hitherto, but with the addition of a daily ration of fresh salad, such as young leaves of dandelion, chickweed, watercress, or groundsel.

Canary with Fit.—Cock Canary had a fit, or stroke of some kind. He rolled over two or there times, and laid on his side, with his head over his shoulder, making a squeaking noise. I bathed his head with water, and to-day he has been eating seed as usual, which he did not do yesterday.—F. W. TRANTER.

This bird certainly appears to have had a fit of some kind, and if he is very "rank," as fanciers say—meaning a bird is in full song and anxious to find a mate—it would be well to run him with a hen in a breeding cage. In addition to his usual diet, let him have some green leaves of chickweed, dandelion, watercress, or groundsel. Your treatment was quite rational, but if it is a mate that he wants cold water bathing of the head won't cure him.

Removing Pair of Canaries from Aviary.—When is the best time to remove a pair of Canaries from an outdoor aviary, from amongst a number of British birds, into a cage by themselves, so that the young may have the food that is necessary to their being reared? Should I remove the hen when sitting, or after hatching?—A. WILLIAMS.

Any time during this month would be suitable, and the transfer should not be delayed if the hen is showing signs of wanting to nest by "calling," or by carrying about any available nesting material. It sometimes happens that Canaries get very wild and timid in outdoor aviaries, and then take some considerable time to steady down to cage life. The hen cannot be removed either when sitting or after hatching, but sometimes it seems advisable to take the cock away, although when he feeds the hen and behaves himself properly there is no occasion to so treat him.

Feather Plucking.—Canary has started to pluck all its feathers out, and is quite bare except about the head, yet seems in good health.—CONSTANT READER.

This is either a case of feather-eating or the work of redmite. Search the bird and cage by candlelight, and if the insects can be seen proceed to exterminate them by scalding out the cage and peppering the bird with freshly ground pyrethrum insect powder. If it is feather plucking, let the bird have a large piece of cuttlefish bone fixed in the cage wires, also dried and crushed egg-shells mixed with the sand, pieces of tape fastened to the wires for him to play with, and hard stems of groundsel or chickweed to bite. In either case plenty of green leaves should be given, and the cage kept in a warm place.

Soaking Seed.—Is it advisable to soak all a Canary's seed (canary, rape, and hemp) for feeding the young with from the time they are hatched?—J.S.

No, it is not usual or advisable to soak any of the seed except rape. The hemp seed kernel is soft enough naturally, and the canary seed gets broken up sufficiently by the action of the mandibles. It is assumed that you will be giving some sort of soft food, such as crushed biscuit, hard-boiled egg, and bread crumbs or "canary cake," such as has been often described in these columns.

Want of Success.—Have tried two years to breed Canaries, but without success Last year I bought a cock in nest feather, but ever since he has been moulting or pulling out his feathers. He sings, though not in tune. I hung the hen bird close to his cage, and she keeps calling to him, but he takes no notice. Fed on egg food, salad, and seed, sample of which I send for your opinion. He will not bathe. Is he fit for breeding.—G.W.

Answering the latter portion of this query first, I must say that this bird does not at present commend itself as a profitable occupant of a breeding cage; in fact, I suspect that it is not a cock bird, because it sings out of tune, and because it does not respond to the calling of the hen. It may have sung sufficiently last year to have deceived you as to its being a cock bird. The seed sample is very fair, and if the birds consume it all one would not advise its being changed, but the changing of the seed would not change the sex, if that is wrong. Anyway, some fresh young green leaves might now be given daily, and will tend to bring the bird into breeding condition. When a bird will not bathe and keep himself clean, he must be coerced, but the process may be done steadily by first dipping his feet and legs and the ends of his wings and tail into the water; then run him into a clean cage, placed in a bright and warm position, when he will be bound to preen himself before he can feel comfortable.

No Progress.—Pair Canaries put together month ago. Hen takes away everything cock puts in nest. They seem friendly.—J. PATTERSON.

Are you quite certain that you have a proper pair—that is, are you quite sure one is a cock and the other a hen? Because, being unable to examine the birds, and in the absence of any verification of one being a cock, I am inclined to think they are both hens. If it is not so, time will solve the difficulty. You run them together somewhat too early, so it would be well to separate them for a few days, keeping them close enough together for the cock to feed the hen, giving him for this purpose some egg food and salad.

BRITISH BIRDS, MULES AND HYBRIDS.

Answered by G. E. WESTON.

Wild Seed (J. G. Taylor).—The samples you send seem to be a very fair example of the residue gathered from a threshing machine, and looks quite all right for use with seed-eating birds, to give in the way of occasional treats. Apparently it contains an unusual proportion of plantain seed, which possibly has been added afterwards; that does not affect its utility, however.

Variety in a Cage (B. Dpt.).—You cannot expect to be particularly successful in keeping any great quantity of British Birds in a cage 6 ft. by 2 ft. 6 ins. by 14 ins. It is not large enough to accommodate more than five or six in comfort. In most mixed collections there is always more or less squabbling; if any particular bird seems unduly aggressive and quarrelsome one can only remove it. And where a number of birds of the same species is kept together the same bickering and fighting are found. "Birds in their little nests agree," the poet tells us; but the saying loses whatever truth it possessed as soon as they are well out of them. You could try cock birds of the following species: Goldfinch, Linnet, Bullfinch, Redpoll, Siskin and Twite. As a matter of fact the smaller Foreign seed-eaters are much the more suitable for keeping together in small indoor aviaries and the like. This seed mixture will suit the birds mentioned: Canary and teazle three pints each, summer rape one pint, linseed and charlock half pint each. Give hemp (a little every day), sunflower (a feed daily) and maw, inga, wild seed mixture, etc., as occasional treats. There is no regulation distance for perches to be apart. Use your own judgment. Put them at different heights, and let the birds make use of their wings in getting from one to the other. Crushed and dried egg shells are good for birds, but more especially for hens about to lay (during the breeding season, in fact). I prefer to crush my hemp seed fresh every day—it does not want really "crushing," however, but only cracking, either for feeding hens or for young birds.

Birds in an Aviary (Oiseau).—No, no, my friend—you can't mix such birds as Larks and Canaries in a small aviary. Larks will certainly breed in captivity, in an aviary, though every pair tried could not be expected to do so. In CAGE BIRDS some while back an account appeared of the successful experiments of a Birmingham fancier in this direction. Only one pair of Larks could be kept in the same compartment, however; and you will be ill-advised to try to keep any other species along with them. The collection of food on which

THE CANARY BREEDING SEASON

Is now with us and everyone who contemplates cultivating Canaries for pleasure or profit, should immediately procure the Standard Work on Canaries :—

HOUSE'S CANARY MANUAL

PRICE ONE SHILLING. Post Free 1/2.

Superbly illustrated by the Champion Canary Artist, Mr. H. NORMAN. EVERY BIRD DEPICTED IS A VERITABLE MODEL, and shows the breeder what to aim for. Some idea of the popularity of this Practical Manual may be gathered from the fact that under the title of "The British Canary," it has passed its Third Edition entering upon a Fourth Edition of 5,000 copies under the new title of "HOUSE'S CANARY MANUAL." The following Summary of Chapters, etc., will show you how completely the ground is covered:

Aviaries and Cages.
Show Cages.
Perches.
Breeding Canaries.
The Young Birds.
Food for Nestlings.
Hens Refusing to Feed.
Sweating Hens.
Young Birds Dead in Shell.
Red Mite.
Clear Eggs.
Moulting.
Exhibiting.
Diseases (treated very fully).
Every variety of Canary is treated upon at length and illustrated.

Mr. HOUSE has thoroughly revised and brought this work up-to-date and incorporated a chapter on the "Roller or Singing Canary."

Send 1/2 now and secure a copy hot from the press.

F. CARL, 154, FLEET STREET, LONDON, E.C.

FIFTY COPIES of the Third Edition slightly soiled—9d. each to clear.

to feed the young is a matter of no little difficulty, for live (insect) food of some suitable kind must be provided. If you could get plenty of live ants' eggs you would probably be well fixed up in this respect. If you have had little or no experience in bird keeping, however, I would advise you to get together a collection of British Finches and Buntings. You will find it interesting, and not difficult to cater for. If you put in all males you could accommodate 16 to 20 in your aviary 8 ft. by 6 ft. by 3 ft. Bramblefinches and Chaffinches are often spiteful to other birds; also Greenfinches and Yellowhammers. In fact, individuals of many species seem on occasion to be blessed with wicked tempers (I had a most vicious Bullfinch once), and owners of mixed collections need always to keep an eye open for incorrigible offenders against the common peace. The Larks might do all right in the aviary if kept in their ordinary cages. You must provide some shelter from the sun's rays during the summer.

Linnet's Voice (Rita).—If you really feel sure it is the oil stove and the varying temperature of the room which upset your Linnet's song (and I quite believe you are correct in your judgment) then obviously the only thing to do is to remove him to "fields and pastures new." It is not possible for me or anyone else to prescribe medicine to counteract the atmospheric conditions the bird has to endure. Let him have uncontaminated air to breathe, and feed him well, giving half a teaspoonful of maw seed daily. Well stir one tablespoonful of glycerine into the same quantity of honey (both of best quality only), and mix a teaspoonful of this into every two tablespoonsful of drinking water, fresh daily. Continue this treatment for 12 or 14 days, and there should be improvement. Gather the bird some young and tender dandelion leaves (also shepherd's purse and chickweed) and let him have a good feed every day.

Hand-rearing Blue and Long-tailed Tits (Experiment).—Notwithstanding what you have heard and read to the contrary, both Blue and Long-tailed Tits can certainly be reared from the nest—hand-reared, that is. But I cannot say that I recommend you to try the experiment unless you are expert in such matters, and possess an inexhaustible fund of what I might term loving patience. Without these qualifications, I am quite sure failure will be your portion. The young should be taken when from nine to eleven days old. Nestling Blue Tits, by the way, are usually not easy to get at. The only food you are likely to be successful with is the following: Soak some best quality ants' eggs (quite free from bits of rubbish) in warmed new milk; drain, and mix two teaspoonsful with the finely-beaten yolk of a hard-boiled new laid egg; then stir in a small teaspoonful of Plasmon powder. It should be of a rather sloppy consistency when used. This needs preparing fresh at least daily (twice a day were better), and is best used with just the chill off. As the birds grow older, cut some mealworms in two, and squeeze them out amongst the food. Small flies will also be appreciated at this stage; blight (green fly) off fruit trees, etc. You must keep the youngsters very clean and cosy. But please don't tackle the job unless you have the time to go through with it properly, and really mean to do so. It will be a shame, otherwise.

Norwich Hen for Light Muling (W. A. Rountree).—Yours is almost an impossible question to answer. No one can recommend any particular type of Norwich hen as "likely to throw light Mules." If you knew a fancier with a strain of Sib bred hens of Norwich type which throws light Mules, then the queston would be simplified; the answer would be: Buy from that fancier. But the purchase of Sib bred hens is a ticklish matter. There is no means of telling by their looks whether they really are inbred, so that one has to accept the seller's word for it, and if the latter is unscrupulous one can easily waste considerable money—the price of "Sibs" is not low. With other hens it is mostly a matter of speculation whether they will throw light Mules; and it must be at once said that the latter crop up in extraordinary manner at times. To sum up, I can only recommend you, as most likely, to get clear or ticked hens, clear bred (that is coming from parents bred from clears for several generations back). If they come from a cinnamon marked strain, so much the better; but Norwich with Cinnamon blood in them are far from common.

Concerning an Aviary (Saddler).—The size you now mention I consider hardly any more suitable than the first. A very fair size would be 6 ft. long, 6 ft. high, and 4 ft. from front to back; the length, of course, will be much improved by having a foot or two tacked on. I should not divide it. Put in Bullfinch hens only, and you might possibly get a Hybrid or two out of them. Say you put in half-a-dozen hens and ten or twelve assorted cock Finches (but no cock Bullfinches). That would provide you with a very fair collection, and at the same time not wholly preclude chances of breeding. Concerning the hen Goldfinch, stir half a teaspoonful of taraxacum (dandelion juice) into two tablespoonsful of drinking water, fresh daily.

Brass Cage and Deaths (Argument).—There is an element of danger about brass cages—especially the cheap kinds—as you seem to know. At the same time, many birds live for years in brass cages without taking the slightest harm. The deaths of your three birds are certainly curious, but I should hesitate to ascribe them to the cage. You certainly ought to have sent a body to our Mr. North, and had a post mortem held on it, which would have settled the point. I really cannot tell you of any "best bird" to keep in a brass cage; I do not know that there is such a one. A Norwich Canary must be as likely a bird as any to keep therein.

A Variegated List (Peter).—I wish you success, Peter, on your entry into the British Bird Fancy on a large scale. (1) The birds in small cages tied up in a black cloth, which you see carried about the London streets, are mostly Chaffinches which have been trained (or are being trained) for singing contests. Sometimes Linnets and Goldfinches may be therein, with a similar object in view. (2) The colour of a Linnet has no bearing on its singing capacity. As a general rule the lighter coloured birds are younger birds than the nutty-brown ones—especially when the latter have a lot of red on breast and poll. I am referring to cocks, of course, for the hens are uniformly lighter in colour. A Linnet showing red on its breast is a certain cock; hens do not possess it—unless put on by the seller, wheu, of course, it can be easily rubbed or washed off. At other times, choose a bird with real nut-brown wing-butts (shoulders), and with plenty of white in its wing flights, and you cannot well get wrong. (3) Yellowhammers have uo real song at the best of times—it consists of only one phrase practically. Feed as recommended "T.W." last week. (4) A Twite's song is much inferior to a Linnet's. It is fairly pleasing, though. (5) The best cages for regular use are not "back cages," but those made on the lines of Finch stock cage, illustrated and described in the 1906 ANNUAL. You are not the only beginner who has bought "Linnets" which afterwards turned out to be Twites. Take heart; you will soon learn better than to be deceived in this way. Very pleased to receive the addresses you mention.

Bullfinch-Canary (N.O.W.).—You ought to be able to find all the hints you want on managing a Muling couple in this (see reply to "Derby"), and the last two or three issues of "C.B." "Feed up" your hen Canary on the usual lines. Let the couple strike up an acquaintanceship before being finally put together. As I am frequently stating, there is no fixed and settled time when birds should be paired; the "proper time" is when one's birds are ready, and as all birds do not arrive at "breeding condition" at the same time, it follows that no precise date can possibly be given. Let your cock Bullie have a half teaspoonful of hemp one day and the same quantity of maw and niger on the two succeeding days; then hemp again, and so on. Gather him a daily feed of young dandelion leaves, and a few sprigs of buds from off fruit trees or bushes, and hawthorn hedges, also seeding chickweed, shepherd's purse and groundsel. He should also have a little sunflower seed daily. Treatment on these lines will very soon bring him into high condition. If he likes egg food let him have a "pinch" now and again.

Cock to Mate to Light Muling Hen (North).—A buff Crestbred cock, even though a clear, is not by any means the best mate you can find for your clear yellow Yorkshire hen you are desirous of getting Muling hens from. I would, rather, strongly recommend you to get a big (heavily built) pink-eyed Yorkshire cock, either clear or ticked, and either yellow or buff. Many breeders take a nest of Canaries from their Muling hens before running the latter with their Finches.

Seed Samples (W. F. Hill).—(1) Is a sample of small canary seed, which, however, looks good of its kind. (2) Is pretty good maw seed—still, better can be bought. (3) Is excellent niger seed. (4) Is good red millet, but this is eaten but little by Canaries, and practically not at all by British birds. (5) Is very nice linseed. (6) Is very nice gold of pleasure.

Finch Mixture (E.S.W.B.)—I cannot detect anything wrong with the Finch mixture, so far as looks go, and am inclined to question whether it had any connection with the death of your Goldfinches. Still, I have not tried it on my own Finches. You won't mind me declining to do this, I feel sure. It contains canary, teazle, hemp, linseed, maw, gold of pleasure, niger, summer rape, "bird rape" (probably charlock), and a few grains of red millet and oats—the two latter may have got in accidentally. Rape of any kind is of no use to give Goldies. Why not adopt the stock mixture I so frequently recommend for these birds, and which I myself use with every success?

Corn and Meadow Buntings (J.A.)—I told an enquirer at length last week how to feed Corn Buntings, and exactly the same treatment is applicable to the Meadow Bunting. Kindly refer back. Young birds—i.e., not thoroughly on to hard seed—must be given insectivorous mixture, freely sprinkled with sprouting (soaked) rape seed.

Linnet "Off Colour" (P.C.).—Give your Linnet two daily "doses" of sulphate of soda, dissolving each morning in two tablespoonsful of drinking water as much as will cover a sixpence. For one week afterwards stir every day half a teaspoonful of taraxaeum (dandelion juice) into the same quantity of water. Gather and give the green foods recommended other querists in this issue.

Thrush Ailing (Scarboro').—By your account of the "warbling" I should say your Song Thrush is certainly a cock. Evidently he is constipated. Give sulphate of soda for two days, as recommended "P.C." this week. I have frequently dwelt on the importance of vegetable ingredients in the daily diet of these birds. Yet you do not seem to ever give any. Read back replies, and amend your feeding methods at once. Your bird will then soon be all right, and keep well, and sing, too. He evidently has a splendidly large eage. Give him every opportunity to bathe.

A "Slipped" Wing (J.A.H.).—By slipped wing, I take it you mean a wing that has been broken (or "put out"), and which has set wrongly—either appearing cocked up over the back, or hanging in a drooping fashion at the side. If so, you cannot cure it, I am afraid. The only chance of effecting a cure lay in treating the member at the time the injury occurred. Had the wing then been bound into position by a bandage fitting round the bird's body, it doubtless would have set properly, and there would have been no sign of any injury left when the bandage was removed, after an interval of, say, twelve to fourteen days. I have used a piece of very wide tape, sewn round not too tightly, with excellent results. It is a difficult material for the bird to fray away by means of pecking it with its beak. The only method of righting matters now would be by getting a veterinary surgeon (perhaps your family doctor might undertake the task) to break the wing at the original point of fracture, and then bandage it up in position. I can quite believe that the injury was caused by the bird jerking its wing away when being handled; that is how such damage is usually brought about. Fanciers need to be careful when handling birds (especially Britishers with powerful wings). Any nervousness or hesitation may easily bring about a disaster.

Choice of Two Linnets (J. S. B.).—It is a fairly safe assumption that the Linnet which shows so much more red on the breast is the older of the couple. Neither of them will be house moulted. As regards choice of the twain for muling, I should to a certain extent be guided by the situation in which the muling operations are to be carried on. If the breeding cage is to be hung in a very quiet spot, removed from inquisitive human beings and prying human eyes, then I should say one bird will be just as good as the other. If, however, you are contemplating breeding in a room wherein people are constantly present, or constantly entering, I should choose the steadiest of the two—the one which shows least concern, and which sings freely, when human beings are close at hand. When fit for muling, the Linnets will be in full, vigorous song, and have deep slaty-blue colored beaks.

Items on Mule Breeding (Derby).—There is no reason why you should not use both of the hen Canaries you possess. One Goldfinch is capable of attending to two or three wives, and usually "makes no bones" about doing so. I don't know whether you have any other birds in the indoor aviary, 6 ft. long by 3 ft. wide by 8 ft. high, which you mention. If not, the trio could safely be left therein for the season. If you must take them out, however, you should let the Goldie hang in such a position as permits him to see both the hens—a three-compartment breeding cage would help you immensely. Feed up the hens in the usual way (see numerous articles recently in CAGE BIRDS) by giving a little hemp and niger seeds occasionally, and a teaspoonful of egg food every second day. Let them also have three or four young, tender dandelion leaves each every day. Let the Goldfinch also have a free supply of dandelion, and feed him generously as regards seeds, not forgetting half-a-teaspoonful of niger daily. When the first hen shows signs of being ready to nest, run the Goldie with her for a few hours daily until the third egg is laid—early morning and the evening are the best times. Then leave her to sitting and rearing duties, and repeat the proeedure with hen number two. If both hens show a desire to go to nest at the same time, run him with one in the morning and the other in the evening, reversing things next day—i.e., letting the evening hen (so to speak) be the morning hen. It is quite erroneous to think a Goldfinch (or any other male bird for that matter) must be with his wife always—a few minutes daily will be all sufficient, providing the hen "calls" to him, and he does his duty in that period. From what you say, I should think your Goldie quite likely to turn out a free breeder. As he is not house moulted, however, it might be well to carry on the breeding operations in a quiet corner, and to guard against over-interference.

Linnet and Hen Canaries "Wrong" (New Reader).—Queries like yours reduce me to a state bordering on despair. You give me absolutely no particulars to work upon—describe no symptom, and don't even say how you are feeding—yet you desire me to cure your birds. I should have to be something more than a wizard to do it. Possibly your Linnet is suffering from constipation. Dissolve as much sulphate of soda as will lie on a sixpence in two tablespoonsful of water, and give this the bird to drink for two days (fresh daily). Let it have plenty of maw seed, and give every day a few young dandelion leaves. Well stir 4 or 5 (not more) drops of chlorodyne into two tablespoonsful of drinking water, and see if a five or six day course of this regulates the bowels of your hen Canaries; mix it fresh every day. Feed them on plain canary seed, and milk sop made as follows: Soak an arrowroot biscuit in new milk, squeeze it as dry as you can, then sprinkle it liberally with maw seed. This must be given fresh frequently—say twice a day. Never on any account let sour food remain in the eage. Please give full details (especially describing the state of the bird's excreta) next time you seek advice.

Goldfinch Paired to a Mule (A. Bilson).—I don't think there is the slightest chance of your being successful (if by successful you mean the production of young) with the mating of a cock Goldfinch to a hen Goldfinch Mule. A hen Mule of this description has never yet been proved to produce fertile eggs, no matter to what bird mated. I am assuming, of course, your hen is really a Mule, and not what so many people think is a Mule, viz., a marked, or splashed Canary. You can make the experiment, though; if you succeed you will have achieved something sensational.

Greenie-Bullie Hybrid Ailing (J.W.).—Your seed diet is not by any means that which I myself use for Hybrids. If you have found it successful in the past, all well and good; I never try to force my own methods on any fancier, believing, rather, in everyone sticking to that which long usage has convinced him is good. Should your present trouble, however, incline you to make a change, I recommend you at present to give the following stock mixture: Canary three parts, teazle two parts, summer rape one part, and maw half a part, by measure. Offer also a dessert spoonful of cracked sunflower seed every day. Hemp I should be sparing with until he is well; niger likewise. Instead of the egg food, give the milk sop recommended "New Reader" this week, but with the addition of a small teaspoonful of best quality ants' eggs (free from bits of rubbish) well mixed in; he might have a feed of this every day. For a tonic get a bottle of Allen and Hanbury's Byno-phosphates, and well stir one teaspoonful into two tablespoonsful of drinking water. Give this fresh every day for a fortnight; then on alternate days for as much longer as seems necessary. You cannot better young, small dandelion leaves as green food; likewise the seeding heads, and seeding chickweed, shepherds purse, and groundsel. I think your bird is simply weak owing to the heavy moult he has undergone, and am confirmed in this opinion by the lack of success of the "asthma" remedies you have tried. You will see, however, Mr. John Patrick mentions a remarkable cure in our correspondence columns last week, and you may feel inclined to try his remedy.

Various Troubles (W.D.F.B.).—You really should have separated the cock Goldies and the hen Bullie before; not left it until the poor male had been practically stripped bare! I expect the two cock Goldies have been indulging in fierce battles over the hen Bullie; though at this time of the year it is unsafe to keep any two cock Goldies together, for, if in good condition, they are certain to fight. The wings, etc., will no doubt come all right again in due course. Birds which will not bathe should be lightly sprayed now and again. It is not often Goldfinches are non-bathers, however. Try them with a different sort of bath (dish). Some birds will use one kind freely and be shy at entering another. Feed them on plenty of good, sound hemp, teazle, linseed and canary. On alternate days offer a small teaspoonful of niger and maw seeds in a separate dish (maw one day, niger the next). Gather young, tender dandelion leaves and give them

freely; also the flowering and seeding heads of both dandelion and groundsel, when available. Treat the hen Bullie in the same way as regards green food, giving, in addition, however, seeding chickweed and shepherd's purse Let her have maw and niger seed also; but omit hemp in stock mixture, giving it on a third day, following after the two afore-mentioned seeds. Stock seeds: Teazle, canary, summer rape and linseed; also a feed of sunflower seed daily.

Breeding with Chaffinch (Novice).—It is a notion which appears to find many believers, but I can assure you it is entirely erroneous to state that the Chaffinch copulates only on the wing—i.e., when flying. At the same time, I do not hold out any great hope of your cock Chaffinch hen Greenfinch mating proving successful. I would like you to clearly understand, though, that I know no real reason why it should not prove successful. I do not for one moment desire to discourage you from attempting the cross; should you succeed you will be well rewarded. If, however, you realise at the beginning what a tough task you have undertaken, you will not, or ought not to be, disgusted later on at the non-success of your efforts, and feel like renouncing Hybrid breeding for all time as "all rot."

Some Interesting Questions (Thank You).—An original non-de-plume and some uncommon questions!—such an unusual combination almost roused me into the performance of saltatory feats on the office floor. No private owner of land can over-ride the law of England; therefore, no one can "legally" give you permission to collect on his estate the eggs of protected birds. Still, if you have that permission, you are not likely to come to much harm, providing you keep out of the clutch (fitting word!) of the "boy in blue." The penalty varies, of course, according to the eggs taken and the testiness of the magistrate you are hauled before—if you filched a Golden Oriole's nest you would probably get fined two-and-sixpence; if you took a Pheasant's egg you would get a month "without the option." In the former case, if I were only the magistrate you would get a dozen with the "cat." If you feed a Goldfinch Mule as you would a Goldie you cannot go far wrong; do not give so much hemp daily, however. Neither young Bullfinches nor young Woodpeckers would come to any harm over a two or three hours' journey to your own home from the place where they were taken It would not even be necessary to feed them in between; still, if you can manage this, so much the better. Do you mean, however, they would have to undergo a two or three hours' journey strapped to a bicycle? This, of course, would be a somewhat different matter. I have had delicate nestling insectivorous birds sent me by rail (three or four hours' journey) without coming to harm. They were packed in a suitably sized box, among soft warm hay, with a piece of flannel stretched tightly just above their heads—a sort of soft, false roof, against which they might bump without coming to harm. A pocket in a lounge coat (especially one with buttons) is not at all a bad place to carry young birds in—bulge it out at the bottom with a lining of soft, short hay. You would need to ride slowly, however, and with tyres only moderately inflated.

Stocking an Aviary (W. L. Tilley).—You must address that part of your question which refers to Foreign Birds to our Mr. W. T. Page (vide Rules). His reply might modify my own, for some of the species he may recommend may not be suitable for keeping with those I myself mention. An aviary (partly or wholly sheltered) 9 ft. by 6 ft. by 5 ft. 6 ins. from back to front will house about 30 birds the size of a Canary very comfortably. If you will read other replies this week you will find some remarks about individuals agreeing in small aviaries (yours, of course, is not really a large one). You could make your selection from amongst the Finch and Bunting families (strictly from the ornithologist's point of view these are sub-families only). Don't have more than one pair each of Chaffinches and Bramblefinches, and don't, if you can avoid it, have the sexes unequal in any of the species. Crossbills (if you indulge in them) are, however, reputed dangerous when kept in pairs. A cock bird I knew kept in an aviary was a very inoffensive and amusing creature, though. You will soon, however, be able to regulate your collection of birds, if you bring your powers of observation to bear upon them.

A Metamorphosed Pigeon House (Constant Reader).—I do not see why your one-time Pigeon house should not answer very well to keep birds in, and your plan of utilising it seems promising enough. You will not need any artificial heat providing the place is free from draughts and damp. The 7 ft. by 6 ft. flight will accommodate 20 to 24 birds of the size of a Canary with every comfort. See other replies respecting "mixed" collections this week. You will need some ventilation at top of the house. Could you not arrange for the roof lights to be open? They would afford very efficient ventilation during the hot weather, and could, of course, be closed at other seasons. I do not approve of the 1 ft. 6 ins. strip of open wire at the front—it would only let in a draught. Board it up right to the glass, and have the latter arranged to open—in the form of windows, that is. All the glasswork should be protected with wire netting, and inside, not outside.

Linnets in Cross Moult (P.B.).—I am sure I have no idea why your Linnets should be in the "soft moult." I can only hazard the opinion that there must be something wrong with your methods. If birds are kept in rooms which experience great changes in temperature (from hot to cold, or vice versa), or are changed about from heated to unheated rooms, or vice versa, "soft moult" usually results. Have you been guilty of things of this kind? Many people, too, make the mistake of hanging their pets out of doors at the first glimpse of spring-like sunshine; then, if there happens to be a cold wind about, their mistaken kindness ends up in their birds falling into cross (or soft) moult. The only thing you can do is to keep your Linnets cosy and out of draughts (not in au over hot place) and wait patiently for them to get their out-of-season moult over. Buy twopennyworth of citrate of iron from a chemist. Every second day, dissolve a tiny pinch (as much as half covers a threepenny bit) in two tablespoonsful of water, and give it them to drink. Give plain water, of course, on the days you are not giving the citrate of iron. Give a feed of maw seed daily; also a few young, tender dandelion leaves, and any seeding shepherd's purse and chickweed you can find.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S., M.B.N.H.S.

Outdoor Aviary.—I am building two outdoor aviaries (6 x 4½ x 10 feet high) for British and Foreign birds respectively. How many and what kinds can I keep in each?—AUBREY NEAVE.

As to kinds of birds note our reply to "Novice" in this issue. You have accommodation for from 20 to 30 birds, but if you want to breed put in half a dozen pairs only—say Rufus-tailed, Gouldian, Zebra and Ribbon Finches, Silverbills and Diamond Doves. Diet: Canary, white, Indian and spray millet, green food, grit, cuttle-fish and continuous supply of water for drinking and bathing. Also such greenfly (aphides), spiders, earwigs, small beetles and horse flies as you can capture for them. When they have young to feed they must have some good soft food mixture; the following is about one of the best: Best ants' eggs (cocoons), crushed Osborne biscuit, crumbled sponge cake and dried flies in equal parts, make crumbly moist for use. Re your British bird aviary repeat this query next week to our Mr. G. E. Weston—I cannot trespass on his preserves.

Birds for Aviary.—What inexpensive British and Foreign Birds, how many, and what kind can I keep in outdoor aviary 10 x 5—7½ feet high?—BIRD LOVER.

As to kind of birds see our reply to "Novice" in this issue; and as to diet see reply to Aubrey Neave also in this issue. You have space for from 40 to 50 birds the size of a Norwich Canary, half as many again of Waxbills or small Foreign Finches. You could also include Red-crested Cardinals, Madagascar, Napoleon, Black-faced and Red-billed Weavers, also Paradise Whydahs. Do not include Pintailed Whydahs for they are murderous little wretches in a mixed collection when in colour. The following British Birds will agree with the Foreigners named in our replies: Brown Linnet, Redpoll, Siskin, Gold and Bullfinches. The Weavers would require a few mealworms and such other spiders, beetles, etc., as you could capture for them. It is best to put the smaller birds in first, let them get used to the place, and then introduce the others at intervals as opportunity offers.

Orange-cheek Waxbill Ill.—The bird pants, opens and shuts its beak as if he could hardly breathe. How can I treat it?—NEW SEAR.

It is very difficult to say whether your bird is suffering from severe indigestion, some bronchial affection or possibly pneumonia. You give me no particulars as to how you are treating. In the case of the first-named make the drinking water quite saline with Epsom salts for one day, and repeat same in three days time if necessary. The bowels must be kept freely moving, the excreta should not be hard, neither should it be watery loose. If it appears at all weak put three or four drops of brandy in its drinking water. In case of some bronchial effection, get from your chemist the following mixture: Ipecacuanha wine, oxymel of squills and glycerine in equal parts, take half a teaspoonful of this to one tablespoonful of water, and let the bird have this to drink till relief is given. Its diet should be: Canary, white and spray millet, green food, grit, cuttle-fish, etc. If it will eat it a little crumbled sponge cake and ants' eggs (cocoons), slightly damped will be helpful. It must be kept warm and out of draught. Only use a crock or glass drinking vessel while giving drugs.

Cork-bark and Birds.—Have covered my nest boxes with cork-bark and I find them nibbling at same. Is it likely to injure the birds?—COWANLEY.

I never tolerate cork-bark inside my aviaries, and though I have known birds to nibble at same for some time without apparent injury, yet for such birds as Parrakeets, which seem to occupy their time apart from eating in nibbling or chewing up something or other, I cannot consider it other than injurious and likely to give rise to stomach troubles sooner or later, and I certainly advise you to remove same from the interior of your aviary. Of course if the birds simply nibble and do not swallow the bark no harm will be done, but I should not take the risk myself.

Blue-Mountain Lorikeets, etc.—(1) Will Blue-Mountains agree with Rosellas, Cockatiels, etc., and will they breed in this country? (2) What is their food and treatment; is a vegetable and seed diet sufficient? (3) Will Moustache Parrakeets live out of doors, and what is their food, etc. (4) Is dari, wheat, millet, canary, grit, etc., sufficient for Red Rosellas? My birds will not touch apple.—WHITELANDS.

(1) I should not put the Blue-Mountains out for another six weeks, unless you know they have come straight to you from an outdoor aviary. They have the reputation of being unsafe in a mixed series, though some have so kept them. If you elect to keep them with your Rosellas, etc., you must keep a watch upon them till their demeanour is ascertained, at least this should be done with all, there is so much individualism in birds. They have been bred in this country, but such cases are uncommon. (2) Canary seed, *ripe* fruit, green food (fresh and clean lettuce) and milk sop, prepared with *boiling* milk only. (3) Yes, the Moustache Parrakeet will live out of doors, but you must not put it out before the middle of May in our uncertain climate. Diet: A seed mixture of canary, millet, dari, wheat, hemp, *small* Indian corn and sunflower seed in equal parts; also *ripe* fruit, green food, plain biscuit, nuts, etc., with regular supplies of grit, cuttle-fish and water. (4) My Rosellas are very fond of apple, but this is not really necessary. The diet you name is sufficient, providing you supply plenty of green food—lettuce, tufts of grass in flower, and any wholesome weeds—but green food must not be given in a frosted or sodden condition. Cut an apple in half, get a stick say 18 inches long, push it through the the apple and then into the ground, so that the skin of the apple rests on the ground. Supplied so, I think your birds will soon take to it. My Rosellas eat freely of orange given in the same way.

East Indian Rice Birds (Hal Chris).—The birds you describe are Grey Java Sparrows. Diet:—Canary, white and spray millet, with a few white oats and a little rice in the husk (paddy rice), at times as a change, green food, such as lettuce, chickweed, and any non-poisonous weeds, grit, cuttlefish, and water, ad lib, for drinking and bathing. Most Foreign birds are unlikely breeders in cages, though some do so; and most probably yours will settle down to nesting once they have become thoroughly accustomed to their cage; any box, formiug a cube, say five inches square, will answer as a nesting receptacle; you must cut an oval hole, say, 2 by 1½ inches, in one of its sides for entrance Give them a little hay and long grass as nesting material. They are hardy and long-lived birds, do not need artificial heat, but, like all birds, must be kept out of draught.

Is Ivy Injurious to Parrakeets? (A.C.T. and Another).—I have never known ivy to injure any species of birds; but that Parrakeets are injurious to ivy there is no manner of doubt. They will strip the wall for you very rapidly, and tear off all new growths as fast as they appear. This destructiveness applies to all manner of trees, shrubs, etc.

Persian Bulbul.—How can I distinguish the male? What is their food and treatment?—W. STRICKLAND.

The male has the head jet black; sides of face, pure white; back of neck, warm brown, narrowly banded with blackish brown; remainder of upper surface, dusky brown with paler edgings to most of the feathers; under surface, brownish-white; ventral region, rich yellow; bill and legs, black; iris, brown. Diet:—Let the bird have as much ripe fruit (as in season) as it will eat, also a few mealworms daily, and such spiders, beetles, smooth caterpillars, etc., as you can capture. You must keep a saucer of some good soft food mixture in its cage (this should be a roomy one), chopped lettuce, chickweed, etc., should be stirred in with the soft food after it has been mixed. All green food must be fresh and clean. The following is a good soft food mixture (or see advertisement columns):—Equal parts of chicken meal, best ants' cocoons, dried flies, and crumbled sponge cake; well mix, and make crumbly moist for use.

Californian Quails.—What is their diet and treatment?—WATERTON.

Almost any kind of small corn will do for these really beautiful birds, but I should not give hemp. When I kept these birds they had access to the Dove and Parrakeet mixtures, and they certainly throve on it. A good mixture for them would be: Canary, millet, dari and buckwheat. They must have a liberal supply of green food, lawn slipping, lettuce, etc. Insects of some kind must be given, mealworms, live ants' cocoons, maggots, or, better, the chrysalids (pupæ) of the flesh fly. Green food should not be given in a frosted or wet condition. If you have any young birds hatched, live ants' cocoons are almost essential, also dried ditto, first soaked and then scattered on ground in their proximity; they are also fond of soaked groats. For the first fortnight green food should be chopped up small for the chicks. These birds need a sand bath in some dry corner, and it is a good plan to mingle a little sulphur with the same.

Collar for Feather-plucking Grey (E.B.B.).—For obvious reasons I am not permitted to recommend special advertisers, but any metal cage maker advertising in our columns will make you one, as also would your local cage maker. It must fit the bird's neck comfortably, not to in any way restrict, yet not too loose, and from it there must be a light steel chain dangling down the bird's breast; the collar should be of zinc and not heavily made. Note. Saturate the parts the bird is in the habit of plucking with a fairly strong quassia solution; this must be persisted in. It is a work of time checking a bird of this objectionable habit. I certainly advise you to treat this as well as having the collar. Diet your bird as advised regularly in this column. Note other birds in this issue

Budgerigar Ill (E.M.G.).—Regret to hear of your loss. I forget how you were keeping your birds. It certainly appears as if your birds had got some contagious complaint, and that the present bird had caught it from the one you lost. The bird should be caged separately and kept warm. I should advise you to blow the feathers aside on the abdomen, and lightly touch the bare skin with a camel-hair brush that has been dipped in turpentine; avoid getting it on the feathers as much as possible. For two or three days put five drops of aromatic sulphuric acid to one ounce of drinking water, and let it have only this to drink: supply it fresh daily. The bird must be kept warm and quiet. I much fear you will lose it, as the trouble seems already pretty well advanced, and will be more so by the time you see this.

Parson Finches (G. E. Brown).—These birds are somewhat irregularly imported, and are not always to be obtained. For obvious reasons I am not allowed to recommend special advertisers, but if you write those advertising Australian birds in our columns I am of the opinion you will succeed in obtaining a pair. If you find these are not on the market, you will find Ruficauda (Rufus-tailed) Finches pretty and interesting birds for the aviary.

Rose-breasted Cockatoo Ill (Hulbert).—It is most mysterious; but, however this may be, its diet has not caused the trouble. It must have picked up something while at liberty which its system has not yet got rid of. As you have already treated with magnesia, dissolve 5 grains of bicarbonate of potash in two tablespoonsful of water daily for three days, and let it have only this to drink, save for a few sips occasionally of water to which has been added 3 drops of brandy to each tablespoonful. Water must not be left in cage, but it must have a few sips at intervals during the day. Keep it warm and quiet. On the fourth day, to one ounce of water add 15 drops of sulphuric acid and one drop of laudanum. Let the bird have a drink of this mixture morning and evening, with clear water at mid-day, for a couple of days. As the bird has lasted so long it should recover; they are hardy and long-lived as a rule. Let me know the result.

Virginian Cardinal with Sore Feet (Gessner).—Your diet appears to be fairly correct, but you make no mention of fruit or green food. Give the bird a liberal supply of such *ripe* fruit as is in season—as much as it will eat. The taste of individual birds varies in this respect, but most species eat ripe banana and apple readily. It should have a little fresh green food daily. Give three or four mealworms also; I give these freely to all my birds, with very good results. Canary seed should form half the bulk of its mixture; the other half to consist of the seeds enumerated. While the soreness continues keep the sand tray covered with peat moss litter, and supply grit in a tin. Soak the foot in hot water (not to scald), remove matter, if any, by gentle pressure, then immerse the foot in a 10 per cent. carbolic solution; dry, and return to cage, which should be kept strictly clean. Continue the above treatment till soreness disappears. I am of opinion the trouble already existed when the bird came into your possession, but has since become more apparent.

Feather Plucking Grey.—My bird has eaten away all its breast and neck feathers. It is fed as follows: Soft bread, biscuit, meat, fruit and a bone occasionally. How shall I treat it?—G.H.B.

Your diet is altogether wrong. Stop the meat and bone at once. Do not give Parrot foods, slops, sops, or any kind of animal food whatever. Diet as follows: Seed mixture one quart each canary and oats and one pint each hemp, wheat, dari and sunflower seeds; well mix and always keep a tin in its cage. Daily supplies should be given of green food, *ripe* fruit as in season, grit, cuttle-fish and water. Also, as extras to vary the diet, nuts, plain biscuits (dry), boiled potato (dry), raw carrot and crust or dry household bread. Treatment is very tedious, make its drinking water quite saline with Epsom salts for one day only, and repeat this as necessary to keep its bowels freely moving, not loose; on other days well colour the drinking water with Parrish's Chemical Food. Also saturate the affected parts with quassia solution, but improvement is very slow. Only use a glass or crock drinking vessel while giving drugs. You might also get a light zinc collar made to go round its neck from which dangles a piece of light steel chain. Any metal cage maker will make you one.

Outdoor Aviary and Birds.—In my aviary (6 x 5 x 5 ft.) I have pairs of Lovebirds, Bullfinches, Redpoll and Linnets. How many and what kind can I keep with above? Can I keep Budgerigars with them?—NOVICE.

Lovebirds and Budgerigars are dangerous company for British and Foreign Finches of any kind; one pair of each might be fairly safe, but when they multiply and get fairly numerous they are really dangerous to the other birds as I know to my cost. You have space for two dozen birds the size of a Norwich Canary, or half as many again Waxbills and *small* Finches. The following are very hardy, inexpensive and pretty birds: Common or Green Avadavats; Grey and Golden-breasted Waxbills; Zebra, Ribbon (Cutthroats), Diamond, Rufus-tailed, Yellow-rumped and Pectoral Finches; Bronze and Black-headed Mannikins; Silverbills; Java Sparrows; Spice Birds; Pekin Robins; and Diamond Doves (very small and pretty). All the above are easily kept, and once they have got over the hardships of the voyage to this country are hardy and long-lived. But a certain percentage of losses are almost unavoidable.

PARK & LAKE AVICULTURE.

Answered by FRANK FINN, B.A., F.Z.S., M.B.O.U., etc.

Swans.—(1) How can I sex Swans? (2) At what age to they begin to breed?—CONSTANT READER.

(1) Swans are easy enough to sex if a true pair are seen together; the male is larger and stronger looking, has a larger knob on the bill, floats higher in the water and shows off, with neck laid back and unfurled wings, much more than his mate. The difference is, of course, less marked in a young male in some respects, especially with regard to the knob, which also varies in size according to individuals to some extent. A single Swan is hard to sex; the best plan is to study a known pair, and note the differences for yourself, if you can manage this. (2) Swans should breed in their third year.

Management of Pigeons.—(1) Would a breakfast cup of seed twice a day be sufficient food? (2) Do they need mutton-fat or cuttle-fish bone? (3) Do they eat green food? (4) What food do they need when feeding young? (5) Do they bathe in water? (6) May they be allowed to breed all the year?—G. W. S. PARKER.

(1) It is always hard to lay down the ration for any bird, but I don't think you would find Pigeons require a breakfast cup full of food each for all day, let alone at two meals. Many fanciers leave food always with them in a hopper. You say "seed," but I suppose you know small seed is merely a luxury for pigeons; one usually feeds them, like poultry, on various kinds of grain, and especially on the dark peas. (2) Cuttle-fish bone is also a luxury; old mortar, mixed up with salt, is quite good enough. The salt may be given separately, as rock salt; but it should always be supplied, as well as large grit. Crushed oyster shells are good. Mutton fat is not given, but I think a little chopped hard fat of any kind would not do any harm. (3) They will eat lettuce, cabbage, etc., which should be tied up firmly. (4) Their ordinary food will do for them to rear young on, but if you give some small seed or broken biscuit it is especially appreciated at such times. (5) Yes, they bathe in water, but not so freely as most birds; what they particularly like is a shower bath, and part of the aviary should always be open-wired, unless they fly loose. (6) No, it is best not to let them breed all the year round.

POST MORTEMS.

Mr. J. North, 435, Oxford Road, Reading, will examine cage birds for a fee of 1s. 6d. each bird; for a reply direct, 2s. 6d.; analysis, 21s. Subjects for post-mortem examination must be sent packed in a box direct to J. North, with fee. Any sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.

Grey Parrot (W. Baker).—Well-established enlargement of the liver, consequent inflammation and rupture of blood vessel.

Linnet Mule (H.O.).—This bird, and possibly the seventeen others that have gone before, died of septic inflammation of liver and lungs, ending in rupture of blood vessels. This is an infectious condition.

Canary (T. F. Bonhote).—Severe chill or inflammation of lungs and liver, with rupture of blood vessel on the latter organ. The bird may have been affected by the wide range of temperature we have had lately; its own bodily temperature may have fluctuated in presence of the "pairing fever." Kindly note that birds which die on Friday are better examined at once than kept till Monday.

GENERAL.

Answered by the EDITOR.

Paper (A. Parks).—The paper you mention is in type and only awaits an opportunity to appear.

Cutting (Miss Bushnell).—Thanks for drawing our attention to this matter, which we shall hope to deal with.

"Being" (J.W.B.).—We are quite unable to see that the substitution of "being" for "are" would make any difference other than to spoil the grammar of the passage.

Report (T. Boyle).—We much appreciate your kindness in forwarding report so promptly, and regret that on its receipt our columns were so full as to preclude our using it this week.

Suggestions (M. Brown).—Accept our thanks for your kindly suggestions, which shall receive every attention. Specimen copies have been forwarded, and we are much obliged to you for the trouble taken in distributing them.

Papers (F. K., A. P., W. D. N., R. P. B., G. A., F. B., Waysider.).—We have to acknowledge receipt of your contributions, and tender our best thanks for same. We shall hope to use them at an early date.

"Blaze of Colour" (W.W.F.).—It has all along been our intention to do as you suggest. A pronouncement will be made in our next issue. Your remarks concerning coloured plates shall receive our consideration.

Non-payment (E. G. Olliffe).—We sympathise with you in the matter, but we could not possibly publish your letter. The case being sub judice, we should be liable to committment for contempt of court.

Talon (J.S.N.).—As the word talon indicates the "claw of a bird" (bird of prey chiefly), it could not, in our opinion, be correctly used to designate the whole foot. Such a loose use of the word might pass muster under certain circumstances; but it would always be best avoided.

Iron Work (Juggins).—We cannot at the moment recollect any particular work giving the information you desire. But if you communicate with Upcott Gill, Publisher, Drury-lane, W.C., we think you will find he has a handbook which treats of the subject.

Seeds and Food (C. W. Rockcliff).—The seed you send is (as stated on the package) black rape, and not suitable as a food for Rollers. What you need is the red summer, or German, rape. The food you send is a really good article, and widely recognised as a substitute for egg food.

Nets (M. M. Blacker).—It is against our rules to recommend individual advertisers. The small nets you mention may be bought from any of the advertisers of nets who use our columns during the season. Refer to back numbers; or consult the ANNUAL.

THE NORWICH PLAINHEAD CANARY.

Where are We?

SIR,—I am tempted to ask this question from the diversity of opinion expressed hy three of our leading fanciers in CAGE BIRDS of March 22nd issue. The three opinions were each expressed at lectures, and it is quite possible the speakers may not have heen correctly reported. Be that as it may, your readers can only judge by what appears in your columns.

At a meeting of the Bury and District C.B.S. Mr. J. Raynes, the Hon. Sec. of the Norwich Plainhead Club, is reported as follows: "Mr. Raynes gave a hrief definition of what he considered a typical Norwich, and contrasted the same with the so-called Norwich, which frequently finds its way into the list of prize-winners at every show; hut so long as the present diversity of opinion among judges existed, so then would these hirds appear as prize-winners. The idea was prevalent that a hig bird with plenty of colour attracted the eye of the judge in preference to the typical Norwich, which had not heen suhject to colour-feeding. Mr. Raynes regretted that some of the Norwich Plainhead Cluh's judges were too much impressed by the size and colour of the bird, instead of having a standard. In his opinion, type ought to receive first consideration, and colour last."

Mr. J. C. Barnes, in a paper read before the Huddersfield O.S., said: "Substance is in great demand at present, and one must he with the times if one's hirds are to he heard of when in competition. Type and quality, which should he the first consideration, appears in a good number of cases to have been neglected somewhat. The rage for size of late years has heen such that one often wonders where we shall drift to, especially in tho Norwich. However, the times demands size, and size we must have, with as much colour as possible."

Mr. J. W. Bancroft, in his lecture hefore the Bolton and District P.C.B.S., emphasised the fact that he wanted "large, bold birds," and not "those nice little undersized things which sometimes manage to creep into the prize list. I care naught for this class. It is the good hig 'uns we want." Again, he says: "In our Norwich there are three necessary points which we must never lose sight of—viz., colour, quality, type."

Now, reading these three opinions, a novice would he plunged into a sea of douht. All three gentlemen are authorities, yet all differ. Mr. Raynes inveighs against the judges because they go for size and colour in preference to type, making it plain that type should como first and colour last. Mr. Bancroft puts things quite the other way ahout. He declares for the "good hig 'uns" and "large, hold hirds," and finishes hy placing the required points in reverse position to Mr. Raynes, putting colour first and type last. Mr. Barnes does not take a decided line. He expresses a preference for "type and quality, which should he the first consideration"; but, like the ladies, he evidently considers that to he in the nation one must he in the fashion, and, as large birds seem to he fashionable, he says: "However, the times demands size, and size we must have."

The Norwich Plainhead Cluh possesses a standard. The Hon. Sec. of the cluh charges the club's judges with not adhering to that standard, and he is not the only one who brings the same accusation against the club's elect. One of the principal reasons for the existence of a specialist club is that the hreed over which it watches should he judged by men who are specialists in that hreed—men who are supposed to know far better than the all-round judge what is required, who will judge to standard, and not to their own individual fancy. In the case of the Norwich Plainhead Club, Mr. Raynes tells us this is not so. I am not a memher of one Norwich Plainhead Cluh, so will not pursue the point further than to say that it is hoth sad and strange that the secretary of the cluh and its judges are at variance in their opinions. What have Norwich breeders to say upon the matter? Who is right—Mr. Raynes, Mr. Bancroft, or Mr. Barnes? My sympathies are with Mr. Raynes. Type should certainly come first, then quality, and lastly colour.—A SOUTHERN BREEDER.

THE KEYSTONE OF THE C.B.U.

SIR,—The defence set up by your correspondent last week is not a very good one. I do not consider it a lihel upon any fancier or exhibitor to say that the Union is not a representative one. Taking up the same line of argument, might not those fanciers and exhibitors who are not members of the Union consider it a lihel if we said the Union was a representative one? When we are told that we have no right to condemn the Union on supposition, we may certainly expect to know hy what right the other side exalts the Union on supposition. Very few will say that the Union has done anything to be proud of up to the present. I also think that when societies become affiliated to the Union, they do become non-entities to a certain extent, for the objects of the Union, as stated, are simply a repetition of the objects for which most cage bird societies are formed. Therefore, societies are simply contributing funds to the Union to do what they are quite able to do themselves, with this significant addition, that while societies have no control over the Union, the Union has supreme power over all societies, so that, instead of the Union existing for the henefit of fanciers, fanciers are existing for the henefit of the Union, which has been my conteution from the first. The one great argument used in favour of the Union is the prevention of fraud. What a poor opinion of fanciers and exhibitors these writers must have! They appear to think that the Fancy is largely composed of rogues and fraudulent exhibitors, and that there are no honest fanciers hut themselves. To say, as a correspondent did last week, that judges knowingly pass faked birds in order that they may be engaged hy other societies, and that they are aided and abetted hy the societies which engage them, and, worst of all, to say that fanciers will not exhihit under honest judges, is to cast a great slur upon the three principal branches of our hohby, and, in my opinion, needs verification. For my own part, I think the best protection a judge can have is that he gives his decisions fairly and without fear; and, so far from refusing to show under honest judges, exhibitors as a rule *prefer* to exhihit their hirds under a judge who has the courage of his convictions. These judges are the most popular and the most sought for. I maintain that, had the C.B.U. really heen beneficial to the Fancy, coercion would not have heen necessary in any form whatever. Would it not have been better if the Union, instead of trying to rule the Fancy by means of boycott and coercion, had left societies to manage their affairs, and contented itself with forming some plan whereby any society fallen upon evil days, instead of heing sued for payment of prize-money, as per rule 13, would he able to pay their way hy means of a grant from the Union (repayable within a given time and at a small interest), and also to help any fancier with legal and financial aid who might happen to have trouble with the railway companies? These are the worst things we have to contend with, and I believe if the Union had confined itself to mitigating these it would at the present time have within its ranks every cage bird society in the country, and that without coercion. Please understand, Sir, the above does not come under the category of "those with fertile hrains for hatching schemes." It is not intended as a suggestion, hut is simply my own opinion.—WM. REID.

[Pressure on space has compelled us to condense the above letter. Correspondents must please he as hrief as possihle, and avoid going over old ground.—EDITOR.]

SIR,—Mr. Wm. Reid makes an ingenious attempt to evade the point at issue. In your issue of March 23rd Mr. Reid distinctly states that the C.B.U. exempted the Palace Show from rule 17, for the sole reason "hecause the Palace Show wouldn't have it." I replied that there was not a shadow of truth in the assertion, and I repeat my statement. The Palace Show was held under C.B.U. rules, rule 17 included. The Show was advertised in CAGE BIRDS under fixtures marked with a *, denoting that the Show was being held under C.B.U. rules, and you, Sir, fully noted the fact in your lengthy critique of the schedule. So I again ask Mr. Reid to confine himself to facts within his knowledge.—J. W. RAMSDEN.

GATESHEAD AND THE C.B.U.

SIR,—I have tried to meet the principal objections raised against the C.B.U. and rule 17 in a general and kindly way, and hope the effort has done some good. In case some reader may think I have some grudge against Gateshead Society, I will reply to Mr. Taylor. I have no desire to injure either societies or fanciers, hut was quite justified in the reference I made to Gateshead. To refuse to let members have the rules because a few advertisements were deemed a good way of paying the cost was childish in the extreme. Too much paint, too little paint, or perhaps it was the colour of the paint that displeased. If he says it was neither, hut the preference shown to particular artists, then let me tell him that preference is a natural and daily necessity and practised by every fancier, and I have a knowledge of one great coup that was tried over the Border. It would have been absurd to ask all the world to advertise. All that was necessary by those who objected to advertisements appearing on the rule book was to pass a resolution that such a step be not taken by the council on a future occasion. We must be prepared for criticism when actions are of an injurious nature, and it was an injury to the members who were affiliated to tho Union to have these rules detained. I can find nothing in my letters that warrants him in accusing me of spite, hut of jealousy—yes. I am jealous as to the effect of some people's actions, and it appeared to me Gateshead might have a greater import than the injustice inflicted on its own members who were absent from the meeting. I write as a member of the Union, and, even though Gateshead was affiliated (under protest) to the Union last year, it remains to be seen whether or not it is this. In saying some fine men were in the society I simply stated what can he said of every society. As I said nothing about "misleaders," I can only think the knowledge possessed by Mr. Taylor has supplied the inference that pricks his conscience and upsets his equanimity to the extent of writing two letters to the Press that ring with the spirit of enmity hoth to Mr. Robson and myself for daring to mention Gateshead. Should it he necessary, I will not he so reserved in my remarks, hut write as plainly as he knows I can. There is one statement in Mr. Taylor's letter that should be most gratifying to the members of Gateshead Society, and that is: "I am quite willing, as long as my members wish it, to carry on the work of this society to the best of my ability, without hope of any pecuniary reward." I hope Mr. Taylor will remember that. I am not an official of the Union, nor am I seeking to be; but I wish it life, growth and usefulness. There is much that such a Union can do, and, as the result of a thoughtful, hroad-minded policy, may Gateshead flourish!—G. W. MACPARTLING.

KEEPING BIRDS IN THE OPEN.

SIR,—Now that the warm weather is again approaching I would like to say a few words as to the advisability of putting birds outside (hoth British and Foreign). There may possihly he some fanciers who, like myself, thought it right to keep their hirds indoors. For their benefit I would like to give my experience. About two years since I started to hang mine outside the house, and after having them out for fully that time, hoth summer and winter, I have come to the conclusion that it is hy far the hest. The birds look better, seem far happier, and have become thoroughly hardened. During the past severe winter I have hung them out almost every day, and, although the frost has several times cracked their glasses, yet not one of the hirds has come to any harm. My hirds are not all British, for in one cage I have a Cowbird, in another a Nonpareil Bunting, and a third contains a Cordon Bleu Avadavat, Waxbill and Nutmeg Finch. I have also seven British birds. I may state they are all in box cages. Over the cages I have fitted up a cover to throw off the rain and keep off the strength of the summer sun. The frame is made of three-quarter inch quartering, and covered with either felt or oilcloth. This runs the whole length of the cages, just wide enough to throw off the rain. I am sure that anyone who has never tried keeping their hirds thus would be well repaid hy giving it a trial. I know it means a little extra trouble hanging them out and taking them in at night, but the true lover of hirds doesn't mind a little trouble for their sake. My advice, therefore, to those who have not done so is to try it. The manifest pleasure of their birds, their better appearance, and their singing, which will sound better out-doors, will cause their owners to have no regret they tried it. This is the experience of one who has tried and proved the henefit of the practice.—W. J. P.

BRITISH-GROWN CANARY SEED.

Now's the time to Plant.

SIR,—It will be remembered that last year a number of Northampton fanciers, having allotments, decided to grow canary seed, and I may say the results caused much interesting talk and friendly visits to the seed patches to compare samples, etc. Some fanciers had well-manured loamy soil; others had dry, sandy soil. On the loamy soil the straw grew much taller, and the seed heads were larger, hut when the final test of threshing came, the seeds grown on the dry sandy soil were the hest in shape, ripeness, hrightness, and colour. It grows ahout three feet in height, a number of stalks coming from one root, and there is one ear at the end of each stalk like wheat, the ear is not unlike the hop in shape and size, and when ripe each ear contains from fifteen to twenty seeds. It should he sown in rows, ahout eight inches apart to allow for weeding. We measured off a piece, threshed and weighed the seed, and it worked out close on four quarters to the acre, which I think is not had, when one considers the price of canary seed. I send you samples of the seed from the two different soils. Will you kindly remark on same, also photos. of seeds, life size, and a seed patch as grown, which will illustrate better than all the descriptions I can possihly give. I do not write this with any intentions of urging people to grow canary seed to feed their birds with as a staple food, hecause we found that on comparison with Spanish, Turkish, and other foreign grown seed, the British grown seed is very inferior in size, etc., hut if any fancier has a spare piece of ground in his yard or garden, and grows a nice piece of canary seed, he will find it very useful at moulting time. If cut and tied in small hundles and stuck up in the flight cages and aviaries, tho hirds will simply revel in it, and it will give the young birds plenty of occupation. They will pick out every seed from the new heads, before they will touch any other seed you may give them, and while so engaged will not pluck each other. British bird keepers will also find it usoful for seeding off Greypates and Linnets, etc. The seed can he sown in April, and cut in August and September.—G. SARGEANT.

(The canary seed Mr. Sargeant kindly sends looks excellent, though small, and tastes well. The photographs we shall hope to reproduce in the near future.—EDITOR.)

CONCERNING SOLDERING.

SIR,—If this should meet the eye of Mr. Thos. Soar I would be much obliged if he would tell me how to tin a soldering iron.—J. A. Y.

Mr. F. Carl,

Dear Sir,

Thanks very much for sending "Annual" direct. It's the first I have had although an old reader of "CAGE BIRDS," but have been unable to get it before, but it won't be the last. I think it an excellent work which should be read by every NOVICE.

Yours respectfully,
J. J. BRAIN.

THE LINNET IN CAPTIVITY.

SIR,—I have read with interest all that has appeared in CAGE BIRDS on Linnets during the last two years. I have a good few Linnets in my possession, most of which are last year's birds, and all are in full song. My greatest difficulty is to get my Linnets steady, and make suitable cages for them. I have tried all-wire cages, hut found these were not suitable. I then made oblong cages, wired at the front and two sides only; these also did not suit them. Now I have box cages about 14 ins. long, 10 ins. high, and 6 ins. hroad, wired in front only, with food hox and water tin outside. Two perches are fitted from hack to front of cage, and one right along the front, all 3 inches from the hottom. The front ledge (including the sand tray) measures 3 inches high. Now for the Linnets. One is continually fluttering his wings, and running along the perch endeavouring to get out; another will flutter his wings, give a jump on to the wire front and down on the hottom of the cage; one will employ himself in jumping up into the top corner of his cage, and yet another will hide himself behind the ledge of his cage and poke his head up like a snake, now and again, and see if any person is near. If not, he will jump holdly up on one of the perches and sing as well as any Nightingale or Blackcap. And a hird holder than the rest is continually on the perch giving us the best of his song; when not doing this he is jumping from perch to perch in an almost upright position, hut if you stand near his cage for any length of time he will hide himself behind the ledge like all the others. The great point in steadying Linnets is, I think, to put them into cages in which they can see all that is going on in front of them, and where they cannot hide themselves when approached. I have a very old hook on hirds in which it says, "Linnets should he kept in square cages, as they are then less suhject to giddiness, and the cages (which are generally much too small) should be sufficiently large to admit of the introduction of a hathing pan every morning." Would the "Linnet King," and other Linnet fanciers, give us a few hints on the caging up of fresh-caught Linnets? I am sure there are hundreds like myself who would he greatly benefited if some successful Linnet fanciers gave us a sketch or two of the cages they use to keep this brown songster in.—LINNET ON THE BRAIN.

THE POINTS OF AN EXHIBITION LINNET.

White Throats or not?

SIR,—Your correspondent, Mr. F. King, wants to know if I really think a Linnet such as I described in the paper which I read before the members of the Darlington Cage Bird Society would have any chance at all if shown in good company. I say yes; hut would like to know what, in his estimation, constitutes good company? In answer to his first question, the statement I made (and I say the same still) was that the Linnet should have a light throat—i.e., a light underground—the same continuing down the centre of breast. When I say light I mean a very pale shade of brown, and running off to white at the vent. The latter may he a little misleading, and should have read, "running off to a 'dirty' white at the vent." Mr. King says his contention is that the hird should be a sound nutty hrown from the hack (this should have read beak.—EDITOR) to the tip of tho tail, which differs little from what I stated, with the exception of the tail, which should be black, not hrown, the four outer feathers having a deep margin of white; also the wing coverts are hlack edged with white. My paper says, "Head and hack should he a rich nutty hrown." Mr. K. next takes that portion of my paper which says the Linnet should show distinct black spangling or lacing on sides of head, neck and breast, and states that I do not mention the ticking on centre of hreast, without which, in his opinion, a Linnet can never he a real tip-top specimen. Surely, Mr. K., you do not understand my meaning. When I say a light throat, the same continuing down centre of breast, each side of *that* must he the sides I mention—"side-front," if you can understand it hetter that way—and they should he well ticked, running well up under the wing. He is astounded at my saying the Linnet should stand as erect as possihle, and says it is very misleading, as he has seen a few as straight as a good Yorkshire, hut says I cannot surely wish to give the impression that a Yorkshire is the correct type for a Linnet. Well, not exactly, Mr. K.; but I should most certainly prefer a little of the Yorkshire type to that of a Norwich for a Linnet. You may, at times, visit a show and not find a good type of a Linnet in the class, and the person who may be appointed to judge will then have to take the other points into consideration, and, to the hest of his ability, make his selection irrespective of type. My contention is that a bird standing fairly erect, and with a good chest (what I call of good position or type) should always stand in front of the short, chubby Norwich type, although the latter may excel in colour and markings. What does Mr. Houlton, one of our recognised British experts, say about type? He says: "As erect as possible, with a good hroad chest"; and, if I am not mistaken, he, together with Messrs. Battye and Maddison, favours the light throat. What is the B.B. and Mule Club's standard? Why, "as erect as possible." You must, as you say, Mr. K., be under a delusion. In CAGE BIRDS for April, 1902, four different types of Linnets usually met with were illustrated, the one given as an ideal specimen heing a hird standing erect (but nothing by comparison to a good Yorkshire). CAGE BIRDS, in a supplement dated November 26th, 1904, published one of the finest types of a Linnet that I should think your readers have ever had the pleasure of studying. If you preserve your back numbers, Mr. King, it would be worth your while to carefully study the above. You will therehy he hetter ahle to judge if such a hird as I described would stand any chance at all if shown in good company.—F. MARWOOD.

SIR,—Once again in your columns I notice two leading advertisers announcing that they do not sell little sea-coasters. As Secretary of the Bradford Linnet Singing Club, I should once more like to ask your readers not to be misled. The proof of the pudding is in the eating. I have no Linnets to sell, hut our club has had a consignment of the sea-coasters this season, and they have proved heyond all doubt as game as anything we have had. Moreover, they are fit to hang against hirds caught in the hills, or made in Germany for that matter. The opinion of a man like Jim Clarke, the original Linnet King of Leeds, a popular and practical judge of Linnets, would he good reading for all lovers of the Linnet. Newcastle, Whitby, Scarhorough and Hull men have as good home-caught stuff as others elsewhere, and no doubt, like some of our members, are prepared to match them. The staple diet used here seems to bo equal parts canary and rape seed (both sorts of rape), with a sprinkling of teazel and linseed combined. They spring their hirds with dandelion and lettuce seeds, and Capern's Refresher, which is a mixture of wild seeds, ohtainable from most big seed dealers. The seeding heads of the dandelion will he obtainahle in a few weeks now, and these beat dry packet food. In conclusion I may say, in reply to Mr. F. King, I have seen no good show Linnet with a continuation of light feather from throat to vent, as per Mr. Marwood's ideal, and I certainly think Mr. King is on the right track. The hright throat markings are all right with the usual four spangles dividing the whites below the mandible and running down the throat a little way. Let us have a nice full brown chest, one mass of moon pencilling from shoulder to shoulder. These moon-shaped, dark-brown pencillings identically correspond with the shape of the red feather in the adult cock, and any birds with the straight hlack spangle are undouhtedly hens. I have seen three hens on the show hench competing with cocks, and one with a first-prize card on. If this is disputed I can name the shows and also the exhihitors. A nice light thumb-mark on the cheeks and good tanning on the hack, together with prominent whites and the ahove-mentioned pencilling, make up a good Linnet. Bear in mind the largest does not always win, as I have noticed at two large Yorkshire shows. The fault of tne judging in Linnets, as with many other British hirds, is that the judge is seldom a fancier or specialist of one variety, and in 99 cases out of the 100 is purely a Canary fancier. The reason is not far to seek. All shows are the outcome of some fancier society's efforts, and, having sat on the committee of one for some years, I know only too well that the voice of the British hird fancier is absolutely lost when judges are appointed, and the Canary judge is carried by the strength of the voting. What chance have we? How many Canary judges can tell a cock house-moulted Linnet from a hen at sight? Very few!—F. W. S. (Bradford).

THE BRAMBLEFINCH AND OTHER PETS OF A BIRD-LOVER.

SIR,—A correspondence has lately taken place in the "Dundee Courier" about the Bramblefinch, which has been seen in great flocks in Scotland this winter. I enclose a copy of one of the letters, thinking it would interest you. The writer, "A Lover of Birds," says:—"I happen to know a little about the Bramblefinch from personal experience and observation. In the ordinary acceptation of the term these birds are not migratory, but in extra severe weather, when food is scarcely obtainable in their own Norwegian home, they gather together in exceptionally large flocks and seek these shores. One of your correspondents says—'Small birds never move during winter nights; only large birds migrate in the darkness—at least in January.' What does he mean by 'small' birds? Does it refer to strength? Would it apply, for instance, to a Starling? Has he seen a Bramblefinch? If so, he has to my mind seen the very picture of bird strength. Its every appearance denotes strength. It is so firmly knit together, its feathers lie so close to its body, that—well, I cannot describe it better than by saying, as our friends over the way might, it looks as if 'born to boss it.' And it did in my aviary. In short, its lines, its symmetry, are perfect. That it does migrate during the night is proved by the fact that many of them in the year I speak of met the fate such numbers of our birds do that are attracted by the lighthouses on their way. 'Bramblefinches will thrive in a cage like the Chinese slaves in a compound. They rather like it.' So says another of your correspondents. This seems a bit sarcastic. What does he mean by a cage? In my aviary they did thrive, and if like the 'slaves' above mentioned, I can only say theirs must be a happy lot indeed. I can tell him that Messrs. Bramblefinch, Yellow Bunting, and Java Sparrow were always first among my hands in the feeding boxes, and the others had to stand aside until their lordships had dined. One particular feature of these three birds was that they did not care for strangers of the human type, and immediately made for the bushes if any such appeared. What happened to them? Well, mice robbed me. They got into the place in such numbers and devoured so much seed, etc., that the hobby got too expensive. I gave it up, giving all my British birds and the stronger Foreign their liberty. They all reluctantly took it, most of them hovering around their old home for days, and fain would they have gone back again. 'Blackie' was the exception, and I must tell you of him. A greenhouse was attached to the aviary, and in it the birds were allowed exercise. The place was well known, and into this greenhouse a sailor dropped a Blackbird with a broken wing. An old bird he was, with his bright yellow beak. With the aid of a couple of matches I set his wing. It healed splendidly, and from that day 'Blackie' was my friend. Liberty for him meant being with me. He would flop down from a tree in the garden on to my finger, and there sing as one seldom hears them except from the high bough of a neighbouring tree. His delight was to get among my feet in the garden, and the worms turned up were shown little mercy. Poor 'Blackie!' A friend lost a cage-bird, got hold of him while I was from home, and imprisoned him. He sat moping on the perch for an hour or so, and then dropped over dead. A broken heart! My wrath can be better imagined than described. Fain would I tell you of our ruse—pouring water from a pan into a barrel to set our Linnet friends agoing, and they did sing—sang for all they were worth; of the funny little Siskins; of German 'Bullie,' who perched on my hand, and, we thought, attempted to speak. If your correspondent does try the Bramblefinch in a cage, let it be a big one, and let him see that his Finch is always provided with a box of clean, dry sand, a sand bath as well as a water bath. He is a most promiscuous bather—the one minute in sand, the next in water—and is unique in this respect as far as I know. Let him 'meat off' the bird, and it will not surprise me if he become not only as tame, but as friendly as my 'Blackie.' The Cock Sparrow, as I have proved, becomes friendly in captivity and most mischievously, laughably cheeky to boot. Let me explain that I do not advocate, as I may seem to, the keeping of cage-birds commonly so-called, but I do the keeping of pet birds. Let Tommy keep a Canary, and his dad will become as interested and as fond of it as he is himself if some night when they are sitting at the fireside together the cage is opened, and Dickie alights on his boy's finger and sings a song to him, and more—I have seen it—when lifted to his mouth, gives him a kiss. Keep pets, not prisoners."—A. MCINROY.

TREATMENT OF FRESH-CAUGHT BIRDS.

How to Lessen the Death-rate.

SIR,—Most people who have had much experience in keeping wild birds cannot fail to have been struck by the high mortality occuring among freshly-acquired specimens, and it is soon obvious to an observant individual that the death rate varies according to the source from which they are ohtained, reaching the maximum among freshly-caught hirds which have heen retained for a few days in hadly-kept and over-crowded hird shops. Every other week one hears the opinion expressed that newly-caught hirds die from indigestion, resulting from the sudden change from moist food to the dry seeds offered them in captivity. That this is not the whole truth appears from the fact that when one can trap his own birds, or obtain them direct from the catcher, the death rate is greatly diminished, though the birds are suhjected to the same food conditions. This being true, there must he other and more powerful factors in operation than the mere alteration of diet; and if ever hird fanciers are to progress towards better conditions they must discard this oft-reiterated explanation, seek out the real cause, and, hy a united and intelligent policy, try to remove it. In my own mind, there is not the slightest douht that the vast majority of the hirds succumh to some infective disease, epidemic in those bird shops where insanitary conditions prevail, and, except something can he done to change the horrible conditions under which they are compelled to await a purchaser, the difficulty will never be overcome. Allow your mind to dwell for a little on the insufficient ventilation, the almost constant use of artificial light, the overcrowding, underfeeding and terrihly filthy surroundings of these hapless captives, and I think you will he forced to admit that here is a combination of all the forces conducive to the outhreak and fostering of infectious disease. If you remember also the sudden transition from a state of Nature, where food and water are abundant, and the supply of fresh air is unlimited, you will understand why the majority of these birds, instead of becoming acclimatised, are attacked by some disease which renders their lives miserable and in almost every case leads to a fatal issue. Now, if we had only constipation to deal with, a little castor oil, Epsom salts or sulphate of soda would afford relief until the hird's digestive system had time to accommodate itself to the change of diet and altered conditions of life, and a majority would not only survive, but would give their owners comparatively little trouble. On the contrary, although laxatives give some relief, the disease steadily progresses and haffles our every effort. Sometimes the most pronounced symptom of the disease may be diarrhœa, hut these cases are not more amenahle to treatment than the others, for even if the diarrhœa be checked again and again, the temporary improvement is not maintained, and the birds ultimately perish. Medicinal and dietetic treatment being unavailing, our only hope is to hring pressure to hear on the dealers, and if possible compel them to improve the conditions under which the hirds are kept. Of course, the motives of many bird sellers are purely mercenary, and they will scarcely move in this except under compulsion; hut now that the Fancy has its own papers, with many thousands of readers, it has a voice that could become very loud and powerful, and might accomplish much more than some people dream of. This suhject should interest us not only from a pecuniary point of view, but there is also the question of cruelty, which is a standing reproach to the whole Fancy, and the dangers that this wanton and wholesale destruction may lead to the extinction of some of our most valuable and interesting species. Trusting some others who have the welfare of our feathered friends at heart may favour us with their views on this question, which I am inclined to regard as of the very first importance.—LINNET FANCIER.

WHY ARE SHOWS FAILURES?

SIR,—In reply to "One who wants to know" why shows are failures, I would say hecause the novices, or new members are not provided with classes, and have to compete with the professional exhibitor. To alter this, have one or more limit price classes to each popular variety, any hird claimed hy more than one intending purchaser hefore 6 p.m. on the first day to bo then offered for sale, the owner and those who have claimed the hird only allowed to bid for the same. If a member is an auctioneer, and will give his services, then all claimed hirds can legally he put up for auction and purchased by any person present. The whole of the money paid over the entered price to go to the funds of the show; this will stop the professional exhihitor. Another point: Do not fix the date of the show the same as any other show within fifty miles (see show date fixtures in CAGE BIRDS). Have a low price charge for admission to view the show each night and the afternoon of the second day, which might also include a catalogue. Do all you can to induce strangers and visitors to become members of the society, and be sure and have some signs outside of the huilding announcing that a Cage Bird Show is on view. Have a judging competition open to all for the hest hird in the show, entry fee one shilling, the fees to ho shared amongst those selecting the bird that has received the most votes. A small hlank card to he given as a receipt for the shilling, on which the competitor will write his name, and the number of the cage he or she has chosen, the card to he dropped into a hox near the exit of the show any time before the show closes.—A VETERAN.

A WINGED WOLF.

THE HARPY EAGLE AT THE ZOO.

However keen a fancier, and however sincere an admirer of the fair sex a man may be, he could not be expected to admire the creatures of ancient Greek fable known as Harpies—a horrible combination of woman and vulture. These monsters were credited with being very voracious, and hence their name has been transferred to one of the most powerful of birds of prey, the Harpy Eagle (*Thrasaetus harpyia*) of South America. This species has been exhibited at the Zoo many years ago, but of late no specimens of it have turned up, so the arrival of one is rather an event.

The Harpy Eagle is a curious looking bird. About as big as a Golden Eagle, it is very different in colour and proportions. Its plumage is pale grey, shading to white on

THE HARPY EAGLE.

the face, and slate on the quills of wings and tail, while it has, with its loose soft plumage, double crest, and tendency to a ruff, some resemblance to the Eagle Owls. Its wings are very much shorter than the Golden Eagle's, but its bill and legs are immensely powerful. It is a Forest Eagle, soaring above the trees for its prey, and pouncing on Foxes, Monkeys, young Peccaries, wild Turkeys.

In some localities the Harpy is called "Lobo Volante"—the flying wolf, a name which expresses what its fellow countrymen think of its ferocity. Nevertheless, this fierce bird has had its place in aviculture, having been trained for hawking by the ancient Mexican nobles before the Spanish Conquest. Cortez, the redoubtable "Conquistador" himself, had to feel the power of the great bird, a trained specimen of which he possessed, and killed in a fit of temper. The bird did not die on the spot, but succeeded in crushing the finger of his cruel master with his bill before death overtook him, thus avenging his wrongs better than his human compatriots, for no Mexican could boast of having wounded this Spanish tyrant. F. FINN, F.Z.S.

A FEMALE SONGSTER.

SIR,—I was interested in Mr. Kinch's article on the above. In 1873 or 1874 I was living at Worksop. A friend of mine was a large breeder of Lizards and Norwich, and well known in that part of the country. The late E. Ormc, of Derby, sent to him for 12 Norwich hens. They were great friends, those good old fanciers! The birds were sent off. In a few weeks one of them was returned as a cock. My friend knew at the time it was a hen, although it could sing out like a cock. Well, this hen was paired up to breed, and bred 13 young ones, and 12 of these were cocks. This shows the best of us can be deceived, when fanciers like Teddy Ormie could be. What he did not know was not worth learning. This was the time when we used to see colour in Norwich, not Crestbreds in Norwich classes. Breeders in those days used to breed for the show bench, not for the market.—E. FULLER.

SHOWING YOUNG BIRDS.

SIR,—Can any of your readers (perhaps some secretaries will oblige) inform me how in club shows, where the club rules state that only young birds can be shown, owned and bred by the exhibitor, a class for British birds can be added?—MAC.

DOES COLOUR FEEDING SHORTEN THE LIVES OF CANARIES?

SIR,—Your fair correspondent asks, Does colour-feeding shorten life? Of course it does, and nobody who has the slightest modicum of commonsense will deny it. Any feeding that is not in strict accordance with Nature will produce ill-health and early death, not only with birds, but with every living thing, and the awful colour of some poor red-fed birds seen at some of our shows is only equalled by the noses of some of their owners, who have also evidently been fed for colour. Let Miss Duke continue with her large cages, good sound food, clean water, etc., etc., and never trouble about the shows, for the true bird fancier is not found there, and the health and bright looks of her pets will be a far greater reward to her than the paltry 10s. first prize, and so on. The true bird lover would as little dream of giving cayenne to his birds as he would to his children. —W. H. MOORE.

THE MAKING OF EGG FOOD.

SIR,—Having been a reader of CAGE BIRDS for two years, and not having seen any method like mine described for the making of egg food, I venture to send you the same. I get half a pound of arrowroot biscuits, divide into three equal quantities, and crush with a rolling pin. To each of these quantities I use one egg. I boil the egg for 15 minutes, then take it out of the water, strip the shell, and, whilst hot, roll egg and biscuit between my hands. The egg rubs into the biscuit, and it becomes like oatmeal. I have kept egg food so prepared for five or six days, and it has not turned sour. I think it is because the egg rolls into the biscuit whilst hot, which it will not do when cold, as the white remains in lumps. Fanciers say birds cannot eat the white, and it is wasted. It is not so with my method. The food looks so nice that it disappears like magic.—W. WORSLEY.

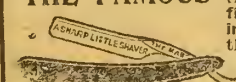
A WEEK-END IN THE HIGHLANDS.

SIR,—Arriving at Campbelltown Pier I found my friend Mr. J. McCallum waiting me, and at 18, Broad Street, I found the usual hospitality. I may mention Mrs. McCallum, her daughter and two sons, are all keen fanciers, so all fanciers paying a visit to Campbelltown should call, and they will be heartily received. Messrs. McC., like many other fanciers, found yellow hens very scarce this season, so had to run double buffs. Their first pair is made up of the Buff cock (3rd City show) and a Buff green hen (also a ticket-hitter at the City); second pair, a first cross Buff cock, procured from Mr. Finlay, Darvil, with Buff pied hen from Mr. Thornton, Edinboro'; third pair, the old Buff cock with a Buff Belgian hen, also from Mr. Finlay. Arriving at the corner of Long Row and Back Street, I could not help thinking that 20 years ago, within 40 yards, there lived four of the keenest of fanciers in Scotland. To-day there is only one left—Mr. D. Stalker. I gave Donald a call, and was pleased to find him hale and hearty, not much changed in such a long time. After losing his three friends he went more into the Norwich, and by careful breeding for some years he built up a good stock. Then he had the misfortune to have a fire in his house, so lost his stock. Last season, after getting a good hen, he bought an expensive cock from England. It also died at the beginning of the breeding season, so left the hen without a mate. Very hard lines! Being, however, a keen fancier, he is going to try again. Better luck this time, Donald! I next called on Mr. Colville, and was sorry to find him suffering from influenza. I did not wish, under the circumstances, to take him into the bird room. He laughed and said, coming so far, I must see his stock. His fancy is Yorkshires. He also has had the misfortune to lose his best, the 1st at Campbelltown. I noticed he is going strong for Hybrids. He has mated his 1st Goldie to a nice Cinnamon hen. He has a large aviary, with Goldfinch cocks, Linnets, a very nice yellow Greenfinch, and a Yellowhammer, hen Bullfinches, and yellow Canary hens. He is allowing them to select their own mates for the breeding season. Leaving Campbelltown on Monday morning at 8 o'clock, after a very pleasant sail I arrived at Gourock in time to catch the mid-day mail south, feeling much the better for my week-end in the Highlands.—RAMBLER.

THE CRESTED CANARY CLUB.

SIR,—My time will not permit me to reply to the numerous letters received in connection with the above joining the C.B.U., therefore I trust all those who have written (irrespective of their views) will accept through the Fancy Press my very best thanks for the keen interest they have displayed, and allow me to assure them that such zeal in the club's welfare is very gratifying to those in official positions.—R. L. CRISP.

THE FAMOUS



"Mab Dwarf Razor"

The description given of the little "Mab" as the **finest shaving implement in the world** is confirmed in thousands of testimonials.

Do not accept any not bearing the registered Trade Mark, "The MAB," or you will be disappointed.

Black Handle	2/6
Ivory "	3/6

The "MAB" SAFETY RAZOR with extra blade. Price 3/6.

The "MAB" blades used in this Razor are absolutely perfect.

"MAB" CO.,
Newhall St., Birmingham.

COAL TAR FOR ASTHMA.

SIR,—I saw in last week's CAGE BIRDS a coal-tar recipe for wheezing and asthma, by Mr. John Patrick. Will that gentleman please tell me if it is common tar, and where it is to be bought?—W. WALLIS.

A PIED LARK.

SIR,—When in a well-known Brighton naturalist's shop I saw an excellent pied cock Skylark. Its head and neck were all white, and the sides were spotted with white. Skylarks are not often seen with much white plumage; cinnamon and black are more common. He had also an albino hen Blackbird.—J. H. VERRALL.

ANOTHER BLACK LARK.

SIR,—Seeing a notice in last week's CAGE BIRDS of three Black Larks having been caught, I thought it might be of interest to your readers to know that I caught one in September or October, 1903. At that time I thought it was a "freak," and gave it to my grandfather, who put it in his aviary. Last season it laid one or two eggs. My brother has one now. It is rather longer than an ordinary Lark's egg, but is not so large round. The bird was very tame, but it died last month.—E. H. TUNMER.

PARROT PRATTLE.

A Medley of Notes.

SIR,—We have had many useful hints of late in your Correspondence columns anent the treatment and acclimatisation of foreign birds, so that perhaps a medley of notes, just as they come to mind, about the Parrot race in particular may not come amiss at this season. It is just about this time that many of the Parrot kind which have been imported during the late summer, and are, consequently, just now entering upon their first winter experience of our dull and variable climate, are beginning to be a cause of some anxiety to their owners. This anxiety is not infrequently intensified by the fact that the bird or birds often represent the outlay of a fair amount of hard cash, and in the case of the working-man fancier are often acquired at some personal sacrifice; so that when they quickly shuffle off the coils of mortality, and all that remains is a very trifling avoirdupois of organic matter—including a bunch of more or less brilliant-hued feathers—the owner is apt to get a little disheartened and rue his speculation. The Grey Parrot, charming companion that it is, is one of these risky lives—to use an insurance office term—and yet with proper care a very good proportion of the birds would survive. They should not be fed on slops and messes of any kind, neither should one go quite to the other extreme of believing that sops are at the root of all Parrot evils. It is notorious that such foods do not figure largely amongst practical Parrot keepers; whilst, on the other hand, one invariably finds on enquiry that the Grey Parrot which has survived for 20, 40 or more years as the pet of the family has had his bit of bread or biscuit sop through it all. But as this is not a dissertation on foods, I will only say that in this matter the bounds of discretion must not be over-stepped. A seed diet as a staple should be preferred, and, if the bird is observed to sneeze, or show other symptoms of a cold, at once begin to add a few pods of chillies to his seed pan daily until the symptoms have passed away, and occasionally give a small piece of plain biscuit or sponge cake dipped in sherry wine. Always keep a covering of flannel or baize to slip over the cage at night, leaving open a circular space at the top, about eight or nine inches in diameter, to prevent the inside getting hot aud stuffy. Slip this cover over the cage after the bird has gone to roost at night all through the winter and spring following the importation. It effectually excludes draughts, and is far better than placing the open cage in a warm corner at night. It is, in fact, the greatest help one can have to the proper acclimatisation of these birds, or, indeed, of delicate birds generally. Should the birds be troubled with mites, simply douche the cover into boiling water for a few minutes when it is taken off the cage in the morning, and these pests will be kept pretty well at bay. Amazons, as a rule, are a more hardy class of bird, and more easily acclimatised; but if they show signs of being affected by the cold, similar treatment for a short time, or during any exceptional severity of weather, will generally bring them through without any ill-effects. Lories and Lorikeets are rather birds for the fancier who has already acquired some practical knowledge with the hardier kinds than for the tyro who has to learn the elements of Parrot keeping. And there is always this one invariable rule to guide one—that extremes of heat and cold are to be strictly avoided until the birds have been gradually "hardened off," and the more delicate the species one has to deal with, the more strictly this general rule must be adhered to. Damp and draughts, it must be remembered, are most deadly foes of newly-imported foreign birds. Even such hardy birds as Budgerigars, which will often rear successfully broods of young outdoors in the winter months, when freshly imported often show susceptibility to cold, so much so that I have had apparently strong, robust birds which would look quite miserable during severe cold in their first winter after importation. Here it is rather an easier matter to counteract the effect, as a sufficiency of cosy boxes or husks hung about, to which they can retire, will remedy this serious evil. The birds will not be slow to avail themselves of protection by using the boxes as sleeping places by night and as squatting places by day when they feel the effects of cold.—FOREIGN BIRD KEEPER.

(Many thanks for an instructive and interesting letter.—Editor "C.B.").

BETTER LATE THAN NEVER.

SIR,—I have a Grey Parrot, which has been in my possession about 15 years. Last Sunday (March 30th) it laid an egg, also one on last Wednesday. Could you or any reader tell me if this is a rare act for a Parrot after having had it so long?—JOSEPH JOHNSTON.

[It is not uncommon for Parrots to lay eggs in the manner of the above bird. Odd cases have been recorded of eggs having put in an appearance after Polly has spent upwards of fifty years of blameless caged life.—EDITOR.]

SOME FOREIGN BIRDS I HAVE KEPT.

SIR,—I have always been a bird lover, have reared hundreds of Canaries, and my birds were a beautiful sight, as I did not sell any, only sometimes gave a friend one. I took such care of them that red mite was only known to me in books, unless I bought a bird occasionally; but I always washed the new ones for fear of the shop ones giving the horrible things to my stock. A man in a bird shop once said if everyone was so successful as I was, birds would be very cheap. I believe no cages can be kept too clean. My birds were out daily, and then the aviaries washed in all parts. The birds had their baths out of the cages, so went back fresh and lovely to a clean house. But as this paper is for Foreign birds only, I must not write any more about Canaries. Patience, plenty of time, and thorough cleanliness is the only way to be successful, I find, in all kinds of birds. Now for my Foreign birds. I will begin with Virginian Nightingales. The cock is bright red, with black face, and rather fierce looking; hen, russet brown, very pretty shades of red. The pair I had were very wild at first, but I always succeed in taming all my birds, so anyone coming into my bird room may enjoy looking at them. I never let strangers go close to the cages, as the birds hate strangers, except at a little distance. The cock sings at night. Mine used to commence about midnight, so I had to put them in my dressing room, with the door open for a time, to hear the song, as I go to bed long before. I thought it well worth listening to. The hen sings, too; some people like the hen's singing best. They were never ill, so I consider them strong birds. I did not find when put in the aviary they did any harm to the other birds. Their food is canary, millet, oats and hemp seeds, but they are fond of egg food, ants' eggs, mealworms, ripe fruit—especially gooseberries; they eat, also, green peas. They come from North America. I have been told they are not difficult to breed, but am sorry to say, though I have had eggs from some Foreign birds, I never succeeded in hatching any; so my success has only been with Canaries. Waxbills come from West Africa and other places. They are very amiable in the aviary. Some kinds are so small that the cage wires must be very close to prevent them getting through. I found they liked warmth, and the best food is canary, millet and a few ants' eggs. Amaduvade Finches come from India. The dealer's name is Avadavats. They were lovely little birds, the pair I had. The cock was red with white spots, and the hen yellow and white spots. They are very delicate, or so I found all I had, as they were not in good condition when they arrived. The Indigo bird, from North America, is a brown bird, about the size of English Linnet, until March, when he changes into a beautiful blue. It is very interesting seeing the brown feathers gradually disappear and the blue ones coming. When pure blue he is a lovely bird in the aviary. In autumn he changes to brown again until the spring. The hen remains brown. He will eat seeds, but is very fond of ants' eggs. I put a cupful of earth and living ants in the cage. It was amusing to see him catch them. He also likes a mealworm. He is easily tamed, and was one of my great favourites. The common Redbeak Weaver is interesting to watch weaving cotton—soft cotton is best to give them. The Red-headed Weaver is very handsome. There are other varieties—Napoleon, or Orange Weaver, Yellow and Black ditto, and Black and Red. The Saffron Finches are hardy birds, of bright yellow, shaded with orange. The Nonpareil is North American, something like the English Chaffinch, but even more beautiful. The slate colour of Chaffinch is bright blue in the Nonpareil, back olive, breast vermillion—such a lovely bird, and ought to be in every aviary. Food, seed of all kinds, and little insect food. The Chestnut Finches are little brown and white birds. The hen lays a great number of eggs, sits for a day or two, then forsakes nest and lays more. It is best to hatch the eggs under Canary; they are very like tiny sugarplums. I always put a variety of food in my aviary, so that all birds can have their choice.—E. G. BENNETT.

Many letters crowded out.

A HANDY BOOK FOR LOVERS OF BIRD LIFE

BIRDS OF THE COUNTRYSIDE

By FRANK FINN, B.A.

In Cloth gilt, 5/- net.

With about 130 full-page and other illustrations and 12 full-page Coloured Plates

"No better or more interesting companion for a stroll in the spring and summer days could be chosen by those who wish to be on speaking acquaintance with the birds they may come across."—WESTMINSTER GAZETTE.

LONDON: HUTCHINSON & CO.,
PATERNOSTER ROW.

My Favourite British Birds.

A Paper by Mr. W. G. Bull (Bristol), read before the Bristol Cage Bird Society on March 6th.

Mr. Chairman and Gentlemen,—Before going into my subject, I wish to ask you all to make an allowance for my shortcomings, this being my first attempt at anything of the sort. I will first give you my experience of the Goldfinch, this being, to my idea, the most handsome of our British Finches. I will try to explain the ideal bird for exhibition purposes. I believe that is what the majority here this evening want Finches for. The first thing to look for is size; pick out the largest, and see that he has a big head, very wide in the forehead, or entrance, as the Canary men call it. When you look him in the face, see that he has got plenty of space from eye to eye; then look for tanning on the breast, that is, rich, dark chestnut colour running from the shoulders well down the body. The yellow bars on the wings should he large and bright, the back a rich, dark hrown. The wings should be niccly buttoned or tipped with white. The most important point in an exhibition Finch I have left till the last, for this reason: some of you may he huying greypates, and, of course, their hlazes are not out in colour till they moult the first time.

Now, gentlemen, you see why I mention the hlaze last, and why you must select one with a hig head, as he has got more space to carry the blaze. Coming back to the blaze, it should come well hack over the eye, reaching well down under the hill, which is even more important than on the top of the head. And you want them as clean cut and as square as possible. Of course, I don't mean to say a Finch with a round blaze won't win, far from it. If any of you saw the last Palace winner, you will have noticed that he had not a square-cut hlaze; but I always fancy if it is square-cut it appears larger than a round one.

Another thing ahout the blaze; see that it is free from too much black,also from the beard, that little line of black extending down each side of the bill, which breaks up the blaze, and I think mars the beauty of an otherwise good face. Let the colour be as hright as possihle. Then there is the cap. I like to see it dense hlack (free from any grey or hrown feathers) coming well down the poll, and elean cut. Some Finches have a very light mark between the cap and the hack of the neck, which I would rather not see. Foreign Finches run very light in this respect.

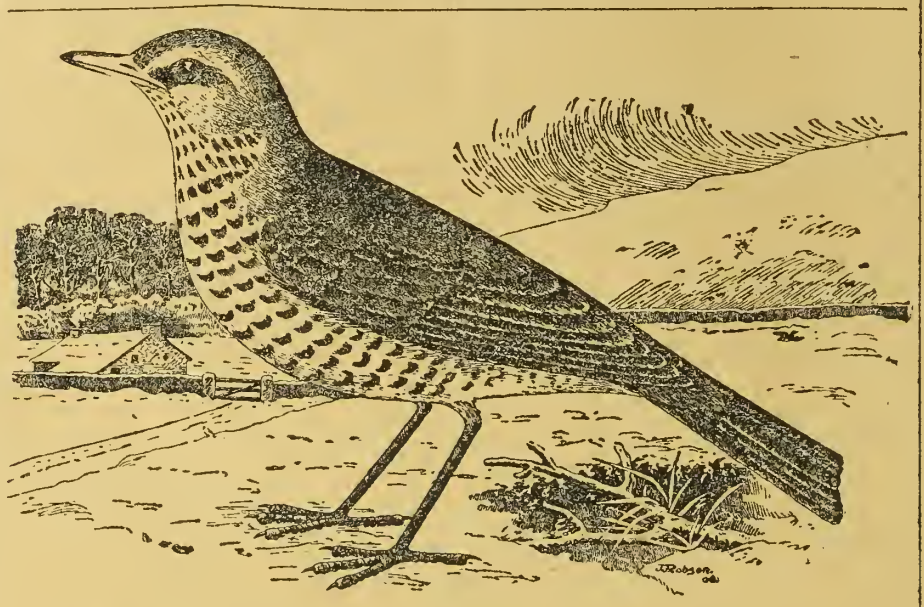
The cheek or collar, I like to see nice and clean, but if it is too white you will very often hear people call it a foreigner, so that if you happen to have one with the cheeks a little hit tanned, so much the hetter. I also like to see the wings just meet at the ends, and the tail well folded.

TYPE TO CONSIDER.

Now, gentlemen, there is type to consider. You will get all types in Finches. For my part, I favour a rather stout set bird, standing fairly well up from the perch. There is another point we must not overlook—that is tameness. It is impossihle for the judge to see all the good qualities of a bird if it is wild, so that, hefore you can show it, you must get it accustomed to the cage, and to people looking, before you stand any chance on the show bench. How often we hear the reporter at a show say, "good bird, but very wild." To accomplish this tameness, I put the bird in rather a small cage, say, about 12 ins. by 12 ins., and 6 ins. deep, not one of those small cages that you very often see some men have them in, not large enough to put your hand in. To keep a bird in such is cruel in the extreme. Hang your cage where people are frequently ahout, and, when passing, take it down and handle as much as possible. Try coaxing, give him a little seed that you know he is fond of, and stop there and watch him eat it. Try him with a little teazle, dandelion, thistle, niger, or maw seed. Another thing I do when I get a very wild bird, if the first and second remedies fail—I spray him with water until he is very wet, then handle the cage. I generally find this tame them, but, as a rule, you always find them wild, little or much, until they are moulted in the house.

I don't know if there is anyone here that cannot tell a cock from a hen; the cock is generally a larger bird, and the blaze on the hen does not run back over the eye like the cock's, and is not so large and good coloured as a rule. Then there is another way of telling the sex; the cock has a black shoulder or wing butt (or should have), while the hen's is generally brown; then hens are duller in colour throughout, and the cap on the head is not so dense a black.

Now, gentlemen, coming to the feeding. If you have freshly caught birds the best thing to do is to put them in rather a large cage, with plenty of light, and put them in a place where they won't get disturbed much. The best seeds to give them are crushed hemp teazle, and canary; of course, don't orush the teazle or canary. Then wean them off the crushed hemp after, say, a week of this treatment, and give as a stock mixture, say, equal parts canary and teazle, and twice the amount of hemp, with a little niger, maw, and rape seed. I give mine, as a change, some crushed sunflower seeds and a mealworm, if I can get them to eat it. You want to start with a very small one first, gradually increasing the size. There is one item you must not forget—the greatest conditioner of all—that is, the bath every day, when it is fine. They do say cleanliness is next to Godliness; anyhow, you will never succeed on the show bench unless you practice cleanliness. I not only clean my cages, but let the hird have a bath, and see that the perches are kept clean. I was asked by one of our members if a Cheveril Finch would be allowed to compete in the class for Goldfinches. Well, gentlemen, you all know that a Cheveril is a mis-marked hird; it is not natural, or a freak of Nature; it has a tendency to albinism.



A Champion Fieldfare.
Winner of 45 First and Second Prizes. The property of Mr. G. McWilliams (Carlisle).

ALBINOS IN COMPETITION.

An Albino should not be allowed to compete with normal coloured hirds, or certain points should be deducted for the mis-marking of the Cheveril or Peathroat, which is similar, only the white under the throat does not quite sever the hlaze. We now come to the cage for showing our little favourite in. I like a cage size 11 ins. by 11 ins., and 5 ins. deep. The colour I like, and which I enamel mine, is holly grcen, that is to say, the green of the leaf of the holly. It seems to blend with the colouring of the hird more than pale blue. I always fancy hlue is too showy, and takes off from the importance of the bird; the colour, instead of the bird, seems to strike you first. You notice, gentlemen, I mentioned enamel; well, I like enamel. One fancier I know said he did not like the inside of his show cages to shine. Well, they cannot shine too much for me, as I know by experience that it adds to the lustre of the bird. It reflects, as it were, its brightness, and therefore improves the look of the bird.

There is another thing I would like to say ahout the Goldfinch; that is, never moult him in a heated room or kitchen, for, if you do, you will never get that rich coloured hlaze. Let him have plenty of fresh air; do not keep him in a draught, which is most deadly to all cage hirds; hang him out of doors when there is a nice warm day, and don't forget the hath. If you have got such a hird as I have described, I am sure we shall have a hot time of it with Finches at our next winter shows.

THE ATTRACTIVE LINNET.

Now we will take the Linnet. This Finch, to my mind, runs the Goldfinch very close for premier honours as a general favourite. Though he is rather somhre in colour, there is something about him very attractive and fascinating. See the little bead-like eyes, like black diamonds set in copper; then the white on the wings. Taking the Linnet on the whole, he is a most beautiful little creature. Listen to his charming song, hear the variations; the hest German Roller is not in it. Now, I will take him as a show hird. Of course, he does not stand such a chance on the show bench in a mixed British class as the Goldfinch. He is not hlessed with such a gaudy coat of feathers.

In selecting a Linnet for show, you must pick out the ones with rich, nutty brown hacks (a painter would term the colour burnt sienna), hut they are very difficult to find. The back must be pencilled, laced, or spotted, as some call it; the pencilling on the breast must commence from the wing butts, extending well down each side, reaching right to the vent, if you can get them. The more pencilling you can get on a Linnet the better, providing, of course, that it is pronounced or distinct in the marking. The pencilling on a Linnet is just as important as the blaze on the Goldfinch. The Linnet should be as solid in colour as possible, free from any margin down the hreast; the whites in the wings and tail should be plentiful, and show up well against the hrown. There is another place I always look for the pencilling, that is on the head; it should be distinct, and run well down the poll.

(To be continued.)

ESTABLISHED 102 YEARS.

HINDHAUGH'S 'SPANISH' SEED.

Absolutely the finest the World produces—Boldest and Cleanest.

MONEY CAN NOT BUY FINER.

SPECIAL OFFER:—56lbs. for 13/- Carriage paid in U.K. Cloth bag included gross (excepting Ireland).

This very special offer is made to introduce this "GRANDEST OF ALL SPANISH CANARY SEED" to all bird fanciers and includes delivery to any station in England, Wales and Scotland having through communication with the North Eastern Railway from Newcastle, by passenger train.

We quote as follows:— DISTANCE NO OBJECT.

"Sample A"	Finest obtainable Re-cleaned Spanish Canary Seed..	10/- per 56 lbs., 2/9 per 14 lbs.
"Sample B"	Very Fine Bold Re-cleaned Spanish Canary Seed ..	9/- " " 2/6 " "
"Sample C"	Really Good Bold Re-cleaned Spanish Seed	7/- " " 2/- " "

Packed in paper parcels up to 28lbs., free. Over 28lbs. should have **3d.** extra remitted for cost of cloth bag to ensure safe delivery. *These prices are free on rail.*

Carriage by passenger train (payable by buyer) is only:—(in England, Wales and Scotland)

Above 50 miles and not exceeding 100 miles:—	7d.	for 14lbs.	11d.	for 28lbs.	1/9	for 56lbs.
100 " "	200 "	10d.	"	1/2	"	2/4	"
Over 200 any distance		11d.	"	1/6	"	2/11	"

Newcastle-on-Tyne.

MULE BREEDING WITH HEN BRITISH BIRDS.

By T. H. Kinch.

This paper on Mule hreeding is to encourage the young breeders who may have several cock Canaries in hand. Of course, you cannot expect to get a clear Mule in this way; hut you may get a good dark one. If possible, I should use or prefer a Green or Cinnamon, as the hens take to this colour before a bright coloured yellow. This I have found out in my experience in this hohby, after a great many trials. If the Chaffinch-Canary Mule is to he got, this is the way it will be done. I expect that this season the Chaffinch cross will be tried very extensively, and that the hen will he the one used. I hope to hear at the end of the season it has been got. Last year I did get fertile eggs from the cock Chaffinch, but its mate was a hen Bullie. I have for years tried the cock, hut never before did I get fertile eggs. I am not satisfied yet that it cannot he done. I shall still try a pair in various ways.

Another cross which might be successful with a cock Canary is the hen Greenfinch. She most readily takes to the cage, and frequently builds a good nest. I have always found British birds to prefer the wooden nest box to any other. I have had them sit as well as Canaries. The hen Linnet also makes a good cross, and generally breeds well. I have also found the Redpoll takes well to a nest-hox.

The hen Yellowhammer might also be tried. This cross has yet to be obtained, and, like the Chaffinch, I expect we shall only get it from the hen side. I have never tried the hen Bramhlefinch with a Canary, but I have with the Bullfinch, Linnet, and Chaffinch, yet could never get any eggs. The Bramhlefinch hen is generally a very spiteful hird, and often does a lot of damage to other hirds with her powerful heak. I am afraid it would not he safe to trust a Canary with her; they would want a lot of watching. If you did get any eggs from her, they should be at once removed for safety's sake. In fact, it would be also wise to remove all eggs from British hens, if it could be managed.

Some may not attempt any one of these crosses, hecause they cannot get house moulted hcn British birds. But I think they would get nearly as good results from the fresh-caught hirds if put together in small cages, as they tame much quicker. I don't helieve in giving them much room until they get steady. If they should be very wild I should advise, as I have done frequently, cutting wing feathers. This would help to steady them, and prevent them flying about so mnch, and not do them any harm; only it makes them look unsightly.

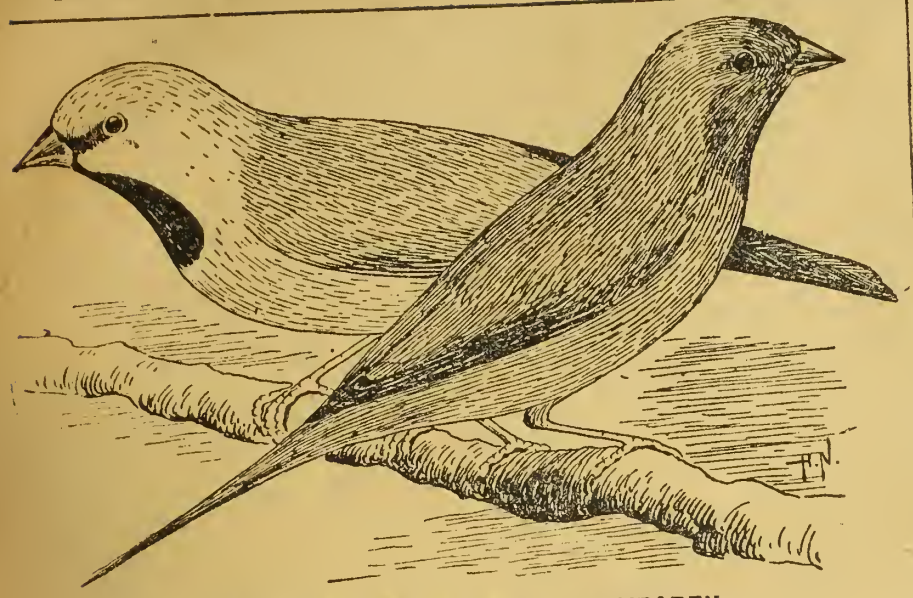
The hen Goldfinch might also he tried with a large cock Canary. But, as a rule, I have found her a very shy hreeder indeed; she is quite the opposite of the cock Goldfinch. Still, I did, some years ago, raise young from the cock and hen Goldfinch in a breeding cage. I also heard of a pair last year which had eggs and raised the young until ten days old, then let them die; they may have been neglected by their owner, as he used to show them to everyone.

Other crosses might also be tried. I hope myself this year to try a great many more experimcnts if I can get a few hen Canaries for fosters. Whether we shall ever be able to get the Canary to pair with any insectivorous birds remains to be scen. It is quite possible we shall hear of the production of some rare cross before the season is over, as I believe more are going into this fascinating hobhy than ever. In my humble opinion, we have yet a lot to learn.

It has come to my knowledge that a fancier who has a rare-feathered Goldie intends to mate this with a large Norwich hcn. This he thinks will beat the use of any Sib-hred hen. But I douht it, as I have the greatest faith in the "Sibs," and bclieve our best and clearest Mules may be expected this way. It would be utter nonsense to expect to get them all clears or light markcd, however, no matter what systcm of mating was adopted.

The Cinnamon Marked Yorkshire Canary Club.

At the recent smoking concert of the Cinnamon Markod Yorkshire C.C. the chairman, Mr. Sunderland spoke of the loss the Yorkshire, and particularly the Bradford, fanciers had sustained by the death of Mr. J. Thackery. He mentioned the success Mr. Thackery had attained in his day, particularly among the Marked Yorkshires. When in his best days he had made as many as 100 cntries per week. He exhibited all kinds of Canaries, and was undoubtedly, in his day, the champion in Yorkshires. If memory served him right Mr. Thackery had gone to Norwich and beaten Messrs. Mackley (then in their fame) in the Norwich classes at an all-England show. A vote of condolence was accorded the widow and son.



PARSON FINCH and PINTAIL NONPAREIL.

Two pleasing Foreign Seed-eaters.

SOME FOREIGN BIRDS TO BREED.

By F.Z.S.

There can be no doubt that foreign bird keeping has of late years taken a great hold in this country, with the result that we now possess a fairly extensive list of foreign birds which have been bred successfully in confinement by enthusiastic amateurs, and almost every year sees the addition of one or more species to this list. There can be no gainsaying the fact that specimens bred in confinement are in many ways to be greatly preferred to wild-caught birds. Not only are they more tame and steady, but their systems are more perfectly inured to the vagaries of our climate, and each brood bred and reared must be gradually but surely paving the way out of difficulties for future breeders, and leading to an increase in the number of species which are to be classed as domestically bred, thus making the hobbyist independent of wild-caught birds.

My sole object now is to mention a few species with which the amateur may dabble during the coming summer, with the object of adding still another name to the list of species successfully bred and reared; at least, in most cases, that would be the result if success crowned their efforts, but not in all cases, as there may be one or two species named which are already on the list. In the latter cases, however, the number of times the species has bred successfully will be limited to a few units.

In the case of the Pekin Robin, for example, which I may mention first, I believe it has been successfully bred on only one solitary occasion. Given a roomy aviary, thickly planted in some portion with shrubs, there seems absolutely no reason at all why this species should not breed quite freely. It takes so readily to confinement, and is very adaptable to circumstances. The lack of some item of food is probably the cause of it not breeding more freely, and in an outdoor aviary I should encourage vegetation to run wild in a sunny spot in order to attract a variety of butterflies and other winged insects, and also try the experiment of attracting flies to some spot by keeping there a scrap of meat protected by a wire gauze so that the birds could not devour it. In this way they would procure a goodly proportion of varied live insect food, for the Pekin is by no means a bad fly-catcher.

To attempt breeding any of the Parrot family, one requires a large amount of space, and in most cases, except with the smallest Parrakeets and the Lovebirds, a separate aviary or enclosed space is necessary for each pair of birds. Among this class the Rosy-faced Lovebird, Mealy Rosella, Quaker Parrakeet, Tovi Parrakeet, might be experimented with.

Such charming Finches as the Parrot Finch, White-eared Grassfinch, White-throated Finch, Quail Finch, Red-headed Finch, Pectoral, and Australian Crimson Finch, are well worthy trying for. The Violet Tanager and the Scarlet Tanager would well repay the trouble of breeding.

Of the Waxbills, the Violet-cared, the Golden-breasted, and the Grey Waxbill, also the Bronze and Magpie Mannikins, the Crimson-crowned, and Orange Weavers, and last, but not least, the Desert Trumpeter Bullfinch, will afford a fairly wide range of choice for the experimental foreign bird breeder.

All these species have made some efforts to breed in captivity, but, except in one or two cases, these efforts have been limited to building nests and laying eggs. It is only in the exceptional cases that they have got so far as hatching out young, so that the amateur must scarcely expect to find the breeding of them to be all plain sailing. He must, on the contrary, be prepared to find many of them hard nuts to crack, but with patience and perseverance the kernel may possibly be extracted, and will prove all the sweeter for the difficulties that have been overcome.

Starling's Sagacity.

A remarkable instance of the sagacity of the Starling is reported from Muston Gorse, a few miles distant from Belvoir Castle. A Starling had entered a hole in a hollow ash tree which proved too small for its exit. Shortly after another bird of the same species was seen at the orifice, endeavouring to release its imprisoned comrade by seizing the captive just above the beak, and pulling with its feet propped against the tree. Although frightened away, the Starling returned and renewed its efforts, which were eventually successful in obtaining the release of its mate.

SPRATT'S

COD LIVER OIL CAGE BIRD FOOD

FOR

YOUNG CAGE BIRDS FROM THE NEST.

A Perfect Substitute for Boiled Egg and Bread Crumbs. Saves Time, Trouble, and Expense.

Sold by all dealers in 3d. and 6d. tins; post paid 6d. and 9d.; 7 lb. bag, 2/6, or post paid, 3/2.

Send postcard for Samples, also Free Booklet on "Canary and Cage Bird Rearing."

If any difficulty in obtaining food locally write at once to—

The Housing and Treatment of Foreign Birds in Captivity.

By WESLEY T. PAGE, F.Z.S., etc.

(*Continued from page 289.*)

THE MASKED TANAGER (*Calliste larvata*).—Habitat: Costa Rica and Veragua. Adult male: Upper surface, forehead, lores, eye circlet, and upper back, black; sides of face, bluish; nape and sides of neck, pale refulgent copper colour; lower back and rump, bright blue; wings and tail, black, partially edged with blue and bluish-green; throat, refulgent copper colour; middle of abdomen, white; remainder of under surface, black, glossed with purple on sides and flanks; beak, black; legs and feet, blackish brown. Total length 5in., tail 2in. Female: Similar, but less refulgent.

BLACK-BANDED TANAGER (*Calliste nigricincta*).—Habitat: Peru, Ecuador, Bolivia, Colombia, Amazon region, Rio Negro, and British Guiana. Adult male: Head and neck, lilacine; upper back, black; lower back and rump, bright blue; wings and tail, black; primaries and secondaries edged with green; greater wing coverts, green; lesser, bright blue; throat, lilacine; sides of face, greenish; breast, black; sides, blue; middle of abdomen, white; beak, black; legs and feet, blackish-brown. Total length 4¾in., tail 2in. Female: Similar, but colours not so intense.

BLUE-NECKED TANAGER (*Calliste cyaneicollis*).—Habitat: Peru, Bolivia, Colombia, Ecuador, and Venezuela. Adult male: Lores, black; head and whole of neck, refulgent blue; upper back, black; wings and tail, black, edged with bright green; rump, refulgent green; wing coverts, coppery; under surface, black, with purplish reflection on the flanks; vent, greenish; beak, black; legs and feet, blackish-brown. Total length, 4¾in., tail 2in. Female: Similar, but less refulgent; rather variable in the various localities.

METALLIC-GREEN TANAGER (*Calliste labradorides*).—Habitat: Colombia, Bogota, Antioquia, and Ecuador. Adult male: Forehead, shining peacock-blue with silvery sheen; lores, eye region, back of head and nape, black; upper and lower back and rump, refulgent greenish blue; wings and tail, black; primaries and secondaries, edged with blue; lesser wing coverts, brilliant blue; under surface, refulgent green with a bluish sheen; middle of abdomen and vent, pale tawny; beak, black; legs and feet, brown. Total length 4½in., tail 1¾in. Female: Similar, but duller.

RUFOUS-CHEEKED TANAGER (*Calliste rufigenis*).—Habitat: Venezuela. Almost entire upper and lower surface, refulgent grass-green; bluish on the head and rump; lores, chin, and sides of the head, rufous; beak, black; legs and feet, dark brown. Total length 5in., tail 1¾in. Female: Unknown.

PARZUDAKIS TANAGERS (*Calliste parzudakii*).—Habitat: Bogota, Colombia, Ecuador, and Peru. Forehead and sides of head, scarlet; crown and nape, rich golden-yellow; back, black; rump, upper tail coverts, lesser and edges of greater wing coverts, bright green, with a silvery sheen; under parts, green, with a silvery-ochraceous sheen; middle of abdomen and vent, tawny; beak, black; legs and feet, dark brown. Total length 5½in., tail 2in. Female: Similar, but less refulgent. Mr. W. Goodfellow, who met with this Tanager in Ecuador, describes it ("Avic. Mag.," vol. vi.) as "decidedly one of the most beautiful of all the genus *Calliste*. The mother-of-pearl-like reflection on the whole of the breast and back is truly remarkable. These rich-looking birds went about in small groups of three or four together, and like all the *Calliste*, seem ever on the move, flitting from twig to twig, with the same little note uttered by the Superb Tanager."

BLACK-EARED TANAGER (*Calliste lunigeva*).—Habitat: Ecuador. Adult male: Top and sides of head, rich orange; lores and eye region, black; nape and upper back, wing and tail, black; lower back, and edges of wing coverts and secondaries, rich grass-green; under parts, refulgent grass-green, mingled with rufous; middle of abdomen and vent, dark tawny; beak, black; legs and feet, dark brown. Total length 5¼in., tail 1¾in. Could not get access to a female skin, but museum catalogue gives this as similar to the male.

GOLDEN-EARED TANAGER (*Calliste chrysotis*).—Habitat: Ecuador and Peru. Adult male: Top of head, black; forehead and ear coverts, rich green, washed with coppery gold; upper back, wings, and tail, black, with bright green edgings to most of the feathers; sides of neck and lower back, shining grass-green; underparts, refulgent green; middle of abdomen and vent, golden rufous; beak, black; legs and feet, dark brown. Total length 5½in., tail 2in. According to museum catalogue female is similar.

ORANGE-CROWNED TANAGER (*Calliste xanthocephala*).—Habitat: Peru and Bolivia. Adult male: Crown, rich orange; sides of head, golden yellow; lores and nape, black; upper back, black, splashed with peacock-green; lower back, peacock-green; wing and tail, black, edged with bluish-green; under parts, blue, washed with green; middle of abdomen and vent, tawny; beak, black; legs and feet, dark brown. Total length 5½in., tail 2in.

THE PLAIN-COLOURED TANAGER (*Calliste inornata*).—This, the most sombre-plumaged of all the Tanagers, is certainly plain indeed, compared with the other gorgeously apparelled members of this genus. It has certainly little to recommend it to the aviculturist save rarity and the desire to know as much as possible of its life history from living specimens. In this sense the most sombre-plumaged and ill-formed bird appeals to the student of bird lore. Habitat: Colombia, Panama, and Veragua. Adult male: Upper parts, ashen-umber; wings and tail, blackish-umber; upper wing coverts, bright blue; under parts, as upper but paler; middle of abdomen and vent whitish; beak, blackish; legs and feet, dark leaden-grey. Total length 4¾in., tail 2in.

THE BLACK-AND-BLUE TANAGER (*Calliste atricærulea*).—Habitat: Bolivia and Peru. Adult male: Upper parts, head and neck, blue washed greyish; lores and upper back, black; rump and upper tail coverts, rich blue; wings and tail, black, edged with rich blue; under parts, rich blue, washed silvery on the throat, and flecked with black spots on the breast and flanks; beak, black; legs and feet, brown. Total length, 4¾in.; tail, 1½in. Young: "Dusky grey beneath, slightly varied with whitish; wings and tail dark, with slight blue edgings to the remiges and rectrices." (British Museum Cat., vol. xi.)

RED-NAPED TANAGER (*Calliste ruficervix*).—Adult male: Upper surface, blue, lightly flecked with black on the upper back; head, black, with a purple sheen; nape, orange-rufous; wings and tail, black, edged with blue; under surface, blue; middle of abdomen and vent, pale tawny; beak, blackish; legs and feet, brown. Total length, 5in.; tail, 2in. Habitat: Colombia, Ecuador, and Peru.

BLACK-CAPPED TANAGER (*Calliste atricapilla*).—Habitat: Colombia, Venezuela, and district. Adult male: Upper surface, silvery-grey, washed bluish; crown, black; wings and tail, black, edged with pale bluish; under surface, dark blue; feathers of neck, breast and sides of head, black at their base, broadly tipped with green, giving a spangled surface of black and green; beak, blackish; legs and feet, brownish-black. Total length, 4¾in.; tail, 1¾in. Female: Upper surface, green; crown, green, washed bluish; throat and breast as male, but duller; flanks, greenish; remainder of under surface, ashen.

THE SILVERY TANAGER (*Calliste argenta*).—Habitat: Ecuador and Peru. Adult male: Upper surface, greenish-grey, with a silvery sheen; crown, black; wings and tail, black, edged with silvery green; throat and sides of head, golden-tawny; beak, black; legs and feet, blackish-brown. Total length, 5½in.; tail, 2¼in. Female: Upper surface, bright green; wings and tail, greenish-black, edged with green; crown, dark brown; throat as male; breast and flanks, greenish; remainder of under surface, cinerous.

NEW GRENADIAN AND VENEZUELAN BLUE-AND-BLACK TANAGER (*Calliste nigriviridis* and *Calliste cyanescens*). These are merely local races and are now both included as one species (*C. nigriviridis*) in the British Museum Cat. (vol. xi., page 123). The Venezuelan form is larger and more bluish than the New Grenadian variety. Habitat: Colombia, Ecuador, Venezuela, and Peru. Adult male: Upper surface, black; forehead and sides of head, black; crown, black, edged with shining peacock-blue; rump, bluish-green; wings and tail, black, edged with blue, and a bright blue patch at bend of wing; middle of abdomen, whitish; remainder of under surface, black, each feather having its end broadly edged with bluish-green; beak, black, greyish at base; legs and feet, blackish-brown. Total length, 4¾in.; tail, 2in. Female: Similar, but plumage less refulgent.

The Management of the Bird Room.

Lecture by Mr. Geo. Packwood before the Members of Reading and District C.B.S. on April 3rd, 1907.

In giving a few words on management in the bird room, some of my remarks may not fit in with the experience of some of my brother fanciers. But my idea is to try and lessen the work in the bird room, and to give a system to work on. I may say the methods mentioned are those I carry out in my own room as far as possible, and which I find answer very well for a working man whose time is very limited.

POSITION OF ROOM AND ASPECT.

Well, the first consideration is the place where the birds are to be kept, and a great deal depends on this matter. It does not fall to everyone's lot to have a room in the living house, which is the best plan if it can be managed. If it can be arranged have one that faces somewhat to the south, and if full south so much the better; never have a room that is exposed to the east if it can be avoided, or you will want artificial heat in the winter. Should you possess a room entirely devoted to the birds, have in it nothing that is not wanted, as the more there is in the room the more there will be to be kept clean, and you al. know how soon dust accumulates.

Have the floor covered with floor cloth, so that the waste seed is easily swept up, and have the floor washed over at least once a week. Perhaps you will say: It is all very well to have the floor washed and scrubbed, but who is going to do it? Well, if you cannot do it yourself, or have not the time, I can tell you how to manage this. Those of you that are married should get the wife to do it for you, for no doubt she will make a better job of it than yourself. Of course, you must not expect to get it done with the usual house work. Just leave a shilling on the floor where it can easily be found, then ask your wife or sister to give the room a tidy up; there will not be any trouble to get it done afterwards.

Another thing: Do not be afraid to have the room well ventilated. If the outside weather is too bad to allow the window to be open, then have the door open; but this may be arranged by the position of the window; at any rate, keep the room from getting close and stuffy, and let me say as regards the open window that you want a wire covering for this. I have for my own window a light frame covered with small wire netting, and the full size of window, so that if a bird gets out of the cage during my absence it cannot escape. Be careful the birds are not exposed to any draught, as they cannot stand draughts.

CAGES AND APPLIANCES.

Now, assuming we have the matter of the room settled, this brings us to the cages. No doubt the best cages are those of the box pattern, without any fixed fittings inside, known as double breeding cages, but which may be used as two single cages by placing the centre slide in. You can get them of various sizes. Be sure to have them plenty large enough, and, if possible, have them all of one pattern and size, as this gives a smarter appearance to the bird room; also have one or two long flight cages to turn the young birds into, and when fitting up the stack of cages have them at least twelve inches off the floor, so that they will not get the bottom draught.

I daresay you have noticed that glass or earthenware drinkers and egg pans are mostly used now; you seldom see tin drinkers used, except on show cages. As regards nest pans, you must be guided by your own success. Some fanciers favour the earthenware with felt lining; I have used these, but I don't care much for them. The best pans I find are the tin ones; they are well ventilated, and hold the nest much better, so that it does not slip on one side so much.

The cages should be painted inside and out, so that you can give them a good scrub out now and then. Have two sets of perches, so that when one is in use the other can be cleaned. The best and quickest way to clean them is to place them in a bath and pour boiling water on them; let them get thoroughly dry before you put them in the cages. Clean the birds out at least once a week; every day when feeding young. Some fanciers use sawdust for the bottom of the cages, but I prefer sand. I know this comes rather expensive to buy; still, it is more suitable for the birds than sawdust, and does not get blown about the room so much.

One of our worst troubles is the red mite. There are many remedies brought out for the extermination of this pest, and some may be well worth a trial; but I don't think anyone can really say they are free from them. Of course, they can be kept down, but it does not matter how clean everything is kept, we still find them. How I manage is to give the inside of cages a good dressing, so as to drive them on the outside, and between the cages while they are in the stack. You will find they get in clusters between the cages. Take the cages down now and then, and you will find you can get rid of them as well by this method as any. However, if you keep two or three birds, or a hundred, they must be kept clean or you cannot expect good results.

CARE OF STOCK.

We now come to the management of the stock. I won't touch on feeding, as this was dealt with at our last meeting. When feeding and watering, go through the whole every day. Start at one place and continue on till the last cage is done; by this means you do not miss any.

You will find if you give it your careful study that you scarcely get two birds with the same temperament, especially hens in the breeding season. You will want to watch these. Some hens I have found will nest on the bottom of the cage instead of in the nest pan. I think the cause is shyness; they want to get out of sight. I have found placing a piece of stiff brown paper over part of the cage front, and having the nest pan in the darkest corner, will entice the hen to build in the proper place. If you do get a hen like this, leave her alone as much as possible.

Regarding ailing birds, if you can find the cause of the trouble try and remedy by dieting, but if you must have resource to medicines be very careful what you give them, and get reliable advice before so doing. I am speaking of birds that are seriously ill. Minor ailments such as colds or other small matters, of course, you would know how to treat.

FEEDING YOUNG.

When birds are feeding young you will find some will feed mostly on one kind of food, and some on another. If you get any like this, let them have plenty of the food they fancy. When you have got everything in order, cages fitted up, and birds paired, this is the time you gain more practical knowledge of the ways of Canaries than at any other season. Give them all the attention you can, and what spare time you have, spend it with the birds so that when they have youngsters they will be quite used to you, and will not mind when you approach their cage. Never go up to the cages quietly, so as to startle the birds that is, but just give them a word or call that they will be on the alert.

I am certain if you wish to have the best results you must study well all the birds' ways and wants. You will find plenty of little jobs to do, too, and, however small, don't neglect anything. Some may say this is only a lot of unnecessary trouble; but, as I said at the commencement, it is what I carry out myself, and if others care to follow this plan I hope they will benefit by these few remarks. Always bear in mind birds must have good food, be kept clean, have plenty of fresh air, and be not overcrowded. Then when you have anyone drop in to see the birds, they will be impressed by the manner in which they are kept, and think to themselves—"Well, at any rate, that chap must spend some time attending to his birds to keep them like he does."

The Standard Book on Canaries.

The value and interest attaching to the new edition (just out) of Mr. C. A. House's book on the Canary, "The Canary Manual," is proved by the fact that this is the fourth of this work that has been ordered by the public, while the demand seems in no way satiated. Mr. Norman has surpassed himself in illustrating this work. Each specimen shown may be taken as a guide for the breeder, and every possible point to be studied by the Canary breeder is thoroughly and carefully dealt with.

Parasites which Infest Cage Birds.

A Paper read by Mr. Fred Procter before the Bolton O. & R.C.S. on April 1st, 1907.

It is said there is nothing new under the sun. This is hardly correct, for Josh Billings, the American humourist, says they had not heard of the New River time table then. That there is not much left to discuss about out little friend the Canary is quite true. Yet I venture to think we shall be able to break up new ground to-night, and gather some grains of information.

For some time past I have paid considerable attention to the parasites which infest cage birds. I do not propose to say much about that troublesome enemy the red mite, but this much I will say, he is not guilty of all the wickedness that is laid at his door. That he is guilty of doing much mischief every fancier is well aware, but I believe we should not hear such a cry out about this pest if a few simple rules were observed. Light and air are the two things the red mite wants nothing to do with. I might here apply a very appropriate quotation which I would recommend the young fancier to remember: "Their ways are ways of darkness, but all their wicked ways are brought to light."

DEALING WITH RED MITE.

Some of you will be asking: How are we to deal with this pest? In the first place don't give them lodging room; they will not lodge in the light of day. Do away with whitewash and use paint instead. Putty up every crack and crevice, after the first coat of paint, with putty made as follows:—Get some whiting or lime that has been slacked for some time, and is almost as fine as flour, put this in the oven and dry off every bit of moisture, then add boiled linseed oil, and work it up to the consistency of ordinary putty. This will set as hard as stone, and will not shrink like the commercial article.

Have loose fronts to your cages, and leave a space of at least an eighth of an inch all round them. Keep your cages well away from the wall, and let light fall at the back if possible, and with ordinary care you will be able to deal with the red mite. I had some hens last season that had two broods of young in the same nests without being changed, and yet I saw no red mite.

A GREAT PLAGUE.

Now I should like to tell you something about a totally different form of parasite, one that is a great plague to the Canary, even a greater pest than the one we have been dealing with, though not so difficult to exterminate. That is the Canary louse.

There seems to be a great want of knowledge concerning this insect, judging from the questions asked through the Fancy Press nearly every week, and the answers that are given. A question often asked is: "What is the cause of my Canary loosing feathers off the back of head and neck?" The answer usually given is: "We expect red mite or liver trouble." There is never any suspicion of the grey louse. Yet birds become pestered with them by day and night, lose rest, get into a low condition and other troubles are set up. I have thought that such birds seem much hotter when handled than others not so affected.

If I have a bird that feels hot I should at once look for the grey louse. If there happens to be any on the bird you may get some on your hand when you have held it still for a short time, but this will not always happen and is not an infallible test. You may often see them by raising the wing, which is their favourite haunt. When the wing is lifted they dart to the nearest cover. You must be quick and have good eyesight to detect them. So do not be deceived or satisfied with one examination. Now should you fail to catch them at home under the wing, you must turn your attention to the feathers round the neck, and more especially the throat. You will not see any lice here, but they deposit their eggs at the quill end of the feathers, and this causes feathers to drop out. I recently paid a visit to one of our member's rooms, and in the flight were several valuable birds, which he said were out of condition. I handled them, and in every case discovered the small grey louse.

TWO KINDS OF LICE.

Here let me point out that there are two kinds of lice, and I am inclined to think there is a third, as they all seem to act differently. The small kind travel quickly through the feathers and never come on to the hand like the large. The third is longer in body, moves very slowly and is usually found on the feathers above the vent.

There is not much I can tell you further respecting these parasites. That they do exist often where not expected, and do much harm to our birds is quite clear. That they are not so well understood by many fanciers, and old fanciers, too, I have had ample proof.

METHOD OF EXTERMINATION.

I will explain the way I have exterminated them; it is not very difficult. In the first place give the birds a good dusting with Keating's Insect Powder, and rub it well into the feathers. Then wrap your bird in a white cloth and lay it aside for a short time. The parasites cannot stand this treatment. Next day examine the bird to see if any eggs of the louse are on the feathers about the throat. If so give them a small dose of parrafin, a very little will do. Follow this up with a good wash, having previously added some quassia to the water. This treatment you will find prove effective, but it is advisable to keep your eye on such birds for a week or two, and make sure the parasites have all been wiped out.

THE EVOLUTION OF THE CANARY.

No. 2: The Crest; and what may happen to it.

"LIVERPOOL" VIRUS
is absolutely harmless to human beings and animals, but is speedily fatal to
RATS & MICE.
It causes a fatal disease to spread through a colony of these pests.
They do not die in their holes.
There is, therefore, no danger of smell from dead bodies.
Mice Virus, 1/6 per tube.
Rat Virus, 2/6 and 8/- per tube.
Prepared in Liverpool. Of all Chemists.

Liverpool and London.

THE YOUNG NATURALIST.

Prizes of 1s. and two of 6d. each will be given for respectively the best and two second best cuttings or original bits about birds. Competitors must be children under sixteen years of age. All efforts must be briefly and clearly written, and ON ONE SIDE OF THE PAPER ONLY.

Two stars indicate the Winning Contribution; one Star the runners up.

"Look! look!" said Kitty, "there is a Bullfinch flying along the hedge. Oh! poor thing, he must have hurt his wing. See how low he flutters." "I will catch him," said Peter; "he will be company for Garibaldi." And Peter crept along by the hedge after the Bullfinch, who kept fluttering on a little way and then dropping to rest on the bank. Peter got very near to him once or twice, and tried to throw his cap over him, but each time the bird flitted on with drooping flight till they had gone about a quarter of a mile, and Peter was hot and breathless. Then, with a soft, piping call, the Bullfinch turned round and flew right over Peter's head, straight back to the place whence it had started. "There now! he was not hurt at all," exclaimed Peter. "He was only laughing at me, and, I daresay, trying to entice me away from his eggs, as the Peewits do. I shall just go back and find them, though. I won't be taken in by a deceitful bird."

"Eggs, Peter! in September! What are you thinking about?" queried his sister. "Bullfinches nest in April or May, and even a second brood would not be as late as this." "I don't care," said Peter; "I am sure he must have his nest in those bushes by the stream, and I shall go and see." And on ran Peter, his sister following more slowly. "Here it is," called Peter; "quite low down in this hawthorn. How beautifully it is made, with a network of twigs for the outside and the inside softly lined with fine roots. But you were right about the eggs, May, the nest is quite empty." "What a pity," sighed Kitty. "I should so love to have seen a Bullfinch's egg. How many do they lay, and what are they like, Peter?" "Four or five, mostly; and they are very pale blue, spotted and blotched with red and purplish brown. You shall see the one in my collection, Kitty," answered Peter. "Let us eat our luncheon here by the water, and then we had better start home. It would never do to be late for tea to-day, and your tin is already full of good things for Garibaldi," said May. "But surely, Peter, those festoons of bright red berries and polished, heart-shaped leaves are Briony. Don't give them to Bullie, for they are poison."

* About the Ptarmigan.

This bird is only found now among the rocky tops of the highest hills and mountains, in the centre and north of Scotland. It is the smallest species of Grouse in Britain, and its plumage varies greatly with the season, becoming nearly pure white in winter. It lays seven to ten eggs, frequently on hare stones. They are of a yellowish ground colour, blotched and spotted with rich dark brown.—ALBERT HEMSLEY (age 14), Tintern Villa, 8, Beeston Road, Old Lenton, Nottingham.

* * Crow Stories.

A lady relates how she once brought up a Crow that had been taken from the nest before it could fly. This Crow furnished amusement for a whole neighbourhood. He would pry into the lady's work-basket, distribute the spools of cotton here and there, and drop the thimble into the aquarium. Afterwards he ate up the fish, and when the aquarium was emptied there came to light two thimbles, a pair of scissors, and a spoon. One of the queerest things this Crow did was to catch small chickens, put them into holes and cover them with dirt. He was excessively fond of butter, and could eat half a pound at a time. On one occasion he stole a quantity and hid it in a hole near the chimney; it melted, and when he saw it trickling down the wall, betrayed himself by his astonished "caws."—TOM WHITE (aged 13), Shepherd's Newlyn, East Cornwall.

* The Peregrine.

The Peregrine is the Falcon held so much in esteem by falconers, by whom the female only was called the "Falcon," the male, which is smaller, being known as a "Tiercel." The female was used for the capture of Herons and Rooks, whilst the male was flown only at Partridges and sometimes Magpies. In a wild state the Peregrine Falcon is regarded by other birds with the greatest terror. Ducks feeding on the banks of streams or lakes, on perceiving it, immediately take to the water; whilst Plovers and Lapwings rise to an immense height in the air and remain there for hours. Ussher, who has had many opportunities of studying this bird in Ireland, where it is quite common, relates an instance of the tenacity with which it follows its prey—in this case a Lapwing. "The Falcon," he says, "after several stoops, cleverly avoided by the Lapwing, was so near clutching that the poor bird, quite worn out, dropped into the water, and the Falcon, after rising from her stoop, poised a moment on her wings and then, quietly lowering herself with extended legs, lifted the Lapwing from the water and bore her off."—Sent by CONSTANCE SMITH (age 10), 38, Harriet Street, Derby.

"CAGE BIRDS ANNUAL."
Is invaluable to beginners in the Fancy.

ILLUSTRATED IDEAS

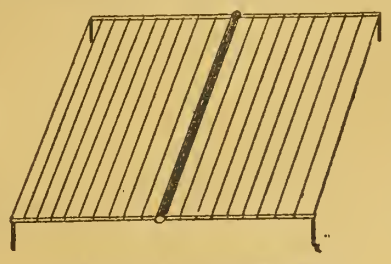
Under this heading we shall illustrate weekly some idea useful to the bird-keeper. Readers are invited to send us particulars of any novel and practical appliance of use in our hobby, either in cage, bird-room or aviary, with a rough sketch of same where possible. Every "Illustrated Idea" used in this column will entitle the sender thereof to a postal order for two shillings and sixpence.

No. 91.

TO SAVE HEN FINCHES EGGS.

Sent by F. Ayscough, 42, Thornville Road, West Hartlepool.

Hen Finches frequently decline to lay in an artificial nest, but the following method is a sure means of saving their eggs, where loose



To Save Hen Finches Eggs.

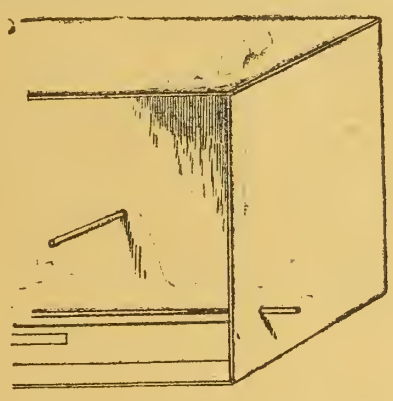
wire-fronts are used. Sketch shows a wire false-bottom made to the size of the compartment, on the same principle as the fronts, with the addition of four feet, about 1½ inches in length at the corners. A perch is fixed in the centre by means of a small staple at each side. The hen is driven into this compartment each night when about to lay. The egg will roll on to the cage bottom, which is covered with bran or sawdust.

No. 92.

FIXING PERCHES.

Sent by C. J. Pike, 33, Queen-st. Buildings, Edgware Road, W.

When I first commenced keeping birds, I experienced a difficulty in cleaning the perch in my cages, which run the length of the cage, and from which the birds reach their seed, etc. In all cages this perch appears to be either nailed or screwed to the side of the cage, making it a fixture. I make a hole in



the side of the cage. one in the centre partition (if there is such), and a corresponding hole at the other side of the cage. The perch is then pushed through the holes, leaving about an inch projecting from the most convenient side. When the perch requires cleaning, it is pulled out, scrubbed, and returned when dry, without disturbing the birds. If it is not convenient to have the end of the perch projecting from the side of the cage, it can be cut off flush, and is easily pushed out with a pencil or a spare perch.—C. J. PIKE.

MICE

IN THE BIRD ROOM.

Rats, Mice, Field Mice, &c.,

EXTERMINATED BY DANYSZ VIRUS

Discovered and Prepared by
Dr. DANYSZ of the Pasteur Institute, Paris.

When affected with the Virus the Vermin leave their usual haunts and die in the open. The remedy is harmless to other animals and human beings and may be used everywhere with absolute safety.

For MICE only, 1/- per tube.

WILD BIRD LIFE

All communications for this column should be written on one side of the paper only, duly authenticated with the name and address of the writer, not necessarily for publication, and sent to H. Norman, Editor, "Wild Bird Life," "Eastcote," Alma Road, Carshalton, Surrey, by Monday in each week. Original observations and records invited.

The Promise of Spring.

Although we have had sharp frosts at night, the days have been perfect. The bright sunshine and soft summer-like breezes make the countryside delightful. All the birds are in song; Blackbirds and Thrushes everywhere; Skylarks rising from every patch of green; the "chee," "chee," of the Greenfinch, mingled with the sparkling song of the Chaffinch; while the simple lay of the Hedge Sparrow enlivens the hedgerows. His mate is already busy in the thicket, and when she shows herself for rest and refreshment he chases her round in a very comical manner. Even the most sober-looking birds act strangely at this season of the year. The hen Hedge Sparrow is quietly pecking about the pathway, and the cock bird is fairly dancing round her, like one possessed. His behaviour is really comical. No one could imagine that such a quiet, sober bird could act so. While this performance is going on the quiet little hen is busily feeding. She is apparently quite oblivious to his presence, unless he comes too close, when she gives him a vicious peck, which makes him keep his distance. In the woods bird songs are repeated. The gaudy cock Pheasant also adds his strong voice to the cries, and overhead the cooing of the Wood Pigeons lends a charm to the surroundings. By a little careful manœuvring we are able to catch sight of the pigeons. They are upon a thick branch of a beech tree; the hen sits quiet, while the cock bird struts up and down, swelling his neck, and dropping his wings, occasionally making little rushes at his mate, in the usual pigeon-like manner. After generations of domestication Pigeon nature does not appear to have undergone any great change, for the antics of the wild bird when love making is apparently the same as the familiar birds of our towns and cities.

One more feathered creature has been added to the downs and uplands of the country. The Wheatear has returned. While roaming over the hills near Tadworth we heard the familiar call of this bird. He was small and pale in colour, as the majority of the early arrivals are, flitting along from bank to bank, calling, and flirting his tail. He was a most conspicuous object in the bright sunlight, and seemed bent upon showing himself off and attracting attention. Possibly the sight of human beings is novel to him, for who knows where he has spent the winter—may be in Africa, or upon the slopes of the Himalayas?—for the Wheatears are great travellers, and wander far during spring and autumn. Many nest in the far north almost to the Arctic circle. These specimens are described as larger and brighter coloured than our British specimens. Whether this is so or not is difficult to say, for although some authorities are confident that only one type exists others have no doubt but that we get two types visiting on these shores.

The early arrivals are invariably smaller and more delicate in colouration, some of them

THE WHEATEAR.

appearing almost white about the body, especially when contrasted with the green turf or rich brown earth of the ploughed lands. The larger birds are big, bold specimens, richer in colour and more decided in markings. Aviarists who have had the opportunity of keeping and studying many species of birds know well that many of them do not attain full growth and colour for a year or two; some, such as the Yellow Bunting, will improve even to the fourth year. Therefore, one is inclined to think that these early Wheatears are possibly the young birds of the previous season; for, in the autumn migration, many young birds lead the way. May they not be the first to return?

Notes and Queries.

Tit and the Bees.

Beekeepers are terribly afraid of Tits; one of these birds will sit outside a hive and pounce upon every bee that comes out. It is the Great Tit only that indulges in this method of obtaining insect life.

Snow in April.

The heavy fall of snow we had on the 7th fortunately did not stay long, or there would have been considerable damage among the early nestlings, as it would have been impossible for the old birds to feed. During these heavy storms many nests with just an egg or two get waterlogged, and are then deserted by their owners.

The Honey Buzzard.

It is on record that Lord Lilford once possessed a pet Honey Buzzard, and that it was once taken to a wasp nest. It soon commenced to scratch and work with its beak, tearing away the turf and roots. The wasps, which swarmed over the bird, did not inconvenience it in the least, for, although they could manage to burrow under the bird's feathers, they could not turn to sting it, owing to the plumage being held tightly to the body.

Early Nightingale.

We shall soon have the chief musician of the woodlands' choir with us, in fact he has already been reported as arrived in some districts. I often wonder if these early arrivals take place, or if in some cases the wish is father to the thought, and the listener has mistaken some sweet passage of the Song Thrush's melody for the notes of the rarer bird. Yesterday one was singing between the showers, and occasionally rendered a passage so like the song of the Gale that one might easily be deceived; but following the "swot, swot, swotty" note of the Nightingale came the unmistakable trill of the Thrush; even this was better than usual. Occasionally one may hear such a bird, and no doubt these are the musicians who, singing late in the evening, are sometimes mistaken for an early migrant.

Early Thrush's Eggs.

Already this season I have found a Thrush's nest with three eggs. A most remarkable thing about these eggs is that there is a kind of pimple at the large end, of about a quarter inch diameter. Has this peculiarity in any eggs ever been noticed before?—FRED. HOLLOWAY (Brierley Hill).

[Eggs are occasionally found with incrustations upon them, probably caused through a superabundance of shell-forming material.—H. N.]

Plovers' Eggs.

Expert collectors of these judge of the locality of the nest by the actions of the birds, chiefly the female, who, upon leaving the eggs, runs a short distance and then flies close to the ground for a little way, always in silence. On the other hand, the cock bird is noisy and clamorous, flying round and round, trying to distract one's attention from the nest. Upon the regular breeding grounds the search for eggs continues daily. The eggs of other birds, such as the Snipe and Redshank, are occasionally mixed in with them. Many of the eggs seen in the London market come from the Continent, although numbers are collected in Norfolk, Essex and Cambridgeshire.

Watch the Birds.

Now is the time to watch and study the birds to aid one to determine the good or ill done by them. From now onwards the insect-eaters will be daily consuming destructive grubs and caterpillars, occasionally wandering from the path of usefulness to take toll of a ruddy cherry or raspberry. If the Starlings have a nestful of hungry youngsters just notice how, time after time, they carry grubs from your lawn to their hiding place, hour by hour, day after day; in this way they must get rid of thousands of insects which the gardener can easily do without. And when they take a few cherries please give them credit for the good already done.

Advertisements continued from page 338.

MAINLY CANARIES—continued.

EXCHANGE one gross and half new bicycle spokes for two hen Canaries or singing cock Canary.—Milton, 26, Love-st., Paisley.

GREENFINCH cock, paired Bullfinch hen, exchange hen Canaries; what offers?—Hill, 10, Ilton-rd., Queen's-rd., Walthamstow.

EXCHANGE Crested cock and Crestbred hen, 1905 birds, for Plainhead cock and hen, or sell 12/-.—H. Sewell, Eastbrook-rd., Waltham Abbey.

LARGE green Crestbred cock, £1; green Crested cock, 15/-; useful exchange.—Arthur Wood, Postman, Radcliffe, Manchester.

WANTED, long, slim, yellow green Yorkshire hen; will give in exchange buff Crestbred Norwich cock, cost 12/6 last year.—D. Burr, 33, Rodway-rd., Bromley, Kent.

PURE Seifert Roller cock, ringed '06, W. Whittaker's strain, Bolton, 20/-, or exchange Yorkshires or Norwich, approval, your birds first.—Davies, High Field-ter., Wellington, Salop.

PRIZE bred ticked buff Norwich cock, 7/-; grand pair Crests, nesting, 12/-, exchange Norwich hens or British.—Knowles, 60, Fleetwood-st., Preston, Lancashire.

LARGE yellow Lancashire coppy cock, '06 bred 30/-, exchange for large '06 Crestbred cock, good scull, plenty feather, approval.—F. W. Walsh, 11, Princess-st., Glossop.

LARGE 1906 cinnamon marked Yorkshire cock, sell or exchange large clear yellow Norwich cock or yellow Yorkshire hen, no rubbish, approval.—J. Green, 256, Chapel-st., Leigh, Lancs.

HAVE got a few good Norwich cocks left from 5/- up to £1; also one buff hen, 8/-, have a look before you buy; approval, deposit.—Meakes, Shoulder of Mutton, South Normanton.

NOTICE.—Grand Palace shaped three-compartment aviary, 3 ft. long, 3 ft. high, new, price 25/-, or exchange Canaries; approval.—McKeand, Hamilton-pl., Castle Douglas.

CRESTBRED cock, full of quality, model Yorkshire cock, like wax, exchange exhibition Mules or Britishers, or big Cinnamons; approval.—Laidlaw, Painter, Langholm.

THREE Norwich cocks, seven hens, also six-compartment and four double breeding cages and flight aviary; offers in poultry or cash.—Ealand, 5, Deerfield, West Hendon.

COCK Goldfinch Mule, full song, 10/-; cock Linnet, full song, muler, 4/-, exchange pair Yorkshires or Norwich; buff Yorkshire cock, 9/-, exchange Norwich or varicgated Yorkshire cock, or offers.—Tutty, 22, Smith's-ter., Common Side, Mitcham.

CLEARING aviary of British birds for Canaries.—Splendid cock Blackbird, in full song, and large cage, 8/-; grand Song Thrush and cage, 8/6, or what offers in Canaries, carpenter's tools?—Hy., Pettit, Horley.

GENTLEMAN'S rolled-gold watch, 25/-; silver ditto, 25/-; lady's, 15/-; gentlemen's boots, 16/6; marble clock, £3 10/-; four-bottle cruet, 12/6; silver-plated butter dish, 10/6; jam ditto, 10/6; pair carvers, 10/6; bull-dog, £10; pen Cochins, £2 2/-; gentleman's 9-carat gold watch, 70/-; lady's ditto, 35/-; cutlery, drapery, household goods; will exchange for Canaries, Pigeons, Fowls, Bantams, Dogs, any kind live stock.—R. Parker, 32, Churchill-rd., South Croydon.

Mainly Foreign
To be Sold or Exchanged

TALKING Amazon Parrot, with cage; exchange for photographic outfit, bicycle; offers; cash £2 10s.—Marriott, Old Court, Springfield, Essex.

AFRICAN Grey, very fine bird, quite tame, been kept in cold warehouse last three months; good cage, 40/-; exchange Canaries.—Pearson, Greenwich.

AMAZON Parrot, young, healthy, and acclimatised, talking, feeds from hand, comes on finger, good cage, 40/-; exchange Canaries.—Pearson, Greenwich.

PAIR acclimatised Zebrafinches and one Zebra hen 5/6, or exchange Avadavats, Spice Birds, or Firefinches.—S. Turner, Wilsthorpe-rd., New Sawley, Derby.

LOVELY pair of cock Waxbills and Zebrafinches, ready for nesting, in good condition, with breeding cage, sell, or exchange good albert chain or watch.—J. Sargeant, 18, Alloa-rd., Deptford Park, London.

AFRICAN Grey Parrot, crimson tail, its equal at talking seldom heard, sell £10, or exchange hammerless gun to value, Dursley Pedersen, or gold albert. For particulars, apply A. Skinner, Epworth, Doncaster.

PAIR Paradise Whydahs, acclimatised, show cage and case, exchange two pairs adult Budgerigars or pair Cockatiels; hen Paradise Whydah, exchange hen Madagascar Love Bird.—Jones, 89, Woodland-st., Mountain Ash.

ZEBRAS, 5/-; Waxbill, 3/6; Orange-cheek, 3/6; Lavender Finches, 6/-; Madagascar Weaver, cock, full colour, 7/6; Saffron Finches, 5/-; Cutthroats, 3/6; White Javas, 10/-; odd cock, 5/-; Blossom-head Parrakeet, cock, 7/6; all tight and healthy; exchange Canaries.—Pearson, Greenwich Market.

Miscellaneous
Sale or Exchange

EIGHT-DAY mahogany clock, good timekeeper, sell 12/6, or exchange.—Wine, Cheddon-rd., Taunton.

EXCHANGE ½-plate camera and outfit, for good Norwich Canaries.—Palmer, 53, High-st., Battersea.

CAMERA, hand, cost 25/-, sacrifice 10/-; exchange Canaries.—Pearson, Greenwich.

BANTAMS, cock and four hens, Game, laying, 15/-; or exchange Canaries.—Pearson, Greenwich Market.

GOLDFISH, 12 assorted, in rustic aquarium, with shells and plants, 5/-; or exchange Canaries.—Pearson, Greenwich.

TWO fowls, white-legged cock Goldfinch, three cock Greenfinches, good working Ferret; exchange hen Canaries or Mules.—Clements, Jeynes-row, Tewkesbury.

PAIR tennis trousers, fancy vest, new, 7/6; silver-mounted stick, 4/6; gold-mounted fountain pen, 10/6; exchange Canaries.—Hellier, 43, Sydenham-ter., Portsmouth.

POSTAL ORDERS PLEASE.

Owing to the new Post Office Regulations respecting the use of stamps upon Postal Orders, we are reluctantly compelled to state that in future our rule re **sending Postal Orders as far as possible instead of stamps** *must be strictly enforced. ALWAYS USE OUR DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor for the *bona-fides* of either buyers or sellers. In all transactions the adoption of our Deposit System should be insisted upon.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient, plus the extra postage incurred, has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller, stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from *both* parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has *not* been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or, if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

PREPAID ADVERTISEMENTS

UNDISPLAYED.—Three Words a Penny up to eighteen words, MINIMUM Fourpence. One Halfpenny per Word for each word over eighteen.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and, after the first eighteen words, are charged at two words a penny.

Headlines or Footlines 6d., 9d., 1/-, 1/6, according to size.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL. Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London. Terms for Display Advertisements on application.

36 in. long, 15 in. high, loose punched bar fronts, beautiful sky-blue inside, black enamelled out, sliding partition forming flight for young, fitted with nest boxes, sand trays, and everything complete, price 4/6; all orders sent same day.—White, 167, Wheeler-st. Birmingham.

THE CHALLENGE BREEDING CAGES.

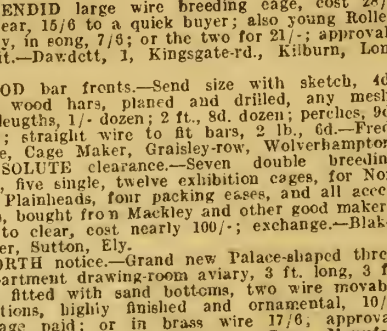
Best planed pine boards, black enamelled outside, blue inside, sliding partitions, sand trays, nest boxes and seed hoppers, best quality loose wire fronts, with punched bars, 18 in. 2/-, 20 in. 2/6; double, 33 in. 3/9, 36 in. 4/3; 9 in. deep, 15 in. high; singing cages, 1/6; cages and fronts made for the trade.—Henry Morris, 57, Cape-hill, Birmingham.

PARR'S POTTERY

NEST PANS, DRINKERS, FOUNTAINS, BATHS (Oval, Round and Square).

"Duplex"

Cut Partition Drawer.



This drawer has been designed to meet the wishes of Breeders so the foods can be separated instead of mixing together. Thus having one drawer instead of two. Made in two sizes.

Messrs. C. A. House, Claude St. John and J. North all say it is a good idea.

Wire door falls into the groove and is not in contact with food.

WALSH, Bird Food Specialist, BLACKBURN.

Sandiford's Royal Red.

ARRIVED! ARRIVED!

10 Tons of SANDIFORD'S Famous ROYAL RED FEED. The Best in the World, Bar None.

I am sorry to inform my numerous customers that I am only able to import this season ten tons instead of twelve, this being all I can produce through such great scarceness of the best Pimento, or Royal Red Feed, from sunny Spain. This also has caused prices to do a jump. So those requiring a good supply must be sure and order enough early on to see them right through the season, as I shall not be able to get any more of this best quality. See last week's advertisement for records with birds moulted on Royal Red at Crystal Palace, 1907, in champion Norwich and Cinnamon classes. Then you will need ask anyone whose colour-feed to use. Just one testimonial out of scores received:—Mr. E. Baker, Cowes.—"Sir,—Once more I have the pleasure of congratulating you on the success of Royal Red. I fed all my birds entirely on your feed. My clear yellow, which won cup and medal for hottest bird was red hot. At the Palace I won three firsts, one second, two thirds, etc., four specials, for best Norwich. In such company I think it speaks volumes. Also was very successful at Plymouth, Portsmouth, Dulwich, and Peckham, L.C.B.A., Newport, Bournemouth, Camberwell Baths, etc. Send me 1 cwt. of your new feed."

Prices this season:—**1 lb., 2/-; 2 lbs., 3/5; 5 lbs., 7/6.** Hot Natal **2/- lb., 2 lbs. 3/8.** Note, these prices are carriage paid. Agents and Wholesalers send for this season's prices.

J. SANDIFORD,

Colour Food King, Estab. 1879, PRESTON, LANCS.

IMPORTANT NOTE.

Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together and counted as one Advertisement.

SANDIFORD'S SPANISH CANARY.

Special Offer of the Best Spanish Canary Seed in the World, Double Cleaned.

IMPORTED DIRECT FROM SUNNY SPAIN.

Can offer this beautiful Seed at **112 lbs., 20/-; 56 lbs. 10/-; 14 lbs., 2/9.**

Mr. Baker, of Cowes, over 300 miles away:—"Send me another sack of Spanish, its splendid!" Remember all Mr. Baker's Champion Palace Winners, which won 3 firsts, 2 seconds, 2 thirds, Championship for best Norwich in Show, etc., were fed on this seed. If you have good birds don't kill them with bad seeds. See other advt. for prices other seeds. **Estab. 1879.** Send stamp for samples.

J. SANDIFORD, BIRD SEED MERCHANT, **PRESTON, LANCS.**

THE HYGIENE OF BIRD KEEPING.

By W. GEO. CRESWELL, M.D., L.R.C.P., F.Z.S.

Price 1/1, post free from CAGE BIRDS Offices,

154, FLEET STREET, LONDON, E.C.

OPINIONS OF THE PRESS.

LANCET: "This little book will be welcomed by all lovers of birds, whether ornithologists, aviculturists, or the owners of a single pet songster. The author deals with his subject in a thoroughly practical and scientific manner, and the results of his experiments prove the fallacy of some rule-of-thumb theories. . . . The book is well illustrated."

COUNTRY LIFE: " . . . a surprising amount of really valuable advice for all who keep small birds, whether in cages or aviaries. . . . Those who approach the subject with an open mind must admit the cogency of the author's arguments; and these, backed by a very wide experience at first hand, will prove hard nuts to crack for many of the champions of the 'good old methods.' . . . We venture to think that his experience will pave the way for a revolution in the methods of bird keeping in the near future."

MEDICINES.

DIARRHŒA Inflammation Cure. 20 years as a practical breeder. My own practical recipe. I supply most of the leading breeders. Testimonials from some of our leading exhibitors. 7d. ounce, free, with full directions.—Mather, 65, Albert-rd., Widnes.

PIGGOTT'S herbal recipe to cure colds, asthma, wheezing, loss of song, and liver and kidney diseases in Canaries and all kinds of cage birds. You can make one pint for less than 4d.; ditto to make same, 1/-, worth 10/-.—64, Rectory-bldgs., Deptford, London.

BRONCHORINE.

Ideal tonic, cold, wheezing, asthma, brings birds into breeding condition, invaluable for young; original testimonials.—Apply, Crawley, 112, Radford-boulevard, Nottingham, 9d., 1/6, and 3/-. "Forward 1/6 bottle Bronchorine. Find it excellent tonic.—211, St. Albans-rd., Watford. March 14th, 1907."

PANNASSINA.

A medicinal preparation for Canaries and all kinds of cage birds, prevents and cures asthma, wheezing, loss of song and all diseases caused through damp and cold; is an excellent stimulant, and takes the birds easily through their moult. This speciality has built up a 30 years' reputation entirely on its own merits, invariably effecting a cure after every other remedy has failed. In 6d. and 1s. tins, postage 1d. extra. If you cannot obtain it from your tradesman, apply direct to W. J. Hammond, 19, Anstey Road, Coldharbour Lane, Camberwell, London, S.E. Agents wanted.

MISS STOREY will send you any birds you require on approval. She will guarantee you satisfaction. Selected red-breasted cock Linnets (fine birds), 1/- each, three for 2/6, six for 4/6, twelve for 8/-; extra large steady birds for show or muling, 1/6, 2/-, 2/6 each; hens 6d. and 9d. each; cock Chaffinches, 9d., 1/-; matched pairs, 1/-, 1/6; Bramblefinches, 1/-, 1/6 pair; Greenfinches, 1/-, 1/0 pair; Goldfinch hens, 1/6, 2/- each; travelling cages, 2d. each. Illustrated price list free. P. Ostler, of 7, Bothwell-st., Dunfermline, writes:—"Birds arrived safe this morning. They are all large beautiful birds, well worth much more money.—To Miss Storey, Practical Bird Specialist, Crowle, Doncaster."

NOTICE.—All birds sent on approval, cash or deposit. If not giving fullest satisfaction, you return them, and have your money back in full, as I do not wish you to keep them. I claim to have finest stock in West England, and in grand song before sent out, not fresh-caught rubbish same most dealers send. Cock Brown Linnets, with nut-brown backs, white in wing, running up to quill, 1/- each, three 2/6, six 4/-, 8/- dozen. Notice, I have imported 100 Siberian Linnets, fit to show, and win, plenty size and markings, 2/6, 3/6 each. Cock Goldfinch, house moulted, guaranteed Mule breeder, 5/6, 7/6; Sib-bred hen Canary, mother ten Mules last season, 3/6, 8/6 pair; cock Goldfinch Mule, pure note, 7/6; cock Bramblefinch, fit to win, 1/6. House moulted Linnets, red-breasted, one stone-breasted, 1/6, three 4/-, six 7/6. Selected by me for Linnet singing contest, same as I have supplied at Hull, Coventry, Newcastle-on-Tyne, Birkenhead, Durham. Seven days' approval. Open Linnets' singing cages, 8d. Talking Parrot, amusing pet, 30/-, worth £5.—Baker, Herbert-st., Bedminster.

COCK LINNETS.

Warranted cocks, 1/6 each; Redpolls, 1/- each; Grey Parrots, 20/- each; Amazon Parrots, tame and talking, 35/- each.

John Mace, Bird Specialist, Doncaster Road, Barnsley.

LINNETS SINGERS AND MULE BREEDERS.

I have some fine red-breasted cocks, not hens, on three clear days' approval, packed in the right way, been caged four and five months, at 2/6 and 2/-. Also a few extra specials for muling, 3/6 and 3/-; some caged two months and one month, 1/6 and 1/-. Cages for any of above 1/3 each. Also Redpolls, caged four months, 2/6 and 2/-. Call and inspect them.—Hancock, 23, Scales-st., Seedley, Manchester.

OPEN YOUR EYES.

There is something here that will interest you I have the best stock of British birds in England. Every bird been properly caged since 1906, mostly in full song, singing their pure wild song. Call and inspect them; over 1,000 to select from. No fresh-caught or foreign rubbish here. Red-breasted cock Linnets, 1/- each, three for 2/6, six for 4/6, 8/- per dozen, five dozen 35/-. Do not be gulled with fresh-caught hens for cocks; extra large steady Linnets for show or muling, 1/6, 2/-, 2/6 each; hen Linnets 2/6 dozen, five dozen 9/-; picked hens for muling, 6d. each. Chaffinch cocks, 9d. each; matched pairs 1/-. For other British birds send postcard for my new illustrated list. All birds on seven days' approval.—Miss E. L. Storey, Crowle.

SIBERIAN LINNETS,

2/6; Siberian Goldfinches, 5/6; Siberian Bullfinches, 5/6; all specially imported.—Varney, Stratford, London.

PIPING BULLFINCHES.

My last consignment this season of these clever and celebrated birds have just arrived, all piping two tunes perfectly, prices from £3 to £4 10/-; so-called piping Bullfinches advertised cheaply, which, in fact, are only broken pipers, I do not keep in stock.—C. Roehl, 400, Edgware-rd., W.

GOLDFINCHES & LINNETS.

Beautiful cock Goldfinches, 2/6, 3/-, 3/6 each, hens 1/3, 1/6, 3 8/-; singing cock brown Linnets, 1/3, 1/6 each, large selected, 2/-, 2/6 each; Goldfinch cages, 1/8; Linnet cages, 1/3; Lark cages, 1/-; singing box cages, 1/4.—Matt. Hopkins, Bird Specialist and Cage Maker, 38 and 41, Fylde-st., Preston, Lancs.

VARNEY, Stratford. English Cock Goldfinches, 2/-: Cock Linnets, 1/-; beautiful extra special Siberian Cock Goldfinches, 5/6 and 7/6 each. All above guaranteed breeders, and singing stoutly.

Splendid Bullfinches, quite tame, 3/6, Hens, 1/-.

HOW BIRDS PROPOSE

Six artistic postcards showing the positions of some familiar British birds in courting poses. Specially drawn by well-known artists for the publisher, Mr. F. Finn.

Price 6d. per Set.

F. CARL, 154, FLEET STREET, LONDON, E.C.

Monster Cock Hawfinch, 10/- and 12/6; Scarlet Cock Cronbills, 5/- and 6/6; Beautiful Cock Snowfinches, 10/- and 12/6.

All in tip-top condition and well on hard seed.

WALSH, BIRD SPECIALIST, BLACKBURN.

MATTHEWS, LINNET KING.

Linnet singers and Mule breeders. My Linnets have stood for the last five years, and I have sent them all over England for contest singing and Mule breeding, and they are acknowledged the keenest and best-noted birds you can get. If you want a real good Linnet, try one of mine. They are all good large healthy birds, all been properly netted from the hills and fields, and are all sent on approval. I have the largest stock of Linnets in England. Some real good birds, in full song, been taught under my well-known champions, been caged since November and very steady, real bargains, 2/6 and 3/- each. Also a splendid lot, well caged, in grand song, 1/6 and 2/- each. I have the finest lot ever seen, all ready for Mule breeding. Good large healthy Linnets, good nut-brown backs, breasts like blood, blue beaks, in grand song, real bargains, 2/6. Those intending Mule breeding should send at once for one of these special birds. A free sample of my special Linnet mixture sent with every order; also sold at four packets a 1/-; and my special wild seed mixture is sold at 3d. a packet, four packets a 1/-. No Linnet fancier or Mule breeder should be without it, as it is the best you can possibly get, all properly cleaned and mixed to suit your birds. Also my special wild dandelion seed, 5d. oz., lettuce seed, 3d. oz., Golden Pleasure seed, 6d. lb. This special mixture will make your Linnets sing at one another with their wings down; 6d. per packet, and recipe how to use it. Sent free. Gentlemen, read these, what others say about my Linnets:—"21, Donegal-st., London, N. Dear Sir,—I received the Linnet safe, and he started singing as soon as I got him out of the box. I am highly pleased with it. Wishing you every success.—F. Grimaldi, to Matthews, Birdcatcher." "Chessington House, Marlborough-rd., Dalmouth. Dear Sir,—The birds arrived safe, after their long journey, and I am very well pleased with them. They are already at home.—From Jas. Harris, to Matthews, Birdcatcher." Gentlemen, I could fill the paper with testimonials, but it costs money. I have over 200 for inspection. See last week's CAGE BIRDS. All birds sent away the day after order. No delay. All sent on four days' approval, at my own risk. Buy first hand, and no fancy prices. Inspection invited.—Matthews, Birdcatcher, 44, George-st., Hyde, Cheshire.

YOUR LAST CHANCE.

This advertisement may not appear again, so be on the safe side by purchasing now. Few choice Worcestershire cock Goldfinches, steady, and in full song, 4/- and 5/- each. Grand stock of inland country-caught cock Linnets, all steady, well caged birds, not fresh caught sea-coast rubbish, 1/- each, three 2/6, six 4/6, or 8/- dozen. Specially selected cock Linnets, warranted in full song, in large cage, 2/- lot. These Linnets are guaranteed exactly the same as those supplied by me to the Linnet singers of Leeds, Hull, Leigh, Skinningrove, Keighley, and all parts of Yorkshire and Lancashire. Hundreds of contest singers have been sold by me during the last 16 years, so why pay big prices when you can buy first handed at moderate price? Few very steady picked Mealy Redpolls, ideal for hybridising, guaranteed cocks, 2/6 each; hens, 1/- each. Hand-reared cock Blackbird, finger-tame and in full song, 5/- each. Hand-reared cock Thrushes, warranted in song, 4/- each. Very large new cottage-topped Thrush or Blackbird cages, 2/6 each. Cock Goldfinch Mules, extra free loud singers, 7/6 each. Cock Linnet, mated with muling hen Canary, 5/- pair; cock Mealy Redpoll, mated with hen Canary, 6/- pair. All birds are guaranteed well on seed, steady, and well caged, and can be seen at any time, all separately caged, on my premises. All sent on approval, cash or deposit rules of CAGE BIRDS, and money freely refunded if every satisfaction not given. Largest wild bird dealer in England. Established 1891.

W. GORE, 131, Gooch Street, BIRMINGHAM.

HARRY ALLEN.

Champion of all champions. First, second, and third last week, first and second prizes this week, at Newtown. I have won more prizes than any six men put together. To prove this look up back numbers of CAGE BIRDS. Gentlemen, if you want winners for shows or singing contests, give me a trial order, and you will never regret it. Big fine healthy cock Linnets, well pencilled, stand well, and very tame, 2/6 and 3/-; extra picked birds, sure mulers, 3/6. Remember, Sergeant Smith, Leeds Fire Brigade, got three of this kind, and bred 62 Mules last year, and 11 this year up to now. £25 to anyone if not true. Cock Linnets, singing beautifully, in a polished singing contest cage, with a packet of my special mixture and instructions how to feed, 4/6 the lot. Young house moulted Linnet, singing hard, and taught by my champions, 7/6, 8/6, 10/6 each, including singing cage. These birds are finger tame, and will sing anywhere, and every bird fit for any show. I can recommend these to any gentleman. I have a few specially trained for contest, £1, with cage; no rubbish; every bird honestly worth the money. Singing contest cages, 1/6 each, 7/6 half dozen. Four packets of my special mixture, 1/-. Send stamped envelope for particulars of my book on Secrets of Linnets. Please read these:—"20, New Bridge-st., Londou. Sir,—The Linnet I purchased from you some time ago took vhc at Llandudno against Bullfinches and Goldfinches.—C. Fisher, to H. Allen." "9, Wood-row, Bebside-furnace, Northumberland. Sir,—I got the bird safe. He is in splendid condition, has a splendid song, and is making my others good. I am highly satisfied. I will have another one soon.—H. Sharp, to H. Allen." "12, Coburg-st., Glasgow. Sir,—Linnet arrived safe. I am well pleased with him. He is a good-sized bird, nice colour, and steady. He started to sing shortly after being transferred from travelling box. I shall certainly deal with you again, and also advise any friends on the outlook for a good bird.—J. Paton, to H. Allen." Only honest dealing done here. Birds sent day after ordered. Send to the real Linnet firm. Beware of imitators.—H. Allen, 42, Brown Hill-ercs., Harehills-lane, Leeds.

RED MITES reduced to a minimum. Linnet cups wired tops, Japanned metal base, **1/6**, three for **4/6**; Best with trays, **2/-**, three for **5/6**; Goldfinch size, **2/-** and **2/6**. Trade Supplied.—Hayes, 170, Wensley Street, Blackburn.

WANTED to purchase, direct from catchers, small Softbills, such as Nightingales, Blackcaps, Redstarts, Wheatears, Wrynecks, Wagtails, Treecreepers, Golden-crested Wrens, etc.; good prices given; reliable catchers write for particulars.—Walsh, Bird Specialist, Blackburn.

NIGHTINGALES.

Fine birds, 7/6, two 13/6; safe delivery, my risk; cages to order.—Gosling, 74, Hugh-st., Pimlico, London.

COCK SKYLARKS, FREE!

Yes, free. They are not hand-reared nor house moulted. They have been caught this year, and they are singing their pure wild note from daybreak till sunset. I am sending these gems out on seven days' approval, complete, with cage, fountains, and food to last seven days, at the following prices, 4/-, 5/- each. I sold a hundred of these songsters last spring. Did not have one returned, as the Editor can prove. I have also about 40 hen Canaries. I will accept 2/6 each; cock, 6/6. Every description of cages, wire fronts, baths, bow-front Lark cages, 2/6; Blackbird cages, 3/-. For anything you require send to William Pimm, 229, Port-rd., Birmingham.

Miscellaneous.

NOTICE.—Three cock Linnets, three cock Larks, in song, 4/6, or 1/- each; cock Canaries, full song, 5/6, 6/6; hens 2/-; cash, deposit.—Brain, Son, few doors below Aston Railway Station, Birmingham.

LATEST OPINION OF MACKLEY BROS.' BIRDS.

"High Street, Uppingham, Rutland. Jan. 12th, 1907. Dear Sirs,—The two Birds arrived safe, in the PICTURE OF HEALTH; they are the BEST TYPE of Norwich Plainhead I ever saw. I am HIGHLY DELIGHTED with them. I shall certainly recommend you to all I have the opportunity of so doing. I never had the favour done me from any one FIRM but yours by sending birds on approval without the Deposit System. Trusting the Firm of MACKLEY BROS. may live and reign for the sake of their customers.—Yours faithfully, J. Waddingham to Mackley Bros."

Postal and Telegraphic Address: MACKLEY BROS., (Jacob Mackley). NORWICH.

Cocks, in full song, 5/6, 6/6; orange yellows, 7/6 and 10/- each; good healthy hens, for this year's breeding, 2/6, 3/6; orange yellows, 4/6 and 5/6 each. Pairs properly mated for this year's breeding, unrelated, 8/-, 10/-, and 15/- pair. Most of these birds have been bred in outdoor aviaries. This is no flattering advertisement, but genuine, with 20 years' references. With my business extending so much, I have had to take larger and more convenient premises. Please note change of address.

WHY PAY FANCY PRICES?

Reliable stock birds, for immediate breeding, 9/6 pair; cocks, full song, 6/6; hens 3/6; inspection invited.—Hardy, 24, Pathfield-rd., Streatham.

REMARKABLE VALUE.

I have grand lot of untried Norwich hens, yellows, buffs, Greens, Cinnamons, Cinnamon-marked, variegated buff yellows, 3/6, 4/6, 5/6, 6/6; pairs matched for breeding, 8/-, 10/-, 12/-; travelling cages 3d. extra.—T. Miles, St. Andrew's, Norwich.

CANARY HENS, 1906 BIRDS.

Twenty for sale, flying in aviary, good stock, from 2/- each upwards to 4/6 each, only for sale two weeks at that price; three Greens, 3/6 each, want the room; also cages, breeding and store; send for list.—H. Gould, 11, Little South-st., Coventry. See last four years' "Cage Birds Annual."

WRIGHT & SON,

84, Heath-rd., Norwich, winners of hundreds of money prizes, also medals, etc., in open competition at Crystal Palace and leading shows. Have some grand stock in Norwich Plainheads for sale; pairs, matched to breed show birds, 10/6, 12/6, 15/- and upwards; prize-bred cocks, 7/6, 10/6, to 20/-; hens, 3/6, 5/6 upwards; all in good breeding condition; approval.

THE LAST CHAMPION NORWICH

Plainheads to spare this season. To give amateurs and novices a chance to breed winners, I offer them at only one third their value. They comprise the following:—1905 bred, large clear yellow cock, Baker's strain, price 21/-; 1906 bred yellow cock, same strain, price 20/-; 1906 bred monster clear buff cock, Vardy's strain, price 21/-; 1906 bred ticked buff cock, champion songster and stock bird, Irons' strain, price 17/6; even marked colour fed buff cock, Morris's strain, price 15/6; colour fed variegated yellow cock, Mackley's strain, price 12/6; champion 1905 bred yellow hen, bred great winners, Baker's strain, price 12/6; monster 1906 bred clear buff hen, Vardy's strain, price 11/6; buff variegated hen, Irons' strain, price 7/6. The above are all guaranteed breeding stock, are cold room kept, good type, rare size, colour, and quality, and are bargains; scores of winners supplied this last season; first orders will take any of the above birds.—Note new address:—Geo. Cubley, Roman Villas, Long Sutton, Lancs.

FOR ONE MOMENT

Just consider what it means to you when selecting birds for your breeding stock. It matters not if you be an experienced breeder and exhibitor, or only an amateur, all have, or should have, one desire—to get the best possible birds at the most reasonable prices. If you have this desire I would remind you that Miss Storey has the best collection of birds in England, birds of the proper type in breeding condition, at reasonable prices. Do not be misled with unshapely rubbish, when you can have the very birds you require at the same price, carriage paid to your address, on seven days' approval and no risk whatever, until you are perfectly satisfied with your purchase. I yearly sell many thousands of birds, and give every customer satisfaction. I guarantee to please you if entrusted with your order. I am now offering exceptional good value in typical Norwich cocks, 6/6, 7/6, 8/6, 10/6, 12/6, 15/-, 20/-, and 25/- each. Hens, 4/-, 4/6, 5/6, 6/6, 7/6, 8/6, 10/6, 12/6 each. Matched pairs, 8/6, 9/6, 10/6, 12/6, 15/-, 17/6, 20/- upwards. I receive many thousands of unsolicited testimonials, of which the following are samples:—"8, Colvil-st., Middlesbro', March 30th, 1907.—Received Norwich hens safe, in splendid condition. They are grand birds, just exactly what I wanted.—C. Clennett, to Miss Storey." "The Pottery, Leotland, March 30th, 1907.—I have instructed Editor to pay you the money for the birds I have received. I am well pleased with them. They are much better than I expected for the money. When I want more birds I shall always send to you for them.—F. Love, to Miss Storey." "11, Pemberton-av., Berry Port, March 30th, 1907.—I thank you very much for the bird, which gives every satisfaction. It is excellent quality for the money. I could not wish for a better.—G. G. Howell, to Miss Storey." "5, Phœnix-st., Newsham, March 30th, 1907. Birds arrived in best of health and splendid condition. Thanks for the honourable way you have treated me. Wishing you every success.—A. Robertson, to Miss Storey." "The Villa, Brucklass, March 30th, 1907.—Birds arrived safe, in pink of condition. Cock commenced singing same day. I can say that your advertisements bear no exaggeration whatever.—M. Laird, to Miss Storey." "Bryn-awel, Trimsaran, March 30th, 1907.—Received Norwich hen, in pink of condition, and am exceedingly pleased with it. Please send me a cock bird to match it.—D. Dunn, to Miss Storey." To make sure of satisfaction, send me your orders for whatever Canaries or British birds you require. Full new illustrated list post free. All Canaries sent carriage paid, on seven days' approval, at my risk. Travelling cages, 2d. each. Note the old and only address: Miss E. L. Storey, Bird Specialist, Crowle, Doncaster.

NORWICH HENS. BARGAINS.

Turnbull."—"January 2nd, 1907.—Birds arrived, are singing well.—R. M. Lee, 79, Mill Street, Crewe."—"Broom, Newton Mears, Glasgow.—The birds arrived in good condition; I am well pleased with such value.—J. Broom."—"January 2nd, 1907, 32, Easson Road, Darlington.—Bird to hand. I like the song wonderfully well, and thank you for your prompt delivery and attention to my instructions.—H. Hutchison."—Send all orders to Varney, Stratford, London.

£860. STOCK. £860.

Miss Storey has just secured the best and most desirable stock of genuine highly-trained Rollers that has ever been imported into England. These are not a lot of wasters picked up in German markets, but the whole stock of one of the most noted Roller breeders. Every bird is cheap at 20/- each; but as I have bought them right I offer these high-class birds at about half their value. Genuine highly trained cocks, in full song, by day and gaslight, 8/6, 10/6, and 12/6 each. Picked contest and Bandmaster songsters, 15/-, 17/6, and 20/- each. Pure Roller hens, of same breed, 3/6, 4/6, 5/6 each. For loud songsters that will make the place ring with their song, you want my untrained Hartz songsters. These are good loud free songsters, at a low price. Cocks, in full song by day and gaslight, 6/-, 6/6, 7/-, and 7/6 each; matched pairs, to breed songsters, 8/6, 9/6, and 10/-. The quality of my birds speaks for itself. I have published many thousands of unsolicited testimonials in this paper, and continually receive dozens by every post. Following are a sample of those received this month:—"5, Fair View, Gilfach, Bridgend, April 0th, 1907.—Please send me one pair of birds for the enclosed. There is much credit due to you for your straightforward dealings. I have dealt with you for four years now, and cannot praise your birds too much. I have still the first bird you sent me, and I am open to sing any bird in our valley. Although I have had it four years, I would not now take ten times the price you charged for him. I, as an old fancier, find you are the straightest person to deal with.—C. Mills, to Miss Storey." "10, Brunswick-pl., Blackfriars, London, April 6th, 1907.—I am highly satisfied with the Canaries you sent me. I could not match them in London for anything like the price. I and my friends consider them splendid birds. With thanks.—W. Hyam, to Miss Storey." "Summer Villa, Llandudno, April 6th, 1907.—Received the Roller in sound, healthy condition. I am highly satisfied with the bird; its song is splendid.—L. Wans, to Miss Storey." I could fill this page with such letters of praise. All I ask is let me send you one of my birds, carriage paid, on seven days' approval, at my risk, and you will be convinced that the quality of the bird is the best, and the prices are the most reasonable. Send postcard for my new illustrated list. Neat travelling cages, 2d. each; all birds carriage paid, on seven days' approval.—Miss E. L. Storey, Importer and Breeder, Crowle, Doncaster.

BUY DIRECT OF

Breeder and Trainer. Finest strain of Rollers in the country; trained to perfection, 7s. 6d., 10s., 12s. 6d., 15s. upwards; hens 2s. 6d., two for 4s. 6d.; cash or deposit.—F. Cartwright, 15, Farfield, Kidderminster; established 1888.

Hummel Rollers.

Finest Rollers imported. To speak well of the Hummel is to gild refined gold. Testimonials from customers who say the Hummel is still singing as sweetly as when purchased four, five, six, and seven years ago. All Hummels have delightful, deep, delicate bow roll, hollow roll, hollow bow roll, du pipe, hollow bell roll, grand round bass roll, vibrating hollow roll, and charming water bubble roll; one price only, 12s. 6d.; no fancy prices; Hummel hens, 5s. each; a beautiful pair of Hummels for 15s. St. Andreasberg Rollers, 5s. and 7s. 6d. each. Hummel Schoolmasters, 20s. each, better than can be obtained elsewhere at treble the price. Thousands of testimonials have been published by me in CAGE BIRDS from satisfied customers. I guarantee strictly honourable trading and satisfaction to all.—Varney, sole proprietor and importer of this remarkable Roller Canary. Twenty years advertiser.—Varney, Stratford, London. Export a speciality. "The Schools, Overton, Ellesmere.—Hummel arrived, it at once commenced to sing—yes, a song worth listening to. It is the most exquisite songster I ever heard—decidedly a perfect Roller. I may say I never expected such perfection; they are worth all you charge for them. I must thank you for your courtesy, and shall be able to recommend your firm to those who require birds and not rubbish."—F. Robbins, to Varney, Stratford, London, Sole Proprietor and Wholesale Roller Canary Importer and Dealer.

Scotch Fancies.

FOR sale, five three-quarter Scotch Fancy hens, the lot 16/-.—John Dykes, 64, Jamieson-ter., Newmilns.

W. RUDD, THE Bird Specialist, NORWICH.

STAND OR FALL!

E. TAYLOR, BIRD SPECIALIST,

3 & 7, Thornton Road, BRADFORD.

I will stand or fall by the result of fair and unprejudiced public opinion on my system of doing business. My birds and bird appliances are no "catch-penny" items of trade. Everything I sell is sound and genuine. I give you the opportunity of a fair and honourable trial. I want no man's money with any man's grum le. I **make** my business friends; and (what is not always quite so easy) **I KEEP THEM!** My Specialities in Cages, Aviaries, Appliances, Foods, &c, for all Cage Birds have something more than merely "a local habitation and a name!" They are known all over the globe. They please all, and disappoint none. My Foods for Cage Birds are ever sound, serviceable, and satisfactory, and my prices all-round are based on terms of both merit and moderation. I sell no rubbish. I have neither time nor room for that class of business. It will afford me pleasure to send you, on receipt of 2 stamps to cover postage, my new Illustrated Catalogue; and, if you are interested in Bird Life, this work will aid that interest.

Remember that I send every Bird out on one full week's approval.

My enormous stock of Canaries includes the largest collection of TYPICAL YORKSHIRES to be seen in any one establishment in the world. The recognised Headquarters by Fanciers, Dealers, etc., for Prize-bred Yorkshires.

TRAVELLING CAGES, with Food and Nourishment for the journey, 3d. EXTRA.

Full Detailed Bird Price List free on application of Norwich Plainheads, Cinnamons, Lancashires, Crests and Crest Breds, Lizards, Rollers, Mules, etc., etc.

E. TAYLOR,

Bird Specialist,

3 & 7, Thornton Road, BRADFORD.

WINNER SILVER CUP.

Mr. S. Smith, Whitehouse-st., Newcastle-on-Tyne, wins five 1sts and cup; Mr. Williams, Chessell-st., Hull, wins three 1sts, special, and gold medal; scores of testimonials same; these birds sent on week's approval at my own risk, cash or deposit. Yorkshires, feather like wax, standard length, cocks, 5/6, 6/6, 7/6, 10/6, 15/-, 20/-; hens, 3/-, 3/6, 4/6, 5/6, 7/6, 10/6, 12/6; Norwich, Bullfinch type, cocks, 5/6, 6/6, 7/6, 10/6, 15/-, 20/-; hens, 2/6, 3/6, 4/6, 5/6, 7/6, 10/6, 12/6; matched pairs, 10/6 upwards. Why not win £15 offered by CAGE BIRDS?—C. Baker, Herbert-st., Bedminster.

WHAT WINS.

What wins your confidence, the confidence of your friends, and the good faith of every bird lover at home and abroad, is the genuine straightforwardness and honest dealing of the Lady Bird Specialist. Why not favour her with your order? If it be for one bird or one thousand, you will be sure to be perfectly satisfied with your purchase. She sends all her Canaries carriage paid, on seven days' approval, taking all risk during the time of approval, guarantecing you sound, healthy birds of good quality at reasonable prices. Her stock of high-class Yorkshires is undoubtedly the best and one of the largest in England (no half-bred and crossed foreign rubbish here); over 10,000 birds to select from Tight-feathered up-standing Yorkshire cocks, in full song, 6/6, 7/6, 8/6, 10/6, 12/6, 15/- each. Racy Yorkshire hens, 3/6, 4/6, 5/6, 6/6, 7/6, 8/6, 10/6 each. Properly matched pairs, 8/6, 10/6, 12/6, 15/-, 17/6, 20/- per pair. A few winners at reasonable prices. A trial order will convince you and your friends that for good quality, at low prices, it is impossible to equal Miss Storey. Every customer sends an unsolicited testimonial. Note the dates. These are not old, but new. "24, North-st., Hugglescote, March 30th, 1907.—Received the Yorkshire cock safe. Am very pleased with him; he is such a beauty. Thanking you for such a beautiful bird.—T. Golsby, to Miss Storey."

Thomas-st., Gorey, Ireland, March 30th, 1907.—Received the two hens, in splendid condition. I am very pleased with them. They are a marvel of beauty. I really do not know how you can sell such birds at so low a price. The day after they arrived here I could have sold them for 15/- profit, but I would not take it. You will by this post also receive orders from some of my friends.—P. Carton, to Miss Storey." (I have received seven orders from Ireland, all mentioning Mr. Carton.) "Ship Inn, Fraserburgh, March 30th, 1907.—Received the birds. I am delighted with them. Please send me another for enclosed amount.—J. Craigie, to Miss Storey." "West Cornforth, March 30th, 1907.—I am well pleased with the birds. I consider they are well worth double the price you charged for them. The cock is an extra good one. You are undoubtedly an honest, straightforward dealer.—M. Joyer, to Miss Storey." "4, Hamilton-st., Glasgow.—It is my duty to thank you for sending me such a fine bird. It far exceeds my expectations.—W. Hayes, to Miss Storey." "93, Wise-mere, Walsall, March 30th, 1907.—I am more than satisfied with the hen you sent me. It is exactly what I required. I find your birds as good as you advertise, and your straightforward, honest way of dealing is certainly a credit to the trade.—J. Carnkill, to Miss Storey." "Erdigg Park, Wrexham, March 30th, 1907.—Received bird safe. I am very pleased with it, and thank you for your straightforward dealings, and for sending me such a good bird at the price.—J. Jones, to Miss Storey." "Langwith, Mansfield, March 30th, 1907.—The hen safe to hand. For quality and price combined it is far superior to any bird I have ever bought before. Thanks for your honest dealing.—J. W. Sadler, to Miss Storey." I could fill the whole of this paper with such letters as the above. If you want good reliable birds at reasonable prices, send your order to Miss Storey, who has a large stock of Norwich at the same prices as Yorkshires. All Canaries are sent to your address, carriage paid, on seven clear days' approval. Travelling cages, 2d. each. New up-to-date illustrated price list post free. Note the old and only address: Miss. E. L. Storey, Bird Specialist, Crowle, Doncaster.

MR. BATE'S YORKSHIRES.

I find I can still spare about **6 pairs** of Mr. Bate's **best Yorkshires**— not having enough room to breed with what I have. This strain won **3,000** prizes, including **20** firsts, **18** seconds this season. Matched pairs **16/-, 18/-, 20/-, 25/-.** Odd cocks **7/6, 8/6, 10/-, 12/-.** Odd Hens **6/-, 7/6, 10/-.**

Approval with pleasure, send to—

J. Sandiford, CANARY BREEDER,

PRESTON, LANCS.

In answering advertisements kindly mention "CAGE BIRDS."

READ HARD FACTS!

BOTH SLOWLY AND CAREFULLY.

Superior to any bought before.

Sebastopol, April 8th, 1907.—I thank you for the splendid bird you have sent me. It arrived early Saturday morning. Its quality is superior to any bird I have bought before. I am more than satisfied, and will recommend you to my friends.—G. Forrester, to W. Rudd.

Better than I expected for the money.

5, Taunton-rd., Lee, Kent, April 10th, 1907.—I received the hen Canary safely this morning. It is better than I expected for the money.—H. Gray, to W. Rudd.

H.M. Prison, Sligo, April 10th, 1907.—I beg to acknowledge safe arrival of Canaries, for which I am exceedingly obliged. They are splendid birds. I could not have done better had I selected them myself.—O. T. Lloyd, to W. Rudd.

A Topper.

New Market Hotel, Launceston, April 9th, 1907.—The Roller arrived safe, and I am pleased to say he is a topper.—J. Gloyn, to W. Rudd.

Largest ever seen.

Dyke Head, Nenthead, nr. Alston, Cumberland, April 9th, 1907.—The Bullfinch arrived safe, and I am well pleased with it. It is a grand bird, and the largest I have ever seen. I think it well worth the money.—J. H. Rutherford, to W. Rudd.

I am sure no one should have cause to doubt your anxiety to please your customers.

Newcastle-on-Tyne, April 11th, 1907.—I must thank you for your prompt attention in sending the two hens. They arrived safely, and I am delighted with them. I am sure no one should have cause to doubt your anxiety to please your clients. Had I visited your place I could not have selected two finer birds. They are mating and nesting.—M.E., to W. Rudd.

See W. Rudd's Advertisements under other headlines.

Remember, I send fully **Extended Price List free.** Unlike many imitations of this List, **it is genuine,** because I possess the birds there mentioned and **challenge denial.** They can be seen, not on paper but in reality, as I do not stoop to such tactics.

NOTE.—For **three stamps** I will send my **Amateurs' Guide and Breeders' Handy Diary,** containing over **250 Illustrations.**

All Amateurs should try my Special Matched Pairs of Prize-bred Norwich Plainheads at 12/6, 15/-, and 20/-. Crested ditto, 15/-, 20/-, 25/- and 30/-. Yorkshires, 12/6, 15/-, 20/-. Ready for immediate breeding.

FEEDING HENS PROPER, 3/-, 3/6.

Travelling Cages, 3d. extra.

"EGGERTINE."

It is the best, purest, and greatest bone and muscle forming food ever known, as the analytical reports of most eminent authorities prove. It will bring hens into sound and robust condition for breeding as nothing else will. This during the past twenty years has been proved by thousands. It is a genuine egg food made with fresh laid English eggs, with white, of course, included (and NOT foreign preserved yolk of egg) with other valuable properties combined. Tins, post free, **1s. 3d.**; large size, **2s. 6d.** There is a saving in the larger size.

"ASTHMARINE."

This remedy has the largest sale of any similar article by far. Beware of imitations! For all lung affections it is marvellously efficacious not a liver burner, but both soothing and healing, 9d. and 2s. 6d. per bottle, post free. Once used, always kept ready for any sudden attack.

After the stress of the Show Season your birds naturally require a pick-me-up. There is nothing in the Bird World that can compare with RUDD'S

CELEBRATED TONIC DROPS,

The Most Invigorating Preparation on the Market.

W. RUDD,

THE Bird Specialist,

NORWICH.

Telegrams—"CANARIES, NORWICH."

West Riding Aviaries, Castleford.

BOOKLET FREE.

FINEST Talking Parrots. I only deal in Parrots that will make first-class talkers; no rubbish. I am willing at all times to send my Parrots on four weeks' trial and three months' talking guarantee. Why? Because all my Parrots are young, strong, and reliable. My lifetime has been spent among grey Parrots, both at home and abroad. I guarantee every customer every satisfaction. Grey Parrots are my special fancy. I have trained them, know their wants, and can give every purchaser a bird that will please him in every way. I can supply grey talkers, not thinkers, that will say almost anything, at reasonable prices. Before you purchase a grey or green Parrot, send for my Booklet, entitled "Talking Parrots." All my birds are sent on four weeks' trial, at my risk. Send postcard for catalogue.—Mrs. Forster, Princes Park Aviaries, Violet Street, Liverpool.

PARROTS! PARROTS!

The largest wholesale place in the world for these splendid birds. Dealers and Hawkers supplied. Also Parrot cages. Send for prices and particulars to Wright's Menagerie, Park-rd., Liverpool.

PARROT LOVERS

Should send post-card immediately for our new enlarged book entitled "Parrot Prattle" (registered copyright, infringers and imitators will be proceeded against). This book contains 120 pages of very interesting facts, and gives valuable advice and hints to all parrot buyers. Full details of our original system of selling Parrots on four week's trial, at our risk, which we were the first to introduce. We sell Parrots of all descriptions on four weeks' trial, at our risk, before settlement. Cheapest and best in the Kingdom, and any Parrot sold by us, and not giving full satisfaction, will be exchanged any time within twelve months. Remember we lead and others try to follow. Write to other dealers as well as us, and judge for yourselves. Lists of Parrots for sale and above book post free on receipt of postcard.

PARROT AVIARIES, MORECAMBE.

I wager £25 that I have wired more husks than any other person living. Has any other maker, however large, sufficient pluck to accept and deposit with editor? My selected **"Improved Secure" Husks** are really and absolutely unbreakable; they have stood the "wonderful" test of 16 years—not six months. Competition always increases their popularity, and still they remain unequalled. Don't be gulled by any paper puff, but listen what experts say:—CAGE BIRDS says they are "far superior to the old husks." "Feathered World" says: "Undoubtedly, the new husks are very superior to the old." Again "Exchange and Mart" says: "Those prepared by Mr. Harper are very superior to the old style, which often fall to pieces at the most critical time, with disastrous results for the nestlings. You had better order the improved form; even if it is a little dearer than the old-fashioned sort, it is cheaper in the long run." "Fur and Feather" tells its correspondents: "They have distinct advantages over the old sort." "Poultry" has said: "For Budgerigars we advise the use of the improved style of husks." Surely these are convincing testimonials. They are **4/6** dozen; smaller quantities, **5d.** each. Interesting pamphlet, entitled "Budgerigar Breeding," free on application. Superior box nests for Cockatiels, etc., **1/6**. Send for the pamphlet now.

HARPER, Upper Villiers Street, WOLVERHAMPTON.

Taylor elected members.

D. JEREMY, Sec.

"CAGE BIRDS" RECENT COMPETITIONS.

FINAL RESULTS.

In the first announcement concerning our recent competitions, we spoke of the quite extraordinary interest they had aroused, and of the phenomenal number of entries received. In two of the "tests of skill," it will be remembered, no competitor succeeded in giving the exact result, and this has necessitated considerable delay in announcing the winners, owing to the task of going through the heaps of papers and coupons being of such a formidable nature, the necessity for carefully comparing every one of them adding to the difficulty. However, we have got through with it, and have pleasure in announcing the winners.

Hybrid Guessing Competition.

Mr. Norman's nomenclature of the specimens depicted in our plate was, it may be as well to state once more, as follows:—

1, Greenfinch-Bullfinch; 2, Siskin-Greenfinch; 3, Linnet-Canary; 4, Siskin-Canary; 5, Greenfinch-Canary; 6, Goldfinch-Siskin.

The reader getting nearest to the correct solution proves to be a lady:

MISS JANET JOHNSTONE,
Helenlea,
Wallace-street,
Grangemouth,
Stirlingshire,

who made but one slip, and therefore becomes entitled to the half-guinea prize. No. 2 she named a Goldfinch-Greenfinch; a near thing to being absolutely correct.

Three other readers follow closely behind, with two mistakes each. These are Mr. E. Smith (Downham), who made No. 1 Canary-Bullie, and No. 2 Goldfinch-Greenie; Mr. S. L. Cocks (Peterboro') with No. 3 Linnet-Bullfinch and No. 4 Redpoll-Siskin; Mr. T. O'Sullivan (Cork), with No. 2 Goldfinch-Greenfinch and No. 3 Linnet-Greenfinch.

Many Parents.

An interesting side to this competition was the remarkable variety of parents attributed to almost every one of the Hybrids depicted. Thus No. 1 (Greenfinch-Bullfinch) became variously a Canary, Siskin, Linnet and Goldfinch-Bullfinch and Greenfinch-Canary. No. 2 (Siskin-Greenfinch) was given as Goldfinch-Greenfinch, Bullfinch, Linnet, and Canary, Siskin-Goldfinch, Goldfinch-Bullfinch, Siskin-Bullfinch, Goldie-Redpoll and Siskin-Twite. No. 3 (Linnet-Canary) some thought a Linnet-Bullfinch, Goldfinch and Greenfinch-Linnet, Siskin-Greenfinch, Canary and Linnet, Linnet-Greenfinch, and Redpoll-Bullfinch. No. 4 (Siskin-Canary) was written down a Siskin-Linnet, Goldfinch-Redpoll, Redpoll-Siskin, Goldfinch-Greenfinch, Goldfinch-Chaffinch, Siskin-Goldfinch and Greenfinch, Twite-Siskin, Redpoll-Canary and Chaffinch-Canary. No. 5 (Greenfinch-Canary) changed to a Goldfinch-Bullfinch and Greenfinch, Greenie-Bullie and Linnet, Siskin-Greenfinch, Linnet-Bullie, Greenfinch-Chaffinch, and Greenfinch-Redpoll. No. 6 (Goldfinch-Siskin) was re-christened Goldfinch-Linnet, Canary and Greenfinch, Siskin-Canary and Goldfinch-Bullfinch.

Rhyming Competition.

THE WINNING RHYME.

The Owl, with keen inspection, views
CAGE BIRDS—so full of birdy news,
With free advice and ready plan
To help the perplexed birdy man.

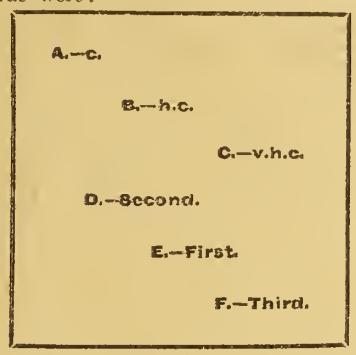
Thus spake the Owl: "From fledgling small
Thou hast most quickly out-grown all
Thy kith and kin; so shalt thou soar
Supreme from now for evermore."

H. C. FARMERY, 252, Water Street,
Accrington, Lancs.

A selection of other rhymes will be given next week.

The "Blaze of Colour" Competition.

In the judging competition promoted in connection with the coloured plate, "A Blaze of Colour," which accompanied the Crystal Palace Show Number, the judge's awards were:—



First, E; second, D; third, F; vhc, C; hc, B; c, A.

The gentleman who "placed the cards" was that well-known judge and expert on the Norwich Plainhead Canary, Mr. J. H. Payne.

Reasons for Awards

The reasons for the placings are embodied in the following comments from him:—

The Judge's Reasons.

I have pleasure in acceding to your request to give my reasons for placing as I did the birds which were depicted on your recent coloured plate, "A Blaze of Colour." FIRST: I placed the six-pointed bird first, as I fully recognise the great difficulty there is in breeding a bird anything approaching it as regards marking. And apart from markings, it is of very good size and shape for a yellow. Its chief fault is that it is a bit long in the neck. SECOND: I put the Clear Buff second, on account of its good shape, short wings, and nicely rounded head. It is beautifully rounded in chest, and full just where it ought to be—that is, right in the front. THIRD: The uneven marked Buff I placed third, because of its shape and position. It stands well across the perch, has a good neck, and has the tail set as I like to see it—that is, straight away from the body. There is no suspicion of hinge-tail here. I think had this bird been highly coloured, it would have taken the place of the clear yellow (which I put vhc) in the estimation of a great many of the competitors. VHC: This, the clear yellow, was, I felt sure, the bird that would upset the calculations of a great many, and I feel equally sure that had this bird been put amongst the winners, there would have been a great many correct placings to chronicle. I dropped this bird to the "carded division," because he has, in my opinion, several bad points, and is made what I call a "good flat catcher" solely by his high colour. Firstly, he is far too long in head, and he has a decided "roach" or wheel back. His legs are not set far enough back, which makes him appear long in the waist, and the wings at the butts are too low set, which makes them appear slipping away from the shoulders. Take the high colour away, and then he would appear quite a different looking bird. HC and C: There is not much difference in the hc and the c birds, but I put the former in its position because I could see more of it than I could of the latter.

J. H. PAYNE.

The competitor who gets nearest to Mr. J. H. Payne's decisions is

MR. J. LOCKE,
21, Queen's Park,
Redfield,
St. George's,
Bristol,

and to this gentleman the prize of half-a-guinea will be forwarded. Mr. Locke reversed the positions of first and second birds, and placed all the remainder correctly. He was closely pressed by

MR. F. W. MARTIN,
M 2 Ward,
Berry Wood,
Northampton,

who, however, has the satisfaction of winning the one guinea prize for giving the reasons for his awards in the most explicit and at the same time accurate manner. The awarding of this special, we may say, was a source of much trouble, the best efforts from the literary point of view being so far out of it as regards the correctness of their decisions. Mr. Martin's paper reads as follows:—

In judging the six birds, I put E first, the even-marked, as it is very hard to get type quality and markings in combination, and I make him a grand bird all round. D second, the clear buff, as he is very level in type right through, and of beautiful quality, with perfect wing carriage, and a splendid tail. C, third, clear yellow, a bit too hollow at back of neck, and a little too round in back, also a little faulty in tail. F, very highly commended, because pale in colour, and might be a little fuller at back of neck, though very good in substance and quality. A, highly commended, very nice head and chest, but patchy in colour, and seems out of condition. B, commended, much too narrow.

F. W. MARTIN.

It will be seen that Mr. Martin places first and second correctly, but reverses both 3 and vhc, and hc, and c.

The decorative heading, "Reasons for Awards," used on this page, is a reproduction of a beautiful specimen of penmanship which accompanied the paper of Mr. C. H. Dring, of Enfield Lock, Middlesex.

Selection from Competitors' Comments.

FIRST—E.

Beautiful markings, same being hard to produce, rather deficient in neck, still a real good one.—Fails in shape.—Beaten in size, but a bonny bird.—All there for colour and quality, short wings and tail.—Bad type for a Norwich, more the Lizard type.—Too upright in carriage, nice beak.—Grand markings and shape, beautiful quality, hardly big enough.—Excellent type, quality and position, fine markings and colour, a trifle small, or would have been my winner.—Body short and neat, back well filled in, good tail and wings, fine carriage, neck not quite filled in enough.—Fails in size.—Nice short bird, good flights and tail, fails size and colour.—Lovely specimen of this hard-to-breed variety.—Typical bird, losing a little in fulness of chest and head.—Grand shape for a markod bird, in life would be a handsome fellow.—Stands very badly, too much like the Yorkshire, or I should have put him first.—One of the best, perfect in markings, good short bird, rather small, or I should most undoubtedly have put him first.—Bonny bird, grand markings, just beaten in size, but not disgraced.—Wins on markings and general type.—Pinched in head and too upright.—Rare good bird, one must give an even-marked preference, especially such a grand yellow.—Fails in size and substance, head, and neck.—Too much like an enlarged Border Fancy.—Truly a most desirable bird.

SECOND—D.

Perfection, beautiful body, head, wings and tail.—Long in tail.—Tail short, close and well packed.—Clear win, splendid shape and size, well frosted, good head, neck and back.—A trifle longer than the clear yellow.—Rather too long.—Bad tail carriage spoils an otherwise good specimen.—Too upright in carriage, and long.—Hardly substance enough, good shape.—Too long in neck.—A grand typical specimen.—Head best of any, but neck too straight under bill, back too flat and body too long.—Back not well filled in.—Grand size, beautiful type, a model.—A true Norwich in every detail.—Much too long in the barrel for a Buff, and a trifle humpy at the shoulders.—Wins easily, perfect type and symmetry.—Good, typical bird, nicely over perch.—Very good, plump bird.—Nice head and lovely chest, but very weak at the backend.

THIRD—F.

A little slack at root of tail.—Fails in colour, good type all over, clean cut.—Good shape, if he had the head and neck of D, would be a beauty.—Typical bird, of good position.—Head too flat, neck too hollow, back too flat, body too long.—Loses in colour, probably a hen.—Nice fronted bird, of good quality and style.—Very typical in body, well balanced wings and tail.—Wants a little more rise of skull.—Lacks substance, and is long-sided.—Full, short neck, good chest and wings, fails only a little in head.—Nice, chubby, well-set bird, good body, head and neck, proper Bullfinch type, fails only in colour.—Rather shapely, but little slack in wing carriage.—Poor colour, but good chest and cleanly cut.—Good size and substance, good even colour, trifle long in barrel.

VHC—C.

An ideal specimen for the stock room.—Short, cobby, excellent colour, might have tail more closely packed.—Might have carried wings better, yet magnificent deep colour.—Very shapely, stands well on legs, grand, thick-set bird.—Hot one, very short and chubby, good quality, nice head, full, short neck, well cut away, short wings and tail, a topper.—Not the up-to-date type, and rather small.—Grand red-hot one, legs well set, short and compact body, splendid size, a gem.—Red-hot, cobby bird, easy winner.—Well across perch, not cobby enough. Best all round for type and quality, grand colour, ideal specimen.—Very short and chubby all over, but drops tail a bit.—Fails in head.—First for its chubby body, short tail and flights, and wonderful colour.—Has that great fault, a hinged tail.—Truly a "blaze of colour," only one fault, a little droop in the tail.—Extra short and thick-set for a yellow, nice short flights and tail.—Too browed.—A topper, hard to find fault with.

HC—B.

Good body and neck, flat on head, carries flights too high and tail too loose.—Tips of wings crossed, fish-tailed, evidently out of sorts. Stands badly, bit snaky on head.—High in wing carriage, and looks as though a tail feather is missing.—Not the right shape.—A few tail feathers to be drawn.—Bad in pose.—Head too small, neck too thin, body too long, wings and tail bad, chest too pointed.—Very nice bird, but too down on the perch.—A poor specimen altogether.—Good bird, though somewhat flat on head.—Nice round head, good body, stands well over perch, good quality and colour.—Too full in chest.

C—A.

Lovely tick on eye, lacks style, too much jumped up.—A bit horny.—A gem, lovely shape, head and neck.—A bit unsteady.—Rough in feather.—Grand even colour, grand head and neck, short, compact body, broad chest, lovely carriage, nice beak and feather, legs well set, wins nicely.—Head and beak badly proportioned, loose in feather, and drop-tailed.—Head nice and round, neck full and neat.—Too straight up.—I make this second, and losing to winner only in colour and closeness of feather.—Can't see enough of him.—Hardly the sort of head that commends itself.—What is he like behind?

Copies of the plate in question may be had on receipt of a sixpenny postal order.

FANCIERS' FESTIVITIES.

BOURNEMOUTH C.B.A.

Successful Annual Dinner.

The Bournemouth C.B.A. held their second annual dinner on April 12th at the Quadrant Restaurant, and the function proved in every way a great success, a most enjoyable time being spent by all. Dr. J. A. Hosker, J.P., presided over a company which numbered nearly fifty, including, among others, Messrs. W. Chapman, J. E. Cole, Pratt, Burton, Holder, Parsons, Stonley, Botterill, H. J. Bailey, J. A. Crawshaw, Brooke, Earp, G. W. Jones, and E. Leech (Secretary), and Mrs. Joseph.

The Chairman, in proposing "The Bournemouth and District Cage Bird Association," said there was nothing that tended to give one pleasure more than the propagation of some hobby, whether it was the hobby of breeding and keeping cage birds or keeping dogs, a hobby in which he took the greatest pleasure. There was undoubtedly a large amount of pleasure to be got—the pleasure of anticipation, as one looked forward to producing something that had never been seen before, and one felt they were doing some good in the world for creation when they were looking after the lower animals. Cage birds had a way of showing their affection, and he was sure his Canary was pleased to see him when he got downstairs every morning. He had the greatest sympathy for anyone whose chords were not touched in that direction. The Bournemouth Society was doing a great deal of good, and was prospering more and more, and he believed the townspeople would do all they could to encourage the members of the Society in making it one of the most successful in the South of England. He was delighted to hear that they had secured the Winter Gardens for this year's show, and that they were determined to offer such prizes as would attract exhibits from all over the country. They could not secure such exhibits unless they offered adequate prizes, and he hoped the townspeople would back up the Society in that respect. In proposing the toast he wished the Society the success it deserved. They had most enthusiastic officers, who were anxious to do anything to promote its welfare. At the exhibition last year one member who had won the cup by a mistake was the first to admit the mistake, and in a sportsmanlike spirit handed over the cup to the lawful winner. That was the spirit that should pervade any society—strive their utmost to win, but do all they possibly could to win fairly. Dr. Hosker referred to the services rendered by Mr. Brooke (Chairman of Committee), whose name he coupled with the toast.

Mr. Brooke, in reply, gave a review of the progress of the Society. The Association was founded in 1890, and was therefore nearly 17 years old. It had met with many palmy days, and had also met with adversity. Last year they had only a balance of 4s. 3d., but after the exhibition that was turned into a balance of over £7, and he hoped the balance of £15, which was reached a year or two ago, would soon be surpassed.

Mr. Crawshaw proposed "The Visitors," and the toast was responded to by Messrs. Chapman and Pratt. The remaining toast was "The Chairman," proposed by Mr. Cole. During the evening a number of songs were contributed, and the programme was taken part in by members of the Municipal Orchestra. Mr. W. Pardy acted as accompanist.

LIVERPOOL BIRD BREEDERS.

Held at the Star and Garter Hotel, Liverpool, on March 26th. Mr. S. Hadwin presided. A goodly number of fanciers, their wives and friends, sat down to a beautifully-served repast, after which toasts and songs succeeded each other in quick and enjoyable succession. "The King," proposed by the chairman, was responded to by the company singing "God save the King." "The Liverpool Bird Breeders," proposed by Mr. Metcalfe, and replied to by Mr. Barrett; "The Green Canary Association," proposed by Mr. Handley, and replied to by Mr. S. Hadwin; "The Ladies," proposed by Mr. Daniels, and facetiously replied to by Mr. S. Hadwin; "The Visitors and Artistes," proposed by Mr. Nimmo, and replied to by Mr. Graham with a soug. During the evening the presentation took place of the prizes given in connection with the Green Canary Association's season's competition. The President, in making the presentations, heartily congratulated the different winners, and promised an extended competition for the following year. Mr. Ryno very feelingly replied to the toast of "The Prize Winners," and gave great credit to Mrs. Ryno for the help she had given him during the year. Songs were rendered in a highly creditable manner by the following artistes:—"Ain't it a pity I have to die," Joe Ray; "How dare you?" J. Schofield; "Seaweed," Mr. Morcland; "Tobermory," J. Graham; "Billy Muggins," Mr. Bennett; "The Bandolero," Mr. Cooke; "A Dream," Dan Ray; "The old armchair," Mr. Ryno; "I love a Lassie," Mr. Graham; "A Society idol," Mr. Schofield; "Gallery and Boxes," Dan Ray; "I see you've got your old brown hat on," Mr. Bennett; "Till death I love you," Mr. Cooke. Amongst the company we noticed Messrs. Braithwaite, Dixon, Doughty, Daniels, Hillman, Bretherton, Irwin, Rawlands, A. Thompson, W. Thompson, Deacon, Stewart, Benson, Hawkins, Slater, Beaty, Mr. and Mrs. Barratt, Mr. and Mrs. Ryno, Mr. and Mrs. Nimmo, Mr. and Mrs. Davies, Mr. and Mrs. Metcalfe, Mr. and Mrs. Handley, Mr. and Mrs. McMurtey, Mr. and Mrs. Brotherton, Master Ryno, Mr. Hadwin, Miss Hadwin (niece), and Miss Harding, and several others whose names we did not catch.—HADWIN and BARRATT, Secs.

WIBSEY & DIS. C.B.S.

The above society held a successful Beast Heart supper and social evening on April 6th. Twenty to thirty persons sat down to supper, which was catered for by the landlord of headquarters (Mr. Gent Ormondroyd), and full justice was done to the fare provided. During the evening songs and duets were rendered by Messrs. W. Chapman, H. Bairstow, S. Foster, W. Norton, H. and J. Taylor, and also two comic songs, entitled "Towser" and "Gathering Coals in Thornton Road," by the well-known Wibsey humourist, Mr. Smith Pearson. A very pleasant evening was brought to a close by a vote of thanks to the host and hostess.—E. W. JOHNSON, Sec.

THE AMALGAMATED YORKS. O.S.

The smoking concert on April 6th proved most enjoyable, and was a decided success. The President, Mr. J. Townend, occupied the chair most ably. The opening item was a duet on the piano and violin, by Messrs. Hudson Bros., and the great applause of the company testified to the excellence of the rendering. Mr. Willock sang with good effect his favourite song, "The Moss-grown Well." Mr. Townend, the chairman, who is well known as an elocutionist of repute, gave "Sarah at the Play," which was productive of much mirth and hilarity. A song, "The Trumpeter," by Mr. H. Pollard, was excellently rendered, as was "Will-o'-the-Wisp" by Mr. W. Northrop, both gentlemen coming in for rounds of applause. Messrs. Hudson Bros. had now the attention of the company with another duet on piano and violin, then came a cornet solo by Mr. P. Stansfield, followed by Mr. W. Northrop's speciality, "The Admiral's Broom," all the performers being in the good graces of the company. At this juncture the chairman presented to Mr. Hammond the splendid brass timepiece subscribed for by the societies and friends of the late A.Y.O.S. in grateful recognition of his valuable services in the position of secretary during the two years of its existence. Mr. Townend was loud in his praise of the capabilities of Mr. Hammond, and of the excellent manner in which he had conducted the business of the society. Mr. Hammond, in accepting the gift, expressed his greatest thanks to the societies and friends for their kindness in providing such a handsome present, which he said would always remind him of the many friends he made during his term of office. After Mr. Hammond's speech Mr. H. Pollard gave a song entitled "The Star of the Desert," Mr. Hammond next rendering "Ora Pro Nobis," followed by Mr. Townend reciting "The Game of Life"; and then Messrs. Hudson Bros. brought the musical programme to a close with an overture on piano and violin, all the items being well received. Mr. J. S. Clarkson proposed, and Mr. W. A. Cowgill seconded, a vote of thanks to the chairman, artistes, and the committee for the very enjoyable evening which had been provided for the company. Mr. Townend responded, and brought to a close one of the most enjoyable evenings it was possible to have.—S. DEAN.

LANCASHIRE AND LIZARD F.A.

Saturday night, April 6th, was set apart by the above association as a social one, and indeed it was, when a large number of members and friends, including the fair sex, wended their way to the Spinners' Hotel, Shaw Road, Oldham, to partake of a splendid dinner, which was well catered for by the host and hostess, Mr. and Mrs. J. Riley. After dinner Mr. Baker obliged us with a few selections on the Phonograph. Then a short business meeting was held, which included several applications from shows for our patronage, the same being left over until the next meeting. Next came a very important part of the evening's functions—viz., the presentation of the silver cups and gold medals, which were greatly admired, as were the two beautiful cards, nicely adorned with the name of the Association and those of the winners of the cups for 1906-7. Mr. Baker made the presentations in a masterly way to Mr. John Garner, the winner of the Lancashire cup, and Mr. John Rukin, the winner of the Lizard cup, and these gentlemen responded in an able manner. The cups are valued at six guincas each, and are well worth fighting for. Mr. John Vickers was the runner-up for the Lancashire cup, and Mr. John Hamer the runner-up for the Lizard cup. Next came the presentation of the gold medals by our President, Mr. John Garner, who spoke in high praise of the winners of these medals. He hoped before long we should be able to give cups to the novice as well as the champions, and which can be done if Lancashire and Lizard fanciers will only rally round us. He then presented to Mr. L. Haslam the Lancashire gold medal, and Mr. Wm. Lawton that for Lizards, and these gentlemen responded. Mr. Lawton now ceases to be a novice. Good luck to him, and may he have the good fortune to be near the final for the cup next year! Mr. Baker now gave us a few more selections, and the ladies obliged with a little of their talent. Mr. Garner here rose and said he was very sorry to hear of the loss the L. and L.F.A. were sustaining in the departure of one of their best members, Mr. J. H. Booth, for Canada. Mr. Garner spoke very feelingly, and wished Mr. Booth much success and a pleasant voyage. Mr. Ben Buckley seconded with a few choice remarks. Mr. Booth said he was sorry to leave the L. and L.F.A., but he was going to no strange land, having gone over it beforetimes, and concluding by saying that he hoped to be among us again. The rest of the evening was spent in an enjoyable way, Mr. Baker's Phono. being a big success, and catered well for dancing. Let us hope that these gatherings will be annual, and preserve a good spirit among the Lancashire and Lizard fanciers, as was the case on Saturday night.—H. OLIVER, Sec.

THE SHOWS.

SWINTON.

The ninth annual show was held in the Congregational Schoolroom on Easter Monday. The entry in the Canary section was very poor indeed, but there was quite a good number of Britishers staged. The Show was opened by Mr. J. W. Hattersley. The thanks of exhibitors are due to Messrs. J. T. Murfin and F. Jackson, both real good workers for the Fancy; while the stewards did their work splendidly. Mr. W. Brotherton, of Rotherham, judged, and his awards were well received.

YORKS. COCK: 1, Wainwright, good colour and length, nice legs and head, but crossed wings at times; 2, Green, splendid type, close as boxwood, stands up to his work well, but beaten in colour; 3, Humphreys, very stylish, had one bad wing, or would have won; 4, Lockwood, very long, a grand stock bird. NOR. COCKS: 1, Hinchcliffe, the old winner, but not at his best; 2, Peplow, nice short-set body, good wings and legs, but the head was patchy; 3, Lockwood, good head and body, a bit thin in neck. GREENFINCH, SISKIN, ETC.: 1, Humphreys, very nice Linnet, stands like a top; 2, vhc, Wainwright, real gem of a Greenfinch, the best I have ever seen in a cage; 3, Lockwood; 4, Pogmore; hc, Axe. BRITISH HARDBILL: 1, Pogmore, a Goldfinch, a real topper, as pretty as paint; 2, Axe, Yellowhammer, splendid type and feather, but the legs have got too thick; 3, Axe, Hawfinch, few feathers out of each side of breast; 4, Lockwood. SOFTBILL: 1, Axe, Thrush, looking splendid, in the pink of condition; 2, Milne, Whitethroat, a real little gem; 3, Bescoby, Redwing, in grand condition; vhc, Milne, Waxwing, had been bathing or would have held his own with most of them. MULE OR HYBRID: 1, Wainwright, a sweet Mule, slightly ticked, a grand bird, should keep himself this summer and leave a bit for the master; 2, Green, another nice Mule; 3, Humphreys, dark Goldfinch Mule; 4, Green, Siskin-Canary Mule.

CITY AND SUBURBAN A.C.B.

Annual Finch Show held at Headquarters, the Church Institute, Marylebone, on April 8th, when a splendid total of 123 birds faced the judge, Mr. C. Prior. The birds were well staged, and previous to Mr. Prior commencing his duties, many of the members took part in a judging competition, the result of which will be made known as soon as the Secretary has had an opportunity of comparing the members' papers with the judging slips. There were some good birds on view, many well-known winners during the past show season doing battle. Mr. F. Vincent's Goldfinch looked very fit and secured 1st and special in its class. Mr. Francis's well-known Hawfinch won easily, and also secured the special for best bird in the show. The Bullfinch classes—both cock and hen—brought out some good birds. Miss Brain's winning Bullie struck us as being an exceptionally nice rich coloured bird. The Bunting class was a most representative collection, containing the Yellow, Snow, Cirl, Corn, Ortolan and Reed Buntings. The judge awarded 3rd prize to the Ortolan Bunting, usually regarded as a "wooden-cage" migrant; the bird was in capital form and a good specimen. The Linnet class contained some very nicely pencilled birds, while the Siskin, Redpoll or Twite class was well filled—19 birds competing—Mr. Turnher winning with a very large Twite, the same exhibitor winning also in the Greenfinch class with a good sound coloured Finch, while Mr. Rouse took second place with another rich coloured bird. The A.O.S. Hen class had six species represented, Mr. Curry winning with a nice hen Linnet, well pencilled and in good order. The time proved all too short to allow visitors much opportunity of comparing the respective prize winners. GOLDFINCH (C.M.) (16): 1, spl, Vincent; 2, vhc, hc, Martin; 3, c, Curry. GOLDFINCH (NOT C.M.) (19): 1, Rouse; 2, Thorpe; 3, Martin; vhc, Porter; hc, Lathleiff; c, Morrison. BULLFINCH (CK.) (8): 1, Miss Brain; 2, Rouse; 3, Potter; vhc, Easterling; hc, Wyse; c, Curry. HEN (13): 1, vhc, Lathleiff; 2, Rouse; 3, Martin; hc, Morrison; c, Turnher. LINNET (C.M.) (12): 1, Francis; 2, Kelly; 3, vhc, Wyse; hc, Morrison; c, Miss Shephard. LINNET (NOT C.M.) (2): 1, Curry; 2, Wyse. GREENFINCH (8): 1, Turnher; 2, Rouse; 3, Morrison; vhc, Curry; hc, Miss Brain; c, Allen. SISKIN, ETC. (19): 1, 3, Turnher (Twites); 2, Easterliug; vhc, Miss Brain; hc, Morrison; c, Miss Shephard. A.O.S. FINCH (9): 1, two spls, Francis (Hawfinch); 2, Curry; 3, Rouse; vhc, Miss Shephard; hc, Miss Brain; c, Thorpe. BUNTING (9): 1, (Corn), 2 (Reed), vhc, Wynn; 3, Francis (Ortolan); hc, Turnber (Reed); c, Rouse. A.O.S. HEN: 1, Curry; 2, 3, Morrison; vhc, Miss Shephard; hc, Miss Brain; c, Thorpe.

SINGING CONTESTS.

BRADFORD.

Contest held at Bradford, 12 Linnets competed. C. Tarlton awarded prizes :—1, Morrell, 2, Smith, 3, Burton, 4, Simmonds.—A. MARK, Sec.

BARNSLEY.

There was a fair attendance at the Lark Sing at the Cherry Tree on April 1st; eleven birds entered for seven minutes' sing. Result:—1, Scamp, 5.54; 2, Stott, 5.51; 3, Allot, 5.30; 4, Brushey, 5.3.

WEST HOUGHTON.

Open Lark singing contest at Victoria Inn, Market-street, West Houghton, on April 27th. The proprietress will give £1 towards prizes, to an entrance fee of 1/6 each bird, 6d. returned in refreshments, three minutes staging, fifteen miuutes singing. First bird staged at two o'clock. There will also be a special prize for the handsomest bird that competes.—ADVT.

WARRINGTON.

Contest at Alexandra Vaults, April 13th. Thirty-four of the best birds of Warrington, Swinton and Leigh competed for five good prizes, given by Mr. R. Thompson. The birds were in splendid order, and we had some of the finest time singing ever beard in Warrington. These birds were allowed half a minute to face, singing not to count, and 6½ to sing. 1st, Statham, 139 seconds; 2nd, Armitage, 131; 3rd, Tryner, 84; 4th, Stanway, 73; 5th, Leah, 70; The judges were Messrs. T. Crawford and J. Ball; timekeeper, Mr. H. Holbrook.—G. TRYNER, Hon. Sec.

SHEFFIELD.

Contest held, April 14th, before a large company. Twenty-nine birds competed for three good prizes at the Shrewsbury Hotel, Park, Sheffield. 1st, Robinson; 2nd and 3rd, Soldier Jack.

LEEDS.

A grand Linnet Singing Contest was held at the Fisherman's Hut Hotel, Ellerby Lane, April 1st, when 22 of the best birds in Yorkshire competed for six prizes, to value of £3, given by Mr. C. Tobin. 1, 2, 4, 5, 6, Allen; 3, W. Lacey. Judges, Jackson, Towers, and Naylor. Our next contest takes place on April 20th.—G. COCKROFT, Sec.

Usual week-end match, at Skinners Arms, Buslingthorpe Lane, on April 7th, when eleven birds competed for three good prizes. Result:—1st, Galley; Reed and Galley shared 2nd and 3rd. Judges, T. Somers, and C. Hunt. April 14th, fifteen birds competed. 1st, Galley; 2nd, Reed; 3rd, Kirk. Judges, F. Raper and J. Grainger.—C. HUNT, Sec.

The Prince Albert Inn Linnet Association, Newtown, met on March 31st to compete for three good prizes, given by Mr. J. R. Saynor. There was a good attendance of visitors. Fifteen previous winners competed. Judges, J. Binner and G. Towers; timekeeper, B. Jackson. Result:—1st, Allen; 2nd, Thompsou; 3rd, Dean. Contest held April 7th, there was a good entry to compete for three good prizes, given by Mr. Sayner. Judges in this contest were: J. Chippendale and S. Green. Result:—1st, 2nd, 3rd, Allen.—E. WOOD, Hon. Sec.

Contest took place at the King's Head, April 13th, when 16 selected birds competed for three prizes given by Mr. J. Booth. There was a large attendance of visitors and members. 1st, Hardcastle, 2nd, Hayes, 3rd, Harrold. Judges:—J. Melia, T. Summers, and W. Naylor. On Sunday 29 birds competed for four prizes. The room was literally packed with visitors. 1st, Whittaker, 2nd. Hoban, 3rd. Stead, 4th, Naylor. Mr. J. Booth purchased the winner for £3 10s., and is open to match his bird to sing any bird in Yorkshire. The bird, which is a champion of champions, can be heard any time at the Old King's Head.—J. MELIA, Hon. Sec.

Our big match, at the Skinners' Arms, Buslingthorpe Lane, on Easter Tuesday, proved a great success, as 32 of the best Linnets in Leeds competed for four good prizes before fanciers from all parts of Yorkshire, who were highly delighted with the singing, as every bird was in splendid condition, and gave the judges many anxious moments to separate them. The singing of the winners was worth going a long way to hear, as they ran note after note in grand style, and will take beating. Judges, T. Crane and G. Towers. Timekeeper, C. Whitaker. 1, J. Clark; 2, H. Galley; 3, T. Stead; 4, A. Hodgson. Usual week-end contest held March 31st, when 16 birds competed. Judges, T. Somers and C. Whitaker. 1, F. Galley; 2, J. Clark; 3, G. Reed.—C. HUNT, Sec.

GREEN CANARY ASSOCIATION.

Annual Report.

The appeal to members for cash specials did not meet with the response of previous years; this is to be regretted, as these specials do a lot towards encouraging exhibitors, and popularising the variety. The Champion Cup has been won by Mr. Ryno two years in succession, so now becomes his property. The fight for the Cup at the commencement was very keen, but eventually Messrs. Ryno and Thompson sorted themselves out from the rest and a straight run home ensued, each side gaining and losing in turn until at the last hurdle at the Palace the old veteran gained the verdict by one point. The competition for the Novice medals at the start looked very uninteresting, Mr. Martin practically being the only starter, but he was not allowed to complete the journey alone, several others joined in at the next turn, but towards the finish it became a question of Martin or Deacon, Mr. Martin just holding his own to the end of a most exciting but pleasant contest. The contest for the cash specials was not so good as usual, those born fighters Messrs. Wardale and Metcalfe dropping out about half way spoiled what promised to be a fine race. Generally speaking, good numbers have turned out at the patronage shows, and prospects for next year are distinctly good, especially in the Yorkshire section. There is room for a great improvement in the number of Norwich Green fanciers. There is a fairly good increase in membership. The Club shows have been good, especially, the Old Show which was a record in every respect. Our financial position was never better, although the balance in hand—18s. 10d.—is less than last year, caused by the exceptional expenditure voted from time to time. We very much regret the disqualifications which took place at Liverpool and the Palace, yet we hope the very large amount of rebutting evidence which we placed before Mr. Ramsden will have the desired effect and lead to the perfect clearance of the characters of Messrs. Clayton and Stewart. These gentlemen must be gratified at the vote of confidence unanimously passed by their fellow members. In conclusion, gentlemen, we would again remind you that it is not advisable to stand still. Our position is good, but it can be made better, and until the Green Canary is "The Bird" in every town and village in the country we are not even nearing the end.

J. W. METCALFE, Chairman.
S. HADWIN, Secretary.

CLUB REPORTS.

ADMIRAL DUNCAN (NOTTS.) O.S.

Owing to the resignation of our Secretary, Mr. T. Whyler, a general meeting was held on April 6th, Mr. J. Bowes presiding. There was a good muster of members, and Mr. W. Healey (who has previously held the office) was unanimously elected as secretary. Afterwards a discussion took place respecting the schedule for First Feather Show on July 6th, and judge nominated for same.—WM. HEALEY, Sec.

DARLINGTON C.B.S.

Show held April 3rd, when three classes for British birds were judged by Mr. E. Brunskill, as the gentlemen nominated were unable to be present. GOLD. OR BULLFINCH: 1, P. M. Carter; 2, H. Carter; 3, Todd and Son; 4, Reeks; vhc, Raine. LINNET, SISKIN, ETC.: 1, Moss; 2, H. Carter; 3, 4, vhc, hc, Todd and Son. A.O.V.: 1, Reeks; 2, P. M. Carter; 3, vhc, Todd and Son; 4, Moss.—E. BRUNSKILL, Sec.

ATTERCLIFFE C.B.S.

A large number of members and friends met at the Horse and Jockey Hotel to hear Mr. Taylor lecture on the Norwich Green. The subject proved to be very interesting, Mr. Taylor dealing with it in a very able manner, many valuable hints being picked up by our members. At the end of the lecture the Chairman, Mr. Perry, asked for questions. There were a lot, and Mr. Taylor answered them to everybody's satisfaction, much valuable information being obtained from them. The Chairman moved a hearty vote of thanks to Mr. Taylor, which was carried unanimously.

W. RICHINSON, Sec.

CITY OF WAKEFIELD O.S.

Meeting at Victoria Café, April 9th. Mr. Sam Sheard in the chair. Mr. Isherwood at our last meeting gave a most instructive paper on British Finches. Our Vice-chairman, Mr. S. H. Ellis followed this evening with a bright and witty paper on "Foreign Birds I Have Kept." It was decided to hold an Open Show on Nov. 5th and 6th at the Corn Exchange, Wakefield. Mr. J. C. Barnes, of Sheffield, was appointed judge. Being a new Society and therefore unknown the members agreed to subscribe £30 towards the expenses of the Show, to ensure it being an unqualified success.

ARMISWOOD and KEELEY, Secs.

BOLTON AND DIS. PROGRESSIVE C.B.S.

Meeting held in the Olinda Cafe, when Mr. W. A. Bladon, Manchester, delivered a very interesting lecture on "The Management of the Bird Room, which was listened to very attentively by all present. A hearty vote of thanks was unanimously accorded the lecturer at the close. Later in the evening one of the members (Mr. Allen) displayed a caseful of bird-room novelties and appliances, which created much attention. A vote of thanks to that gentleman for his kindness in bringing the novelties brought a very interesting meeting to a close.—JOHN W. BANCROFT, Hon. Sec.

SALE OPEN O.S.

Meetiug held April 5th. Charles Swettenham, Esq., was elected a vice-president, and Messrs. J. Gray and J. Dunning members. It was resolved that any person joining this society on or before June 1st next pay no entrance fee. Show of birds. Mr. Tom Harrison judged, and gave every satisfaction. GOLD, OR BULLFINCH: 1, 2, 3, Hurst; 4, Stanford. LINNET: 1, 3, Hurst; 2, Smith. GREENFINCH: 1, Whitney; 2, 3, Hurst; 4, Leigh; vhc, Smith. CHAFFINCH OR BRAMBLE: 1, Smith; 2, Whitney; 3, vhc, Plant; 4, Hurst. A.O.V. BRIT.: 1, 4, Hurst; 2, Whitney; 3, vhc, Smith. FOR.: 1, Smith; 2, Whitney. SELL., 12/6: 1, 2, Hardcastle. During the evening we were pleased to see so many visitors having a look over the exhibits, one and all being very enthusiastic about the future of the Society. Intending members please apply to G. F. HARDCASTLE, Hon. Sec., 63, Harley-road, Sale.

NATIONAL B.B.M.C.

Committee meeting, at Headquarters, March 28th. Present: Mr. Robson (chairman), Messrs. Silver, Dewhurst, Trower, Cooper, Maxwell, Goodchild, Plumbridge, and Carr. Letters were read from Messrs. Swaysland and Walsh re standing for provincial committee. A letter was read from Mr. R. J. Howe, suggesting that a form for exhibitors to count their own points for cups, medals, etc., be sent out at the commencement of each show season. It was unanimously agreed by the committee that this would be unworkable. Mr. Trower proposed. Mr. Dewhurst seconded, the following addition to rule 16:—"That any member nominating more than the specified number of birds in the respective sections shall have the whole of the exhibits disqualified for the cups." A letter was read from Mr. Tyson for the club's patronage for their forthcoming show; this was put back until July, when all applications will be dealt with. It was proposed that the Hon. Secs. approach the L.C.B.A. respecting holding a club show in conjunction with their annual show. Letters were read from Messrs. Fulljames, Swaysland, Weston, Walsh, Howe, and Hills respecting the classification of the Grossbill and Snow Bunting. A long discussion followed. Mr. Silver brought forward authentic statements by well-known up-to-date authorities, such as Messrs. Kearton, Bowdler Sharp, etc., of the Crossbill's nest and eggs frequently being found in Scotland and Ireland. On the Chairman putting the proposition for the Crosshill to be classed as a resident, five of the committee, and two who voted by proxy, were for, and one of the committee, and three who voted by proxy, were against. On the Chairman putting the proposition for the Snow Bunting to be classed as a resident, it found only one supporter. An amendment on the club's list of British birds was proposed by Mr. Dewhurst: "That the list be left open, with the exclusion of Hawks, Owls, and Ravens." This was seconded by Mr. Cooper. New members elected:—Miss Grace Ashford, Branksome Wood-road, Bournemouth, and Mr. J. Dobson, 14, East-road, N. A hearty vote of thanks to the Chairman concluded the meeting.—PLUMBRIDGE and CARR, Hon. Secs.

DEAL, WALMER AND DIS. F.A.

Annual meeting held in Clarence Hall, under the presidency of Cr. W. H. Redsull. The chairman heartily congratulated the members upon the success of the year's working, and upon the balance in hand, which was larger this year than last, being £9 19s. 4d. on an income of £54 16s. 7d. Their numbers now reached the total of 110 which, compared very favourably indeed with similar societies in the neighbourhood.

A pleasing ceremony was the presentation to Mr. W. A. Darracott, jun., on his retirement from the post of secretary, of a handsome dressing case. In making the presentation, Cr. Redsull spoke of the untiring lahours of Mr. Darracott. They all knew the vast amount of trouble he had taken in the early days of the association's existence, and the members thought they would like to present him with some memento of the time he had spent among them. He was pleased to hear that they would not be losing him entirely for some time yet, but he hoped that when he left Deal, he would carry with him pleasant recollections of the time spent among them.

Mr. Darracott, said words failed to express his thanks for the handsome present they had given him. He should always look back on the time he spent as one of their secretaries as one of the happiest times of his life. Of course, there had been the usual "ups and downs" inseparable from such an office, but on the whole things had gone on very harmoniously. As he expected to be in Deal for some time yet, he should endeavour to do his utmost to further the interests of the society.

Election of officers: Chairman, Cr. W. H. Redsull; Vice-chairman, Mr. A. Atkins; Treas., Cr. A. S. Taylor; Committee, Messrs. S. Baker, G. Bringer, T. Dixon, W. Lacy, C. R. Mowle, S. Smith, W. T. Stoate, W. T. Street, H. Thompson, S. Miller, W. A. Darracott, junr., W. Smith, W. J. Cavell, and Neeve; Hon. Secs., Messrs. M. N. Avis and W. H. Thompson.

Hearty vote of thanks was accorded Mrs. and Mr. Thompson for so generously allowing the use of Clarence Hall for their meetings. Considerable discussion took place with reference to whether the annual show should be thrown open to the whole of Kent or not. Poll was taken, when the narrow margin of six votes decided in favour of an open show. The chairman thought such a small majority was not decisive enough on such an important thing, and it was resolved that a special meeting should be held to come to a definite conclusion on the matter. October 9th and 10th were fixed as the dates.

METROPOLITAN A.C.M. AND H.B.

Meeting on April 11th. Messrs. C. Mabey, W. J. Honeysett, and F. Simmonds were elected members. Mrs. Lesless was nominated for membership. Mrs D. Mabey was nominated as Vice-President. Matters were discussed for the welfare of the Society.

A. J. HEAD, Hon. Sec.

SWINDON F. AND F.A.

Annual meeting held March 30th. The following officers were elected:—Committee: Messrs. Hill, Wallington, Barnes, Sprules, Patterson, Page, Wilkins, Simmons, and Reeves. Treas., Mr. Allsopp. Will other secretaries please note: Hon. Sec.'s, W. Northover and T. Watson, 154, Redcliff-street, to whom all communications should be sent?

CITY OF BIRMINGHAM C.B.S.

At a meeting, held April 3rd, a very instructive lecture on "Yorkshires" was delivered by Mr. A. Paddock. Four new members were elected, and three more nominated for election at the next monthly meeting. The annual Members' Nest Feather Show was fixed for Wednesday, 17th July, Mr. G. Russell, of this town, to judge. The meeting terminated with a hearty vote of thanks to the lecturer.—H. C. WILKINS, Hon. Sec.

READING AND DIS. C.B.S.

Meeting held in Palmer Hall, on April 3rd. It was decided to communicate with a few gentlemen re judge for show to be held end November or early in December next. Mr. G. Packwood gave a very interesting and able paper on "Management in the Bird Room." Considerable discussion ensued. The paper was very much appreciated, and Mr. Packwood was accorded a hearty vote of thanks for same. At next meeting, May 1st, Mr. Wooldridge will give an address on "My Experience as a Canary Breeder."—G. A. CHARLES, Sec.

LANCASTER AND DIS. C.B.S.

Meeting held April 6th, Mr. S. Mulliner in the chair. Show of British birds, Mr. T. Fisher judged. A few good specimens were staged. A judging competition followed. Mr. H. Capstick was the winner. Mr. Fisher then described the birds in the show, and the reason for the awards. Annual show business took up a great deal of time, a good number of the members not wishing to change the date, as we have practically had the same dates since the Society commenced. Preston O.S. have claimed our date, and it being at an easy distance from Lancaster we have decided on November 15th and 16th. Judge, Mr. R. Sutcliffe, Shipley. It is hoped members will turn up for the next meeting, on Wednesday, May 1st, at 7.30 p.m., as a great deal of business respecting the show is left undone.

H. J. BROWN, Hon. Sec.

BRADFORD (EAST) O.S.

Mr. W. A. Cowgill, of Girlington, gave a splendid lecture on the "Management of Canaries," before the members on April 9th. His remarks anent the successful breeding of Yorkshires were full of interest throughout, being a practical review of over twenty years' experience in breeding this variety. He described very minutely the various details through which a fancier has to plod in order to attain his object. Starting with the novice he touched upon nearly every phase of the subject, leading to a full-blown exhibitor. He said that many fanciers were not successful in breeding, because they did not study the individual habits of their birds, which vary considerably. He strongly advised running two hens with one cock, as it gives the breeder more scope to select the kind of hens most suitable to bring forward good results. He also said that novices as a rule were too apt to part with their best birds when offered a tempting price, largely to their own detriment. It was only by keeping the best for himself year by year to breed with, that a man was able to succeed in breeding exhibition specimens. The open-hearted manner in which Mr. Cowgill gave his lecture met with the general approval of those present, and a hearty vote of thanks was accorded to him for his effort. This is the last of a series of lectures given by prominent breeders, which have proved very interesting and instructive to the members. The meetings have been well attended, a good audience facing the lecturer on each occasion, and the Society feel grateful to these gentlemen who have so kindly come forward and helped us in the process of welding the members more closely together. Three new members were enrolled during the evening and the Society now stands with a membership of forty.—H. HILL, Sec.

WELSH CAGE BIRD CLUB.

Annual Meeting held at the Ship and Bell, Merthyr, on April 2nd. There was a good attendance of members, who displayed the go-ahead spirit which is characteristic of a Welshman and which is excelled by none. The club has had a record year, both in members' subscriptions and cash, as there is a nice little balance in hand to be carried forward. It shows signs of doing even better this year, the members being determined to make the club's influence felt in Wales. The chair was taken by Mr. T. L. Castree. Letters, apologising for non-attendance, were received from Messrs. J. R. Leech, D. A. S. Longden, R. W. Jones, D. Jenkins, and T. H. Melhuish, also a wire from Mr. R. Thomas. A vote of sympathy was proposed to Mr. J. B. Rees, on account of his mother's death; also to Mr. L. Hughes, upon the death of his sister. The committee invited Mr. J. R. Leech to present the medals and cash specials to the winners, but he wrote expressing his regret at being unable on account of previous arrangements. He said that he recognised the good work that the club was doing in Wales, and wished it every success. To assist it he enclosed a cheque for a handsome amount, giving the committee a free hand to use it as they thought fit. It was decided to purchase two cups, to be called the Leech Cups, which will be competed for amongst members. The Secretary was asked to write to Mr. Leech and thank him for his generosity. The following gentlemen were elected:—Dr. G. P. Francis, J.P., vice-president; Messrs. G. T. Jones, R. A. Mills, and S. Jones as members, all from Brecon. The accounts were audited and found correct hy Messrs. A. E. Jones and B. Davies, who commented on the satisfactory way the books had been kept and the balance-sheet made out. Several rules were amended. The deliberations of the committee were upheld hy the meeting. The Secretary read a letter which he received on October 16th from the Llanelly Poultry and Pigeon, Etc., Club, in which the Secretary said that they were joining the Cage Bird Union, and writing that night. The action of the committee in connection with this show was upheld, and no further notice will he taken of the matter. It was decided that all shows receiving our patronage shall agree to admit a delegate, who has been selected to visit the show, and he shall have free access to look after the interest of the members and the exhibits at such show. The committee was instructed to draw up a scheme for holding a Club Show and submit to a general meeting. A vote of thanks was proposed to the officers for their services during the year. The annual subscription remains the same, 2s. 6d. per year, and is now due.—D. H. TEDSTONE, Hon. Sec., 4, George Street, Brecon.

CREST AND NORWICH C.C. OF IRELAND.

A very successful meeting was held in the Avenue Hall, Belfast, on March 26th. About twenty new members joined the club, and paid their subscriptions. Members and fanciers please note our next meeting will he held in the same hall on April 23rd, at 8 p.m. A large attendance is earnestly requested.

JAS. STEWART, Hon. Sec.

359, Donegal-road, Belfast.

ALTRINCHAM C.B.S.

Meeting April 9th, at new headquarters, the Central Cafe, Stamford-street, Altrincham, and a very interesting evening was spent. Mr. T. Brennan introduced a discussion on "Pairing Up," illustrating his ideas with two pairs of Yorkshires. The subject was handled in a very able manner, and brought forward some good sound arguments. Almost every member in the room took part in the discussion. Two new members were made.—TOM HARRISON.

GREAT HORTON O.S.

Monthly show held April 13th. Judge, Mr. H. Kellett. Awards:—CL. OR TICK. YELL. YORKS.: 1, 2, Brayshaw and Jowett; 3, Self. BUFF: 1, Self; 2, Brayshaw and Jowett; 3, 4, Barraclough. UNEVEN MARKED YORKS.: 1, Self; 2, Dean. CINN. MARKED: 1, Self; 2, 3, Brayshaw and Jowett. NOV. CL. OR TICK. YELL. YORKS.: 1, Oliver; 2, Whittaker; 3, Kay; 4, Gudgeon. BUFF: 1, 2, Gelder; 3, Gudgeon; 4, Whittaker. UN. OR FOUL-MARKED CIN. YORKS.: 1, Gelder. A.V. BRIT.: 1, 3, Myers; 2, 4, Barraclough.

S. DEAN, Sec.

LEYTON AND DIS. C.B.A.

Meeting held at the Leyton Constitutional Club, April 8th. Mr. J. Robson lectured on the "Breeding of Canaries etc." An abundance of questions were asked and admirably answered by Mr. Robson, to the satisfaction of every one present. Five new members were given in for nomination. A hearty vote of thanks to Mr. Robson brought a pleasant evening to a close.

B. F. FORSE, Sec.

SOUTHEND AND DIS. O.S.

Meeting held at Alexandra Hotel, April 10th. Mr. A. E. Pattrick in chair. The Secretary introduced the question of keeping an address book (containing the names and addresses of local fanciers who are members of the Society), the said book to he kept in one of the public rooms of the Society's headquarters and accessible to all who care to consult it. The idea was that Southend, being a holiday resort, there would possibly be, during the holiday season, some brother fanciers in Southend. What then is more natural than that they should want to fraternise with us and see the class of bird we have, and how the Fancy in this district is progressing. It was decided to have an address book similar to the one described by the Secretary, with the addition that, opposite each name should be entered the section of the Fancy each member was engaged in. The Secretary also introduced the question of seed and bird room requisites, and pointed out how difficult it was to get a really good seed in Southend, because of the antipathy of the local seed merchant, who either did not care to, or did not realise, the rapid growth of the cage bird Fancy in the district. As for bird room requisites, it was impossible to get what one wanted. To get over this difficulty the Secretary suggested that the Society should buy their own seed and requisites and retail them to its members, the Society to take over the profits, to be used for the benefit of all the members. After a lively discussion for and against, it was decided not to put it to the vote, but to hold it over for further discussion at a future meeting. The Secretary and Assistant Secretary were instructed to visit the local chandlers and ask for samples and prices of seed, and at the same time try to induce them to cater for the cage bird fanciers of Southend. Six new members accepted. Members joining within three months are exempt from the nomination fee.

J. DOBSON, Sec., 42, Queen's-road, Southend.

CITY AND SUBURBAN A.C.B.

Canaries that are Popular, and Why.

Meeting March 25th. Miss M. G. Shepherd, Mrs. A. M. Maher, Messrs. E. Morris and A. C. Cox were unanimously elected members; Messrs. W. Knight and T. Monger were nominated. At the forthcoming Finch Show it was decided to award the judging competition medals to the three members making the highest number of points, and that the public should he invited free of charge. Eight special prizes for the same were announced. Mr. C. E. Truscott was thanked for his handsome special prize for the coming Young Bird Show. Mr. R. L. Crisp expressed his appreciation of the confidence reposed in him in electing him trustee. Mr. J. Robson then proceeded with his lecture entitled "Canaries that are Popular, and Why." Speaking from knowledge gained by visits to shows in all parts of the country and to breeders rooms, the three varieties of Canaries that are the most popular were, he said, the Yorkshire, Norwich, and Border Fancy. The reasons they were so popular were they were more hardy and prolific, not requiring care or experience with breeding, less expensive, not requiring foster parents, more attractive and active looking in appearance; the medium-sized stock birds could he disposed of as songsters, and the hens as feeders, but the one great secret was that no one had the monopoly of these varieties. He (Mr. Robson) was delighted to see the green Canary coming to the front again, because a few years ago it was in the hands of few, hut now they were to be seen outside Liverpool. Crests were practically monopolised by one man, and the exhorbitant prices were a great obstacle to their popularity, as well as the fact of them being indifferent feeders. Lancashires, Cinnamons, and Lizards suffered from confinement to one district, and in the case of the Lizards the preservation of the nest lights and tails, and they being but one year birds, seemed to have a detrimental effect upon their popularity. Belgians were a monopoly in three hands, and the same might almost he said of the Scotch Fancy. A variety coming from one source on to the show bench undoubtedly meant good-bye to its popularity, as others taking it up eventually gave up in despair, unable to make any headway. Canarics to be popular must be bred in every district, and the monopoly done away with. What he (Mr. Robson) complained of was that fanciers would not help one another, that there was a great want of broad-mindedness, and that instead of disclosing their "secrets," they carried them with them to the grave. Such things as monopolies and these secrets tended to destroy rather than elevate the Fancy. At the close of his exposition, which was listened to with great interest, questions were asked by Messrs. Curtis, Wheller, Easterling, Burn, Pooley, Tyson, and Crisp. A vote of thanks to Mr. Robson, who suitably replied, and thanks to the chairman closed a pleasant evening.—V. WYNN, Hon. Sec.

JUDGES OF CAGE BIRDS.

The attention of Show Secretaries is directed to the following list of gentlemen willing to act as Judges. Terms for insertion on application.

A. AMBLER, 17, Lytton Road, Bradford. Judge of Canaries and Cage Birds. Life experience. 11 years reporter to the Fancy Press.

H. W. AXE, 55, Market Place, Doncaster. Judge of Canaries and other Cage Birds. Practical experience (Norwich and British speciality).

W. O BARLOW, The Aviaries, Malpas, Cheshire. Judge of Canaries, British Birds and Mules. Terms moderate

J. C. BARNES, 149, Duncombe Street, Walkley, Sheffield. Judge of Canaries and Cage Birds. Long practical experience. Terms moderate.

W. P. BARNES, Judge of Canaries and Cage Birds. Life practical experience. Breeder and exhibitor. Reporter for Fancy Press. Commercial Road, Grantham.

GEO. BENNETT, 46, Wenlock Street, Luton, Beds. Judge of Canaries and Cage Birds. Thirty years' experience. Terms moderate.

W. A. COWGILL, 115, Washington Street, Girlington, Bradford. Judge of Canaries and Cage Birds. Over twenty years' experience. Terms moderate.

A. G. DAVIS, Judge of all Classes of Cage Birds. Long practical experience. Terms moderate. 110, Tib Street, Manchester.

T. DIXON, Pioneer Terrace, Bedlington Station Northumberland. Judge of Canaries and Cage Birds. Life experience.

J. DOBSON, 14, East Road, London, N. Judge of Canaries and Cage Birds.

J. W. DRIVER, (Adnitt & Driver), Gladstone Street, South Normanton, Alfreton. Judge of Cage Birds.

GEO. GARDNER, 11, Haverstock Road, London, N.W. Judge of all kinds of Cage Birds.

C. A. HOUSE, 82, Upper Walthamstow Road, Walthamstow Judge of Canaries, Mules, British and Foreign Birds.

W H. LINDLEY, 4, Summer Lane, Wombwell, near Barnsley. Judge of Canaries and Cage Birds only.

E. A. LOVELL, 19, Islington Road, Southville, Bristol. Judge of Cage Birds (all varieties). Life experience.

F. MARWOOD, 1, Barnard Street, Thornaby-on Tees, Mules, British and Foreign, a Speciality. 17 years exhibitor. Terms moderate.

W. R. MILES, The Aviaries, Chichester, Judge of Canaries and Cage Birds. Life experience.

W. MUNDELL, 6, Carlisle Place, Bradford. Judge of Canaries and Cage Birds.

J. NORTH, 435, Oxford Road, Reading. Canaries, British and Foreign Birds. Author of "The Common Sense of Canary Rearing."

J. PATTERSON, Chirnside. Judge of Cage Birds. All varieties. Wide practical experience. Specialist Border Fancy Judge.

J. H. PAYNE, 17, Northgate Street, Gloucester. Judge of Canaries, British and Foreign Cage Birds.

PARKER ROBINSON, N.B.B. & M. Club, 1, Back Hartington Street South, Barrow-in-Furness. Cage Birds, all Varieties.

J. H. ROE, 167, Clarence Rd., Derby. Judge of Canaries and Cage Birds. Twenty years' practical experience.

WILLIAM J. ROSS, 19, Haulgh Road, Inverness, N.B. Judge of Pigeons, Canaries and Cage Birds. All varieties. Life experience.

C. E. SILK, The Aviaries, Emsworth, Hants. Judge of Canaries and all Cage Birds. Life experience.

HENRY TAMS, Orchard Place, Longton, Staffs. Judge of Canaries, British and Foreign Birds. Twenty-five years Breeder and Exhibitor.

R. B. TOPE, Hoe Street, Plymouth. Judge of Cage Birds, Rabbits, Cats, and Cavies. Twenty-five years' experience.

J. WILCOCK, 14, Chapel Street, Eccleshill, near Bradford, Yorkshire. Judge of Canaries and Cage Birds. 25 years Breeder and Exhibitor leading shows.

J. C. WILMOT, 17, Sandhurst Road, Bedford. Judge of Canaries & British Birds. Thirty years experience.

H. WRIGHT (WRIGHT & SON), 84, Heath Road, Norwich. Judge of Cage Birds. Life experience.

SUNDERLAND C.B.A.

Meeting held April 13th, Mr. John Fauer in the chair. Mr. E. Baker (Cowes), and Mr. J. Fountain (Sunderland) become members, which means a round dozen new members. We hold our First Feather Show on July 6th. The classes are two each for Norwich, Cinnamon, Yorkshire, Lizards, Borders, and one each for Crests, Crestbreds, Mules, Linnet, etc., British Finch, British A.O.V.; entrance fee, 6d. Judge, Mr. J. T. Clark. A generous offer was then made by Dr. O. Neal to present a good special for the best exhibit in the young classes. A good discussion arose in respect to novice classes in our Open Show, and we shall be pleased if exhibitors will assist us, as we mean business.—J. GORDON.

W. SCOTLAND N., ETC., A.

Meeting held April 7th, in Nelson's Temperance Hotel, Glasgow, Dr. Manson in the chair. The President presented the Association with two handsome silver cups, one to replace the British Bird Cup, which was won outright at the last show. The other was left to the discretion of the members, and is to be given for best young Canary, Mule, or Hybrid bred in 1907. It was unanimously agreed to record a vote of thanks to our worthy President for his handsome gift. The rules were revised, and new copies will be forward at next meeting. Messrs. R. Gordon, A. Wilson, Jas. McGirren, J. Shields, H. Cockburn, and T. Lindsay were elected members. Mr. John Young, Rutherglen, will lecture at next meeting on "Crests and Crestbreds." New and intending members are specially invited. We have now six silver cups and medals for young birds bred by the members. A syllabus of limelight lectures, "Bird Washing and Cage Making," will he drawn up at next meeting.

GEORGE SMART, Sec., Carmyle, Glasgow.

DARLINGTON C. & B.F.A.

Monthly meeting held at George Hotel, April 10th, Mr. W. A. Simpson in the chair. After the usual business, a washing exhibition was given by Mr. Hawkins and his movements in handling the birds were keenly watched by the members. Mr. Hawkins washed two birds, one with a powder soap recommended for washing birds, and the other with Dobbie's soap. He commenced washing the flights first, then the under part of the body, back, tail, and head last. After rinsing the birds in two lots of water they were rolled in flannel and laid before the fire for ten minutes and then put into the drying cage. Mr. Hawkins explained that he preferred Dobbie's soap, it giving a good lather, and the soap being easily got out of the feathers again. Much credit is due to Mr. Hawkins for the remarkably short time the birds were in his hands and out again. It was decided to hold our First Feather Show on June 29th, and our Open Show on November 2nd, judges for same to he elected at our next meeting night. One new member was enrolled.

R. S. BLACK, Hon. Sec.

SHOW DATES FIXED.

To secure insertion in this column a guarantee that the show will be advertised in "C.B." to the extent of at least 25/- must be sent to our manager.
* Under the Rules of the C.B. Union.

*Oct. 4 and 5.—**Burnley** (J.H.R.)
*Oct. 10.—**Peterborough C.B.A.**

RUNCORN and District **Show of Poultry and Cage Birds, Saturday, Aug. 10, 1907.** —Schedules from GODWIN & HARDY, Secs.

FIRST FEATHER SHOWS.

The dates fixed for First Feather Shows are inserted in this column free of charge. Secretaries should notify us of same as soon as decided upon.

May 6 and June 3.—Hull C.B.S.
May 18.—Hucknall Torkard C.B.S.
June 1 and 27.—Bradford East O.S.
June 1 and July 20.—Shipley O.S.
June 12.—Grimsby C.B.S.
June 22.—Rochdale Good Intent C.B.S.
June 29.—Rotherham C.B.S.
June 29.— Potteries C.B.A.
June 29.—Darlington C. and B.B.F.A.
July 3.—Bristol C.B.S.
July 6.—Coventry O.S.
July 6.—Ormskirk and Dis. C.B.S.
July 6.—Blackburn C.B.S.
July 6.—Bradford West C.B.A.
July 6.—Sunderland C.B.A.
July 12.—Cumberland Yorkshire C.C.
July 13.—Hartlepools C.B.S.
July 13.—Suffolk C.B.S.
July 17.—Birmingham C.B.S.
July 20.—Wallsend and Mid-Tyne C.B.S.

Mr. A. E. Silk (Whitstable) writes:—I have sold a pair of my stock birds to a well-known Scottish fancier for £8 the pair.

Will Miss Constance Smith, late of 38, Harriet Street. Derby, send her new address? A prize from Uncle Peter has been returned through the post office.

An excellent sample of nesting material, such as is used in the parcels advertised in our columns, reaches us from Mr. Hicks, the Aviaries, Holsworthy. It is most suitable for its intended purpose.

I inserted an advt. in your paper last week for sale of Canaries, and I have had more applications for them than I can possibly answer. CAGE BIRDS is, indeed, a very valuable paper, writes John Fletcher, Grindleford, Sheffield.

Kindly insert the following advt. in this week's CAGE BIRDS. Your paper, as an advertising medium, is better than all the other Fancy papers put together.—M. HARDY (Streatham).

Mr. John Ferguson, Hon. Sec. of the Cumberland Yorkshire Canary Club, writes:—Our Young Bird Show will be held at Whitehaven on July 12th. Mr. J. Nixon, of Maryport, has been selected to judge.

Mr. C. Roehl (London, W.) is advertising in our columns this week an interesting consignment of insectivorous birds, including Blue-headed Wagtails, Blue-throated Warblers, Nightingales, Woodpeckers, Tree Creepers, etc.

Our printer exercised his genius on Messrs. Payne and Wallace's advertisement last week, making them offer "Zebra-rumped Grass-finches." As the well-known Bath firm of importers remark, "People will think we are trying to 'fake' a new species on them!"

Fanciers who are thinking of joining the Norwich Plainhead Club may obtain all the necessary information from Mr. John Raynes, the hon. sec., whose address was inadvertently left out of the note which we published last week. Mr. Raynes's address is 9, Richmond Road, Chorlton-cum-Hardy, Manchester.

In our advertisement columns last week one of Mr. Rudd's testimonials, thanks to the printer, appeared with the date as April 19th, 1907. The testimonial came from Ireland. Our readers will doubtless remark, "Irish with a vengeance!" If March be substituted for April, then the testimonial becomes understandable.

The quarterly balance sheet of the City and Suburban A.C.B., which comes to hand this week, shows the cash assets total the highly satisfactory sum of £23 1s. 11d. The frequent notices sent us by the untiring secretary render comment on the work and progress of the club unnecessary.

Gay indeed are the members of the Bournemouth and District C.B.A. A dinner on April 12th and a ball on April 17th show the local fanciers to be possessed of a desire to enjoy life, and these two social events held at the beginning of the breeding season should encourage the members, and fortify them against any little incidental disappointments.

At the request of Mr. C. A. House, his lecture on "The Lancashire" to the members of the London and Counties A.C.B. has been postponed until Thursday next, the 25th inst. This meeting, to which all fanciers and others are invited, will be held at the "Bay Malton," Great Portland Street, W. (a few minutes' walk either from Portland Road Station or Oxford Circus), at 8.30 p.m.

The result of the first year's working of the London and Counties Association of Canary Breeders is such as to gratify all its members. It has held four shows, each of which has been well supported. The balance in hand is £1 15s. 10d., and with medals, staging, etc., the total assets are £3 16s. 6d. The Association has over forty members, and is in a most flourishing condition, thanks to the good work done by its hard-working officials, and the efforts of that smiling fancier, Mr. R. J. Pretty, the Hon. Sec., whose address is 6, Old Burlington-street.

The paper which Mr. Cutmore gave before the members of our society, on the subject of "British Birds, their Habits, Structure and Colouration," proved of the greatest interest, being far more instructive than the ordinary run of birdy lectures. The 100 or more specimens of birds, eggs, nests, etc., besides several diagrams, which Mr. Cutmore exhibited to show the various organs, and the skins, nests, etc., illustrated very vividly the lecturer's remarks on the protective colouration of birds and of their nests and eggs. Thus writes Mr. G. W. F. Lythgoe, the hon. sec. of the Manchester and Northern Counties O.S.

Messrs. Wrigglesworth and Son, the well-known cage and wire-work makers, of Stonegate Wireworks, York, have sent us their latest price-list, just published, which is one of the neatest and most comprehensive of its kind we have had brought to our notice. It comprises fanciers' pottery, nest-pans, baths, etc., breeding, show, stock and fancy cages, wire, wire fronts, punched bars, and all kinds of garden wirework. The practical value of this price-list is considerably enhanced by the up-to-date illustrations it contains. A copy will be sent post-free to all readers of CAGE BIRDS who send a post-card for it and mention this paper at the same time.

Eccles and District Cage Bird Society will hold their Open Show on November 30th, writes Mr. A. Wheatley, the Sec.

Your CAGE BIRDS Annual is brimful of interest.—Robt. Watson, jun., 56, Market-street, East Glasgow.

Mr. H. J. Knapp has removed to Priory Road, Carisbrooke, and asks that our readers will note the change of address.

Cleator Moor F.S. Show will be held under C.B.U. rules, writes Mr. J. E. Byrne, the hon. sec. I have applied for a license to Mr. Lythgoe, and received the same.

"The Darlington C. and B.B.F.A. have fixed June 29th for the First Feather Show, and November 2nd for the Open Show," writes Mr. R. S. Black, the Hon. Sec.

From Mr. F. Howes, the Hon. Sec., we learn that the Wolverhampton and District Cage Bird Society has decided to join the Cage Bird Union.

The City of Wakefield O.S. have decided to hold their Open Show on Nov. 5th and 6th, write Messrs. Netherwood and Keeley, Secs., with Mr. J. C. Barnes, of Walkley, as judge.

Glasgow and West of Scotland are having an Open Show next November. The last pair Show, held February 26th, and Annual Show, on December 6th, proved very successful.

The Crewe O.S. have decided to extend their radius from three to ten miles inside Cheshire. Fanciers desirous of taking advantage of the same should write to me for information, writes Mr. A. Wilkinson, 49, Vincent Street, Crewe.

At our Open Show, Nov. 22nd and 23rd, and First Feather Show, July 13th, Mr. J. Trengove has been appointed judge. Both events are under Cage Bird Union rules.—J. STRINGER, Sec. Bolton Ornithologieal and Roller Canary Society.

Mr. Alex. Smith, of the Galashiels O.S., writes:—The judges for our show on Nov. 16th are—Scotch Fancies, Messrs. J. Dalgleish, Leith, and G. Fulson, Partick; Borders, Mr. W. Haddow, Hamilton; British, Foreign, etc., Mr. J. W. Bruce, Coldstream.

Mr. A. A. Asbury, hon. sec. of the Hucknall Torkard C.B.S. writes:—We have engaged Messrs. J. W. Driver and Geo. Marshall to judge our show on Nov. 8th and 9th. We have also fixed a First Feather Show for May 18th. Mr. F. Beardall will judge.

At the last meeting of the Mansfield Cage Bird Club, the members, we learn from Mr. W. Roslyn, had to regretfully accept the resignation of its Secretary, Mr. E. W. Booth, whose services must cease owing to ill-health. Mr. Joseph Duckworth, Tennyson-street, will now combine the offices of Corresponding and Financial Secretaries. Illness has been very busy this winter with the members, one old and respected fancier, Mr. W. Barwise, having been near to the "great divide" for many weeks, and is only just getting about again, a mere shadow of his former self. We are sure all fanciers to whom these gentlemen are known will wish them a speedy recovery.

Resignations at Barrow.

Please announce that I have resigned the office of President of Barrow and District Cage Bird Association.—J. WAGSTAFF.

Please notify I have resigned the office of Treasurer for 1907 for Barrow and District C.B.A.—W. ROOKE.

I have resigned the office of show secretary for Barrow and District C.B.A. for 1907.—ANDREW CHERRY.

Hastings United C.B.S.

Messrs. Godden, the hon. secs. of the Hastings United C.B.S., write:—Our Open Show will be held on Nov. 19th and 20th, at the Central Hall, Hastings, the finest room in the town for the purpose, with splendid light and freedom from draughts. Mr. J. H. Payne has been elected to judge. The show will be held under C.B.U. rules.

The Final Tie.

Many readers of CAGE BIRDS are also enthusiastic lovers of our great winter pastime. To-day (Saturday) is the day of the year to followers of the Association code, and many will find themselves in London, intent on seeing the final tie between Everton and Sheffield Wednesday. Should any of them feel inclined for a chat about the Fancy on Saturday morning, we shall be pleased to welcome them at the office of CAGE BIRDS, 154, Fleet Street, E.C. We cannot promise them champagne and cigars, but we can assure them a hearty greeting.

Fines in Societies.

The North and South Heigham Bird Breeding Society, of which Mr. H. Chettleburgh is Chairman, and Mr. W. Key Hon. Sec., has issued a very handy members' rule and subscription card. One very noticeable feature in the rules is the fines which are imposed for different offences. A member missing two meetings in succession is fined 1d.; 3d. is the fine for not paying the subscription on the night it becomes due, 1d. is demanded from each member absent from a special meeting, whilst for misconduct, or using obscene language, 1d. is the penalty. Some sensitive folks might consider the last penalty slightly inadequate to the offence

SCARCITY OF COLOUR FOOD.

IS THE MARKET CORNERED?

Threatened Shortage of the Deep Red Pepper Pods.

Rumours having reached this office that there was likely to be a shortage in the supply of the vegetable from which the colour food of the Canary Fancy is manufactured, and that as a consequence there would be a great increase in the price of colour food this season, we thought it our duty to make enquiries from the principal vendors of colour food as to the truth or otherwise of the whispers which we had heard. The reasons given were two: One that owing to last season's crop having to be harvested in bad weather the pods were not properly ripened, and therefore the rich, deep red colour so much valued was absent. The other was, it was said that an attempt had been made by one large vendor to capture the bulk of the supply for the English market, and thus create something of a corner. His designs in this respect, however, if ever he had any, seem to have failed, or at least not to have reached the extent which he desired. Had the market been cornered it might or might not have been a serious matter for exhibitors, but anyway it appears this is not to be. Although, as will be gathered from the replies which we have received from the colour food vendors, there is some truth in the rumour as to the shortage, owing to the bad harvesting of the crop, yet there is likely to be little material increase in the price, and that increase not very general or sustained.

If, in soliciting opinions, we should have inadvertently overlooked any dealer in colour food, we express our regret, and trust that we may be favoured with his views in time for our next issue.

I will reply to your enquiry at the end of the week. I have been waiting for samples for two weeks. I suppose there is something in it by the delay. E. PRETTY.

In answer to your query, April 12th, re Colour Food, I am glad to say I shall be able to supply my customers at the same price as previous years, viz., 1s. 7d. tasteless red feed, and 1s. 11d. Hot Natal per lb., and I am informed that there is no prospect of raising the price. J. GOSTLING.

In reply to yours, I beg to state there is a scarcity of peppers for colour feeding. I have, fortunately, bought my pepper at a price that will enable me to sell as last year—viz., 1s. 6d. per lb.—but I have been able to secure only a small parcel, which I do not think will be sufficient for my trade. If I have to buy more at an enhanced figure, I shall certainly have to raise my price. GEO. LECLAIR.

In reply to yours of the 12th I may say that, although from the information that I have received it seems likely that tasteless pepper will be both scarce and dear this season, yet I hope to be able to supply my customers as usual. Although I cannot speak with certainty as regards price yet, I shall not advance my price unless I am absolutely compelled to do so. WM. ERRINGTON.

In reply to yours re colour feed, I think it impossible to form any opinion as to failure of the coming crop. This crop is a quick-growing one, and will hardly be above ground yet. At least half of the feed each season is the leavings of the past season's crop. The harvest is, I am informed, about July. I have no fear of the price being seriously advanced, if at all, and am prepared to fill any orders at the prices in CAGE BIRD ANNUAL advertisement. J. F. SMITH.

In reply to yours, it is hardly correct to describe the crop as a failure. The crop was a fairly good one, but the climatic conditions under which it was harvested were somewhat unfavourable. Most of the pods are slightly variegated in colour, and many are a light red instead of the deep red required by fanciers for colour feeding. These lighter-coloured pods make an ideal yellow feed, and are also useful for salads, pickles, etc. Growers were in many cases unwilling to pick out the perfectly coloured deep-red pods, as in so doing they reduced the value of the remainder. My buying agent could only persuade them to do so by offering a very high price for the selected pods. In November last I secured a quantity equivalent to my entire sales for last season, but owing to the increased demand from abroad for the very best coloured sweet pepper, I cabled my agent to secure further consignments. This he found very difficult to do, but after some weeks' search he secured enough to cover my probable sales for the coming season. He writes that the supply is now exhausted, so I expect it is the late buyers who are feeling it, and report the crop a failure. I have raised my price slightly to the trade, but have decided not to raise the retail prices at present. I do not anticipate any difficulty in supplying my retail customers during the season, but trade buyers must buy subject to the fluctuations of the market. My advice to both is—place their season's orders early. J. W. RAMSDEN.

In reply to yours re colour food, I am informed from the firm in Spain that I import my feed from that the crop has not been so good as was expected, and that the price will be a trifle more than what I paid last year; but I shall sell at exactly the same price. I have now two tons, and if I require more I can get it. I hope to do well with colour food soon, as I buy the best I can come across.
J. WALSH.

Re your enquiry about Colour Feed, there has been a poor crop of pimento, or what I call my Royal Red feed, this season, my people in Spain not being able to supply me with my full order. They have, however, with a lot of extra expense secured me ten tons, this being two tons less than I ordered. There is any quantity of the inferior quality to be had, but not the best, and it has cost me much more than last year. This has caused me to advance my prices this year, but with ordinary luck they will drop again next year. I adviso big breeders to get a good supply before July, for should my supply run out I shall not be able to get any more of the same quality this year. What I have I guarantee to be the very best, same quality as last year, which had such record successes.
T. SANDIFORD.

OUR CANARY BREEDING COMPETITION.

An extraordinary number of people have sent in applications for particulars of our competition and declaration form. The particulars are published in CAGE BIRDS, and the form will not be required till there are results to declare. We are, however, sending the form to all who apply.

Several correspondents have written enquiriug whether the words, "most successful" mean the best average result, and if a novice who has only a pair or two of birds stands the same chance as the one with half a dozen.

We have pleasure in answering these queries in the affirmative. The number of young birds reared must be taken in conjunction with the number of pairs bred with, and editorial discretion will be exercised in each case.

Miss M. Keys (Pimlico) writes:—Where I am working they are not breeding this year, but have offered me a pair of Yorkshires if I like to try. I should like to enter, but cannot afford to buy any birds myself.—I am sorry to say, Miss Keys, you would not be eligible. All birds must be the bona-fido property of the competitor.

Being a Cauary fancier of about six months' standing, I shall feel much pleasure in joiniug your Novice Competition, if you will kindly send me a form. I may say that I have taken in CAGE BIRDS ever since I started the Fancy, and have found it very useful in every way. As I am not a member of any club, could you tell me one of the nearest to us, and will you tell me how I can join one? I shall be more than pleased.
S. B. SMEETON.
Whetstone.

I noto with pleasure your intention of awarding £15 in prizes to amateurs who have never bred a Canary before. With a view to entering this competition, I am taking up the Fancy; but I am rather perplexed on this point:—I am going to spend two or three pounds on stock birds. Now, shall I buy a lot of cheap German birds, which can easily be procured at the rate of three pairs for a sovereign, or act on the advice of old fanciers, who tell me not to breed rubbish, but invest in two pairs of good Norwich birds? If I adopt the latter course, I shall not stand a very big chance for your competition, as the prizes are given for the greatest number of healthy birds reared, irrespective of quality or value. [These words are not ours.—Ed. "C. B."] So, shall I breed for quantity or quality?
B. L. L.

[Breed for both, we should say, as far as possible. B. L. L. will find it easier, we think, to breed successfully with first-class, well-bred Norwich or Yorkshires than he would with German birds. Let him follow his own inclinations.—EDITOR "C. B."]

G. Reynolds (Pendlebury) writes:—My birds are all Norwich. Your esteemed paper has been of great value to me. Re your competition for novices, is a novice compelled to get cage bird club members to be witnesses? I am just outside town, but not in touch with any club members. Yet I know a few men in the Fancy, but not members of any club. Also you could have private names and addresses. If I have to fish for club members to act as witnesses, I should have to hunt Pendleton and Salford up. It would cost me nearly 5s. for railway fares and expenses, as I am certain men would not do it for nothing; and this is an item out of a working man's pocket. Trusting you will be able to remedy this. Allow me to make one remark more re your valuablo CAGE BIRDS ANNUAL. This book contains grand and useful information, and is a book that all bird fanciers should have in their possession.

[Mr. Reynolds need not obtain the depositions of anyone as to his purchasing "C. B." each week. The mere fact that he has the coupon out of each copy while the competition is on will be sufficient for our purpose. Nor is it absolutely compulsory for the witnesses to his results to bo members of a cage bird society, so long as they aro people of good reputa and in an established way of business. —EDITOR "C. B."]

OUR

CANARY BREEDING COMPETITION.

Received by all with enthusiasm. **NOTE! TWO NEW RULES, 5 and 8.**

With the idea of stimulating the interest of outsiders in the hobby of Canary Breeding, and so provoking new recruits for the Fancy, the Editor of "CAGE BIRDS" has decided to offer £28 in Prizes, for the most successful Novico Breeder of Canaries, under the following conditions:—

1. Only Novice Breeders are eligible for the Competition, a "Novice" to mean anyone who has never bred Canaries before.
2. The Prizes will be: **A**, Cup, value £5 (or Cash), First Prize; **B**, Cash, £3, Second Prize; **C**, Cash, £2, Third Prize; and **D**, Five £1 Cash Prizes for the next best in succession.
3. Prizes to go to the "most successful" breeders, meaning those of tho competitors who are most successful in satisfactorily rearing the largest number of healthy young birds during 1907 Canary breeding season now in progress.
4. Tho young Canaries must bo bred by the competitors on or before July 15th, 1907, next. None bred after that dato will bo eligible.
5. All stock birds used must be the *bona fide* property of the Competitor.
6. Competitors must have tho results of their breeding operations attested to by two responsible officials of any recognised Cage Bird Society, or may swear a declaration attested to by two responsible witnesses (form on application).
7. From now till the date of the Competition closing, August 3rd, each issue of CAGE BIRDS will contain a Coupon, and when sending in tho declaration competitors must onclose the whole series of coupons to show that they havo been during the period regular readors of CAGE BIRDS. The second Coupon appears at tho foot of *this announcement*, the first appeared last week.
8. The Editor's decision shall be final.

Secretaries and Officials of Societies are invited to communicate with our Manager, when a scheme of co-operation by which new recruits for their Societies may be enlisted, will be forwarded.

A Prize offered for the Old Hands.

It has been represented to us that though our Canary Breeding Competition is of vast interest to the raw recruit, the absolute novice, it leaves the experienced hand out in the cold. To remedy this we have decided to offer **FIVE POUNDS** Cash, or Cup to full value, at winner's option, to the most successful Canary breeder of any experience. All breeders of one season's experience and upwards eligiblo. Same conditions as for Novices. The Editor's decision to be final.

We also invite the hearty co-operation of all readers in the following "rolliug" scheme:—

THE "TELL SIX" PLAN.

By simply procuring SIX Signatures you may be able to win £6.

The plan is as follows: All you have to do is to tell six of your friends, unrelated to each other, about CAGE BIRDS' great Canary Breeding Competition, and persuade each of them to enter and tell six of their friends about it also. You send in to us the first six signatures to an undertaking to this effect, and if any of the signers aro successful in our Canary Breeding Competition we will award you £1 for each successful competitor nominated by you. If any of the six people you tell fill up our forms as appended with signatures of six of their friends whom they have persuaded to enter, we will award them £1 for each successful competitor nomiuated by them. If two or more people nominate the same successful competitor the nomination prize will be divided amongst the successful nominators. The nomination forms must reach us by May 27, 1907, and the *bonâ fide* signatures and addresses in full of the competitors you have induced to enter must be given in each case. Here is the

NOMINATION FORM.

We, the undersigned, having carefully read, or had read to us, the rules of CAGE BIRDS' great Canary Breeding Competition, agree to enter for the Competition and abide by tho rules of same. We further, each of us, undertake to try and induce six of our friends to enter the Competition and tell six of their friends about it also:—

Full Name and Address.

1. .....
2. .....
3. .....
4. .....
5. .....
6. .....

The above are the *bonâ fide* signatures and the complete addresses of six intending competitors in CAGE BIRDS' Canary Breeding Competition, and I hereby nominate them to win one of your prizes. If any of them are successful I should like my prize money sent to me addressed as under:—

Name .....

Address .....

.....

Every form sent in, if properly filled up, will entitle the sender, whether a successful nominator or not, to a set of picture postcards, "Dickie in the Dumps."

All forms must bo sent in on or before May 27, 1907.

Now you want to know WHY you should adopt our "Tell Six" plan. We will tell you:

1. It will make new recruits for your hobby.
2. It will teach people to look after their pets better.
3. You may be successful in winning ono or more of our prizes.
4. The friends you persuade to enter may win one or more of our prizes.
5. The friends your friends persuade to enter may win one or more of our prizes.
6. You may be a novice or an experienced hand; you have still a chance to win a prize.
7. If you are a member of a society you may enlist a new member by means of this Competition.
8. Rich or poor—a lot of birds or a single pair—it makes no difference. All have an equal chance.
9. It will take your mind off your business or private troubles and give you a little spare-time recreation of a novel kind with the chance of making a pound or two.

Roughly and briefly these are the benefits of the "TELL SIX" plan. Follow it up for all you are worth and see how much you can win.

You need not necessarily enter for the Canary Breeding Competition to win one of the nomination prizes. It will be sufficient if a breeder nominated by you on one of our forms is successful in winning one of our prizes. That is to say, if he or she is successful you will be successful. If there is any point you are dubious on, write—

F. CARL, 154, FLEET STREET, LONDON, E.C.

Have you a young friend? Induce him or her to enter for our Great Breeding Competition.

Canary Breeding Competition.
APRIL 20th, 1907. Coupon No. 2.

CLUB NOTICES.

No charge is made for notices of forthcoming meetings, but they can only be inserted once. Should secretaries desire to secure immediate insertion of their announcements **exactly as written** they can do so by prepayment at the rate of three words a penny.

Altrincham C.B.S.—April 23rd, at Central Cafe, Stamford Street, Altrincham, 8 p.m. First Feather Show and other important items; members please note new headquarters.—Tom Harrison, sec.

Barnsley and Dis. C.B.S.—April 20th, at Maltsters' Rest, 7.30. Show arrangements.—T. Coward, sec.

Blackburn Linnet Singing Association.—Will all members and friends meet at Blackburn Station at 8.30 a.m. on Sunday, April 28th, for a day's walk through the country? We shall take train to Langa, then to Stonehurst College by Hacking boat, and back through Whalley. It will be a very interesting outing for bird lovers. Everybody welcome. —G. Rostron.

Cinnamon Marked Yorkshire C.C.—April 20th, at Market Tavern, Bradford, 5 p.m. Balance-sheet for 1906; election of officers 1907; members are earnestly invited to attend.—R. Garnett, sec.

City and Suburban A.C.B.—April 22nd, at Church Institute, 60, Paddington Street, Marylebone, W., 8.15 p.m. Essay competition on "Breeding"; 10s., 5s., 2s. 6d. prizes.—V. Wynn, sec.

City of Bradford O.S.—April 27th, at Travellers' Rest, 8 p.m. Very important.—P. Stansfield, sec.

City of Wakefield O.S.—April 23rd, at Victoria Cafe, 8 p.m. Schedule for Open Show.—Netherwood and Keeley, secs.

Crewe O.S.—April 23rd, at Swan Hotel, 7.30. Postponed annual general meeting.—A. Wilkinson, sec.

Derby C.B.C.—April 27th, at Victoria Street Congregational Schoolroom, 7 p.m. Appointment of visiting committees and other important business.—W. H. Bamsey, hon. sec.

Ealing, Hanwell and Dis. F.S.—April 25th, at Mission Hall, Church Road, Hanwell, 8 p.m. Mr. Norcott will lecture on "The Racing Pigeon."—W. Bird, sec.

Federation of C.B. (Ashton-under-Lyne Centre).—April 20th, at George and Dragon, Market Place, Ashton, 6.30. Election of officers, C.B.U., and other important business.—A. Ackroyd, sec.

Glasgow and Western Counties Norwich, Etc., B.C.—April 27th, at Good Templars' Hall, 7 p.m. Show of British birds; (1) Bramblefinch, (2) Chaffinch, (3) Greenfinch, (4) Bullfinch.—J. H. Adam, sec.

Gt. Harwood and Dis. C.B.S.—April 22nd, at Headquarters, 7.30. Messrs. W. Clough and J. Wilson will give a washing exhibition; all fanciers heartily invited.—F. Sharples, sec.

Gt. Horton Good Intent O.S.—April 25th, at Church Schools, 8 p.m. Lecture on "The Breeding Room and its Requisites—Illustrated," by the President, Mr. J. T. Brook; all fanciers invited.—A. Holden, sec.

Green Canary Association.—April 25th, at Oldham Hall, Renshaw Street, Liverpool, 8 p.m. Adjourned general meeting; very important business.—S. Hadwin, sec.

Hoyland and Dis. O.S.—April 27th, at the Clothiers' Arms, 7.30. Open Show.—J. Warrender, sec.

Huddersfield O.S.—April 22nd, at White Hart Hotel, 7.30. Paper by Mr. R. Halliday, "Feeding and Rearing of Canaries"; all fanciers cordially invited.—S. Lodge, sec.

Hyde and Dis. C.B.S.—April 22nd, at St. George's School, 8 p.m. Lecture, "Catching and Treatment of British Birds," by Mr. Matthews, of Hyde.—T. Allsop, sec.

Laisterdyke B.F.A.—April 27th, at Royal Oak Hotel, 8 p.m. Mr. A. Bottomley will lecture on "Breeding and Preparing Birds for Exhibition."—J. Pownall, sec.

Larkhall C.C.C.—April 27th, at Miners' Hall, 6 p.m.—Geo. Kirk, sec.

Warrington and Dis. O.S.—April 25th, at 7.30 p.m. Discussion on "Rearing Young Birds."—J. Emmett, sec

---

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. It kills all insects, harmless to everything else.

QUESTIONS & ANSWERS

DOUBTS AND DIFFICULTIES SOLVED BY SPECIALISTS.

Queries will be answered under the following conditions:—

(1)—*All questions must be clearly written in ink (or typewritten) on one side only of paper, and must conclude with either the correct name of querist, or a pseudonym, or initials.*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper and enclosed with the query. In no case must the address appear on the query.*

(3)—*Queries intended for different specialists must not be written on the same sheet of paper.*

(4)—**Queries must not include or be included in** *orders for books, instructions re advertisements, or any other matter for publication.*

(5)—*The department to which the queries refer must be stated in bold letters on the left-hand corner of the query.*

(6)—*If an answer in the same week's issue is desired, queries must be posted to reach us by* **Monday's first post** *at latest. Queries will be dealt with in the order in which they are received, and only as space permits. The earlier queries are received the better attention they are likely to have.*

(7)—*Queries relating to illnesses of birds, except enquiries as to cause of death (for which see Post Mortems) will be answered by return of post on receipt of a postal order for sixpence and an addressed stamped envelope. Queries of an ordinary nature will be answered by post, if desired, on receipt of a postal order for one shilling and a stamped addressed envelope.*

(8)—*All who require letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence to pay postage expenses, &c., otherwise their letters will not receive attention.*

(9)—*All queries must be addressed* **the Editor, "Cage Birds,"** *154, Fleet Street, London, E.C. Only queries so sent will be answered. Postcards are not admissible.*

NOTE.—Readers are requested to carefully study past numbers and current issue before submitting questions. By doing so they may save trouble and unnecessary repetition.

THE following gentlemen represent CAGE BIRDS staff of **ADVISORY EXPERTS.** Queries must in no case be addressed to any of them individually, but to the Editor.

CANARIES.

NORWICH PLAINHEADS.

Answered by J. H. PAYNE.

Hen Commencing to Wheeze.

W.D.—Give your hen, in the drinking water, fresh daily for a fortnight, 15 drops of syrup of tolu and six drops of paregoric, well mixed. Cover her cage over at nights with a warm cloth, and keep her away from any draught. Put a piece of apple between the bars of the cage for her to peck at.

Cock Bird and Young.

W.W.—I suspect that what you took to be "pecking" on the part of the cock bird was only gentle tapping to rouse the youngstere up so that he could feed them. You are not the only one by a long way to be so deceived. I think, now, you had better return him to the hen when the young are fit to take away, and let him stop with the hen through the next nest, unless, of course, you see he is really molesting the young, when remove him at once.

Wheezes at Night.

Billposter.—Give your Norwich cock ten drops of ipecacuanha wine, five drops of paregoric, and ten drops of glycerine in the drinking water, fresh daily for a fortnight, when I think you will find a great improvement in him. If you do not cover him over at night, by all means do so. The temperature of your kitchen will be very much lower in the early morning, unless you have a fire burning all night.

Birds Going Blind.

Easterfield.—The fact of your cock bird being blind in one eye would not have been the cause of the infertile eggs, if, as you say, he was in good health and singing well. I am inclined to the opinion that the open loft door was the cause of the birds going wrong in their eyes, as there was probably a great draught there. Your blind hen will be of no use; and if she is, as you say, totally so, then I should recommend you to destroy her. I do not think your cock bird will go the same way, as I see no reason to think there is any infectious disease. Do not keep your birds in a direct draught, and do not hang any more in the window.

Various Matters.

Markham.—The egg which you damaged, and which you say you broke the shell of, will not be any good, so I should advise you to remove it, as it may probably only get entirely broken, and thus cause the other eggs to get stuck and soiled with its contents. (2) I think the cause of your hen not sitting on the nest is because she is not quite in good breeding trim—that is, not properly broody. Am afraid this nest will be a failure, unless she settled down after you wrote me. I am inclined to think your cock bird is of a mischievous disposition, and I should advise you to take him away when you set the hen next time. Many breeders take the cocks away from many of their hens, but your friend is wrong in advising you always to do so. When they agree thoroughly, and settle down in a business-like manner, I should always advise keeping them together. (3) I am pleased to hear your birds like the rape seed prepared as I recommended.

Young Ones Dying.

Napper Tandy.—It is impossible for me to tell you the cause of your young Canaries dying; but I should fancy it is through the hens ceasing feeding from some cause, perhaps through the changeable weather we have had. I fancy you will be more successful with your next round. Do not sprinkle the maw seed on the egg and bread, but sprinkle on instead a little castor sugar. Let the old birds have as much hemp seed as they will eat.

Behaviour of Cock Bird.

C.K.S.—Your cock bird seems to me, from what you say, to be one of those mischievous ones which most breeders are troubled with at some time or other. I should advise you to take him away when the hen goes to nest next time—that is, unless he has been leading an exemplary life since you wrote, and has not interfered with the remaining eggs or the nest. Your feeding is quite correct. Let your old birds have plenty of hemp seed when they have young.

A Mixed Trio.

Golden Shadow.—(1) From your description of this hen, I should say you had better not place any reliance on her, as she certainly seems to me to be very unreliable. I should put her aside for a month. In the meantime feed her generously, and give a few dandelion leaves two or three times a week. If she does not then settle down and lay a full complement of eggs, I should discard her altogether. (2) This hen, if she hatches out and feeds the young, will no doubt afterwards lay herself, as the feeding of the young will reduce her excessive fatness, which no doubt is the present cause of her not laying. Let her have plenty of green food whilst feeding the young. (3) There is no cure for the bird which you say is blind in one eye, and from what you tell me I expect the other eye will go the same way. It is no doubt cataract.

YORKSHIRES.

Answered by H. W. BATTYE.

A Continuous Moult.

Querist.—Are you sure your bird has not been exposed to some slight draught during either day or night? My advice is, to take him back into your bird room, and try to make sure whether there is any draught, and as a precautionary measure, cut and fix a piece of paper so that it will reach about an inch below the top perches. Let his food be canary seed in the seed hopper, and give for two weeks as much maw seed as he will eat, when I should expect him to have a thorough moult. When he seems to have got rid of most of his old feathers put in his drinking water a few drops of some kind of tonic, such as quiniue, tincture of iron, or chemical food. Do not give the wild seeds. Should the bird go through his moult, he will probably regain his voice, and gradually get into full song. Thanks for kind remarks re answers to queries.

Gone Off in Condition.

New Reader.—Stop egg food for a week or ten days and let the bird's staple food be white canary seed, with just a pinch of maw seed, also a small piece of apple in the wires to peck at. Put a pinch of Epsom Salts in his water (just enough to make it taste) on alternate days, and on the days you do not give the salts, give ten drops of the glycerine and whiskey. Your bird seems to have been fed on too highly stimulating food. Keep him as near the light as you can, but free from draughts, when I think you will find him come much better in health. Then you can give him about half the quantity of egg food you are giving at present, adding a pinch of maw seed and a little moist sugar. In the course of a few weeks your bird will probably be all right, and in breeding condition.

Clear Eggs.

No Name.—Evidently you paired your birds up early, and before the cocks were in proper condition for breeding. Separate them, and feed your cock birds as follows:—Plain white canary seed in seed hoppers, and give one teaspoonful of egg food daily, to which add half a teaspoonful of maw seed. Also give one or two young dandelion leaves daily, and put sufficient Parrish's Chemical Food in the drinking water to make it the colour of red ink. Feed as above until the birds are in full song, when you may again pair them up, with very probably much better results.

Hen Refusing to Sit.

Elroy.—There may be several reasons for your hen not sitting. One may be because you disturbed her too often. Some hens are very shy and nervous with their first nest, and such hens should be set not later than the day they have laid their third egg. The cold nights, however, may have been the cause. Let her have a week's rest by herself, and then pair her up again, and try leaving her eggs with her, disturbing her as little as possible.

Loss of Voice.

G.A.Z.—From what you write, I am surprised your bird will attempt to sing at all, as taking him into a cold shop out of a warm kitchen was calculated to both cause him to lose his voice and to drop into the loose moult as well. You do not say whether you want him to breed, or only for song. You would be all right breeding with him, as he is healthy in other respects. To assist him in recovering his song, mix equal parts glycerine, syrup of squills, and good Scotch whisky, and give ten drops in his drinking water fresh every morning. Continue this treatment for at least two or three weeks, when I think you will find your bird get all right.

Nesting Troubles.

Constant Reader.—In the first place, you paired your birds two or three weeks too early. This pairing up too soon in the year has been condemned so frequently by nearly every writer on the subject for years, that ignorance is hardly an excuse. Still, breeders who do, or ought to know better, will still keep putting their birds together early in March. This early pairing is inadvisable on account of inclement weather, which is sure to come. Some seem to suppose, as soon as they are flattered by a nice day or two, that summer has come. They at once put their birds together, with similar results to yours. In nine cases out of ten, it will pay to wait till the first or second week in April, as if the weather is as cold, or even colder, than in March, the birds are more matured, and in more vigorous condition, and thus have more strength in reserve to help them to withstand any variations of temperature that may occur. Also when the young hatch out they will have at least an hour longer daylight at each end of the day; thus the interval between the last feed at night and the first feed on the following morning will be two hours shorter, and this means much in the way of rearing strong, robust, and healthy youngsters. If you have been letting your hens sit up to the time you see this, examine their eggs before a window, and if they all seem clear, or there is only one dark (or fertile), I should throw them away. If there are two fertile eggs, I would give them to one hen and let her sit them out. If there are no good eggs, let your hens have three or four days to themselves, and then pair up again. Let their staple food be white canary seed, also giving to each pair of birds one good sized teaspoonful of egg food daily, mixing with it fresh twice a day a little maw seed, till the hen has laid her third egg. While the hen is sitting, give, in place of the egg food, half a teaspoonful of good summer rape daily. Treat as above, and you will have a fair chance of success.

CRESTS AND CRESTBREDS.

Answered by W. E. GREEVES.

Colour-feeding Crests.

Novice X.—No; there is no need to colour feed either Crests or Crestbreds for the show bench.

Breeding Crestbreds or Crests.

Roberts.—It would be difficult to say for certain whether or not your hen is Crestbred, i.e., bred from one Crest parent and one Plainhead, the description you give certainly points that way. The overhanging eyebrow is characteristic of the Crestbred, as is also the long feather. Are you not able to find out from the breeder? Whether Crestbred or not, if mated with a Crest it would throw some Crests, but they would be very small, and no use for breeding for exhibition.

CINNAMONS.

Answered by J. NORTH.

Cinnamon Out-crossing.

Chairman.—I have very much pleasure in replying to the two queries which you tell me have given rise to a prolonged discussion amongst the members of your society. (1) No; a Cinnamon son cannot be got from a non-Cinnamon bred mother mated with a Cinnamon coloured father. All the Cinnamon or pink-eyed produce of such a pair would be hens; and all the young cocks would be dark-eyed. But it would be untrue to say that all the young hens would be pink-eyed, for some might come with dark eyes, and if they were variegated their marking would be of the usual dark greenish brown colour. The sweeping assertion that all the young hens would be Cinnamons has got into the records, and the error is occasionally repeated by those who have inadequately studied the subject. Two crosses must be taken before a young Cinnamon cock can be produced. (2) No; no Cinnamon sons can be got from a Cinnamon hen when paired to a cock that has no Cinnamon blood in him. It is beyond the power of a Cinnamon hen to so reproduce her own colour. The dark-eyed cocks from both these crosses will throw Cinnamon chicks when judiciously mated with Cinnamon hens of known pedigree; but the sons of a Cinnamon sire perpetuate the Cinnamon colour more easily than the dark-eyed sons of a Cinnamon mother. Two dark eyed birds may throw a pink-eyed chick; but two pink-eyed stock birds are not likely to produce any dark-eyed progeny.

BORDERS.

Answered by J. PATTERSON.

Pairing.

Mrs. Muir.—From your description the pair of birds seem both in breeding condition, and with a little time may yet live in harmony. No doubt you have a tartar of a hen to deal with, spiteful and jealous, and perhaps she may have given her love to the other cock bird (as you mention two pairs). You have neglected to give me their colour and markings. Spend a little spare time in a corner of your bird room, out of sight of birds if possible, and listen to their "calling." If the hen you had paired up is answering the other cock bird, then they have taken to one another, and I should advise you either to run them together or change the cock bird into another room until the hen and No. 1 cock have become more agreeable, and the hen is sitting. Let the cock bird into the small cage you have the hen in for a few minutes two or three times daily, and if they do have a stand up battle they cannot damage one another in a small cage to the same extent as when they have the length of a breeding cage. Watch how they proceed, and separate them when needed, and I think after a few days she will come round to him. Should they not, you must just run the hen in the breeding cage, and the cock in the small cage; give her a nest to build in, and when once the nesting fever is on her she will call to him. Run him in beside her a few minutes each night and morning until the pairing takes place, then return him back to the small cage. The hen will sit and bring up the brood herself until they are about two weeks old. You can then run the cock back beside her, and he will put her to nest again, and assist to rear the brood, as by this time she should feel kindly towards him. (2) It is customary to pair a yellow and buff together. If your cock is yellow pair him to a buff hen, or vice versa. A green cock and a marked hen would throw greens and heavily variegated. If you want lightly marked young you should pair him to a clear hen, that is, one with no markings. Very pleased to assist you, and welcome you into our hobby.

ROLLERS.

Answered by F. A. LESTER.

Food for Fresh Bought Rollers.

Ignorant.—Your feeding with soaked rape seed is entirely wrong, and is only required where young birds fresh off egg food are in question. The staple diet for your Roller will be two parts German summer rape seed and one part canary; a little of the packet seed you mention will be a change once or twice a week. Knowing the dealer's shop you mention very well, it is kept very hot, and your bird will require being carefully broken to a cooler temperature. Sand must be given in very small quantities, as the bird has been so long without it that he may eat greedily and suffer in consequence. If he does not appear to brighten up shortly give him 10 drops of Parrish's Chemical Food in his drinking water; also give him a little cress or apple now and then. The dealer you bought him off may have had him a few weeks, and I expect he will be a 1906 bred bird.

Roller Out of Sorts.

Reader.—Your bird has possibly caught a cold, which is not to be wondered at considering the changes we are having. Give him in his drinking water 10 drops of whisky for a few days, and then 10 drops of Parrish's Chemical Food. Keep out of draughts, and in any way that occurs to you make a change in his food, his position in the room, and, in fact, any little thing that may rouse him up.

Clear Eggs: Cause and Prevention.

First Nest.—You appear to have done everything that is correct, and yet you have the bitter disappointment of your two first nests being clear. When you read this, take your cock birds in your hands and examine their vents, as I surmise you you find the vent is still well-feathered, and this being so, when the act of coition takes place the seed is diverted and does not enter the vent of the hen. I have to thank our secretary for pointing this out to me, and in many cases I have found this has been the only cause of the failure. There are several other things that tend to the same end, such as not having suitable perches, loose perches, etc. It is not always possible to see the act you speak of; it usually takes place in the early light of the morning, or in the fading light of the evening. However, you will try again, and if the feathers are there, as I expect, get a pair of scissors, take the bird in your left hand, and clip them as closely as you can. It is an easy job if you are careful, and do not lose confidence in yourself.

MISCELLANEOUS CANARY QUERIES.

Answered by "OLD JUDGE."

Canary with Swollen Leg.

Anxious.—Your bird has probably caught himself in the cage wires, and in his endeavour to release himself has strained the muscles of his leg. Soak the leg in warm water for three or four minutes two or three times daily, when dry paint with tincture of arnica, using a small camel hair brush for the purpose. It will be advisable to remove the perches for a few days, and to cover the cage bottom with a piece of soft flannel.

Losing Birds.

Lost seven cock birds in five months. Feeding, the best Spanish Canary seed, and mixed seed. They start by feathers becoming loose and ruffled about neck, go all into a ball, and die in three or four days. Six hens in same room and fed same way are the picture of health.—J.P.

J.P.—Frankly, your query puzzles me. Had the whole of your birds been taken I should at once have thought the bird fever was the cause, but seeing that the hens living under the same conditions are strong and well, that cannot be the cause. The case is a most peculiar one, and the only advice I can give you is to send the body of the next one that dies to our Mr. North for post-mortem examination. He doubtless would be able to give you the cause of death, and also be able to advise you how to remove the contributory circumstances.

Concerning Perches.

W. E. Sweetman—This is a matter upon which there is considerable difference of opinion. Flat, oval, round, and those with oval tops and flat sides all have their devotees. It is, I think, one of those little details of management which call for the exercise of a breeder's powers of observation. As men differ in the size of their feet so do birds, and as all shoes will not suit all men neither will all perches suit all birds. Feet vary in form and size, and the perches should be adapted to them. In a large flight cage it is wise to have perches of varying size and shape. Many cases of "slip claw" are caused by the use of perches which are too large for the young birds to grasp, and thus the muscles of the hind claw never being used become atrophied and useless. Speaking generally, I prefer perches which are oval on top, and flat on the sides, and varying in size from three eighths of an inch in width across the top, and half an inch in the depth of side to half an inch in width and seven-eighths in depth. The wild birds are continually moving from branch to branch, and doubtless do so to ease and rest their feet. A little thought will convince anyone that for a bird to be forced to stand by day and night from one year's end to another upon perches of exactly the same size must, to say the least, not be conducive to its comfort and happiness. It should also be remembered that perches suitable for such birds as Borders and Lizards are not large enough for Lancashires and Crests, whilst the peculiar carriage of the Scotch Fancy necessitates one that is round in shape and grooved or roughened.

Chinese Canary Moulting.

E. China Canary.—Seeing that your bird only arrived from China a month ago, he has not had time to become acclimatised, and having commenced moulting will probably go on for the next seven or eight weeks. Continue the egg food and plain canary seed, and twice or thrice a week give him a little mixed seed, about half a teaspoonful, on the bottom of the cage, after fresh sand has been given him. It would also be advisable to give a little Parrish's Chemical Food in the drinking water each day, just enough to turn the water a rich pink colour. Give a sprig of watercress, and some other kind of green food daily.

Canary with Insects.

My Canary, bought some time since from a shop, seems to be troubled with insects, and is continually picking his feathers, being quite bare on the shoulders; kept in a wire cage.—R.Q.R.

R.Q.R.—In buying birds from shops it is wise to give them a good washing before putting them into a cage. This should be done with warm water and carbolic soap, using a shaving brush. If unversed in the art of washing, you should seek some fancier who would give you a lesson, or purchase some cheap handbook on Canaries. House's "Canary Manual" contains a chapter on washing. It would be the best thing to do even now. In addition to washing the bird, you should boil the cage in the copper on the weekly washing day after the day's wash is finished. Dry it well, and then paint all the corners and crevices with turpentine; also give the perch ends a soaking with turpentine.

Canary not Singing.

R.J.S.—Judging from what you say, your bird has evidently dropped into a soft moult. You must keep him warm and cosy, and away from all draught. Seeing that there is a fire in the room during the day, you should throw a woollen cover over his cage before retiring for the night. Feed on plain canary seed, giving about half a teaspoonful of mixed seed twice or thrice a week. Yes, a rusty nail in his drinking water will be of service, but in preference I should advise giving a little of Parrish's Chemical Food daily, just enough to colour the water a nice rosy pink. If you place a piece of raw fat bacon between the wires it will prove of great benefit to the bird; renew it twice a week.

Sudden Death.

Paired two Canaries two weeks ago, had just started building. Seemed all right on Wednesday, on Thursday cock was dead and hen nearly so; placed her in a warm room and she has come round a bit. Cock very thin, windpipe red and enlarged. Other Canaries in room not affected. Will the hen be all right with another cock.—DOWNHEARTED.

Downhearted.—I should say your bird died from diarrhœa, caused by some irritant in its food. Had it not been that the hen was also ill, I should have thought it a case of wasting or atrophy, but both birds being affected, it looks as though food or water were wrong. Possibly the egg food. Great care is necessary in giving egg food to see that it is fresh. Stale egg food is responsible for the deaths of hundreds of birds each season. I should advise you to let the hen rest for three weeks or a month before pairing her up to another cock. If you pair her now, shortly after her illness, she will most probably die.

THE CANARY BREEDING SEASON

Is now with us and everyone who contemplates cultivating Canaries for pleasure or profit, should immediately procure the Standard Work on Canaries :—

HOUSE'S CANARY MANUAL

PRICE ONE SHILLING. Post Free 1/2.

Superbly illustrated by the Champion Canary Artist, Mr. H. NORMAN. EVERY BIRD DEPICTED IS A VERITABLE MODEL, and shows the breeder what to aim for. Some idea of the popularity of this Practical Manual may be gathered from the fact that under the title of "The British Canary," it has passed its Third Edition entering upon a Fourth Edition of 5,000 copies under the new title of "HOUSE'S CANARY MANUAL." The following Summary of Chapters, etc., will show you how completely the ground is covered:

Aviaries and Cages.
Show Cages.
Perches.
Breeding Canaries.
The Young Birds.
Food for Nestlings.
Hens Refusing to Feed.
Sweating Hens.
Young Birds Dead in Shell.
Red Mite.
Clear Eggs.
Moulting.
Exhibiting.
Diseases (treated very fully).
Every variety of Canary is treated upon at length and illustrated.

Mr. HOUSE has thoroughly revised and brought this work up-to-date and incorporated a chapter on the "Roller or Singing Canary."

Send 1/2 now and secure a copy hot from the press.

F. CARL, 154, FLEET STREET, LONDON, E.C.

Cock Crouching.

A. Pike.—I don't think you need worry about the bird crouching on his perch. You say he sings well, is lively, and feeds the hen all right, therefore there can be no need for anxiety. If the birds are well and lively as you say, why give Chemical Food? It is not needed. There is no sense in doctoring birds when they are in good health. It is the right way to make them go wrong. Give them sound food, plenty of clean water for drinking and bathing, sand, cuttlefish, and green food, and they should go on all right.

Young Birds Dying.

Clutch of four, three lived till eight weeks, sit on perch in a hall, head under wing, puffing and blowing, and eyes closed. One has died. Their food has been canary seed, with egg food occasionally, cuttlefish, and bath; their bowels do not seem so free as I should like them to be. Had same trouble last year, lost all except one about the same age. Kindly tell me why I lose them, and the best remedy.—S.T. (Clapham).

S.T. (Clapham).—To commence, you paired your birds far too early. The majority of experienced breeders are only just hatching out their first nest, and yet you have young birds over two months of age. By early breeding last year and this, the probability is that your old birds are not so healthy as they should be, hence their young are not very robust, and the recent cold winds have proved too much for them. It may be that you put them too suddenly on to hard food, and thus unable to digest the seed they have not received nutriment sufficient to keep them in health. In addition to the egg food, which you should have given daily and not occasionally, give them a little scalded summer rape each day. In their drinking water mix 30 drops of Fellows' Compound Syrup. It may be obtained from any chemist or drug store.

Hens gone Wrong.

(1) Hen in breeding condition, put with cock, at once huddled up like a ball of wool, have removed her, given aperient, and she is better. Is there a chance of her mating? What was the cause of her going off so suddenly? (2) I purchased two birds as cocks last autumn, they sang, but I thought they were hens, stopped singing, went into moult. One of them is now in splendid feather, and has every appearance of being a hen. Have tried to mate, but there are continual rows. Do you think it any use me trying any longer. To all appearances it is a hen?—H.S. (Rhondda).

H.S. (Rhondda)—(1) It is difficult to say why your hen went suddenly wrong, unless it was due to excitement. Let her rest a week or two and then try her again. The fact that an aperient had a beneficial effect points to her having been too fat and gross. Put her in a large cage, so that she may get plenty of exercise before you pair her up again. (2) Many hens sing, especially when young, and curiously enough singing hens are generally somewhat pugnacious and over-bearing when mated up. Such hens require an extra robust cock, they then settle down, and make the best of mothers. It however, is useless mating them with effeminate or sickly cocks. If the cock seems to be master, leave them together for a while, that is, if you are convinced as to the sex. If you still doubt then try the bird with another hen.

Canary Panting and Squeaking.

Beginner.—Your bird is undoubtedly suffering from asthma, and badly, too, from the symptoms as described by you. I am afraid I can hold out little hope of a complete cure, yet you may considerably alleviate your bird's suffering, and make its life fairly comfortable and happy. Medicate its drinking water by adding to each wineglassful of water ten drops each of tincture of lobelia and paregoric. For a time, say two or three weeks, remove its seed, and in place thereof give one of the prepared foods advertised in our columns, which should be mixed with boiled milk and then have from ten to twenty drops of Scott's Emulsion added to it. Keep the bird warm and away from all draughts. You certainly ought not to attempt breeding with a bird suffering from this disease. If the treatment recommended does not improve matters, write again, giving me full particulars as to feeding, and where bird is kept.

Hen in Trouble.

Pairod birds April 10th. On Friday I found an egg on cage floor. On Saturday she laid in the nest. But this morning, Sunday, she has not laid, yesterday and to-day she seemed to be in pain. Will not sit on her nest, and makes a funny little noise. She seems swollen and inflamed underneath. She is not constipated.—B. J. LAMBERT.

B. J. Lambert.—It is quite possible your hen is suffering from inflammation of the egg passage. Give her one drop of laudanum in three of milk or sweet oil three times a day. Work a little sweet oil into the vent by the aid of a fine camel hair brush. In the place of egg food and seed give her a portion of arrowroot biscuit moistened with boiled milk. Let this be fresh twice a day; if thrice so much the better.

Canary making Noise.

C. Melhuish.—As your bird is strong and vigorous, and the young ones from him are well, why worry? The whistling noise is doubtless due to excitement more than anything else, as you say he only makes it when you try to catch him. However, to be on the safe side, it will be wise to only let him be with the hen for about half an hour morning and night, and when she has gone to nest remove him altogether. She will incubate and bring up the young without him, and you avoid the risk which worries you.

Eggs not Hatching.

G. Reynolds.—It is not usual, but hens do sometimes exceed the fourteen days. Several things conduce to this end, such as extreme cold, the hen not settling down and sitting close at first, or the hen being a little out of sorts and not generating the normal amount of heat during the period of incubation. Very pleased to know you find CAGE BIRDS so helpful. May I ask if you kindly help us by mentioning the paper to your friends? See our Tell Six Competition announced in this issue.

BRITISH BIRDS, MULES AND HYBRIDS.

Answered by G. E. WESTON.

Thrush not Singing after Nine.

J. C. Smith.—Your letter is a puzzle. I can't for the life of me imagine why your Song Thrush should refuse to whistle after nine o'clock in the morning, and your communication sheds no light on the matter. True, birds hung outdoors commence singing at unheard-of early hours during spring and summer. Perhaps your Thrush is a particularly "early bird," and considers he has "earned his little bit of corn" by the time nine o'clock strikes. Joking apart, however, many birds sing freely early morn and late evening, and are comparatively silent during the middle of the day; especially is this so in the summer-time. But I gather you wish me to understand your bird shuts down completely at 9 a.m., and I must candidly confess that I cannot understand the situation. Is there another Thrush kept near by which has "sung him down"?—i.e., got the master of him so far as singing goes. This sort of thing is unquestionably liable to happen. I was talking only last Saturday with an old bird-keeping acquaintance of mine, and he was complaining that the importation of a fresh Thrush into his street had "killed" his own bird—stopped its song, he meant. The newcomer was a young bird, and a vigorous, masterful singer; after a few "duels" the old bird had "gone sulky" and kept more or less mute. Curious, but true. There is one thing: If you cover your bird over until eight or nine o'clock in the morning for a few days, you will soon see then whether he opens out afterwards.

Jackdaw Poor in Plumage.

Bertram.—Confinement in a cage—unless exceptionally large—would tend to make any Jackdaw get loose in plumage, and ragged. Such birds want opportunity for exercise outside. Pity you cannot make some provision for your bird to take this. Your feeding method reads quite correct. Get some hazeline ointment from a chemist, and very lightly smear the bald places on the head with this daily. If you mean by "sore" wing a wing that is raw, you should paint a little Friars' Balsam over the place. This "stings" a little for a moment or two after being applied, and the bird should be held for a minute or so to prevent him pecking it. Afterwards he will quite likely let it alone, when it will quickly heal.

"Will they, Won't they?"

A. Etherington.—If you had read my answers recently, you would have seen I have stated several times that the Chaffinch has so far only been known to produce Hybrids with the Bramblefinch. A letter from a breeder of such was printed about a fortnight ago in our correspondence columns. Other Hybrids from the Chaffinch have been claimed, but never to the present satisfactorily established. Among them has been the Chaffinch-Canary cross. Hybrids from cock Goldfinch and hen Chaffinch are unknown as yet. This need not necessarily discourage you from trying, however. If no one ever tries we are, of course, never likely to see any. Said to be impossible crosses have been produced in the past, and I am quite sure they will be again in the future. I should certainly like to see a Goldfinch-Chaffinch Hybrid; it would surely be a beautiful bird. You could try a hen Chaffinch with a cock Canary; I should hazard the opinion that this way of mating would be more likely to succeed than that with the sexes reversed. You should have not the slightest difficulty in producing Hybrids from the cock Goldfinch hen Canary mating. Goldfinch Mules, as they are more generally termed, are as common as hot-cross buns on Good Friday.

Birds for Outdoor Aviary.

Aubrey Neave.—I cannot add anything to the answers given in last week's issue on this subject. See replies to "Oiseau," "B. Dpt.," "W. L. Tilley," etc., and choose your birds as therein advised. You say your aviary is 6 ft. by 4 ft. by 10 ft. This is difficult to understand. I should, in the ordinary way, take it to mean 6 ft. long by 4 ft. high by 10 ft. wide (back to front); but these seem curious dimensions. Probably you mean me to understand it is 6 ft. long by 10 ft. high by 4 ft. wide. Taking this to be so, such a place will hold 16 to 20 small birds very nicely, though not with any prospect of breeding results. Don't put any acceptedly pugnacious species therein; or, if you do, remove them at the first sign of damage being done. I might mention that an aviary of this size is best entirely roofed over; any other method you will find unsatisfactory.

Mule Breeding Procedure.

J. Statham.—You are certainly doing right; in fact, are only adopting the method of procedure followed by nine Mule breeders out of every ten. Unless one has full knowledge of the disposition of one's Goldfinch, and confidence in the correctness of his behaviour, it is always best to remove him entirely once the hen Canary settles down to sit in earnest, which, of course, should be on the evening her eggs are returned to her. The Goldfinch may be run with another hen as soon as ever the latter is ready to commence domestic duties. In reply to "Derby" only last week I fully went into all this; kindly refer back. When he should he again put with hen No. 1 must depend on how that lady comports herself. If she favours you with a clutch of clear (unfertile) eggs only, she will be ready for another trial after a rest of seven or eight days, during which period she should be well fed, a little egg food being given daily. If she hatches, then don't begin to think about a second nest until the brood is safe—a bird in the hand is worth two in the next round of eggs, as Shakespeare omitted to remark. Young Mules are more precocious than young Canaries, and can usually feed themselves a day or two earlier. It is always the best plan, however, to let the hen keep steadily on feeding them until they show signs of picking up for themselves. This will happen somewhere about the twenty-second day after hatching. Round about this time young Mules can be safely transferred to nursery cages, or shut off from their mother by means of a wired slide. But if she shows no impatience to commence with the second nest (by plucking the young, or in other quite unmistakable ways) don't hurry to separate them. If necessary, it is possible to part the hen and her young for an hour of a morning or evening, while the Goldfinch is run along with her. It is best not to trust the Finch with the young unless you know him well. Cock Bullfinches are birds fanciers very seldom have any success with as Hybrid producers. I do not know that I can recommend you any "best" bird to mate to him. You might try either a hen Greenfinch, or Linnet, or Canary. But don't build your hopes of success too high.

What Bird is it?

F.W.B.—Black cap, forming a black ring round neck, coming to a patch on throat, and continuing in a line down centre of breast, cheeks white, back and wings green and blue, breast yellowish. This is a broad description of the Great (or Oxeye) Tit. The Blue Tit is not unlike the Great in colour and markings, but is at once distinguishable by its much smaller size and the absence of the black on the head and breast, this being replaced with blue. As regards feeding: Briefly, the species require some good insectivorous food daily, and a supply of canary, sunflower, hemp, and maw seed; also mealworms and other available insect life. They are fond of various table scraps—fat meat, suet, cheese, vegetables—but these things should not be overdone during the hot weather. Berries of many kinds are also relished. They must have plenty of live food whenever it is obtainable, otherwise they are very liable to go "light," when there is nothing for it but to give them their liberty.

Linnet's Erratic Behaviour.

Starter.—I cannot offer any definite opinion as to the cause of the erratic manner in which your Linnet sheds its plumage—at all sorts of unseasonable times, according to your letter. I agree with the other birdie men you mention that it is a "completo puzzle." So far as I can see, no explanation lies hidden in the details you give, which outline quite the usual treatment accorded their birds by Linnet keepers. The fact that the other Linnet you have should behave normally under precisely similar treatment serves to make the matter still more mysterious. On one point your letter is not clear: whether the Linnet was house moulted or fresh caught when you "got it" (as you put it) in October. If the former, then I should say the solution to the mystery lies in the probability that he had not moulted for the current season when you bought him. He might commence to drop a few feathers just before Christmas, and a spell of cold weather would cut this short. Now, when the warmer weather is with us, the growth of new plumage commences again, and the bird proceeds to entirely cast its old (or partially old) coat. Linnet No. 2, having renewed its plumage at the proper season, would not, of course, be affected in like manner. This, however, is pure assumption; you are in possession of the facts of the case, and if my "guess" fits, all well and good. If I fail to score a "bull"—well, we won't be any the worse friends for that.

Old Thrushes Feeding Young in Cages.

Dora.—Yes; the parent Song Thrushes (and Blackbirds, too) will continue to feed their young if the latter are placed in a cage, nest and all, near the spot the latter came from. It is not even necessary to be very precise about last-mentioned item though, according to some tall yarns I have both read and listened to, where the parents have travelled quite considerable distances in order to feed their sequestrated nestlings. The wiring of the cage will need to be fairly open—inch and a quarter or inch and a half wide. I suppose you are in a position to guard against cats or two-legged marauders discovering and making away with the cage or its contents. You could transfer the young Thrushes when from ten to twelve days old—anyway just before they get to that age when interference with the nest causes them to scramble out over the side. Birds so reared would not be anything like as tame as hand-fed specimens, but could soon be got so. It is really quite easy to hand-rear Thrushes. If the parent birds should desert their progeny, indeed, someone certainly ought to be prepared to undertake to do so; it would be heartless to let them starve to death.

Sex of Redpolls.

F. Bennett.—It is exceedingly difficult to sex house moulted Lesser Redpolls. A bird that is a free singer can, of course, be put down a male; but beyond this one has little to work on. You can only go for the deepest coloured bird, the one carrying the densest (blackest) pencilling, and that is densest in colour on the rump. An adult male in a state of Nature can be spotted at once, for he has a rose-tinted breast, and this the female lacks. Both cock and hen have the red on the poll. If your two examples are not house moulted, then I should imagine you have two hens. But the fact that they have as yet made no attempt at breeding is nothing to go by, for the simple reason that it is much too early in the season for Redpolls to think of breeding in captivity. The beaks of Lesser Redpolls are normally yellow, with black streak at the tip of the upper mandible. Feed them exactly as you would a Linnet.

Birdroom and Two Goldfinches.

Bulley.—It is a mistake to have the window facing east to open and not the one facing the other quarter (curiously enough you do not state what quarter). Birds don't like east winds any more than human beings. If you could let iron ventilating grids (to open and close at will) into the south and west walls, the former at bottom and the latter at top of wall, you would have a very efficient means of ventilation, which could be supplemented by the open windows during the heat of summer. Our new book, "Canary Breeding for Beginners," contains some helpful observations on this subject which you would do well to peruse. There is no reason why you should wait until May before pairing up your Goldfinches with the hen Canaries seeing they are, as you say, in full song and with clear beaks. If you mean, however, that one of the Finches has been in a very warm room all winter, and is there now, I certainly should not risk taking this one outdoors until May has turned. He might drop into cross moult, and be spoilt for the rest of the season; it would probably kill him, in fact.

Two Hen Bullfinches.

Constant Reader.—The bronchial syrup you mention is very good, and I should give it a lengthy trial before commencing with anything else. Read the replies to "N.O.W." and "W.D.F.B." last week, and follow feeding advice therein. Simply roughness of plumage is not catching; red mite, of course, are, if they happen to be the cause. You

need not let the two bare places on the wing-butts deter you from pairing up the hen Bullie, providing she is otherwise sound and in high condition. Try anointing them gently and lightly with hazeline ointment for a short time, once or twice daily. Give both plenty of seeding green food every day.

Another Softbill Aviarist.

Beginner.—An outdoor aviary, 6 ft. by 6 ft. by 8 ft., would house 12 to 16 small insectivorous birds comfortably. Yours appears to be very well designed for the purpose, especially if it faces south, as it ought (or south-west). Both ends should be boarded up, and the wire netting will need to be half-inch mesh, if very small species are indulged in. An addition of a foot to the width (making it 4 ft.) would be a decided improvement to the aviary. As regards the selection of its inmates, read the reply to "W. F. M. H." I should avoid the Wagtails (as yours is but a small place), though one specimen might do very well. If you try Creepers, Wrynecks, and other climbing birds, mind you fix up suitable stumps around the place. A few hollow logs, boxes, husks, etc., are also generally appreciated by one or other of the birds.

Goldfinch-Bullfinch Cross.

Winson.—Both Goldfinches and Bullfinches come into breeding condition in due course if correctly fed. Follow the lines laid down in my recent answers, and you ought not to go wrong; I have no difficulty with my own birds. Both species should have plenty of young dandelion leaves, likewise the flowering and seeding heads of dandelion and groundsel, shepherd's purse, and chickweed. Give good feeds of niger and maw seeds to both birds daily, and do not stint the Goldie of hemp nor the Bullie of sunflower, while the latter may have a taste of egg food every day is she shows any liking for it. Some fanciers believe in transferring the eggs to hen Canaries, and some prefer to give the hen Britishers a chance to hatch them and rear the young. When the couples are in cages, the former invariably proves the most certain method, especially with hen Bullies, whom I never found any too reliable. In small aviaries they often behave all right. Should you get young offer all of the above-mentioned seeding green foods freely, egg food (or rich insectivorous food, if the hen Bullie likes it), small mealworms, and sprays off rose or fruit bushes which are infested with smother fly (aphides).

Song Thrush not Singing.

Mavis.—I can only say to you, as I have said to so many in my time, that you do not feed your bird well enough for it to sing. It is not sufficient to buy a packet of somebody's food (no matter if it boasts a thousand testimonials), and give it month in and month out, mixed with just a spot or two of cold water. The food needs properly mixing, and the bird needs insect life in addition. Until you amend your feeding methods you cannot expect the bird to sing; nor do you deserve to have him sing. Proceed on the following lines: Damp the quantity of food required for use with grated raw carrot, or finely chopped tender dandelion, chickweed, lettuce, watercress, etc., according to season, or cold boiled potato, or even a little ripe fruit, varying it as much as possible. Give a few mealworms daily, and any live foods you can get in season—for instance, smooth caterpillars, flies, spiders, wasp-grub, gentles, earwigs, beetles, cockroaches, and the like. A little ripe fruit and various berries, sweet apple, pear, split grapes, orange, red and white currants, banana, etc., straw, rasp, black, privet, elder, haw, etc., berries are also relished. Into the stock food a proportion of preserved yolk of egg (flake) should be well mixed now and again; or a hard-boiled egg; or a little finely-scraped raw lean meat makes a nice change at times, but should not be overdone.

A Linnet Muling Venture.

Novice in Doubt.—There is no reason whatever why you should not be successful with your cock Linnet mated to your buff Yorkshire hen, providing the birds are in breeding condition, and you proceed on the right lines. The end of April is not too late to commence breeding Canaries (read our Yorkshire Canary expert's, Mr. H. W. Battye's, replies to querists for an opinion on the point), and I am quite certain it not too late to commence Mule breeding—it is much more likely to be too soon. To come to the point, I am convinced you paired your birds without finding out whether they were ready for breeding or whether they were not. You can leave a cock and hen together for a year—much more a week—and they still will not show signs of nesting unless they come into breeding condition. Pair your birds up again in ten or fourteen days time, and in the meantime feed them generously. Let your Linnet have a teaspoonful of hemp seed one day, and a teaspoonful of mixed niger and maw seeds the next, in addition to the usual stock mixture, and a liberal allowance of young dandelion leaves and sprigs of chickweed and shepherd's purse. The hen Canary should have a feed of egg food daily, with a teaspoonful of mixed seed one day, and a teaspoonful of mixed niger and maw the next, in addition to her usual seed diet. Let her also have a good feed of young, tender dandelion leaves every day.

Song Thrush with Fits.

Acton.—I am often asked by fanciers the treatment for Thrushes, etc., troubled with fits, and replied to one some three or four weeks ago. I notice the fits always attack birds which, according to my own ideas, are not given sufficiently generous (nourishing) food, and I am always "laying the law down" on this point. This applies equally to your own case; read and learn of the diet the Song Thrush subsists on when at liberty; then ask yourself whether your own menu is an adequate substitute. Feed your birds as I am so frequently recommending. If you must use packet food of the kind you name, then supplement it with five or six mealworms daily; also boiled and chopped snails, spiders, blackbeetles, small earthworms, and all the likely insect life you can lay hands on by way of variety. A little scraped raw lean beef or mutton may be added to the food now and again; or a piece of liver may be dried in the oven and grated, and a teaspoonful or so be mixed in. The fact of it having been off song and subject to fits for so long should be sufficient to at once tell you the bird is hopelessly out of condition. If you amend your feeding methods, it is possible he will recover. It will help you to this end if you mix a half-teaspoonful of tasteless cod liver oil with his daily food supply. It is best to commence with a smaller quantity, and gradually work up to this dose. On alternate days you could put a small teaspoonful of Parrish's Chemical Food into every two tablespoonfuls of drinking water—that is, plain water one day, medicine the next. As regards treatment for the fits, many fanciers have told me of their success when using bromide of potassium. If you immerse a bird's head in cold water for a moment, it usually suffices to end a fit at once. Also drop into the beak three or four drops (not more) of a 10 per cent. solution of potassium bromide, which any chemist will prepare for you. Give two or three drops daily for a time, and at once on any sign of a fit. If you experience any difficulty in catching, etc., the bird to administer it direct into the beak, stir a small teaspoonful of the solution into two tablespoonfuls of drinking water. Don't give the Chemical Food at the same time, however; also allow frequent intervals on plain water when giving the bromide of potassium.

Sample of Canary Seed.

John Fox.—It seems curious, and not a little suspicious, that birds should have died when being fed on the canary seed, and the rest have recovered after you had changed it for another kind. But we do not undertake the analysis of seeds at this office. Such a task requires the services of a professional analyst, whose fee would be a guinea at least, and most probably more. Your best plan would have been to have sent a dead body to our Mr. North for post-mortem examination (see rules), accompanied by a letter giving the circumstances of the case, when he would have at once acquainted you of the presence or otherwise of any irritant poison. The seed looks all right. But I don't feel equal to trying it on any of my own birds. Have laid it down for the benefit of the office mice.

What Bird?—And Others.

A. J. Brown.—I can only conclude that you have a pair of Cirl Buntings. Your description in some parts is not particularly illuminating—as when you say, "top of head darkish streaky"—but, taken all together, it answers closely to that of the species above-mentioned. Cirl Buntings are distinctly local birds, unknown in many parts of the British Isles, and probably more common in the South of England than elsewhere, though far from common even there. Feed exactly as advised another enquirer this week concerning another member of the Bunting family. Have never heard of them having bred in a cage, and very much question whether they would do so. Most Cirl Buntings are too wild in disposition. Fanciers usually have a difficulty in getting them steady enough for exhibition. When newly caught they are not of more than a few shillings' value. I wish you success in your efforts to produce the Blackbird-Thrush Hybrid. Have never inspected anything I felt was at all likely to be this much-debated Hybrid; still, it has often been claimed as bred, and I believe some of the instances have been well authenticated. Have been told of several cases where a Thrush and a Blackbird were mated and nesting out of doors; but the said cases never withstood investigation.

Thrush off Colour.

T. Warden.—Bathe the Thrush's eyes twice or thrice every day in warm water tinged with Condy's Fluid. For two days give an aperient in the drinking water—dissolve as much sulphate of soda as will cover a shilling in every three tablespoonfuls. Afterwards, for a week or ten days, well mix as much flowers of sulphur as will lie on a sixpence in every tablespoonful of the bird's daily soft food. Possibly your feeding is at fault. But you do not say anything on this point. However, I am frequently giving advice on feeding. Do you mix plenty of vegetable food with his soft food every day?

Cock Bullfinch—Hen Canary.

Novice.—Several fanciers have claimed to have produced young from the cock Bullfinch when mated to a hen Canary. Their claims have generally been sceptically received, however, owing probably to the non-success which invariably attends attempts to produce Hybrids from the Bullie male. I myself saw the said-to-be results of one cock Bullfinch and hen Canary mating; but the youngsters struck me as being Canaries purely and simply—pointing to some mistake on the part of the breeder. The fact that your friend's hen Canary mated to a cock Bullie has gone to nest and is sitting on four eggs proves nothing at all. I would like to lay him even money the said eggs are unfertile, providing no other male bird has had access to her. Hen Canaries will go to nest just the same, whether eggs be fertile or unfertile: the proof of the pudding lies only in the eating, which this time means that one should never count his Hybrids until they are hatched. Further, the act of coition may take place (or appear to do so), and eggs still be unfertile. It is full early yet for any cock Bullfinch to be thinking of egg-filling; they are quite late breeders, as a rule.

Birds in an Aviary.

G.C.P.—In an outdoor aviary, 5 ft. long, 7 ft. high, and 3 ft. 6 in. wide, you can certainly keep a few small British birds—say 12 to 15. You would need to keep cats away from the front; they are brutes at jumping on the front and frightening the birds. Roof it entirely over, and board up both ends. As regards making a choice of birds, the smaller seed-eaters alone would be suitable to keep in it all the year round, and for advice on their selection, see three or four replies given this week and last week.

A Trio of Questions.

New Reader.—(1) Crested Mules are not common; but this is only because they are not popular—i.e., few people try to produce them. They are of no more value than ordinary dark Mules. A really good Crested Mule, however, might fetch a crown or two more because of its top-knot. But fanciers can generally find hens likely to throw good crests something better to do than breed Crested Mules. (2) Try your Yellowhammer, which has a cold, with a 14-day course of the following medicine:—Best honey and best glycerine, equal parts, well mixed. Of this, stir one teaspoonful into two tablespoonfuls of water, and give it the bird to drink, fresh daily. (3) Do you mean—let them fly loose in the room? You can do so, of course; but the plan is seldom so successful (never, so far as breeding is concerned) as keeping the various couples in cages. Heat is not at any time necessary for the hardier British birds; neither is it for the hardier breeds of Canaries. If flying loose, it would be doubly unnecessary, if that is possible.

Softbills in an Aviary.

W.F.M.H.—You say your aviary is "about 7 ft. 6 in." But what do you intend to convey by this—7 ft. 6 in. square? Most of the smaller Softbills can be kept together in a decent sized aviary. The Robin and the Great Tit should be barred absolutely, and the Blue Tit and Nuthatch are best not kept with other birds unless in a very large place. Song Thrushes are not usually quarrelsome with other birds, though I don't consider them fitted to be kept with smaller Softbills in confined quarters, for they keep the latter away from the food-troughs, and scare them at other times. By the way, split the food amongst several vessels, and keep these in different parts of the aviary. You can easily get together a charming collection. Stick to the male sex if you can manage it. Were your place larger, this would not matter, though it seems rather cruel, from the sentimental point, to confine the hens, seeing the long journey they have made with a view to propagating their kind. From this list you should find ample choice:—Wheatear, Whinchat, Stonechat, Nightingale, Blackcap, Redstart, Whitethroat, Hedge Sparrow, Bearded and Long-tailed Tits, Wren, Tree Creeper, Wryneck, Grey and Yellow Wagtails, Tree Pipit, Pied Flycatcher, and Woodlark. You will find them expensive to feed, ample live food being a daily necessity, likewise a good insectivorous mixture. If you turn in newly caught birds, you are certain to lose a few through not "getting on" with the soft food mixture. "Meated-off" birds would be much better as regards chances of survival. At any rate, one or two birds freely on food should be in the place before any newcomers are released therein.

Will Redpolls Breed in Cages?

Liverpool.—Redpolls are about the easiest of all British birds to breed with in a cage. They do not often make much fuss about the matter, once well settled down to life in captivity. It is no sure sign of sex, however, that two birds should feed each other. Two cock Redpolls in forward condition will feed one another most industriously; so will two cock Linnets or Goldfinches, etc. Still, it is a good sign, and quite likely you have a true pair. See other remarks on sexing Redpolls in this week's issue. A cage, 3 ft. long, 2 ft. high, and 2 ft. from back to front, makes a rattling good cage to try to breed either British birds or Hybrids in, the good width affording seclusion. Give them an ordinary nest-bag and a supply of charpie for nesting materials. My own Redpolls were very fond of charpie, and built a fine, clean-looking, cosy nest practically entirely of it. They used an earthenware nest pan, but the majority of hen British birds prefer wooden nest-boxes, or Roller travelling cages with the end (or top) and inside fitments removed. They will rear the young on the ordinary seeds, but must have unlimited seeding shepherd's purse, groundsel, chickweed, and the like. In addition, mine also relished soft foods, and egg food well sprinkled with maw seed.

A "Fat" Linnet; also Hybrid Breeding.

Esperanto.—Take my tip, and don't worry about the supposed excess of adipose tissue on your cock Linnet. If he sings and appears otherwise healthy, let well alone; good health is the chief point. I'd sooner be a little too fat than a little too thin myself (it feels much nicer, I'll bet), and I would most decidedly sooner see my birds that way. I have kept a good few birds in my time, and think I can claim to have studied them keenly, and I am very far from being convinced that a sort of Banting diet is correct for them, and a sort of slim waist a prime essential to healthy condition. I don't believe in giving Linnets hemp in their stock mixture; only a feed very occasionally, unless moulting. Linseed also need not now be given, except in very small quantity. His stock mixture would be:—Canary two parts, teazle and summer rape one part each, linseed a quarter part. You are quite right in giving flowering and seedy green foods—dandelion, chickweed, shepherd's purse, groundsel, and plantain cannot be beaten for Linnets, and Nos. 2, 3, and 4 on this list are obtainable during greater part of the year. You can certainly run a cock Goldfinch with a hen Canary for a nest, then (after a rest) transfer him to a hen Linnet for the remainder of the season. This is the right mating to pursue—Goldie cock to Linnet hen—for the production of Goldfinch-Linnet Hybrids.

Aviary Breeding.

H. T. Woolage.—Your scheme is an interesting one, and ought to meet with a certain amount of success in the last few issues I have given at length my opinion on attempts at breeding in aviaries with mixed groups of birds, and cannot add anything thereto. I should say the weakest points in your own scheme are a tendency to get too many birds into each compartment, and a tendency to mix the species of hens employed somewhat too much. A lot of Goldfinch cocks together, too, are pretty certain to squabble; likewise a lot of Greenfinch and Linnet cocks. In all probability, if you halved the number of birds you have planned to use, you would in the end have more success to place to their credit.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S., M.B.N.H.S.

Amazon.

Thanks to your reply, my bird is much better, but the looseness is still in evidence every morning. Can you suggest any further remedy?—S. TREWEEK.

S. Treweek.—Glad to note the bird is better. I take it you have corrected your dietary, as advised in my previous reply. Let your bird have as much cuttlefish as it will eat. Give eight drops of tincture of rhubarb direct to the bird's mouth, then, three hours afterwards, let it have the following to drink:—Five drops of aromatic sulphuric acid to one ounce of water for two or three days. Afterwards follow on with directions already given. Cage must be kept strictly clean; it is better to remove voidings at once if possible. If the bird appears in pain, give three drops of tincture of opium direct to the mouth. Continue to give the Chemical Food as already advised. Keep the bird warm and quiet.

Outdoor Aviary, &c.

A. A.—A brick shelter shed is, of course, the best, more lasting, more weather-proof, etc.; but this depends on what you wish to spend. A wooden shed, if made wind and wet proof is equally efficacious; a good plan is to have two thicknesses of boards with a layer of felt between for all walls. In like manner a boiler and hot-water pipes are valuable adjuncts, increasing the range of birds you keep, while you have provision for exceptional extremes of weather. If you have such, see that all woodwork is properly protected in region of boiler, or you may have a deplorable catastrophe. In your case you cannot concrete the whole of your aviary, therefore it will help you but little to have such in your shed. You can make yourself secure against rodents of all kinds by taking wire netting below ground level, as per my previous reply. After soil is well trodden down in your shelter, put three inches of gritty sand on same, rake this over and renew as necessary, and the place should be kept quite sweet. As regards ventilation, fix a revolving cowl on roof, and have a sash to open in the front of aviary for very hot weather, in such position that it will not create a through draught. I have marked up and returned plan. Gold and Bullfinches will agree with your Foreigners, but the Bullfinches make havoc of your bushes by eating the young buds in spring time. Goldfinches and Bullfinches I reared without difficulty when I was a keeper of British Birds. Goldfinches you can treat much as you would Canaries as to extra food when rearing young. My cage was smaller than yours and I reared several broods without difficulty as above; but a continuous supply of fresh green food is important for both these birds when rearing young.

Paradise Whydah, etc.

(1) My bird pants. It is fed on white millet and ants' eggs. What can I do for it? (2) Is Hall's Distemper safe after it has been on about 12 hours? (3) Can I put a pair of Cockatiels out of doors now? They have been in the house all the winter.—J.W.G.

J.W.G.—(1) Diet:—Canary, white and spray millet, ants' eggs, green food, grit, cuttlefish, and water; also several mealworms or other insects (spiders, beetles, smooth caterpillars) daily. Make its drinking water just saline with Epsom salts for one day, providing the bowels are not too loose repeat the dose in a week's time. The insects will help the bird materially at this juncture. You can procure mealworms through our advertisement columns. This bird should be kept warm, free from draught, and below the level of any gas jets. (2) Quite safe. (3) If your locality is a southern one, you can put them out at once, but if it is northern I should wait till the first week in May before doing so, though unless we have an unexpected and very severe spell of weather, they should be safe enough. In our uncertain climate it is best to be on the safe side and wait till the end of the month.

Scarlet Tanager.

(1) What is its value? (2) Are they much use for exhibition purposes? What is their diet and treatment?—T.C.C.

T.C.C.—(1) A newly imported specimen, 12/6 to 15/- each; a steady and acclimatised specimen, in good feather, almost, if not quite, double that price. (2) If in very finest condition, perfect as to toes, etc., and fine and sleek in feather, it should stand a good chance of catching the judge's eye; but of late so many rare species have come to hand, and been shown in good condition, that the well-known but beautiful Scarlet has had to take a back seat for the time being. Of course, this principally refers to the large shows. If in good condition they should always stand a good chance of a card. (3) They need some good soft food mixture (see advertisement columns) or equal parts of crumbled sponge cake, crushed Osborne biscuits, best ants' eggs (cocoons), dried flies, and game meal; well mix and make crumbly moist for use. Also a plentiful supply of ripe fruit, and several mealworms or other insects daily. They are not delicate birds when once acclimatised, but they should not be kept in a small cage; the smallest cage I keep such a bird or pair in is 30 in. by 15 in. by 18 in. high.

Cordon Bleus, etc.

(1) My new purchases are mostly dull, though bright at times. What can I do for them? (2) Have I room for any more in my aviary cage, 3 ft. by 3 ft. by 1½ ft.? (3) If so, what kind would you advise? (4) What diet?—NEW YEAR.

New Year.—(1) These lovely little birds come to hand in a very delicate condition, and very many of them speedily die. I should advise you to keep them for two or three weeks in a cage to themselves, or they may contaminate your other birds. Keep them warm, free from draught, and they may recover, but don't mix them with your healthy stock till they are quite lively and sprightly. Make their drinking water just saline with Epsom salts for one day only, and if you can procure it give a spray from a rose bush that is covered with green fly; of course, at this season this must not be given when frosted; also let them have tufts of grass in flower to pick over. (2) If the cage is cleaned daily you could keep a dozen small birds in it. By the way, all new purchases ought to be placed in quarantine for a few weeks before being mixed with healthy stock. (3) Zebra and Common Waxbills, Green and Common Avadavats. (4) Canary, white, small brown, and spray millet, green food (especially sprays of blighty foliage of a non-poisonous character), grit, cuttlefish, and water ad lib, for drinking and bathing. A few ants' eggs (cocoons), if your birds will eat them, are very wholesome.

Red Cardinals, etc.

(1) Will these breed in an indoor aviary 6 ft. by 5 ft. by 8 ft. high? (2) Will egg food do them any harm?—S. T. HASELTON.

S. T. Haselton.—(1) These birds often nest, but do not often rear their young in captivity, owing to the difficulty of keeping up a supply of live insects for them. Though they eat prepared foods at ordinary times, for the first fortnight of the youngsters' lives they will not touch it, and you must either leave them a good supply in some vessel from which they cannot escape, or give them a supply of live insects (cockroaches, mealworms, beetles, smooth caterpillars, maggots, in fact, almost anything that creeps or flies, save bees and wasps), every one or two hours, from sunrise to sunset. If you keep them with birds that do not require insect food, then you could put in a "Demon" beetle trap half full of cockroaches, and the birds could help themselves, but you must keep up the supply and variety. Also plenty of fresh green stuff. (2) About three years ago, I came to the conclusion that the weight of evidence showed egg to be a dangerous food, and I determined to feed without egg. The result of that experiment has been such that I have never used it since, nor recommended anyone else to do so. A good mixture consists of game meal, dried ants' cocoons (very best), dried flies, dried pupæ, and crushed Osborne biscuits; well mix and make crumbly moist for use.

Budgerigar Ill.

R. De. S.—In addition to seed your bird should have grit, cuttlefish, green food, and water ad lib for drinking. Make its drinking water quite saline with Epsom salts for one day only, and give it two drops of glycerine direct to the mouth for three days. If this does not give relief, get from your chemist the mixture as follows:—Ipecacuanha wine, oxymel of squills, and glycerine in equal parts; take half a teaspoonful of the mixture to tablespoonful of water, and let the bird have only this to drink for a week or ten days, or a little longer if necessary; of course, you will give a fresh supply each day. It should be kept warm and free from draught till recovery is complete.

"Pink and Grey Parrot" Pecking Itself.

McGinty.—You do not say how you have been dieting your bird: improper diet is the cause of the great majority of cases of feather pulling. The proper diet for this bird is:—A mixture of two parts canary and oats, and one part each hemp, wheat, dari, small Indian corn, and hemp. Give, in addition, at intervals, ripe fruit, plain biscuits (dry), and nuts; with regular supplies of grit, cuttlefish, green food; and water three times a day to satisfy its thirst. Do not give sops, fats, or any kind of animal food. It will be a work of time improving your bird. Sponge the bare parts daily with quassia solution. Put one teaspoonful of Dinneford's magnesia in its drinking water for one day, and repeat this weekly for several weeks, providing its bowels are not loose; on the other days (that is, in between) well colour its drinking water with Parrish's Chemical Food. You will have to persevere probably for a few months before

much improvement is apparent. You must not use a metal drinking vessel while giving drugs.

Which is the Egg Eater?

W. H. Wheelwright.—Any one of the following: Chaffinch, Crossbill, Bullfinch (both kinds), Starling, and Ortolan Bunting, would be fully equal to the deed you name. The Zebra Finches are cunning little fellows, and will soon learn to build where they can defend and rear their progeny in security, if you provide them with cover, in the shape of masses of twiggy branches, and square nest boxes, with an oval hole (1 in. by 1¼ in.) in front. Do not spare the number of nest boxes—put them in every suitable corner—and I am of the opinion that before the summer is over you will have a small tribe of Zebra Finches disporting themselves in your aviary.

Red-breasted Cockatoo Wheezing.

T. E. Collings.—You will find the correct diet for these birds in reply to "McGinty" in this issue. Get from your chemist the following mixture:—Ipecacuanha wine, oxymel of squills, and glycerine, in equal parts. Put half a teaspoonful of this into the bird's drinking water (two tablespoonfuls), till relief is given. The water should not be left continuously in the cage, but allow the bird to satisfy its thirst three or four times a day. Keep it warm and out of all draughts. Twice a week soak half a teaspoonful of Dinneford's Magnesia into a crust of dry household bread, plain biscuit, or any other absorbent food the bird will eat, so as to keep its bowels moving freely, but not looscly.

Java Sparrows Nesting.

Phyllis Yaldwyn.—Sorry to hear your birds do not behave better, but I think they will settle down a little later. What sort of nest box have they? These birds do best with a square box, say six inches all ways, with an oval hole about 1½ by 1 in. cut in for entrance, near the top of one side. Hang this up near the top of cage, and I do not think you will have any more broken eggs. But you must not be too inquisitive; if you get looking into the nest boxes often to see how many eggs there are and whether they are hatching, this alone will unsettle, cause them to turn out their nest box and begin building over again. Hope you will have better luck next time.

Budgerigars not Breeding.

"Dunno."—I think the sex of your bird is correct, but that she has gone out of breeding for the time being, and that about a month hence she will settle down again all right, and her cere resume its normal colour. Observation should soon decide this for you. Sooner or later, if a true pair, you should catch them in the act of pairing. It is impossible to say with certainty, as abnormalities occur with every species, and we hear of female occasionally with blue ceres, so that in such a case, without having the birds under observation, it is impossible to give a positive reply, but I am of the strong opinion your bird is a female. Two pairs of Budgerigars, providing they have space, frequently settle down to breeding quicker than a single pair; one stimulates the other, but sooner or later, even a single pair in a cage settle down to reproduce their kind. Your diet is satisfactory; give them tufts of grass in flower, when you can procure such free from frost and not sodden with rain.

Breeding in Captivity.

C. Melhuish.—Foreign birds are somewhat erratic as to breeding, except a few of the so-called common, or rather, freely imported species. Zebra and Ribbonfinches, White Java Sparrows Bengalese, the diminutive Diamond Dove, Budgerigars, and Cockatiels may all be accepted as reliable breeders. The following have all bred more or less freely:—Silverbills, Grey and Green Singing Finches, Gouldian, Rufous-tailed Saffron, and Diamond Finches, Bronze Mannikins, Spice Birds, and many others. The most likely to cross with the Canary hens would be:—Alario Finch, Grey and Green Singing Finch, Grey-necked and other Serins, all of which should produce good singing Hybrids, and with the exception of the first-named, also pretty birds: the Alario-Canary Hybrid is very plain, but usually a good singer. You must understand that there is the same uncertainty as to producing Foreign Hybrids that there is in producing British ones. The following purely Foreign Hybrids appear to be obtained fairly readily:—Spice Finch and Bengalee, Spice Finch and Silverbill, Silverbill and Bengalee, and Bengalee and Striated Finch, and several others of closely allied species.

Parrakeets and Finches.

J. H. Adan.—I have, even in a comparatively small and crowded aviary, found the Cockatiel absolutely safe at all seasons, and the same may be said for the Turquoisine, and I believe the Many Colour. But as for the Blossom-head, I should say most decidedly no; in the breeding season they can scarcely be trusted with kindred species. Some individuals are very treacherous during this period and need careful watching, even with other Parrakects as large as themselves. Of course, every rule has its exceptions, and occasionally an amicable pair of this species comes along, as occurs with every other species. I am afraid, generally speaking, Blossom-heads must be relegated to the class that cannot be kept with others of any kind smaller or weaker than themselves.

Budgerigars Going Wrong.

New Beginner.—I do not think either of your hens would have been of any use for breeding; the surviving one will certainly not be any use for two or three months at least. Any young she produced would be weak, puny things. If nothing worse, they were afflicted with what is commonly called "French Moult," and such stock is of absolutely no use, for reproduction at any rate. If your males are sprightly, strong, and well-feathered birds, get two more hens for them from some good strain of aviary bred birds (see advertisement columns), and destroy the one you have. Give your cage a good clean, and put it in your brick house, it will be better there, but arrange it so that it will get plenty of sun and not be in a draught. Hang up four hunks; it is large enough for two pairs. Your diet is satisfactory; give as an extra a tablespoonful of oats twice a week.

Red-faced Lovebirds.

L.G.—These birds mostly come to hand in a very frail condition, and very many of them never get over the hardships of the voyage to this country. Do not leave the water continuously in the cage, but let it satisfy its thirst three times a day. Keep a piece of cuttlefish in its cage, and lightly colour its drinking water with Parrish's Chemical Food. Diet: Canary, white and spray millet, grit, cuttlefish, also a piece of ripe apple, fixed between wires of cage, and, when procurable free from frost, a tuft of grass in flower for it to pull about. Till it is in condition it should be kept warm and free from draught.

Mynahs?

T. E. Ryves.—I am in doubt as to what bird you mean. If you mean Mynahs, they require a cage as large as a full sized Parrot's cage, and about the same treatment as to temperature, that is if suitably fed. They will thrive in the atmosphere of an ordinary living room, but they must be kept very clean or they soon become offensive. They should be fed on some good soft food mixture (see advertisement columns), or the following:—Boiled potato, crushed Osborne biscuit, game meal, ants' cocoons, dried flies, and dried pupæ, in equal parts; well mix, and make crumbly moist for use. Ripe fruit, as much as they will eat, live insects, mealworms, and any spiders, beetles, cockroaches, etc., you can catch. It should be trained to take a bath out of its cage, as it makes a rare splash, and it will not keep in health without its bath. A few scraps of finely minced raw meat, also suet, may be given once or twice a week. Fed and treated as above they are healthy birds, and interesting from the facility with which some individuals learn to utter words in a very human voice. If I have not guessed the bird you mean aright, you must repeat your query.

POST MORTEMS.

Mr. J. North, 435, Oxford Road, Reading, will examine cage birds for a fee of 1s. 6d. each bird; for a reply direct 2s. 6d.; analysis, 21s. Subjects for post-mortem examination must be sent packed in a box direct to J. North, with fee. Any sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.

Hen Canary.

C. K. Eaton.—This hen died of inflammation of the egg passage. It is a good plan to give some such soft food as bread and milk sop during the egg laying period.

Nursing Hen.

S.D.—The immediate cause of unexpected death was apoplexy, but this was the result of enlargement of liver, and a too generous diet. It is suggested that more green food be supplied.

GENERAL.

Answered by the EDITOR.

A Testimonial (T. T. 8.).—We have duly noted contents of your communication.

Feather Troubles (J. C.).—Your query will be answered by our Mr. J. North in next week's issue.

Cuttings (R. Jolliffe).—Thanks very much for your thoughtfulness.

"Eggshell."—Yes, if you pierce the eggs as mentioned they will be rendered useless.

"Bird World Magazine" (B. H. Clegg).—You will find your question answered in another reply given this week in this column.

Lecture (G. W.).—We will use our endeavours to secure the lecture you mention for insertion in our columns.

Paper for "Bird World" (Mrs. E. G. B.).—Many thanks for a most interesting article. Will certainly utilise.

Order Executed at Last (A. Dolphin).—Glad to hear there has been no necessity for harsh measures.

A Mishap (J. B. Woodhouse).—We much regret the mishap to the plate, and are sending another, which we hope will reach you safely.

Birthday Number for 1906 (J. U. G.).—We have only an odd copy or two of this, but can let you have same post free on receipt of a postal order for sixpence.

Remuneration (G. H. S. E.).—We are extremely obliged to you for your communication, but it is not our custom to pay for mutual help of this nature.

Article on the Blackcap (C. Fairey).—A very thorough and practical article on keeping the Blackcap Warbler, ran through Nos 198, 199 and 200, which can be sent you post free on receipt of 3d—one is a special number containing two plates.

Verdict (F. R.).—It reads very like a case of "hard lines," and we regret your society should have been treated in the manner you were. Thanks for cutting forwarded; also for kind promise of local items, which are always most acceptable.

Alteration to "Bird World" (H. Rees).—Your remarks noted. We have thought the matter well out and see no reason to alter our decision. Sorry to hear that you are still lacking employment, and trust affairs will quickly mend for you.

Foreign Subscription to "Cage Birds" (F. Bouche).—The subscription to CAGE BIRDS for Belgium is from this date 8s. 8d. per annum, postage paid. We are delighted to enroll you on our list and hope you will persuade still more of your countrymen who understand English to join us.

First Steps in Canary Breeding (Lt.-Col. Brodie-Mills).—We agree with you. It was our intention to issue the book simultaneously with CAGE BIRDS ANNUAL, but the printers ordained otherwise. However, it is out now, and a copy has been sent you. We can send you a book on Mule breeding, on receipt of 1s. 1d. post free.

Cuttings, The Shamah, etc. (T. Aitken).—Accept our thanks for your interesting letter and the cuttings, which we shall have pleasure in using as space permits. Your query respecting the "Imperial Bustard" has been referred to Mr. Frank Finn, who will give you an answer in our columns next week.

Enlargement of the "Bird World" (J. G. Taylor).—We are waiting for the first volume to be completed before altering the BIRD WORLD, so that subscribers can have the series in the same form. The number of pages will be increased, but the superficial area of the page will not be greater than at present.

Breeding Cages (W. Munn).—You have mistaken our position in the matter. Our mission is to give readers all the latest information on breeding cages; but we do not make and sell them. Turn to our advertisement columns, and you will find therein the addresses of many good and reliable makers of breeding cages, who will supply to order, any pattern you wish.

Glasgow and West of Scotland (Robt. Watson, jun.).—Why should you think you were getting the cold shoulder? I fear you are but one of many who, alas, are too ready to imagine bias and favouritism where they do not exist. I believe the reason we did not have a report of your Annual Show was because our reporter could not manage to get a catalogue. We publish all reports we receive. Make no mistake about that. I sincerely hope your open show will be a successful one.

"On the Make" (Roland Mein).—You talk arrant nonsense, sir, and have given the matter no thought. If we received the full penny from the newsagent the case would be different, but we get a bare fraction over a halfpenny for our copies, and now on account of trade union developments amongst pubishers' assistants, we are being requested for further discounts. However, we have the workhouse at Poplar, and shall probably have an old age pension, if hard work does not kill us meanwhile.

Several Queries answered by post.

A GOOD START.

SIR,—I have taken CAGE BIRDS for about 18 months now, and am very pleased to be able to tell you I have gained a lot of knowledge from it, as regards Canary breeding. I have eight hens and four cocks. This is my second year of breeding. I have two hens which hatched this week-end seven young out of nine eggs, and have also four hens sitting, while, according to appearances, another will be laying by Tuesday next. Then I have another to pair. I have also taken "Bird World Magazine" since its commencement, and it is a good 3d. If you give anything like extra value for the extra 3d., I shall not grumble. B. H. CLEGG.

THE LINNET IN CAPTIVITY.

I think many are troubled with the same difficulty of steadying the birds. Having kept Linnets now between six and seven years, my experience is that getting them finger tame, as they term it, is out of the question. I have birds now, caged three years ago, almost as unsteady as that of "Linnet on the Brain." They sing well and appear very contented, yet there is not that tameness which we all are wanting to accomplish. In your issue dated March 30th we read "Linnet Fancier's" treatment, which I have tried without much success. Admitting that some are more confiding than others, I am inclined to think still that there is a secret somewhere. For instance, I saw an old Linnet singer open his cage door and offer a tit-bit (what, I could not see) to the bird, which lowered its head to be scratched like a Parrot. On enquiring of him his method, after telling my own trouble, he smiled and said, "You started wrong first off." If some of the leading fanciers would give a few hints, it would make the little brown bird more popular with us ordinary fanciers, who keep them purely as a hobby.

WM. HUCKLE.

CAGE BIRD SOCIETIES AND THE PROTECTION OF MEMBERS.

SIR,—I have read the accounts published by you of the charges against a certain dealer, and feel prompted to bring to the notice of the various societies a rule of the Mansfield C.B.C. which deals very effectively with dishonest people, and is a means of protecting our members from the ways of persons who seem to consider the fancier fair game for their shady practices. The fanciers hereabouts are in a particularly unfortunate position for the sale or purchase of stock. We have no bird market, and there is no really recognised dealer in the town, so that almost all birds have to be bought from or sold to a distance. When we formed our club we found that most of the fanciers joining had, at some time or other, been the victims of some unscrupulous dealer or fancier, and we determined to adopt some means of protecting members. I wish it to be clearly understood that I do not class all dealers alike. Far from it, for I know many dealers with whom it is a pleasure to do business. Some will doubtless read these lines with whom I have had dealings for years, and whose transactions have always been of the most honourable kind, and with whom my relations have ever been of a most cordial nature. But there are others whose dealings seem based on very different methods. The rule I refer to reads as follows:—"It shall be the duty of all members to report to the club any transaction of a fraudulent character that may have occurred to them in their dealings with other fanciers or dealers, and if the members think such a course justifiable, such fanciers or dealers shall have their names entered in a book called the 'Black List,' as a protection to its members." We have had a few cases where the same method of procedure as is outlined in the case published has been tried on one or other of our members, and where no reply could even be obtained as to receipt of birds or otherwise. In these cases a letter from our secretary, intimating that, unless a satisfactory reply was at once received, the matter would at once be placed in the hands of our solicitor, has always led to the recovery of the member's money without legal action being taken. It should be clearly understood that we do not issue this as an empty threat, for we are at all times willing to take up the cause of a member (always supposing that it is just), even to spending the last shilling of the club's funds, and, those being exhausted, to rally round him with a special subscription, to prove that we are in earnest about this matter. If the fanciers mentioned in the particular case in question had been members of a society with a similar rule, they need not have suffered, and I should like to impress on all societies that, by adopting similar tactics, the bird trade would be considerably purged of a lot of the dishonest people who, with alluring advertisement and in other ways, prey upon fanciers, many of whom are unable to afford to make a stir about the matter when they have been "done." The honest, business-like dealer has nothing to fear, and it is not against him that we wage war; but, as far as our society is concerned, we will have none of the other kind, and will see that he gets none of our members' hard-earned money.

W. ROSLYN.

THE PALACE WINNING GOLDFINCH.

SIR,—Mr. W. G. Bull, in his lecture on British Birds, given before the Bristol Cage Bird Society, says: "If any of you saw the last Palace winning Goldie, you will have noticed that he had not a square blaze." Dear, dear! What are we coming to? By the "winning Goldie" I take it he means the first-prize winner, which belonged to me; and, if this is so, how on earth has he arrived at this conclusion? I have had many good Goldies since I commenced the hobby of bird keeping, and have seen many more, but never have I had the pleasure of seeing one with a more square-cut blaze. His winnings are probably equal to (or nearly so) any Goldie that has ever lived, and each time he has been reported on in your valuable paper the following has appeared:—"Perfect square-cut blaze." So, Mr. Bull, you see you have made a big mistake. In his report of the Palace Show, one reporter goes so far as to say that he is an "ideal British Goldfinch," and I feel certain this could not be said of one with a round blaze. Perhaps your Mr. Weston, who judged, will kindly give his opinion. D. G. LEWIS.

[Our Mr. Weston says that in his opinion the 1907 Palace winning Goldfinch would be hard to beat as regards the square cut of its blaze. He thinks it probable Mr. Bull was referring to the 1906 winner, which had not a particularly square under-blaze.—EDITOR.]

TESTIMONIAL TO Mr. D. H. TEDSTONE, HON. SEC. WELSH C.B.C.

SIR,—May I call the attention of the members of the club to a movement that was unanimously decided upon at the annual meeting at the Ship and Bell, Merthyr Tydvil, on April 2nd? All members will agree that Mr. Tedstone has had much hard work while he has been in the office in endeavouring to make the club the success which it is now. It is more flourishing than ever, and has a good prospect; therefore I trust all will put their shoulders to the wheel to work the movement to a success, which can easily be done with every member's assistance. It was decided that a committee should be appointed from various districts, in order to work the movement successfully, each committeeman to have a subscription book, so that he may receive subscriptions; or, if more convenient, members may send their subscriptions direct to me or Mr. J. H. Jones, Ship and Bell, Merthyr. I hope that every member will respond to this appeal, so that we may be able to encourage our most deserving and worthy secretary. The amount (one guinea) collected at the meeting gives us a very good start. The following is the appointed committee:—Secretary, B. Davies; treasurer, Mr. J. H. Jones; committee, Messrs. T. L. Cartree (Aberdare), E. A. Jones (Dowlais), J. H. Jones (Merthyr), D. Jenkins and A. G. Camden (Swansea), F. P. Dymond (Cardiff), T. Oriel (Abertillery), D. R. Jones (Llanelly), H. S. Davies (Llandilo), G. T. Jones (Brecon).

B. DAVIES.

21, Cardiff Street, Abercanaid.

ALLEGED REFUSAL OF MEMBERSHIP THROUGH ASKING FOR PRIZE-MONEY.

SIR,—In your last issue, referring to the above, the sec. states the heading is incorrect. I can prove by letters received from the sec. that the above heading is straightforward and perfectly correct. The sec. says: "The writer knows well why he was asked to resign." The only, and no doubt the correct, reason why they wished me to resign was because I asked for what was honourably due to me—viz., the balance of my prize-money. I honourably won everything in the Canary section under Judge Payne (which gentleman's name I overlooked in my first letter). Now, I am perfectly willing to send in my resignation on receiving a straightforward, satisfactory and correct reason—not because a member of a society asks for his prize-money. Being successful with his ten exhibits I can prove was very disappointing to two or three of the committeemen, whom my first letter refers to as "no doubt disappointed exhibitors." If such so-called fanciers would allow me to publish their names in your valuable paper, and explain why they are "disappointed exhibitors," I should be most pleased to enlighten them of what I am "in the know." Re my challenge, up till to-day, I may advise your numerous readers that this has not been accepted. I will leave it for your readers to think whether they consider it is jealousy on the part of a few members of the society, or if they think they are acting straightforward in wishing me to send in my resignation as a member without a reason (which I particularly asked for through your columns). Would the sec. care for me to send the letters, he sent me, to the Editor for publication, also mine in answer to his? If so I should be most willing to do so, and then allow readers to pass their opinions. Having been proposed as a member, and paid my subscription, I consider myself still a member of the Bath and Dis. F.A. until they give me a satisfactory reason to the contrary. I am certain of my birds being again in the prize-list some day.—G. E. LANHAM.

THE KEYSTONE OF THE C.B.U.

SIR,—With all the letters criticising rule 17 of the C.B.U., which is the most vital rule I have not noticed even from its most bitter opponents any suggestion which could be taken as an amendment to it. It would be of much greater benefit to all fanciers if those who object to rule 17 could suggest something to take its place—that is, to protect, not coerce, the fancier—and which would enable the C.B.U. to force an open show committee to act honestly to the exhibitors without having to go to the County Courts.

SYDNEY L. COCKS.

SIR,—Mr. Ramsden accuses me of attempting to evade the point at issue. He repeats that the Palace Show was held under C.B.U. rules, although I pointed out that nothing to the contrary had been stated. Mr. Ramsden purposely misquotes my statement, in order to make it appear untrue. He says that I distinctly stated that the C.B.U. "exempted" the Palace Show from rule 17 because they (the Palace) would not have it. If he cares to look my letter up, he will find that the word "exempted" was never used, neither was my allusion made to the late Palace Show. By using "exempted," he makes it appear that my statement referred to the late Palace Show. The word I used was "exempts," which gives my statement a totally different meaning. I based my statement on the remarks made by Mr. Ramsden at the delegates' meeting, and what I wished to point out to fanciers was that, no matter how members of the C.B.U. voted for rule 17, if it did not agree with the Palace company, they would not have it, for Mr. Ramsden distinctly stated that the Palace Show "will be open to all." Therefore, my statement is quite correct. Perhaps I should have used the words "will exempt" to make my meaning more clear. Now, Mr. Ramsden, can a society holding a show "open to all" conform with rule 17? I think that I have again proved that I do "confine myself to facts within my knowledge."

WM. REID.

PROPOSED NEW SOCIETIES.

Heywood and District C.B.S.

SIR,—A meeting of fanciers was held on Ap. 9th, when it was decided that a Society be formed, to be called the Heywood and District Cage Bird Society. Twenty-two members associated themselves in the effort, "and paid." A first feather show was arranged, and there is every indication of great success attending the fixture. The next meeting will be held on April 23rd, when Mr. James Lee, of Rochdale, will address the meeting.—R. D. MCMURNO, Hon. Sec., 27, Market-place, Heywood, Lancs.

Handsworth and Dis.

SIR,—As there does not seem very much headway made with the West Bromwich proposed society, why not try a society for the Handsworth and district fanciers? I have noticed a few letters in one or two recent issues, and I think there are not the fanciers in West Bromwich to take the matter up as there are in Handsworth and district, because we could probably draw them from over the border to join us. Most likely the following gentlemen, who have written on the subject before, would take it up again—viz., Mr. Lewis, Mr. Key and Mr. Green. I do not mind which of the two societies I myself support, but I should prefer the one for my own district. I would thank anyone else in this district interested on the subject for a reply. J. H. JENNINGS.

16, Cornwall Road, Handsworth.

THE POINTS OF AN EXHIBITION LINNET.

SIR,—I am pleased to see that Mr. Marwood admits some of his remarks re Exhibition Linnet may have been misleading, and my reason for again trespassing on your valuable space, Mr. Editor, is that his ideas, even in their amended form, are still, I think, far from being the correct ones, especially when he still contends that the Linnet should have a light throat continuing down centre of breast, and running off to dirty white at vent. Mr. Marwood kindly advises me to study my back numbers of CAGE BIRDS, so that then I shall be better able to judge if such a bird as he describes would have a chance if shown in good company. I respectfully beg to inform Mr. M. that I do not require to turn back to study them. I have done so from the first number issued, and thereby gained, along with practical experience, such knowledge that enables me, and, I hope, without appearing arrogant, to advise the British Bird novice when selecting a Linnet for exhibition, to discard all birds with light throats and breaks down centre of breast. For the other points of an exhibition Linnet, let them turn to Mr. W. G. Bull's description given to the members of the Bristol C.B.S., and published in last week's CAGE BIRDS, with every word of which I agree. Mr. Marwood contends that a bird "fairly erect." with a good chest, should always stand in front of the short, chubby Norwich type, although the latter may excel in colour and markings. Now, what does the standard say Mr. M.? Shape and position 10 points, markings 20 points, colour 15 points; that is, 35 points against 10. This does not square very well with your ideas, does it? I also think that you are very much mistaken when you suggest that Messrs. Houlton and Battye favour the light throat. I have exhibited and won under both those gentlemen, and have also seen a large number of Linnets that they have placed in the money, but I have never yet seen them favour the light throats. Further, judging by the class of Linnet exhibited by Mr. Maddison at the Leeds Show, held October, 1903 (Mr. Battye, judge), I should not think that he does this either.

F. KING.

THE ART OF SOLDERING.

SIR,—Your correspondent, J. A. Y., asks me to tell him how to use a soldering iron. I will with pleasure. First file the copper bit to the required angle, then heat your iron fairly hot, and with an old file carefully clean the part to be tinned. Put some resin on a flat surfaced stone (a stone door step will do, but it must be dry and free from grease) melt the resin with the tool, next melt some solder into the resin, rub your soldering iron in this mixture, as though you were trying to sharpen it on the stone, and the solder will adhere to the copper bit. When soldering, use a clear sharp fire, and avoid letting your iron get red-hot, as this, and a smoky fire (sulphur) will remove the tinning; if this should happen, proceed as before mentioned.

THOS. SOAR.

SIR,—Seeing that one of your readers is anxious to gain a little information as to how to tin a soldering iron, or, to be more correct, a copper bit, and as the writer has had several years' experience as a tinman, being daily called upon to solder all sorts of articles, in tin, iron, copper, brass, etc., possibly it would not be out of place if I were to give a few practical hints to those who are desirous of learning the art of soldering, which is an interesting and at all times a useful art, when once properly learnt. In order to affix the solder on to the face of the copper bit we require a flux for the purpose. There are several of these fluxes upon the market, namely, resin, spirits of salts, and soldering composition fluxes. Resin is not of much use generally, and then spirits of salts is an evil-smelling and troublesome liquid to meddle with, as it has to be "killed" by cutting up, and putting some small pieces of zinc in it, until the poisonous liquid ceases to boil or effervesce. The writer does not admire spirits of salts as a good soldering agent, as it soon leaves a rust mark if not quickly rubbed or washed off the article. The writer himself, who is employed in a large factory, has for some years used a soldering flux known as "Baker's soldering preparation, or flux," and which is obtainable at all good ironmongers in 6d. and 1s. stone bottles. By using this liquid, soldering is quite easy and delightful, it will not rust, and it is always ready for instant use. Used with care, a small bottle of it will go a long way, and it should be always kept well corked when not in use. We pour out a little of the liquid, say half an egg-cup full, then get our soldering iron and file it with a medium rough file on each of the four sides of the copper bit, say about ½ to ¾-inch from the point, according to the size of the bit. Having got it fairly bright, we put it into a clear part of the fire, and let it get hot there. On no account must we let it remain quite long enough there to get red-hot, as that spoils it and takes all the good qualities out of the copper. A little practice will soon determine what is the exact heat required for the soldering iron. Having got our soldering iron sufficiently warm enough, something just below red heat, we dip the point of it into the egg cup of flux, and afterwards put the point of the soldering iron on to a piece of solder; if it melts the solder, turn the handle round a little, so that the four sides or faces of the soldering iron gets a chance of having some solder upon them. Dip again the point of the soldering iron into the egg-cup and put it again on the solder, and once again into the flux and solder; you should now have a beautiful tinned soldering iron. When soldering any article, make a little brush with a few hairs taken out of the soft household broom, and tie them with cotton or twine to a piece of stick. Cut off the hairs with a pair of seissors about a quarter of an inch from the end of the stick where tied. Then if you wish to solder a hole in a kettle, or any wires together for a cage or anything else, just brush a little of the liquid out of the egg-cup on to the article, get your soldering iron warm enough, dip it into the flux, and then with it in your right hand and a piece of solder in your left, melt a little solder on to the desired spot and slightly work it in with the point of the soldering iron a little, especially if the spot is a rough one, or has not been previously tinned or soldered. In soldering any metal article, it is an excellent rule, at all times, to get the spot as bright as you can which you wish to solder; use a little emery paper, or scrape with a knife or scraper, but be sure to get it bright, as that is half the battle in soldering anything. In soldering any rough iron, after having got it as bright as you can get it and having put some flux on it, rub or work the hot soldering iron with a little solder back and fore upon the part to get it warm, then put more flux on it and a little more solder, repeating this process time after time with the soldering iron, flux and solder, until you get it satisfactorily soldered. That, in brief, is an explanation of the art of soldering, which can be easily learnt by those who wish to do many little jobs for themselves. A well tinned soldering bit, a clean surface, a little practice and much patience, will soon make you a good hand at the art of soldering.

G. H. S. ESHELBY.

SIR,—Procure one pennyworth of rock sal-ammoniac, which can be obtained at nearly all chemists and ironmongers. File the required place on soldering iron smooth, heat to a good heat (not red hot), hold iron on sal-ammoniac with a little solder. This will be found a simple and good way. By filing iron smooth it enables anyone to do work much neater and quicker.

LINEMAN.

SIR,—Being an ardent reader of CAGE BIRDS, and seeing J. A. Y.'s query for tinning a soldering iron, I take the liberty of describing the process for him. First file the copper end of the soldering iron quite clean, and heat it until one can just bear it being held half-an-inch from the face. Then procure an old tin with some killed spirits of salts in, and put some small pieces of solder in an earthenware or clay saucer. Having heated the iron, dip the end in the spirits and then roll it round in the solder until it melts and adheres to the iron, rub quickly with a piece of old felt until the solder on the iron looks bright and smooth. The iron will then be ready for use.

A. T.

SIR,—J. A. T. wants information on above. I have had every success as follows:—Clean tip of iron with a smooth file, heat to a dull red, then dip in zinc chloride. Place a piece of solder on a clean piece of tin and, while the iron is still hot, allow it to pick up some. Then dip the tip again in zinc chloride, and it is ready for use. After tinning it is only necessary to dip the iron in zinc chloride after each subsequent heating. Zinc chloride is made by dissolving scrap zinc in spirits of salts. Use a glass or earthenware vessel. You can pour off the solution or not as you wish. Three rules to remember when soldering:—(1) Have close, clean joints, well moistened with zinc chloride; (2) have iron hot and well tinned; (3) have the parts to be soldered securely fixed, so they cannot slip when applying the iron.

H. W. S.

THE BOLDNESS OF HAWKS.

SIR,—The following incident I thought might interest your readers as to the boldness of a Hawk. It was sent by Mr. T. Lanceley, of Malpas, Cheshire, to a weekly paper the other day. He says:—A few days ago I was out cycling, when I saw quite close to me a large brown Hawk. I thought at first that it was wounded and unable to fly, and got off my bicycle intending to catch it. I was much surprised when I discovered it had a Starling in its claws. I went towards it, but when I was about 10 yards away it flew a little way off, dragging its prey along the ground with it. I followed, came within a few yards of it again, and saw that its face and beak were covered with blood. I then frightened it, and it dropped the Starling, which had apparently been just killed and was bleeding at the neck. While I was examining it, the Hawk flew round and round over my head. I went a little way off, and the Hawk again seized its prey; when I followed it, as I had done before, it dropped the Starling. The head now was nearly bitten off. I again went a little way from the Starling, and the Hawk returned, but this time seized its prey, soared into the air, and was soon out of sight.—ALBERT SMITH.

THE NORWICH PLAINHEAD C.C.

SIR,—As a member of the above club, I am sorry to learn that the number of members are falling off. I think it is quite time we rallied round and supported judges who are specialists in this breed. The all-round judge is at fault a good deal, for I find he generally goes for size and colour, or vice versa, omitting type completely. I have seen such at several shows, and have been fairly disgusted at the judging, when seeing a long-barrelled bird standing first and special, and often a typical bird, which perhaps looked a little smaller, out of the cards completely. As there is a standard, why not keep to it? It is all right to go in for big 'uns, but we want typical birds, and not long rough ones full of colour, such as we see winning at the present time. In fact, I have some of fair size and typical, but I have to pick my birds to suit the judges, or else it is of no use sending them out. This shows you also the state of things. I bought from a noted exhibitor a Norwich cock about four years ago for a stock bird. He informed me that I must not show him under a certain judge, but he would win under the others; so he did, and in the money every time out. Why cannot all the judges stick to the proper fixed standard, and not go by their own individual taste?

J. M. WILLIAMS.

THE SPOOK ALBINO LINNET.

SIR,—During the bird-catching season it is my habit to take a ramble into the country occasionally on fine Sunday mornings for the purpose of coming across the usual catchers, and purchasing a few Linnets—the pick of the plums if possible. On the morning in question I had arrived at the old place by the drinking hole, not to see there my usual friends, but two rather disconsolate colliers just picking up their tackle ready for home. "Well, chaps," says I, "what luck? Ow't to sell?" "Nay," says one, in rather awe-inspiring tones, "I'll niver cop another bord at Sunday as lang as I live. We've just copped a white 'un wi' pink 'ees, and when it wor on't hedge it sang like t' nightingel. When I hed it i' my hand it fair talked tul us, so I let it go, and believe me, mate, I made up my mind I'd niver come ketching again at Sundays, nor I weant orther." My friend can prove the accuracy of this story. My only regret is that I did not arrive half an hour sooner, to try the effect on this tender spirit with a good-looking coin, that might have made me the possessor of the Angelic Albino Linnet which had struck terror into the heart of the humble catcher. May his conscience for ever feel easy, and Frank (of Bradford) will wish him luck.

F. W. S.

THE SQUARE FEATHER CONTROVERSY.

SIR,—Having attended the two meetings held to consider the disqualification of two Green Canaries at the Palace Show, I should like to give my views on the matter. I have kept Greens for three years, but never had any idea there were such things as square feathers until after the Palace Show, when I went through my stock and found only one of my birds had these feathers. He is a very heavily-variegated bird, two years old, and not a show specimen. I produced this bird at the meeting on April 4th. Since then he has gone into a moult, and on examining the feathers which he had shed I found some exactly like those which the Greens were disqualified for. I enclose you a few, and should like you to reproduce them in the next edition of CAGE BIRDS. My opinion is they are chewed by the bird itself. I am now alluding to those with the little "nicks" in them, and, if the cause is ever found, I am absolutely certain that this will be the verdict. Those feathers which are square at the ends are perfectly natural, and are caused by a slow moult. The bird these feathers came from is not a show specimen, and I should, therefore, have no motive whatever for trimming his feathers—a thing which I shall never stoop to do, not even in the hope of getting the coveted 1st prize at the Palace, which so many exhibitors think a great honour. This fact points out that these feathers are there by no fault of my own. Say this bird had been a very grand show bird, and I had shown him at the Palace, I should have been disqualified for trimmed feathers. I should have been branded a faker, and also have the knowledge that I had never cut a feather in the bird. This is precisely the same feeling Messrs. Clayton and Stewart have. If the Council of the C.B.U. only do the thing that is right, they will decide against the decision of the judge at the coming meeting, and clear the names of Messrs. Clayton and Stewart, who, I am certain, are two very honest exhibitors. If the judge had done the thing that was right, he would have put the birds down according to the extent of the disfigurement. I hope my letter will be read by those who will sit at the coming meeting, and make a good impression on them—so much so that they will decide in favour of the exhibitors.

C. A. FISHER.

[We had not sufficient time at our disposal to get a drawing of the feathers sent.—ED.]

ESTABLISHED 102 YEARS.

HINDHAUGH'S

'SPANISH' SEED.

Absolutely the finest the World produces—Boldest and Cleanest.

MONEY CAN NOT BUY FINER.

SPECIAL OFFER:—56lbs. for 12/- Carriage paid in U.K. Cloth bag included gross (excepting Ireland).

This very special offer is made to introduce this "GRANDEST OF ALL SPANISH CANARY SEED" to all bird fanciers and includes delivery to any station in England, Wales and Scotland having through communication with the North Eastern Railway from Newcastle, by goods train.

We quote as follows on rail Newcastle:—

"SAMPLE A"

Finest obtainable Re-cleaned Spanish Canary Seed, 10/- per 56 lbs., 2/9 per 14 lbs. (Bag free.)

Carriage if by passenger train (payable by buyer) is only :—(in England, Wales and Scotland)

Above 50 miles and not exceeding 100 miles :—7d. for 14lbs.	11d. for 28lbs.	1/9 for 56lbs.

NOTES ON THE TANAGER IN CAPTIVITY.

SIR,—Reading the very interesting articles on "The Treatment and Housing of Foreign Birds in Captivity," I should like to know if it is not a fact, that most of the Tanagers particularised in this article never come into the English market? At any rate, it has only been my pleasure to see a few. I should like to see more of these lovely birds amongst, and in the care of, our Foreign bird fanciers. I think the common idea is that Tanagers cannot stand the cold. I have Tanagers that have stood the severe test of this winter without the slightest artificial heat, and I have also 25 of these beautiful birds flying loose in my outdoor aviary—comprising Superbs, Blue, Olive, Brown, and Scarlet (the latter in both sexes)—and these have not had any heat. During the past month, the thermometer has many times registered 36 degrees, and probably during the night has passed freezing point, yet I have not had a single loss from these outdoors. I received these birds in exceedingly rough plumage, but at present all are getting in the pink of condition, whilst several are in the finest exhibition form. All are in perfect health. I have my own particular method of feeding them, and probably this has much to do with their condition. I crush and mix my own soft food, which consists of nine different ingredients. I have discontinued the use of hard-boiled egg some time now, and my birds seem all the better without it. The daily menu of this little collection is:—½ lb. of my food; 8 oranges; four bananas; 100 mealworms. It may interest many to know that I have one Brown Tanager that is very fond of canary and millet seeds. I see him daily eating from the seed hoppers placed in the same aviary for Giant Longtailed Whydahs and Ruddy-shouldered Cowbirds that are flying with the Tanagers. It is a charming sight to see these birds perched on the branches under the open portion of their aviary. Granted, I close them in the covered portion at nights, or during very wet or exceptionally cold, windy days, but even yesterday (Thursday, April 11th) they were in the open having a rain bath. The fact remains, that they are outdoors, and are the healthier for it. Before I put them out, I had several deaths, but have not had one since. I should like to know if other fanciers have tried a similar experiment with their birds? I write this letter purely to show fanciers that even the delicate foreigners can be acclimatised to our changeable open air life. Anyone passing through this town can see for themselves the birds enjoying their freedom—or, rather, their freedom from cages. O. MILLSUM.

Swindon.

THE NORWICH PLAINHEAD AT BOLTON.

A Difference of Opinion.

SIR,—We have perused Mr. Bancroft's letter on the above subject, and before passing any comments on it, we must confess that we cannot see how he can construe our letter to be "sheer audacity and cheek," after so plainly asking for all he got by his extraordinary boastful lecture. Assuming that, as he says, he has never given us cause for complaint by his talk (which, however, we still hold to, as we have not been told by merely one person but by several; but, as we have no wish to draw anyone else into this controversy, we will for the moment let same pass), we should think that his lecture is quite sufficient provocation for our letter, and therefore have no excuse to offer. We can, and have, put up with a lot (whether true or untrue Mr. B. should know best), but, at any rate, we have now got something tangible to work on, and which he cannot very well deny. As to his letter, he has (as we anticipated) glided over the important parts, and also (as we expected) denied that he intended to imply either us or our birds in certain parts of it. We may be a little thin skinned, Mr. Bancroft, when we took it that you included us in the term "novice recruits," but there is no doubt whatever as to whom you refer to when you say "nice little Norwich." We are not the only ones who have put the same construction on this. If the lecture was not meant for us what was his reason for saying, "Any other firm in Bolton, etc." We are the only firm exhibiting in Bolton and district; so if that did not mean us, who does it mean, and what was his reason for making the special effort to include "firm"? As for the saying, "That people who live in glass houses should not throw stones," does Mr. B. not remember saying to a certain party that we should have to be careful what we said when we read the paper on the Yorkshire Canary (which was read the meeting before Mr. B. read his paper)? Does he not think it would have been better if he had himself taken the advice he offered to us? We have no objection to Mr. B. giving as many lectures as he wishes, but he must not draw odious comparisons, and refer either directly or indirectly to us, or to our birds; if he does, he must be prepared to see an effusion (as he calls it) from our pen. With reference to the number of years he has been breeding, we may say that our first season was 1897. We may also say that we are not aware of, and emphatically deny, that we ever went to him for advice. There are older and more experienced fanciers in Bolton to whom we have been and still (when necessary) go to for advice. As a matter of fact, and to show how long this matter dates back, we closed our bird room to him over six years ago, through some talk which was at that time going on, and have never admitted him since. He refers to the statement made by "the brother John" (as he terms him) at Bury. If Mr. B. will look at the back number of "C.B.," containing the article, he will see that he said that: "They had been breeding, and he thought he might say exhibiting successfully, the Norwich Plainhead during the last ten years"—— not "for," as Mr. B. states, and what we said then we say now. As a matter of fact, we have not been exhibiting Norwich for the last ten years, and have never said so; we have, however, been breeding ten years. This is not the first time Mr. B. has referred to this, and we make this "confession" in the hope that it will relieve his mind. What we said in our lecture at Bury was the truth, and he will remember we did not need to draw comparison in order to make it appear that we were the only people in the district capable of speaking on the Norwich Plainhead. Just another point. About the attendance of our Mr. John Hopkins at the meeting at which Mr. B. read his lecture. Does he (Mr. B.) think that he (Mr. J. H.) has no more sense than to say anything which would have resulted in a lot of talk, and maybe a general row? We still deny Mr. B.'s claim to be champion exhibitor in Bolton and district. In 1905 Mr. B. showed at the principal shows in amateur classes. How does his "hotter competition" come in here? We were in the champions, and then won more prizes than he did. Last season we have been to practically the same principal shows (only more), and have come away with more prizes than he has. Where does his "hotter competition" come in here? Of course, we know his reply. But, if some of our wins were with natural colours, we had some in the colour fed classes, and did as well there as Mr. B., in proportion. The natural colour classes, too, are open to everyone, and everybody has the same chance. Mr. B. had a natural colour hen at the Scottish National, but it did not come off. Why? Because, so he says, it was not washed. Does he expect us to believe that a breeder and exhibitor of his so-called experience would send an unwashed bird (at nearly the end of the show season) to a show like the National? As regards exhibiting bought birds. If Mr. B. will only refer to our former letter, he will see that we said with the exception of one. By this we, of course, meant the yellow cock we got from Mr. W. Vardy, and which we exhibited also in 1904 (if Mr. B. will look at show catalogues) as well as 1905 and 1906. The Scottish National selling class bird he mentions we do not count as a win. We claimed this bird at Wigan out of the 12/6 selling class; exhibited it a short time after at the Scottish National in a 30s. selling class of twenty-three birds, where it won (as Mr. B. says), and was afterwards claimed for about 33s. We think this is quite as good a performance as Mr. B.'s 15/- selling class bird, at the same time showing our "abilities or astuteness as buyers" (as he terms it), and being able to "tell a good bird when we see one." We have, however, never boasted about the win, and do not count selling class wins. With the exception, therefore, of the yellow cock mentioned, we have bred all the other birds that we show. Has Mr. B. now, or has he ever had as many birds which have won prizes in open Norwich classes (not selling or members' classes) as we have at the present time, which birds he either saw or read about in show reports last season? The yellow hen is the only bird he won with last season in open Norwich competition (besides the two bought birds). Again, even if we did only win our first money prize with a Norwich Plainhead in 1902 or 1903 (as he states) may we ask when he won his first money prize? With the exception of a few British (principally a Magpie) we cannot find he won any money prize until 1905, and then with a bought bird. So if his claim to be champion exhibitor of Norwich Plainheads in Bolton and district is not "sheer audacity and cheek," what is it? We still maintain that the yellow hen is the best bird he has ever bred, and should like to see "the many grand birds which we have never seen or heard tell of," as he puts it. Mr. B. would only have been too delighted to have told everybody about them. As to our yellow hen, which he said he beat at Altrincham: this hen has done as much winning as his, in the keenest competition (including two N.P.C. Cup shows last season), and would, in all probability have done more, only she has the misfortune (as is fairly well known) to be a little delicate. As Mr. B. knows, she had the hard luck to be overlooked at a show we sent her to just before Altrincham, and was not unpacked until late in the afternoon of the show day, and was consequently thrown quite out of condition for Altrincham. We may have made a mistake in entering her; and it appears that Mr. B. intends to take advantage of it. If our memory serves us well, the first birds Mr. B. won with in open competition were with the two bought birds in 1905; so it will seem that after breeding twenty years, and making a speciality of Norwich Plainheads twelve years, he had to buy his first two winners. These winners have certainly done well for him, breeding several nice birds in 1905 (including the yellow hen), and maybe several nice birds in 1906. But what about the old strain that he has been working up by "brother and sister inbreeding," etc., the last twelve years? We must congratulate Mr. B. on the admirable way he has of sliding out of awkward questions. We asked in our former letter the following questions, and are still waiting for definite answers. (1) When did Mr. B. win his first money prize in open Norwich classes? (2) What other winners has he supplied during the last twelve years, other than the one sold to the Northern exhibitor? (3) Where are all the Palace winners he has bred through brother and sister inbreeding, etc.? As regards the latter question. It may have been discussed before we left our cradles (but not by Mr. B.), and we know it is a very open question, but before Mr. B. makes such a positive statement, and says that those who do not recommend it "cannot have had much experience," we contend that he should be prepared with some proof. If Mr. B. would answer these questions instead of issuing vague threats as he does, this matter would stand a much better chance of coming to a satisfactory conclusion. If he is not prepared to answer them, we do not see the use of continuing this controversy. The motive for our former letter was not, as he puts it, jealousy. There is no necessity for us to be at all jealous of him. We were simply drawing his (as well as other fanciers) attention to certain very misleading statements he had made in his lecture. We may inform him that whatever other faults we may possess as "youths," he certainly cannot accuse us of alluding to anyone, and not having the courage to allude to those persons by name. If Mr. B. did not mention names in his lecture, we think it is as clear as can be to whom and what he refers. Then when we accept the challenge he issues in such lecture, he writes a high-sounding letter and throws out some vague threats, just because we speak the truth and he does not like it. Play the game fair, and if you want to be the champion exhibitor in Bolton and district, obtain your claim to it by solid exhibiting, not try to bounce everybody else out of it by means of a lecture.—J. and J. HOPKINS.

THE CRESTED CANARY CLUB AND THE C.B.U.

SIR,—The rescinding of the resolution passed at the annual meeting of the Crested Canary Club at the Crystal Palace, affiliating the Crested Canary Club with the Cage Bird Union, I venture to hope may be the means of saving the Crested Canary Club from being totally wrecked, which is my firm conviction will be the case if that resolution be adhered to. It seems to me to be superfluous to give the reason why; it is obvious, as may be seen from the fact that already so many members have intimated their intention to resign. I see nothing childish or unsportsmanlike in resigning from anything you do not approve of, and I much doubt if anyone would willingly contribute or help to maintain anything one did not approve of; being compelled to do so is another thing. It is now for the members to decide, and it is the duty of everyone to vote for or against, as he thinks fit; neglect to do so shows apathy, which should not exist when so much is at stake, and the accurate feeling of the members is desired. My object in writing is solely in the best interest of the Crested Canary Club. Up to date I have heard of only one reason why affiliation should take place; and that is, it would strengthen the hands of the Union. No doubt it would, but at the expense of the Crested Canary Club. Not a single word has been said as to in what way it will benefit the Crested Canary Club. It is purely a case of give all and take nothing. If I am wrong, will someone kindly point out how and in what manner anything will accrue for the benefit of the Crested Canary Club? I have before me a leaflet on which is printed a number of rules, issued by, for, or on behalf of the Cage Bird Union, the first of which is as follows:—"In the event of conflict, these rules shall prevail over any other." If the Crested Canary Club agrees to this, I maintain it becomes a nonentity; if not absolute, it does so far as power is concerned. I fail to see where one wants anything plainer. It may maintain its name, it may have subscribers, it may contribute to the funds of the Cage Bird Union, but its rules and regulations, made from years of practical experience at the expense of much gratuitous time, will not be final—it becomes subservient to the Cage Bird Union. Now the question is: Do the members of the Crested Canary Club want a governing body? I have nothing whatever to say against a central authority, but I must confess that I am not an optimist so far as the present Union is concerned. Already evidence is not wanting, judging from the report of the meeting of the Crested Canary Club on the 3rd inst., that matters have not been altogether satisfactory. There is ample scope (if it is needed) for the Cage Bird Union to do a lot of useful work, in which I have not the slightest doubt the Crested Canary Club would be willing to assist. By this means let it, the Union, gain the extra confidence of the Fancy, by showing in some tangible form its ability to do this satisfactorily. There is much the Crested Canary Club might have done that has been left undone. Had the same spirit of enthusiasm animated the breasts of its members, that has been the case with its Secretary, coupled with determination, many reforms by this time might have become a reality. Personally, I have nothing to gain and nothing to lose either way, but I should be sorry to see the constitution of the Crested Canary Club undermined, the more so now that it is in such a satisfactory condition. I would suggest that the members give the question their careful consideration before voting. W. E. GREEVES.

Many letters unavoidably held over.

Home to Roost.

The distance which birds fly to feed is considerably more than some people imagine. Rooks will make their way four or five miles from home in the early morning, returning at sundown. Wildfowl fly in from the sea twenty to thirty miles, to feed during the night. Many of the Gulls so common about the Thames in London, during the winter months, fly down to the mouth of the river to roost upon the edge of the marshes, below Gravesend, a distance of about twenty miles. They may be seen passing down the river during the afternoon in flocks of various sizes.

CRIMINAL NEGLECT.

To keep birds in a cage and not attend to their requirements regularly, thoroughly and accurately, is not only careless, is not only brutal—it is criminal, and punishable by the law of the land. If you are a bird keeper and a reader of **"CAGE BIRDS,"** it will not be necessary for us to remind you that to the bird keeper of all hobbyists,

"A little knowledge is a dangerous thing."

Make yourself a master—a professor of your pursuit, by immediately purchasing

Cage Birds Annual

For the trifling sum of Sixpence (the price of a Modern Novel) you will be told in the pages of our Annual all about the ailments of cage birds and how to treat them; the principles of cage bird management; how to breed Mules or Hybrids, Canaries, etc.

System is a Short Cut to Success,

and one of the first rules in every bird man's system should be to have **"CAGE BIRDS ANNUAL"** always ready to his hand.

"A Battle of Song."

A BATTLE OF SONG.

Chaffinch Singing in the East End of London.

Among a large section of metropolitan bird-keepers, chiefly those located East, singing contests are the vogue, to the exclusion practically of every other phase of the cage-bird hobby. Not that the love of matching one bird to sing against another is confined to London solely; far from it, as singing contests are as popular in many parts of the provinces as in the great city itself. Your typical cockney, however, places the sprightly Chaffinch before all other birds in his estimation, whereas outside the Metropolitan area the Linnet is the favourite songster, though the Lark is held in very high esteem. Considerable stakes are often lost and won at these singing contests, though useful articles of one kind or another more generally constitute the prizes. It is a curious fact that London fanciers will tell you the Chaffinches coming from different counties "do" different kinds of song—the Essex Finch, for instance, singing "Toll-loll-loll-chickweedo" whilst the Kentish Finch distinctly turns out "Toll-loll-loll-kiss-me-dear." One of the raciest and most humorous description of a singing contest appeared many years ago in a journal now defunct, and which readers may be interested to see reproduced.

"Alighting at Church Street, Shoreditch," says the writer, "I found Hare Street the second turning on the right, and the 'Queen of Spades' towards the further end. My friend was waiting for me on the 'Queen's' steps, and I was presently ushered into the parlour. I was not the first arrival; I should say that in the long, narrow room there were at least forty men present, and every one of them smoking, so that the apartment was literally choked with tobacco-smoke. Nevertheless, the twenty or thirty birds that hung in cages round the room hopped about as busily, and sang as merrily, if not as sweetly, as though it were a summer morning, and they were free in the merry greenwood. I inquired after the famous bird I came to see, and was informed that he was upstairs in the landlord's bedroom, that being the most secluded part of the premises; but I was shown the bird's owner, who sat up in a corner, anxiously turning to the door every time it opened, and nervously wiping his forehead with a corner of his neckerchief.

"The Kingsland Roarer was late, but presently he made his appearance, in company of an oily-looking man, with perverted side-locks. He was greeted as 'Meatey,' and the company asked him 'What cheer?' and offered him their liquor. My friend the birdcatcher informed me that 'Meatey' was a cats'-meat man, and that the Roarer had not got a chance against the other bird, which my friend, moreover, opined was a good job too, for, whereas the cats'-meat man earned lots of money, and kept two ponies, his opponent was only a market porter.

"'Now, gentlemen,' said the landlord, bustling into the room, 'I'll thank you to clear your birds out, the match is on in ten minutes.'

"The company took down their birds, and placing them in safe keeping outside the house, returned to their seats. Pots and pipes were replenished, and, amid a dead silence, the birds were brought in, each cage being tied up in a black bag.

"'Now you know, Meatey,' observed the market porter, as the former produced his bird, 'don't let's have no tricks, that's a good fellow, let it be a square (fair) match.'

"'Me?' replied the oily man, with the most edifying innocence. 'Why, you knows me, don't yer?'

"'I do *so*,' responded the porter, with most uncomplimentary emphasis; 'that's what made me make the observation.'

"My companion informed me at this juncture that the admonition of the porter was not altogether uncalled for, it being the meat man's boast that he could set any of his birds singing, or stop them while in full song, either by his voice or a motion of his hand.

"The men now tossed up for choice of position, an advantage, as I understood, of considerable importance, the aim being to secure the snuggest and warmest corner, or the one farthest removed from door or window. The bird who loses the toss is bound to take up his position opposite the window. This being the case, the winner will not always take full advantage of his privilege, but will choose an inferior position, if by so doing he can throw his adversary into a very undesirable part of the room. The advantage, in this case, was gained by the Kingsland Roarer.

"'There he is, sir,' exclaimed the old bird-catcher with rapture, as the birds were uncovered; 'there he is; and a bigger beauty never sang atween wood and wire!'

"I must say I was not dazzled by the 'beauty's' appearance. For, to begin with, he had no tail, which gave him the appearance of being much too tall on his legs; his head, unrecovered from the last moult, was entirely bald and white and shiny; and of eyes he had only one, which, I suppose, induced him to carry his head all on one side, in so queer a manner. I never saw any one thing in my life that he could be compared with; but if I were permitted to mention what three things he most reminded me of, I should say a raven, a ticket-of-leave man, and a recruiting sergeant. The Roarer, on the contrary, was a decent-looking Finch, had both his eyes, sufficient tail to save him from perjury if he swore by it, and, indeed, seemed altogether much the bald-head's superior.

"The conditions of the match were, that the bird who delivered the greatest number of notes in fifteen minutes was to be declared the winner; the birds being left entirely to themselves, and to receive no encouragement from their owners. A perfect note, according to bird-keeping phraseology, is a perfect and complete *toll-loll-loll-chickweedo:* if this phrase is a syllable short, it counts for nothing.

"The umpire now placed himself midway between the birds, with a stop-watch in his hand, while the 'scorers' took their positions, each before a bird, with a slate and chalk before him. A scorer cannot take a note till he has the umpire's nod of approval. 'Off!' says the umpire, and the match has begun in earnest. The Recruiting Sergeant unlimbers his artillery, and fires salvoes of 'chickweedoes' thick and fast at the enemy, in hopes to bully him into subjection; but the Roarer does not belie his name, and stands it like Gibraltar. It is as much as the umpire can do (and very interesting he looks, gravely wagging his head, first to one scorer then to the other) to get through his business; for the birds keep time as evenly as a pendulum. Presently, however, the Recruiting Sergeant changes his tactics; he ceases singing, and takes to seed and water, whereat everyone looks annoyed save the porter, who has an insight into that bird's character almost amounting to inspiration. The Roarer, observing the indifference of his opponent, delivers another note, and then he also descends for refreshment. Now, with a burst echoing through the room, the Sergeant begins again. This *coup* evidently astonishes the Roarer, who affects not to hear the challenge, and quietly goes on with his repast. One, two, three notes ahead. The meat man grows excited, he bites his lips, and looks savagely towards the victorious Sergeant. Four, five notes ahead. The meat man absolutely goes wild, and, spasmodically jerking his nose, mocks the Roarer quietly picking up seed. Six, seven, eight notes ahead! With a desperate lunge the meat man takes his handkerchief from his pocket, and blows a violent blast. In an instant his bird begins again.

"'Now, Meatey,' says the porter, 'cut that, you know.'

"'Cut what?' replied the injured Meatey. 'Mustn't a fellow wipe his nose? Well, I'm blowed!'

"'Not with the hanksher you carries him about in,' responded the porter. 'I knows yer.'

"Meanwhile, the Roarer, who seemed to understand he had incurred his master's displeasure, tried hard to make up for lost time. He tried too hard. He galloped over his notes so furiously that one out of every three was imperfect. He would get as far as 'chickwee' and utterly lose sight of the 'do'; whilst the old soldier, with a steady tramp, marched in double quick time through every note he uttered. The fifteen minutes passed over, and the Sergeant won the match by ten notes."

AN AVICULTURAL DEPARTURE.

The New Bird House at the Zoo.

By F. Finn, B.A., F.Z.S.

Setting aside Canaries, I think most people will agree that cage birds can be readily classified into two categories—"Parrots" and "all the rest." The Parrots have long had fair and adequate representation at the Zoo, but the other cage birds, to a great extent, have languished under their shadow in the Parrot House. Often did one hear complaints that when one had just discovered and was delightfully contemplating some exquisite little creatures in the small bird line, the Parrots—envious no doubt of the attention their tiny rivals were receiving—would raise a hair-lifting yawp, which would make the house uninhabitable, and the visitor would flee in horror and disgust.

A Generous Donor.

Now all this is changed. A Fellow of the Society, Mr. C. Czarnikow, came forward with the princely donation of £1,000 for a house for cage birds, and, with this as a foundation, the undertaking has been decided upon and completed; so that now we have in the gardens a house devoted entirely to cage birds. This, I think, may be fairly claimed to mark an epoch in English aviculture, for the influence of what may now be seen at the Zoo cannot fail to have an important effect on the foreign bird fancy, at any rate—and it is precisely this section that most needs stimulating.

Details of Construction.

The new house is situated in a position which all will admit to be well chosen. It is close to the main entrance, and just beyond the monkey house, thus being in just the position to attract the notice of visitors. It is a span-roofed erection of oblong shape, made of fire-proof slabs set in an iron framework, and very well lighted by skylights all along, and other windows in the roof and at the two ends. All along the front on each side of the porch are flights, roofed at the back and open in front; these house birds of the Crow tribe. Besides the front door, there is also one on the Monkey House side.

Inside Arrangements.

The house is warmed by a hot-air system, and has gas-burners for the provision of light on dark days. All the cages and flights are on a masonry foundation 2 ft. high, and they are arranged as follows:—On each side of the front entrance will be found a row of flight cages separated by wire partitions, and reaching nearly up to the roof. Each of these rows ends in a small keeper's room, occupying the two corners. The whole back of the house is taken up by six much larger flights. These flights are painted of a pleasing light green at the back, and provided with natural branches.

Cages.

Most people will think there are far too many small cages in the house. The two ends are occupied by them, three tiers in each, and, in addition, there are two blocks of cages occupying the centre of the house, with a space in between, opposite the front entrance. In each of these blocks there are three tiers of cages on each side of the block, the cages being back to back. These, like the flights, are painted green inside, the wiring being black. Half the tops of the cages are of wood, the front halves being wired—an excellent arrangement. These centre blocks might well have been flight cages, however.

Inmates of the House.

The house is not yet fully stocked, and it is not to be regarded as quite final. The flights are occupied by soft-food-eating birds—small Toucans, foreign Thrushes, Mynahs, etc. In the small cages at the Monkey House end may be found a collection of Troupials, while those at the opposite end contain Bulbuls, etc., and some British Finches—rather out of place in a warm house. The centre blocks of cages contain chiefly foreign Finches, of which a very fairly representative collection is already on view, and these are certainly the best inmates for such cages. Softbills requiring so much larger space. Altogether the house, as it stands, is extremely satisfactory, and will no doubt attract a large number of visitors both in summer and winter.

THE DESERT TRUMPETER BULLFINCH.

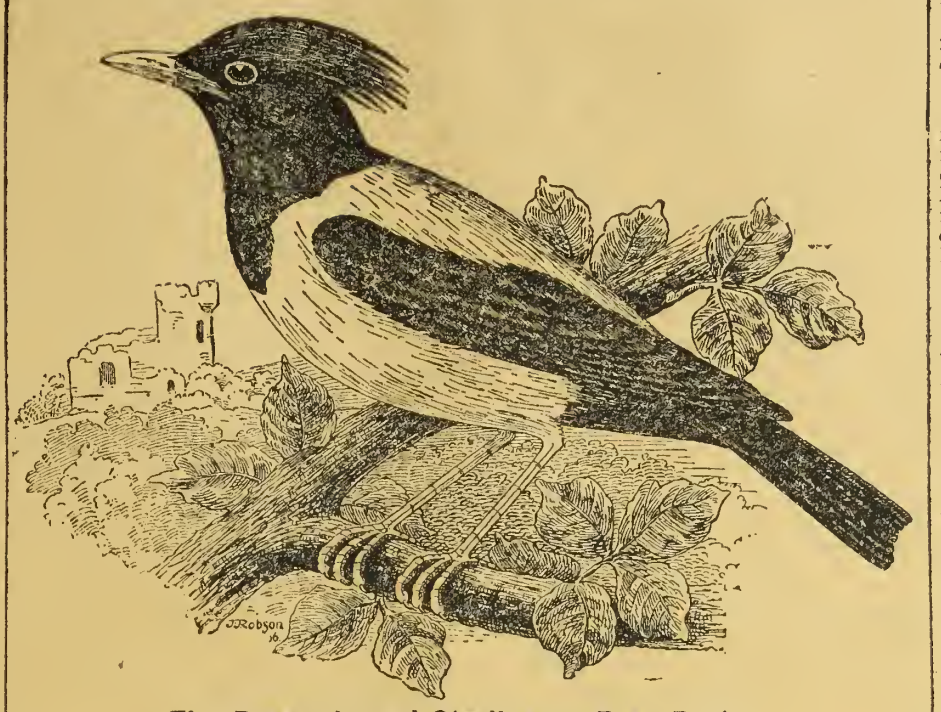
By Bully.

Although one rarely meets with this bird in confinement, it must be due much more to a lack of opportunities for acquiring specimens than to the specie being regarded with any disfavour. It is, in fact, a very desirable bird for captivity, either as an exhibition specimen or as part of the amateur's collection, of which the sole idea is to qualify the æsthetic taste of the bird-loving owner, so that it seems very strange that it is not imported more freely and frequently than it is. Of course, as things are now, the meagreness of the supply in the market renders the Trumpeter Bullfinch a valuable and somewhat high-priced species, which it would not be if it was imported in greater numbers. It is a typical Finch, and is a native of the country south of the Mediterranean, ranging eastwards through Persia and on to Western India. In appearance it is rather a contrast to our native chubby "Bully," being of a more slender build, and also somewhat smaller in size. In colour, too, it differs from its European relative.

The male is of a generally ashy brown on the upper parts, with narrow ruddy margin to the feathers, and the rump and upper tail coverts are of a reddish tint, in which point it differs markedly from our English bird's pure white patch of colour. The larger flights are slightly tipped with white, and the under surface generally of a roseate hue, tinged with brownish on the throat and flanks. The beak is red, and the legs and feet orange coloured. The female has similar markings, but is duller throughout and more tinged with ashy-brown. It has a little seasonal change of plumage, both sexes losing some of their ruddy tint after the breeding season, when they become decidedly more ashy-brown all over, and the colour of the beak also loses some of its brightness. The young are described by Von Henglin as "greyish earth-brown, below clearer," and in a wild state it nests from March to May, and lays five or six pale blue eggs spotted lightly with dark purple.

As a songster it does not rank very high, its chirping chatter being freely interspersed with the sounds of the tin toy which gives it part of its name, and the call note is interpreted by Mr. Meade-Waldo, with whom the bird bred freely in this country, as a "Twang-twang." The young appeared to be fed from the crop by partly digested seed, and soft food does not seem to be greatly relished. The readiness with which it appears to nest in captivity should make it a special favourite with the amateur who desires to experiment in breeding foreign birds, and in course of time it should be quite possible to raise a supply of aviary-bred specimens, which would reproduce their kind in confinement with just as much ease as many of the free breeders, and the value of the birds should make such efforts well worth the trouble—or, rather, pleasure—of raising such a strain.

The chief food consists of canary, millet, and bunches of spray millet. They are especially fond of the latter, and also of bunches of seedy grasses, chickweed, and shepherd's purse. When rearing young, it is most essential to keep them well supplied with half-ripened seeds of these and various other plants, as they feed largely upon them. The seeds of the common docks would doubtless be appreciated as much by these birds as by their European name-sake, with whom they are prime favourites. A piece of cuttle-fish should be always provided, and, of course, coarse, gritty sand, and a constant supply of fresh, pure water for drinking and bathing.



The Rose-coloured Starling or Rosy Pastor.
A Rare Visitor to the British Isles.

Kindly thank all who replied to my advertisement re Bullies and Linnets, as it is impossible for me to answer them. I was simply flooded with letters. Nothing beats Cage Birds as an advertising medium.—W. Lawrence, Coggeshall, Essex.

PROTECTED BIRDS OF TASMANIA.

By J. W. Archer.

While on a visit to Launceston, Tasmania, I was greatly interested in gleaning information as to the manner in which bird life is protected in our Southern Colony. No one makes a livelihood out of birds in Tasmania, and the only hawkers one sees are those who come from Sydney and Melbourne with consignments of birds of various kinds. At certain periods of the year these hawkers generally make their appearance if the other markets are at all glutted. No trapping of the local birds is allowed in the Colony on any consideration, and recently when a few Goldfinches were sold by auction in the local market the attention of the sellers was drawn by the authorities to the following extracts from the Game Protection Act:—Edward VII. No. 23, 1903. Section 3.—If any person buys, sells or offers for sale any of the birds enumerated in the schedule (2) of the said Act, every such person shall, for every such bird so bought, sold or offered for sale, incur a penalty not exceeding twenty shillings. Also: Edward VII. No. 24, 1904. No. 26-14.—Every person who shoots at or wilfully kills any of the birds enumerated in the schedule (2), or takes or destroys the nest or eggs, or takes the young of any of the birds enumerated in the said schedule, without the written consent of a Justice of the Peace, shall forfeit and pay a penalty not exceeding twenty shillings.

The result of this rigid law is that birdlife throughout Tasmania is on the increase especially in the case of Goldfinches, Blue Tits and the pretty little Diamond Bird. These are of great service to the farmer, Goldfinches being his especial favourites. You may walk through the streets of Launceston and hear Goldfinches piping lustily from every coign of advantage. From telegraph wire or from hedge it is just the same, the Finches allowing you to approach them quite closely without showing any signs of fear or alarm.

GOLDFINCHES IN THE STREETS.

Sometimes they may be seen feeding in the streets after the fashion of the Sparrows in our more northern climes. Since their importation into Tasmania Goldfinches seem to have improved both in stamina and plumage, and in my rambles I saw many which would have made splendid exhibition birds. The shape of some of them is somewhat altered from that of the English type, the head being longish with, consequently, a smaller blaze. Others, again, are perfect in proportion throughout, with what may be called a square-cut blaze covering two-thirds of the face; large in body, with excellent colour and markings.

Another interesting bird, but one seldom seen in captivity, is the Flame-breasted Robin. This is a gorgeously plumaged bird and may often be seen flitting in and out of the boughs, followed by his more sombre coloured mate.

The Gorge, an ideal picnic ground in the neighbourhood of Launceston, is very rich in bird life. In the early morning various kinds of birds may be seen flying to the fresh water below for a drink at their usual drinking places. Among them I noticed Robins, Goldfinches, Fly-catchers, Fantails, Honey-eaters, Wrens, White-eyes, Diamond-birds, Firetails, Blue Tits, Kingfishers and Magpies. The Blue Tit is a superb little bird and his colours glisten as he flits about in the sunshine. These pretty birds are very plentiful in the neighbourhood of Launceston, and the hedges adjoining the roads seem to be possessed by them. Every few yards out pops a pair of Tits to see if there are any insects about.

THE FIRETAIL FINCH.

Firetails, though not as numerous as in former years, are still to be seen in numbers, in certain districts. Many of our noted Finch exhibitors have been sorely disappointed with Firetail Finches. Speaking to one of the leading fanciers in Launceston about the treatment of the Finch in captivity, he stated that he had no luck wth them until he changed their usual diet. He now gives them grass seed and canary seed ad lib., and green food every day. Since he has done this he has had them building in his aviary with no deaths to speak of. They consort readily in an aviary with Goldfinches and smaller Finches, such as Blackthroats, Zebras, Nuns, Mannikins, etc., and are peaceful until the breeding season comes round, when the male becomes slightly pugnacious if the nest is approached too closely by the other birds. On parts of the road to Glen Garry Ground Thrushes and Ground Larks seem to be very plentiful. They feed in the fields adjoining the road, and fly off to a safe distance as one approaches. The banks of the river also seem to be a domicile for Moreporks, Gulls and Plovers, who feed on the mud flats and waste land in the long reaches of the river.

Going further inland and following the road to Garrick, Black and White Magpies, Thickheads and Topnut Pigeons may be seen in abundance. Other pretty Pigeons often met with are the superb Fruit Pigeon and the Bronze-winged Pigeon. These are very quick on the wing, and cannot be approached closely. Swallows do well, and their neatly constructed nests of mud may be seen on nearly every old porch throughout the country districts. They are quite tame and will continue building their nests in your presence, the birds showing no signs of fear. They place the damp particles of mud in the position desired and shape the inside of the nest with their breasts.

A near relation of the Swallow, but one seldom seen, is the Spine-tail Swift. Other birds protected by the Game Protection Act are Owls, Cuckoos, Crested Night-jars, Summer Birds, Whistling Shrike, Grass-birds, Brush Wattlebirds, Skylarks, Rails, Crakes, Oyster-Catchers, Sand-pipers, Stints, Turnstones, Whimbrels, Stilts, Ovocets, Dottrels, Terns, Petrels, Prious, Pelicans, Gannets, Musk Ducks, Herons, Egrets, Bitterns, Grebes, Penguins, Ibis, Pheasants, Partridges and Grouse.

Fanciers are all talking about the Substitute for Egg and Bread Crumbs.

SPRATT'S

COD LIVER OIL

CAGE BIRD FOOD

REARS FROM THE NEST.

GIVES STAMINA.

SAVES TROUBLE AND EXPENSE.

Sold by all dealers in 3d. and 6d. tins; post paid 6d. and 9d.; 7 lb. bag, 2/6, or post paid, 3/2.

Send postcard for Samples, also Free Booklet on "Canary and Cage Bird Rearing."

If any difficulty in obtaining food locally write at once to—

My Norwich Plainheads.

How I Breed, Moult and Exhibit Them.

By JOHN W. BANCROFT.

Lecture before the Bolton and Dist. Progressive C.B.S., March 5, 1907.

(Continued from page 326.)

GOOD BIRDS NOT ALWAYS DEAR.

Doubtless the prices I have previously quoted for stock birds may appear somewhat high, and lest some of you beginners might get disheartened by putting a wrong construction on my remarks, and imagine that to commence the keeping of good stock Norwich you will of necessity be compelled to go to a considerable outlay of capital, as a counter to this, I may tell you that it is quite possible to acquire much cheaper birds for stock purposes which, with fair luck, might turn out something decent. In fact, very inferior looking stock birds, if rightly bred, sometimes produce really choice show birds.

One of our leading and most successful exhibitors of Norwich informed me quite recently that a noted champion of his was bred thus, yet the parents were such indifferent looking speciments that he hardly liked to tell anyone of the fact. In my own stock I have a smallish hen, very well bred, but to look at her no one would care to offer 5s. for her, yet she has bred some grand youngsters for the last two seasons, and open winners each time.

One well-known breeder and exhibitor, and who has bred a bird which, until the Palace show, was never once beaten this last season, told me that his motto for stock birds was "Blood, not appearance." With all due deference to this fancier's views, I must confess to a weakness myself for a little measure of appearance in addition to blood; further, were I to be given the choice of two pairs of birds, one of which was what we might term an up-to-date, typical pair, but of altogether unknown pedigree, whilst the other was a very inferior looking couple but boasting the blood of champions, I should unhesitatingly prefer the former, and take my chances.

A START IN EARNEST.

We will suppose, now, that the beginner has decided to make a start in earnest, in which case I should advise (provided the purse will allow of it) the purchase, say, of a clear yellow cock, well up in size, colour, quality, etc. To match him we will get two buff hens, one clear, the other heavily variegated, each to be of extra good shape, good in under colour, and nicely mealed or frosted. For our second set we will reverse the order of things, and get a variegated buff cock, extra large, and red hot in colour, and as good in feather as we can get him; also two medium sized yellow hens, one clear and the other ticked, or very lightly variegated, of extra good type and teeming with quality. By breeding from these two sets, and then in the following season pairing up such as are suitable of the young from one set to the parents of the opposite set, I think the beginner will have the right nucleus for the building up of a reliable strain of his own.

Should the necessity at any time arise which makes it advisable for the introduction of a change of blood, by all means, if practicable, procure it from the source that the original birds came from. By this method you will generally find that the blood will blend much easier, and with more satisfactory results than would be the case if the fresh blood be procured from a totally different source.

Perhaps some of you may wonder why I advocate the use of two hens to each cock. Well, I have different reasons for this procedure, which I will explain. In the first place, by having two hens to work with you have a much better chance of getting a fair amount of youngsters to show for your season's working. Suppose one turns out a "wrong 'un," you would still have another to go on with. Not so in the case of one cock one hen. If the one hen turn out wrong, then your hopes are dashed to the ground—for that season at any rate. Then it is also what we might term a more economical way, as it saves the purchase of another cock bird. There are many people who uphold the theory that the best results are got from the one cock one hen mode of pairing, allowing the pair to remain together right through the breeding season. As many of you present are aware, this is a theory I place little faith in, feeling confident, after an extensive trial, that I get quite as good results, if not better, in regard to size and robustness, when running a cock with two or more hens, providing I allow him to remain with each hen only until she has laid the third egg in her clutch, and taking good care to feed him up on a generous diet for a few days after he has got the hen down, and until I run him with another one, as I do when using the cock bird to one hen only. In this latter case the cock is continually paying attention to his partner; this, and feeding first the hen, and later assisting to rear the brood, does far more, in my opinion, to impair his vigour and stamina than being run with different hens simply for the purposes of fertilising their eggs.

Just a case in point. In 1905 I ran my champion clear yellow, then an inflighted bird, with four different hens, in spite of which he moulted splendidly and quickly, afterwards winning at five open shows four firsts and a third, also first and special best bird in show at our own Members' Show. In 1906 I ran him with three different hens, yet he came up smiling again through the moult, and took fourth Great Harwood, second Leeds, and then first and championship medal at Manchester, where he was acknowledged by all competent to judge to be in the pink of condition.

FEEDING AND PREPARING FOR BREEDING.

I will commence this heading by starting just after the end of the show season, or thereabouts, say, middle of February. From finishing the moult, up to this time, the stock birds, and such as have not been sent about to the shows, will have been having very little but plain, sound canary seed, with just a little mixture, once or twice weekly, consisting of German rape two parts, hemp, maw, niga, teazle, and gold of pleasure one part each; also a few sunflower seeds, slightly cracked, which are a grand conditioner, with a slice of sweet apple or boiled carrot, the latter for preference, as I find the apple too relaxing for some Canaries, especially those which have been going the rounds of the shows, and are somewhat run down in consequence. These I turn out into the largest flights, so that they can get plenty of wing exercise, and recover somewhat of the vigour they have lost. I also supply plenty of cuttle fish all the year round. I have great faith in this useful commodity. Such birds as have felt the strain of the show season and are below par, I give a little egg food now, or a good teaspoonful of milk-sop, two or three times a week, made as follows:—I boil some fresh milk and pour on to the soft part of a slice of stale home-made bread, just sufficient milk for the bread to properly absorb, previous to pouring on the milk. I scatter a little soft sugar on the top of the bread. This makes a grand pick-me-up. I also add eight drops of tincture of iron or steel in the drinking water twice a week. This, with a pinch of maw seed daily, generally puts them in good condition, if continued for a week or two. The cocks should now be separated from the hens (if this has not previously been done). I continue the ordinary winter treatment, until about the end of the first week in March, at which time I substitute young dandelion shoots for the apple or carrot. A little egg food once a week is added, about half a teaspoonful at the commencement of its use, as this high feeding must not be sprung on the birds too suddenly. The egg food I make by boiling a fresh egg for about ten minutes, then, when cold, I press through a sieve. This I mix with the soft part of a thick slice of good stale home-made bread, that I have previously rubbed up fine between my hands, and to which has been added a half-teaspoonful of soft sugar. In case the hens get relaxed, I omit the sugar and add a good dash of maw seed to counteract the looseness. After the second week I allow the egg food twice weekly, until the birds are paired up, when they have a little every day until the hen has laid her clutch and commenced to sit. I do not care to start pairing up, if I can avoid it, before the latter end of March or the beginning of April.

DEALING WITH FORWARD HENS.

Sometimes, however, circumstances make it imperative that we should put certain hens up earlier than we care about. I allude to such as are constantly calling for the cocks, flapping their wings, appearing very full at the abdomen, and are, to use a common expression, "very ripe and breeding mad." There is no advantage to be gained by keeping them back, better far to let them go their own sweet way, even although clear eggs be the result of the first round. As a rule the keeping back of these very forward hens spells disaster, as many of them if denied their desire are of no use whatever during the remainder of the breeding season. Where practicable, it is a capital plan to keep all the cocks in one room, and the hens in another, as these forward hussies have a knack of pairing to the cocks at sight, or by calling to one another. When this occurs it often happens awkwardly, for nine times out of ten the birds which pair on their own are not suited to each other. I will tell you how I have surmounted this difficulty successfully with my own birds. I have before now run a cock with a hen which, unknown to me, has already paired to a cock on sight, or by call. The poor fellow has usually been led a lively dance by the hen chasing him about, plucking out his feathers, and causing him to look a most miserable and dejected object generally. If this state of things is not noticed there is a danger of the cowed cock starving for want of food, for these hens generally make for him the moment he attempts to approach the seed hopper, and a very few days of this may mean the death of a good bird by starvation. Now for the remedy. In the first place, I endeavour by close watching and listening to find out which particular cock answers to the hen's call. This discovery made, I take him out, place him in a linnet or similar open cage, and hang him in front of the couple I am anxious to get on friendly terms. Most likely the cock in the small cage, to which the hen has been paired on sight or call, will, the moment he catches sight of her, burst forth into joyous and triumphant song, at which the hen will begin to twitter and bustle about, plainly showing her delight in getting into such close proximity to her self-chosen lord and master. But wait a bit. Look at her cage companion. Where is that cowed, dejected bird of a short time ago? In his place has come a defiant bird, overcome with jealous hate. He ejects one short song of defiance, then burning with jealousy and anger, assumes the aggressive on the hen, treating her to a dose of the same physic as that to which she had previously treated himself, and quickly driving her into a state of submission. I now remove the cock bird from the front, returning him to his own living cage, after which nine times out of every ten, the pair will get on the most friendly terms, and breed without further trouble.

TRIMMING BEAKS AND NAILS.

Before proceeding further, I wish to mention a custom I have, and which is, that just previous to pairing my birds up I overhaul my whole stock, cocks and hens, and, with a pair of sharp scissors in hand, clip off any overgrowth of the beak. Those which have much overgrowth will need the beak trimming up afterwards with a sharp knife or file. I also shorten any of the birds' toe nails which may have grown longer than is necessary for their comfort. Then I clip the feathers from about the vent, to allow greater freedom for fecundity. Many a fertile egg has been perforated and spoiled, many a plump, hearty nestling has been dragged out of the nest to meet a cold death on the cage bottom, and many a valuable breeding hen has met with a broken leg, the result of her too nails having been neglected and allowed to grow to an unnecessary length. An abundance of feather about the thighs and abdomen, when a hen has been at all inclined to sweat her young, has been the means of nestlings being carried out of the nest, on account of their getting stuck, or gummed as it were, to the mother's feathers. Therefore, I say, shorten this abundance before your hens commence breeding operations, and be on the safe side. Some breeders I am acquainted with make a practice of cutting about one half of the hens' tails off before pairing up, and no doubt some advantage is gained thereby, especially so in the case of slovenly hens, to whom an accumulation of excreta and filth seem to be part and parcel of their stock-in-trade.

THE PAIRING TIME.

When my birds have paired nicely, I introduce a little building material, and also hang the nesting receptacle in its place. The white earthenware one is what I favour most, although it matters little which kind you use, for if your hens are going to breed successfully, breed they will, no matter what nest you provide them with. As nesting material for the first round I like good clean cow hair, or the cotton used for candle wicks, cut into one-inch lengths; this makes a capital nest. Afterwards I use chiefly dried moss, as besides being a good moisture absorber, it is also much cooler in the hot weather. The dried stiffish grass one can gather on the moorland, or disused pasture land, is also capital nesting, and with which most hens will make a very neat nest indeed if supplied with same. Whilst the hens are feeding the young, egg food must be constantly supplied; three times a day mine get it, breakfast, dinner and tea time, then again last thing at night, so that they may commence operations with the egg food at break of day. In addition to the egg food, I supply plain canary seed in the hopper, also, in a separate vessel placed inside the cage, I give hemp seed ad lib., a little summer rape, and a dash of maw seed. In former years I used to allow my hens, after the young were two or three days old, green food daily whilst rearing their young broods. Latterly, however, I have been more sparing, and this last season I tried the experiment of withholding the green food almost entirely, and with pronounced success, having experienced the best and most successful breeding season that I have ever had. In future I intend to give green food very sparingly to breeding hens, and then not so much in the way of a food to nourish and sustain, but rather as a medicine, a little at a time, just to stimulate and purify the bird's system. I have a theory that were green food to be given more sparingly we should be troubled far less by those bugbears of the breeding season, sweating hens, and nesting diarrhœa. At such times as a hen seems to lag in her duties a little suitable green food will help to brace her up, and stimulate her in the performance of her maternal duties.

REMOVING THE YOUNG.

At the age of 28 days the young are usually able to feed themselves, at least on the egg food; so to assist them I give cracked hemp, mixed with uncrushed summer rape and maw. Canary seed is always in the hopper. At five or six weeks of age the youngsters are usually able to shell the hard seeds. I now begin to wean them from the egg food gradually, until they can manage on hard seed alone. If at any time any of the youngsters seem listless, mopish, or in any way out of sorts after weaning, I at once place them on the milk sop diet, allowing them nothing else, either seed or water (unless it be a little maw), for a few days, which treatment usually puts them right. I have had youngsters go bad just when weaning, getting like veritable skeletons, and almost dead, which, after having been placed on the milk-sop diet for three days or so, have become "as plump as partridges." Personally, I consider the above diet a certain panacea for almost all the ills the Canary is heir to. After the youngsters are weaned from the egg food, I gradually reduce their allowance of hemp, until they are weaned from this as well, giving nothing but plain canary, summer rape, and maw. Green food I never allow to the young birds from being weaned until after the completion of the first moult. A few ripe heads of the plaintain may be given with advantage, which they will greatly relish.

THE SECOND NEST.

Should the hen be desirous of going to nest before the young are old enough to feed themselves properly, and such is very often the case, I make a practice of removing the brood as soon as they make any attempt to leave the nest, placing them in a nursery cage, fixed to the front of the breeding cage. At the same time I furnish the hen with a clean nest pan, also some fresh nesting material, with which to build herself a new nest, which she will do, and feed her brood until she has laid her clutch and commenced to sit. When the hen appears well on with her new nest the cock should again be introduced to her, so that her eggs may be properly fertilised, removing him again when she has laid her third egg.

(To be continued.)

LEEDS C.B.S.

"Breeding and Rearing."

Meeting held April 6th, at Lockhart's Cafe, Mr. Cobb in the chair. There was a splendid attendance of members and friends, to hear a paper on "Breeding and Rearing," from Mr. F. King. It was quite evident that the same was thoroughly enjoyed, as everyone present was very attentive. Mr. King gave some very good hints in regard to feeding stock when getting ready for breeding, and also when rearing young. He strongly advocated not being too anxious during incubation, and the time when the young were hatching. He also believed in leaving the cock with the hen all the time, and giving a little egg food once or twice whilst sitting; his reason for doing so was because this would give the cock a rest from continually cracking hard seed. Other most practical and useful knowledge, beneficial to both novices and champions, was given. The following members then asked questions: Messrs. Nichols, Chambers, Stead, Jennings, and many others, which were satisfactorily explained. On the meeting terminating, a hearty vote of thanks was given Mr. King. Proposed in a few well-chosen words by Mr. Harrison (of Greenock), well known in Scotch Fancy circles, who kindly gave us a few of his experiences. Mr. Nichols then seconded. This brought a most enjoyable and instructive meeting to a close.—STEPHENSON and HORNBY, Secs.

WIMBLEDON C.B.S.

"Seeds for Birds."

At the usual monthly meeting of the Wimbledon Cage Bird Society, held at Mr. Johnstone's Rooms, 6, The Broadway, on April 15th, and presided over by Mr. W. H. Stoakley, the members listened to a very instructive and interesting lecture by Mr T. R. Trower on "Seeds for Birds." The various sorts in general use amongst cage bird fanciers were illustrated in a practical manner by a considerable number of samples of good, bad and indifferent seeds, thoughtfully provided by the lecturer.

He first dealt with canary seed, showing some nine or ten samples, and giving a list of the various countries in which they were produced. He said at one time considerable quantities of this seed were grown in Essex, Norfolk, Sussex and the Isle of Thanet, but, owing to competition, it had now practically gone out of cultivation in England, at any rate for market purposes, and very little of it was now produced, but for sweetness the English grown variety wanted some beating. The Spanish canary seed he considered the best, but said the best seed from this country was not easily obtained. Rape seed was the next to come under review. He said how difficult it was to distinguish between the genuine seed and charlock and turnip seed. Hemp seed—samples of which were handed round, he said, was grown chiefly in Russia, and the best qualities came from that country, but it was also grown in other countries, and a little, he said was produced in England. As to flax seed, he said, when it was grown in England there was nothing to beat it, but, as in the case of canary seed, the low prices obtaining had practically killed its cultivation. Samples of millet, maw, niger, teazle, dandelion, thistle, plantain, safflower and different sorts of sunflower seeds, as well as paddy rice, were also shown. A very hearty vote of thanks was accorded the lecturer by acclamation.

THE YOUNG NATURALIST.

Prizes of 1s. and two of 6d. each will be given for respectively the best and two second best cuttings or original bits about birds. Competitors must be children under sixteen years of age. All efforts must be briefly and clearly written, and ON ONE SIDE OF THE PAPER ONLY.

Two stars indicate the Winning Contribution; one Star the runnere up.

When the children got home they found their friend Charlie had just arrived and was busy untying the string which held the brown paper round the small travelling cage wherein was the Bullfinch. "Oh! thank you, Charlie," exclaimed Peter, as the paper fell from the cage. "What a beauty he is! He looks both bigger and brighter-coloured than the wild one we saw just now." "He is a Russian," said Charlie. "He cannot pipe a tune as the German Bullfinches are trained to do; but he is a larger, handsomer fellow than they; and for my part I prefer a bird's natural wild note to any sort of musical-box performance taught by art. I am glad to give him to you, Peter, because I am sure you will feed him well, and not forget to give him plenty of water. Bullfinches are thirsty birds, and they are very fond of bathing, too. You need not be afraid of giving him a good supply of hemp and sunnower seed. So long as he has green stuff and sufficient exercise there is no danger of fits. Nearly all the Bullfinches I have seen when their owners told me they had died of overeating were in reality quite emaciated, it was only their puffed out feathers that made them look fat." "I will take good care of him," said Peter. "I think a Bullfinch is the very nicest bird there is. And Garibaldi seems quite tame already. Did you see him take that sunflower seed from my fingers?"

* My Pets.

The other day I sent away for a pair of foreign birds called Avadavats. I had not the least idea of what they were like. In two days' time they came. When I opened the box I felt for a bird of fairish size, but instead I caught hold of a bird a bit smaller than a Wren. They were very funny little birds. Their backs were brown, spotted with white; their breasts were a coppery colour, and they had red beaks. They were constantly uttering a little cry. I gave them some mixed millet and canary seed to eat. The cock bird would preen the hen bird. The hen bird would sit by him and hold her head on one side, while he put her feathers straight. Shortly afterwards the hen bird got mopy. I put a few drops of brandy in the drinking water, and it livened her up greatly. At night they cuddle up closely on the perch to keep each other warm.—Sent by W. HOLLINGS (age 12), Gas Works, Llanidloes.

* A Tame Jackdaw.

During the summer months my cousin had a tame Jackdaw, called "Jack." When he cycled into the town each morning "Jack" would sit on his shoulder for some distance, but always turned at the same point. When he returned at night "Jack" would greet him with loud cries. At last "Jack" disappeared for three days. When he returned he looked ruffled and thin; he was again absent next day, and we have not heard of him since.—Sent by W. DORIE (age 13), Craigielea, Maxwelltown, Dumfries.

* Birds in the Suburbs.

It has been extremely interesting to notice the effect the cold has had on birds this winter. During the snow after Christmas large flocks of Larks arrived, but went away as soon as it began to thaw. At that time also I noticed six Ducks flying high up. Sea Gulls came up from the river every morning, flying in a north-easterly direction, sometimes in ones or twos, and sometimes in flocks of about ten. It has not been cold enough this year to induce the Rooks to enter the gardens, but they carefully watch till a Sparrow has got a piece of bread and then pursue him and take it. Blackbirds and Blue Tits are driven into town by the cold, but never stay past March.—C. G. LEAROYD (aged 15), 1, Dalgarno Gardens, North Kensington, W.

ILLUSTRATED IDEAS

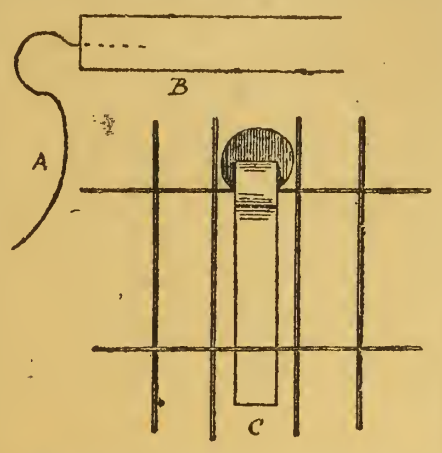
Under this heading we shall illustrate weekly some idea useful to the bird-keeper. Readers are invited to send us particulars of any novel and practical appliance of use in our hobby, either in cage, bird-room or aviary, with a rough sketch of same where possible. Every "Illustrated Idea" used in this column will entitle the sender thereof to a postal order for two shillings and sixpence.

No. 93.

A SPRING PERCH.

Sent by C. S. Dowell, 6, High View Road, Upper Norwood, S.W.

I send a sketch of a spring perch, which your readers might find useful, especially when two or three birds, or more, are in a cage together. Buy a lock spring, and at the end of the perch insert the blade of a penknife as far as possible. Then push in one end of the spring about 1¼ in. There is



A: Lock spring. B: Perch. C: Perch, with spring attachment, in position, two pieces of cage wire being inserted between existing cage wires.

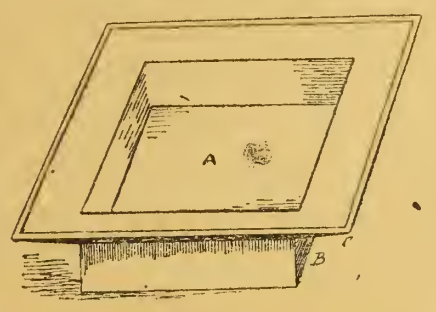
then about half of the spring out. This can be smeared with oil to prevent red-mite. Then take two lengths of cage wire rather longer than the space between four of the wires of the cage, and place as seen in sketch, wherein the rest of the method can be seen. I have used it myself for some months now in a flight cage containing several birds, and find the perches have plenty of spring, yet at the same time do not sag with use as I have found others.—C. S. DOWELL.

No. 94.

WATER OR BATH TROUGH.

Sent by H. Heel, Paliton, near Rugby.

I enclose a sketch of a drinking trough (which also makes a useful bath, if desired) for an aviary. The flange on the side prevents the water from being slopped over on the aviary floor. I have made and used



A: Well for the water. B: Zinc trough. C: Flange with raised edge.

them for some time, and find them in every way satisfactory. Sketch shows the trough as seen from above. It is a zinc trough set into a wooden frame, the size just as is thought suitable, but 1¾ inches deep. The flange at side of the frame I make 2½ in. wide, with a raised edge for the birds to get a good grip on with their feet, and this also serves to prevent any water coming over.

Is the Hedge Sparrow Obnoxious?

A farmers' club in Gloucestershire is waging war against certain species of wild birds, and looks upon the Starling and Hedge Sparrow as two very destructive birds to crops and fruit. It is a difficult matter to see eye-to-eye with our West Country friends regarding the latter bird, for small seeds and insects appear to be its food during the whole of the year. While carefully watching some exceedingly dark specimens through the glasses as they hunted over the grasses of the newly-mown lawn the other day, it was seen that they fed exclusively upon small worms and insects found among the roots of the grass. And such appears to be their food the whole of the summer, adding the seeds of different weeds as they ripen.

HOW TO MAKE LIGHT BUNS.

By using Eiffel Tower Bun Flour the most inexperienced person can make *light* Buns and Cakes with certain success. Try a 1d. packet. Save Eiffel Tower Labels for 10/6 picture free.

WILD BIRD LIFE

All communications for this column should be written on one side of the paper only, duly authenticated with the name and address of the writer, not necessarily for publication, and sent to H. Norman, Editor, "Wild Bird Life," "Eastcote," Alma Road, Carshalton, Surrey, by Monday in each week. Original observations and records invited.

Use of Straw in Nesting.

We have had a cold, wet week, weather conditions quite unfavourable to the doings of the wild birds. Spring is here, and neither wet nor cold will quite stop the busy creatures from proceeding with their nesting affairs. A pair of Starlings have been collecting materials for several days now, and one notices that straw forms the bulk. It is seldom one meets with a nest away in the woods, or along the country hedgerow, in which any of this material has been used in the construction. Either the birds find plenty of roots, grass, moss, etc., to hand, or

The Starling.

for some reason or other they do not take kindly to it. Straw would certainly not be so warm as hay; but when used in the outward construction would scarcely affect the warmth of the whole, and therefore this can hardly be the reason of its disuse.

Sparrows, Robins, and Starlings are birds that pass most of their time in the vicinity of buildings, and all of them generally use a good deal of straw with the other materials. Possibly their dependence upon man has something to do with it, for they are equally ready to appropriate such trifles as string, rag, etc., that come their way.

The Pushful Starling.

The Starling is increasing rapidly in this country, and is undoubtedly extending its range westward. The last few years they have also made their way northward, and can now be seen in the Scottish Highlands and the Hebrides.

The First Swallow.

The Swallows have arrived. One was seen hawking along the banks of the Medway on the 13th. A cold, easterly wind was blowing at the time, and as the day declined we were glad to get indoors to enjoy the sight of a cheerful fire. This was not ideal weather for a bird that had only recently journeyed from sunny lands. I was told that some of them had been seen for several days at a farm away on the higher ground. There is a pond there, with plenty of rank vegetation growing right to the edge of the water, with flags, etc., along the shallow spots. This is an ideal place for insect life, and, of course, the different animals round the farm buildings help to keep up the supply. This Swallow may have been one of these birds roaming a little further afield, and he would no doubt return to the farm, for although a careful watch was kept the following day he was not seen again.

Pigeons and Peas.

A field freshly sown with peas is visited daily by the Wild Pigeons. These are not the Ring-neck Doves nor the Stock Doves, but lighter coloured, smaller birds, that nest in the cliffs of the big chalk quarries. They are very shy and difficult to get at. I was rather anxious to obtain one, as this same field was last season smothered with charlock, and thousands of Linnets fed daily upon it. Through the glasses one could see several parties of them now, together with a fair sprinkling of Greenfinches. They were as busy as bees, no doubt feeding upon some of the seeds recently brought to the surface by the farming implements.

It was just probable that the Pigeons were not wholly concerned with the seed peas, but were taking part in the general hunt for charlock; if so, it would be a point in their favour. One or two of the cock Linnets had already put on that lovely crimson tint which they get in the breeding season. It is about the most beautiful bit of colouring to be seen on any of our birds; so different to the browns and greys of the winter dress, that, if seen for the first time, the observer might well fail to identify the species.

Notes and Queries.

A Curious Nesting Site.

Having a workshop, about 8 ft. by 14 ft., situated at the bottom of my garden, on going into it on Good Friday to get a glue pot, I found that a Robin had built a nest inside it, and was sitting on five eggs. The old bird flew off and got outside. Not wishing her to let the eggs get cold, I went out again. I had been hammering away that day, and have done so for several days since, but she has taken no notice. I may say the pot is hung against the side; she must have got in through a broken window.—W. HAYWARD (Larkhall, Bath).

Protection of Wild Birds.

The protection of birds is gradually being taken in hand by the Governments of various countries throughout the world. In America the law is very strict, and, in addition to taking care of the wild ones during the breeding season, several sanctuaries have been established for the rarer species, for it had been recognised that unless something was done some of them would soon become extinct. The exportation of America's native birds to Europe was sadly thinning the ranks of many species. The law has now been extended to curtail this wholesale shipment, and no doubt in time the brighter-plumaged birds (which were the species to suffer) will regain their numbers.

A Note from Devon.

I see that original observations are invited, and I am sending you a list of a few of the birds I see around here. On March 25th I heard the Chiff Chaff, and on the 30th I saw two Swallows. The same afternoon I went to Torquay and had a walk around the cliffs, and saw a Chough; its beak showed up well when flying against the sun. I watched it for some time, and think it must have had a nest there, as it kept returning to the same place and going into a hole in the cliff. April 2nd I heard the Black Cap, also saw a small flock of Redwings. Bramblefinches have been very plentiful here this season. In the first week in January they nearly all went westward. I should think some of the flocks numbered quite two thousand.—R. W. WEBBER (Newton Abbot).

The Pipe of the Redshank.

The Redshanks have returned to the breeding sites upon the banks of the river. They are very conservative birds, and not easily driven from the marshes. Their curious yelping note can be heard a long way off, and is a cry quickly noted by other birds. The Redshank makes a perfect sentinel, and will fly round and round an intruder, repeatedly calling, until he has left the district.

To a Skylark Singing out of Sight.

Concerning the selected verses printed below, I was looking through a copy of the "Pontypool Free Press," dated 40 years back, says a writer in a contemporary, when I saw this poem. An editorial note appended announced it to be from the pen of a working man named John Jones, of Albion Road, Pontypool. It is palpably the spontaneous outburst into song of a poetic soul that longed to tell its rapture abroad. Wordsworth, Hogg, and others have written beautiful odes to the same poet-favoured bird, but this poem can be put to shame by none of them:—

Whence art thou, heaven haunting bird?
I saw thee not ascend,
Yet o'er the clouds I hear thy song
As it would never end.

What bubbling ecstacies of bliss,
What flutterings of glad sound
Are thine, O soul of love inteuse,
In melody unbound.

The Nightingale may shroud her deep
In darkness of the night;
But like thee is no other bird,
Thou singeth hid in light.

As from some fountain infinite
Dost thou thy strains prolong;
Or as a chain let down from Heaven—
A golden chain of song.

I hear thee, till thy strains no more
Seem modulated breath.
I cannot deem thou art allied
To dust-resolving death.

It must be that thou comest down,
And hoverest there to sing,
When earth a vision is of Heaven,
And life is love in spring.

See Page 365.

MAINLY BRITISH—continued.

EXHIBITORS.—Grand Siberian Bullie, 1st prize-winner Kirkcaldy, etc., very steady, takes seed from hand, in show condition; sell, or exchange two or three good breeding cages or a good Siberian Goldie.—Robert Dyer, Haystoun Farm, Peebles.

TWO Siberian cock Goldfinches, white legged, 7/- each; four cock Linnets, twice cage moulted, 3/- each, with cage; one Goldfinch Mule, 3/-, lot 28/-; exchange common fowls or anything useful.—Randall, 21, Bridge-st., Homerton, N.E.

COCK Crossbill, 7/-; two cock Bullfinches, 3/- each; two cock Chaffinches, 2/- each; two cock Brown Linnets, 2/- each; two cock Bramblefinches, 2/6 each; two cock Twites, 1/6 each; all selected for showing; 25/- lot; exchange Canaries, gun, cycle.—Thomas, 28, Mounts, Northampton.

COCK Hawfinches, 12/6; cock Crossbill, 7/6; two cock Bullfinches, 6/-; two cock Chaffinches, 4/-; two cock Brown Linnets, 5/-; two cock Bramblefinches, 5/-; two cock Twites, 3/6; £2 lot; exchange Canaries, gun, cycle.—Thomas, 28, Mounts, Northampton.

Mainly Canaries
To be Sold or Exchanged

WILL give pair of Rollers for exhibition Siberian Goldfinch.—Lee, 35, Marshall-av., Bridlington.

UNFLIGHTED yellow cock, 6/-; exchange good buff hen.—O. Cooper, Long Buckby.

COCK Siskin, cock Linnet, pair Dutch; exchange Canaries.—Daish, Ash-rd., Newport, Wight.

WILL sell or exchange four cock Canaries, in full song, and two breeding cages, 24/-.—Strecter, 5, Walnuttree Cottages, Church-rd., Wimbledon.

THREE grand large Roller hens, 2/6 each; one large buff Norwich hen, 3/-; bargain.—F. Simonds, Upper Houghton, Dunstable.

WILL exchange a long buff Yorkshire hen for a good yellow Norwich hen.—Hughes, 20, Wench-st., Walworth.

LARGE Crestbred cock, 15/6; or exchange for a good pair of Norwich; will give little cash; approval.—George, 119, Llewellyn-st., Pentre, Glam.

TWO good Norwich hens, 4/6 each; or exchange good cock.—W.S., 294, Lancaster-rd., Notting-hill, London.

EXCHANGE two variegated Yorkshire hens for a buff 1906 Norwich cock, or pair Budgerigars.—Wilson, 21, Church-st., Fleetwood.

SELL or exchange, for Norwich good, three Yorkshires, value 26/-; mutual approval.—Allnatt, The Knoll, Kingston-hill, Surrey.

YELLOW Norwich cock, 6/-; six hens, 13/-, or 2/6 each.—Oakley, Coroner's Court, Warwick-pl., Whitecross-st., E.C.

EXCHANGE large 1906 buff Norwich cock, singing, for large 1906 Green Crested hen.—Salmon, 11, Ariel-rd., West Hampstead, N.W.

EXCHANGE one clear yellow and two Cinnamons, Yorkshires, hens, for Yorkshire cock, or sell at 2/- each.—Address, A. Wipf, 3, Dunesgate, Lincoln.

GOOD yellow eye-marked Norwich hen, second prize winner, sell 7/-, or exchange Roller cock; approval.—Lewis, 32, Morris-st., Shirebrook, Mansfield.

TWO Yorkshire hens, one Cinnamon quarter Belgian, one yellow marked, 8/6; exchange good Green or yellow Yorkshire cock.—Butler, Plumber, Southwell.

EXCHANGE Norwich drooping Crest, Crestbred, for bike, watch, or Toy Yorkshire Terrier pups or Toy black, chocolate, or blue Poms.; sell 20/-, 30/-, 40/-, 60/- the pair.—L. Haywood, 3, Nevill-st., Nottingham.

EXCHANGE large heavily variegated Crestbred cock, for pair large Norwich (buff cock, yellow hen), or sell £1; white-legged cock Goldfinch, proved mulcr, 7/6, for yellow Yorkshire hen.—Cranston, Northwall Quarters, Pentonville Prison.

THREE hens, Crested, clear and marked, eager to nest, 2/6 each, 6/9 the lot; five young cock Canaries, splendid songsters, in good health, 6/- each; exchange for cock Goldfinches in song or yellow Budgerigars.—Nicholls, Aviaries, Whitstable.

GREEN Crestbred cock, Crested hen, 15/-; green Norwich cock, 8/6; buff Lancashire cock, 8/6; buff Yorks. cock, Bully hen, 10/- pair; nest four cocks, Norwich, Roller, hatched 1st March, offers, cutlery, Seifert Rollers, anything.—H. Woodhead, Caretaker, Athenæum, Manchester.

Mainly Foreign
To be Sold or Exchanged

CRIMSON-WING Whydah, in aviary 12 months, 20/-; or exchange acclimatised foreigners.—80, Manchester-rd., Swindon.

GALAH Parrot, cock, very tame, acclimatised, splendid colour and condition, good cage, 15/-; or exchange.—Pearson, Greenwich.

LONG-TAILED Whydah (*Chera Progne*), vhc Palace 1906, £2 10/-; or exchange for exhibition Parrakeet; King preferred.—80, Manchester-rd., Swindon.

Miscellaneous
Sale or Exchange

PAIR of working Ferrets for good buff Norwich hen.—Ward, Nunburnholme Station, York.

AIREDALE dog, five months, exchange singing cock Canary.—Palmer, Parade, Child's Hill, Hendon.

EXCHANGE bullet rifle, good order, cost £1 1/-, for Norwich.—Terry, Union-st., Maidstone.

BAGATELLE board, exchange Canaries, or sell 30/-.—Cowper, Jacob's Well-lane, Wakefield.

EXCHANGE 40 vols. of magazines, clean, for aviary or Rollers.—Wilkins, 4, Rydon-cres., E.C.

PAIR good cycling knickers; exchange pair Borders or Norwich cock.—Raeside, Fullarton-st., Irvine, Ayrshire.

HAND-REARED Thrush, in song, sell 6/6, exchange two 1906 Norwich hens; also a pedigree Irish Terrier dog, 18 months, £2, or part exchange; particulars, stamp.—Brooks, 14, Ridley-rd., Dalston, London.

POSTAL ORDERS PLEASE.

Owing to the new Post Office Regulations respecting the use of stamps upon Postal Orders, we are reluctantly compelled to state that in future our rule re **sending Postal Orders as far as possible instead of stamps** *must be strictly enforced. Advertisers unable to obtain Postal Orders must remit an extra half-penny with every four penny stamps.*

EXCHANGE a pair of nets, store cage, four birds, for Pigeons or good Doe.—Cundy, 5, Priory-av., Prittlewell.

BARGAIN for somebody; breeders' cages, racks, and appliances; particulars, stamp; must be sold.—Manley, 85, Halton-rd., N.

MEERSCHAUM pipe, sailor's head, well coloured, cost 12/6; exchange good buff Border cock; or offers British.—Hunter, Aynam Cottage, Kendal.

AUSTRALIAN Parrot, 12/6; cock Thrush, 3/6; Linnet, 2/-; hen Goldfinch 1/-; exchange Canaries.—Richardson, 17, Silwood-st., Brighton.

PEN of prize-bred Black Orpingtons; exchange cage birds or anything useful; approval.—Jones, Oddfellows' Arms, Newcastle, Staffs.

"HOME Life in Bird Land," price 6/-, new, will exchange for good muling Canary; approval.—Parker, 99, Windsor-st., Islington.

TWO double breeding cages, loose fronts, fittings complete, 5/6 each, worth 10/-, exchange; inspection invited.—Groves, 60, Hampton-rd., Ilford.

FOX Terrier bitch, white body, perfect marked head, very affectionate, exchange to good cock Canaries.—Morgan, 8, Perowne-st., Aldershot.

EXCHANGE 2 st. good maw seed, send sample, for two healthy Norwich hens.—Shead, 23, Canning-st., Bedford.

EXCHANGE lovely Seabright cock for orange yellow Yorkshire cock.—Stanton, Bootmaker, Wells, Somerset.

HALF-PLATE camera for sale cheap, 25/-, or would make part exchange for Foreign birds.—T. Jones, 46, Ridding-lane, Wednesbury.

THREE domo Crystal aviary, full size, 10/-, or nearest offer, or exchange for a good Norwich cock to value.—George, 2, Birch-cottage, Bushey Heath.

EXCHANGE fishing rod and wheel for Canaries, Goldies, or sell 12/-.—C. Hughes, 64a, Caulfield-rd., East Ham.

WHAT offers 85 CAGE BIRDS, cash or exchange, anything?—A. Bates, 2, Avenue-ter., Villiers-rd., Watford, Herts.

ALWAYS USE OUR

DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor for the *bona-fides* of either buyers or sellers. In all transactions the adoption of our Deposit System should be insisted upon.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient, plus the extra postage incurred, has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller, stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from *both* parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has *not* been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or, if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

PREPAID ADVERTISEMENTS

UNDISPLAYED.—Three Words a Penny up to eighteen words, MINIMUM Fourpence. One Halfpenny per Word for each word over eighteen.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and, after the first eighteen words, are charged at two words a penny.

Headlines or Footlines 6d., 9d., 1/-, 1/6, according to size.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL. Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London. Terms for Display Advertisements on application.

BOOKS.

THE HYGIENE OF BIRD KEEPING.

By W. GEO. CRESWELL, M.D., L.R.C.P., F.Z.S.

Price 1/1, post free from CAGE BIRDS Offices,
154, FLEET STREET, LONDON, E.C.

OPINIONS OF THE PRESS.

LANCET: "This little book will be welcomed by all lovers of birds, whether ornithologists, aviculturists, or the owners of a single pet songster. The author deals with his subject in a thoroughly practical and scientific manner, and the results of his experiments prove the fallacy of some rule-of-thumb theories. . . . The book is well illustrated."

COUNTRY LIFE: " . . . a surprising amount of really valuable advice for all who keep small birds, whether in cages or aviaries. . . . Those who approach the subject with an open mind must admit the cogency of the author's arguments; and these, backed by a very wide experience at first hand, will prove hard nuts to crack for many of the champions of the 'good old methods.' . . . We venture to think that his experience will pave the way for a revolution in the methods of bird keeping in the near future."

BIRD NOTES

Talking Parrot, amusing pet, 30/-, worth £5.—Baker, Herbert-st., Bedminster.

HARDBILLS—continued.

PRESTON LINNET FANCIERS.

An all England contest will be held at the Cherry Tree, Lancaster-rd., May 11th. Prizes, consisting of valuable cup, given by Mr. Sandiford, and other valuable prizes. Entrance fee, 1/- per bird.—Secretary, J. Hindle.

OPEN YOUR EYES.

There is something here that will interest you. I have the best stock of British birds in England. Every bird been properly caged since 1906, mostly in full song, singing their pure wild song. Call and inspect them; over 1,000 to select from. No fresh-caught or foreign rubbish here. Red-breasted cock Linnets, 1/- each, three for 2/6, six for 4/6, 8/- per dozen, five dozen 35/-. Do not be gulled with fresh-caught hens for cocks; extra large steady Linnets for show or muling, 1/6, 2/-, 2/6 each; hen Linnets 2/6 dozen, five dozen 9/-; picked hens for muling, 6d. each. Chaffinch cocks, 9d. each; matched pairs 1/-. For other British birds send postcard for my new illustrated list. All birds on seven days' approval.—Miss E. L. Storey, Crowle.

MATTHEWS, LINNET KING.

Linnet singers and Mule breeders. My Linnets have stood for the last five years, and I have sent them all over England for contest singing and Mule breeding, and they are acknowledged the keenest and best-noted birds you can get. If you want a real good Linnet, try one of mine. They are all good large healthy birds, and are all sent on approval. I have the largest stock of Linnets in England. Some real good birds, in full song, been taught under my well-known champions, been caged since November and very steady, real bargains, 2/6 and 3/- each. Also a splendid lot, well caged, in grand song, 2/- each. I have the finest lot ever seen, all ready for Mule breeding. Good large healthy Linnets, good nut-brown backs, breasts like blood, blue beaks, in grand song, real bargains, 2/6. Those intending Mule breeding should send at once for one of these special birds. A free sample of my special Linnet mixture sent with every order; also sold at four packets a 1/-; and my special wild seed mixture is sold at 3d. a packet, four packets a 1/-. No Linnet fancier or Mule breeder should be without it, as it is the best you can possibly get, all properly cleaned and mixed to suit your birds. Gentlemen, read this:—April 20th, 4, Cambrian-pl., Pontardulas, Glam. Sir,—The birds arrived safe, and I am highly pleased with them. Thanking you for your honest dealings, will know where to send again. These are the best Linnets I ever had. Wishing you every success.—From D. Lewis to Matthews, Bird Catcher. Birds sent day after order; no delay; on four days' approval, cash or deposit.—Matthews, Bird Catcher, 44, George-st., Hyde, Cheshire.

HARRY ALLEN.

Champion of all champions. First, second, and third, open to all England, at Fisherman's Hut, Hunslet, last week; first and second at Newtown this week; and no wonder I win all before me, as I get nothing but the best Linnets that can be possibly got. Big fine healthy cock Linnets, well pencilled, stand well, good nut-brown backs, 2/6 and 3/- each; extra picked birds, sure mulers, and fit for any show, 3/6 each; no rubbish; remember the record. Cock Linnet, singing beautifully, in a polished singing contest cage, with a packet of my special mixture and instructions how to feed, 4/6 the lot. Young house moulted cock Linnets, singing hard and mad proud, 7/6, 8/6, 10/6 each, with cage; every bird fit for show and in the best of condition; will sing anywhere. I defy any dealer to sell birds like them at the money. I have a few that bred Mules last year, 10/6 each, real honest birds. Four packets of my special mixture, 1/-. Contest cages, 1/- and 1/6 each. Send stamped envelope for particulars of my book, which tells you how to make Linnets sing at one another with their wings down, how to moult, how to train, what to do with Linnets in soft moult, etc.—a real valuable book. I have had hundreds of visitors during the holidays to hear and see my birds, gentlemen from near and far being delighted with my stock of Linnets. One gentleman from Glasgow, along with many others from other places, asked me why don't I advertise as the Linnet King, seeing I win all before me, and the kind of birds I have sent them. My answer was, Why should I? It does not make my birds any better. No, I rely on my birds making a name for themselves, which I think they have done. Birds I have sent out are winning for their respective owners both at shows and singing contests. Everybody is welcome to hear my champions, and see hundreds of testimonials. Only honest dealing done here. Seven days' approval, cash or deposit. I have no agents, so beware of imitations. Send to the only original Linnet firm, and you will never regret it.—Harry Allen, 42, Brown Hill-cres., Harehills-lane, Leeds.

THREE pairs Norwich Plainheads, 1905, cold room birds, hens 3/-, cocks 6/-, good breeders and good rearers.—F. Elston, 15, Tower-st., Gainsboro'.

NORWICH hen Canaries, green, variegated, and yellow, 2/6 and 3/- each.—76, Rushmore-rd., Lower Clapton, N.

GREEN Norwich cock, 7/6; two buff hens, 3/- each; breeding condition, 1906, splendid type; 13/- lot.—Barker, 15, Rochester-av., Upton Park.

TWO Norwich cocks, 8/- each; two hens, 3/6; three singing Linnets, 2/- each; on approval.—Lafhery, 442, High-st., Manor Park, E.

TYPICAL Norwich Plainheads, hens 4/-, 5/-, 7/6, cocks 6/-, 7/6, 10/- upwards; approval.—Carver, The Rose, Lakenham, Norwich.

HIGH-CLASS Norwich, good pairs ready for nesting, 12/6, 15/-; approval; stamp for reply.—Coakley, Norwood-green, Southall.

MUST clear stock for breeding season; Norwich cocks from 6/-, hens from 2/6.—A. Deakin, 19, Rosedale-rd., Forest Gate, London, E.

COLOURED PLATE of Yellow and Buff Norwich Plainheads, artistic and lifelike, sent post free, carefully packed, on receipt of four penny stamps.—CAGE BIRDS, 154, Fleet Street, London, E.C.

BEAUTIFUL pair Norwich Plainheads, nesting, 15/6; ditto 21/-, gem; approval; some good feeding hens; a breeder twenty years.—Ralfs, 71, Glebe-rd., Norwich.

G. W. SAUNDERS, 10, Rosebery-gardens, Sutton, finds after pairing up he has three buff cocks, also one yellow and buff hen to spare, cheap to clear, healthy, anxious to nest; approval, stamp.

TWO typical clear yellow hens, 8/- each; two yellow cocks and two buff cocks, 10/- each, same strain as my winners.—J. Collier, 10, Field-rd., Walthamstow.

FORTY Norwich and Yorkshires, cocks, 7/6, full song; hens, 3/-, healthy condition; all colours; approval.—Kennewell, Breeder, 31, Munster-sq., Portland-rd. Station, London. Inspection.

HAVE still for disposal genuine untried Norwich hens; yellows, 5/-, 6/-, 8/-, 10/- and 12/- each; buffs, 4/-, 5/-, 6/-, 8/- and 10/- each; all on approval with pleasure.—F. Yallop, 23, Alexandra-rd., Norwich.

ARTHUR GREEN, 42, Tunnard-st., Boston, offers handsome Norwich cocks, on full song, 8/6 and 10/6 each; hens, 3/6; 1906 birds; particulars with pleasure.

"A STUDY IN GREEN AND GOLD."—Mr. H. Norman's latest coloured plate of Cinnamon-marked and Self-green Norwich, post paid, 3d.—F. Carl, CAGE BIRDS Office, 154, Fleet Street, E.C.

HAVING returned from St. Leonards and paired my stock, can spare some of my best birds, prices reasonable; large yellow cock, yellow hen, three buff hens, unflighted, ready to nest.—Barrows, Wardington, Banbury.

HIGH-CLASS Norwich Plainheads, grand cocks, 7/6, 10/6 upwards; well matched pairs, 9/6, 10/6, 12/6 upwards; hens, 3/6, 5/6 upwards; all cold-room bred and in breeding condition.—Geo. Wright, Breeder and Exhibitor, 51, Silver-st., Norwich.

HIGH-CLASS Norwich.—I have a few grand birds to part with, cocks or hens, large and good; no better strain in England; ready to nest; will sell reasonable; approval.—T. Billington, 220, Colwick-rd., Nottingham.

TYPICAL yellow and buff cocks, 7/6, 10/-; hens, yellow, 4/6, 5/-; buffs, 4/-; grandly matched pairs, 12/6, 15/- upwards; untried, healthy, breeding condition; approval; deposit.—Watts, 5, Palace-st., Norwich.

MUST clear about 12 pairs of large Bullfinch-type Norwich at half value, to make room; your last chance to secure the best; many of them able to win; state your wants and have them on approval.—C. Roberts, 67, Whitegate-drive, Blackpool.

J. SAVAGE, Westfield Aviaries, Goole, has a few of his 10/6, 12/6 pairs of Norwich Plainheads left, fine trim, ready for immediate nesting; young hens, still in the flights, 3/6, 4/6, 5/6, 6/6, wanting to nest.

HIGH-CLASS Norwich cocks, in full song, 6/-, 7/6, 10/-, 12/6 each; hens, 3/6, 4/6, 5/6, 7/6, 10/- each; pairs, matched for breeding, 8/6, 10/6, 12/-, 15/- pair; stamp reply; money returned if not approved.—Stewart's Wholesale Earthenware Stores, Surrey-st., Norwich.

MR. MARSH invites you to call and inspect his Norwich Canaries; all cold-room bred; yellow, buff, variegated, and colour-fed; cocks, 7/6, 8/6, 10/6; hens, 3/-, 3/6, 4/6, 7/6; no rubbish; all good typical birds, ready for nest; seven days' approval.—Freemasons' Aviaries, Merceron-st., Brady-st., Whitechapel-rd.

JUST published, Mr. J. H. Payne's latest lecture on the Norwich Plainhead Canary. This has been issued in pamphlet form, and containing as it does some most valuable hints on this popular and profitable variety, should be read by every Norwich fancier. "All About the Norwich Plainhead Canary," price one penny, postage paid 1½d., from F. Carl, 154, Fleet-st., London.

HENS.—J. Hertle, 7, Mitchell-st., Nottingham, has the following to spare, all in good sound health:—Good marked Crestbred, 15/-; another good clear buff Crestbred, 12/6; yellow marked Norwich, a gem stock hen, 15/-; buff marked, good one, 12/6; Cinnamon cross buff, 10/-; also buff marked Norwich cock, good one, 12/6; dark Crest cock, big one, 12/6; on approval with pleasure; stamp.

F. W. HEATON, Ash Cottage, NANTWICH, CHESHIRE. Champion Norwich.

Winner of over 3,000 firsts, specials, and other prizes at the principal shows in the country. Diplomas for best Norwich in show, Crystal Palace, and other leading shows. Have supplied many of our leading exhibitors for years with both stock and show birds. Grand Stock and Show Birds. Single Birds from 15/- each; pairs from 25/-. **Approval with pleasure.** Inspection invited.
State wants—you can rely on true **PURE-BRED NORWICH. TYPE—QUALITY—COLOUR—CONDITION.**

RELIABLE STOCK BIRDS, 9/6 PAIR.
Norwich hens, ready for breeding, from 3/-, warranted unmated; cocks, full song, 6/6.—Hardy, 24, Pathfield-rd., Streatham.

WRIGHT AND SON
for grand prize-bred Norwich Plainheads; pairs, matched to breed show birds, 10/6, 12/6, to 30/-; prize-bred cocks, 7/6, 10/6, to 20/-; hens, 3/6, 5/6, upwards; untried and in grand breeding condition; approval.—84, Heath-rd., Norwich.

"STAND BY WITH THE LIFEBELT!"
"AYE, AYE, SIR!"
Veterans (in the Canary Breeding Competition) should waive their objections to anything new and try "Lifebelt." Intelligently used it is an eye opener. Tin of Lifebelt and Feeder, 2/6. Pamphlet for post-card.—Garthwaite, 49, Hare-st., Grimsby. See pages 379 and 382.

FOR ONE MOMENT

Just consider what it means to you when selecting birds for your breeding stock. It matters not if you be an experienced breeder and exhibitor, or only an amateur, all have, or should have, one desire—to get the best possible birds at the most reasonable prices. If you have this desire I would remind you that Miss Storey has the best collection of birds in England, birds of the proper type in breeding condition, at reasonable prices. Do not be misled with unshapely rubbish, when you can have the very birds you require at the same price, carriage paid to your address, on seven days' approval and no risk whatever, until you are perfectly satisfied with your purchase. I yearly sell many thousands of birds, and give every customer satisfaction. I guarantee to please you if entrusted with your order. I am now offering exceptional good value in typical Norwich cocks, 6/6, 7/6, 8/6, 10/6, 12/6, 15/-, 20/-, and 25/- each. Hens, 4/-, 4/6, 5/6, 6/6, 7/6, 8/6, 10/6, 12/6 each. Matched pairs, 8/6, 9/6, 10/6, 12/6, 15/-, 17/6, 20/- upwards. I receive many thousands of unsolicited testimonials, which are all open for your inspection. To make sure of satisfaction, send me your orders for whatever Canaries or British birds you require. Full new illustrated list post free. All Canaries sent carriage paid, on seven days' approval, at my risk. Travelling cages, 2d. each. Note the old and only address: Miss E. L. Storey, Bird Specialist, Crowle, Doncaster.

Rollers & Singing Canaries.

HARTZ cock, in breeding condition, 5/-, hen 2/6, the pair 7/-.—Boston, Great Brickkiln-st., Wolverhampton.

HARTZ Mountain Roller cock Canary, price 25/-; one week's approval, cash with order.—G. Pemberton, Aston, Wem.

PURE Seifert Rollers.—I have for sale a really first-class Schoolmaster, price 50/-.—Foulds, 213, Brunswick-st., near Owen's College, Manchester.

I HAVE a few good Rollers, 10/-, 15/-, 20/-, guaranteed first-class cocks; three days' deposit approval.—Corkindale, Studley, R.S.O., Brecder, Trainer.

A GREEN Crested Roller cock, with buff hen, both in breeding condition, and splendid double breeding cage, 10/6 the lot.—Miller, Craven-st., Barnoldswick, Colne.

HARTZ MOUNTAIN

Roller cock Canaries, direct from Hartz, beautiful birds, only 3s. 9d. each; 21s. a stick, try one.—Varney, Stratford.—"The Elms, 18, Whitehouse Loan, Edinburgh, January 1st, 1907.—Hummell arrived safely, and sings lovely; it is a pretty bird, and gives satisfaction.—N. Turnbull."—"January 2nd, 1907.—Birds arrived, are singing well.—R. M. Lee, 79, Mill Street, Crewe."—"Broom, Newton Mears, Glasgow.—The birds arrived in good condition; I am well pleased with such value.—J. Broom."—"January 2nd, 1907, 32, Easson Road, Darlington.—Bird to hand. I like the song wonderfully well, and thank you for your prompt delivery and attention to my instructions.—H. Hutchison."—Send all orders to Varucy, Stratford, London.

Hummel Rollers.

Finest Rollers imported. To speak well of the Hummel is to gild refined gold. Testimonials from customers who say the Hummel is still singing as sweetly as when purchased four, five, six, and seven years ago. All Hummels have delightful, deep, delicate bow roll, hollow roll, hollow bow roll, du pipe, hollow bell roll, grand round bass roll, vibrating hollow roll, and charming water bubble roll: one price only, 12s. 6d.; no fancy prices; Hummel hens, 3s. each; a beautiful pair of Hummels for 15s. St. Andreasberg Rollers, 5s. and 7s. 6d. each. Hummel Schoolmasters, 20s. each, better than can be obtained elsewhere at treble the price. Thousands of testimonials have been published by me in CAGE BIRDS from satisfied customers. I guarantee strictly honourable trading and satisfaction to all.—Varney, sole proprietor and importer of this remarkable Roller Canary. Twenty years advertiser.—Varney, Stratford, London. Export a speciality. "The Schools, Overton, Ellesmere.—Hummel arrived, it at once commenced to sing—yes, a song worth listening to. It is the most exquisite songster I ever heard—decidedly a perfect Roller. I may say I never expected such perfection; they are worth all you charge for them. I must thank you for your courtesy, and shall be able to recommend your firm to those who require birds and not rubbish."—F. Robbins, to Varney, Stratford, London, Sole Proprietor and Wholesale Roller Canary Importer and Dealer.

£860. STOCK. £860.

Miss Storey has just secured the best and most desirable stock of genuine highly-trained Rollers that has ever been imported into England. These are not a lot of wasters picked up in German markets, but the whole stock of one of the most noted Roller breeders. Every bird is cheap at 20/- each; but as I have bought them right I offer these high-class birds at about half their value. Genuine highly trained cocks, in full song, by day and gaslight, 8/6, 10/6, and 12/6 each. Picked contest and Bandmaster songsters, 15/-, 17/6, and 20/- each. Pure Roller hens, of same breed, 3/6, 4/6, 5/6 each. For loud songsters that will make the place ring with their song, you want my untrained Hartz songsters. These are good loud free songsters, at a low price. Cocks, in full song by day and gaslight, 6/-, 6/6, 7/-, and 7/6 each; matched pairs, to breed songsters, 8/6, 9/6, and 10/-. The quality of my birds speaks for itself. I have published many thousands of unsolicited testimonials in this paper, and continually receive dozens by every post. Following are a sample of those received this month:—"5, Fair View, Gilfach, Bridgend, April 6th, 1907.—Please send me one pair of birds for the enclosed. There is much credit due to you for your straightforward dealings. I have dealt with you for four years now, and cannot praise your birds too much. I have still the first bird you sent me, and I am open to sing any bird in our valley. Although I have had it four years, I would not now take ten times the price you charged for him. I, as an old fancier, find you are the straightest person to deal with.—C. Mills, to Miss Storey." "10, Brunswick-pl., Blackfriars, London, April 6th, 1907.—I am highly satisfied with the Canaries you sent me. I could not match them in London for anything like the price. I and my friends consider them splendid birds. With thanks.—W. Hyam, to Miss Storey." "Summer Villa, Llandudno, April 6th, 1907.—Received the Roller in sound, healthy condition. I am highly satisfied with the bird; its song is splendid.—L. Wans, to Miss Storey." I could fill this page with such letters of praise. All I ask is let me send you one of my birds, carriage paid, on seven days' approval, at my risk, and you will be convinced that the quality of the bird is the best, and the prices are the most reasonable. Send postcard for my new illustrated list. Neat travelling cages, 2d. each; all birds carriage paid, on seven days' approval.—Miss E. L. Storey, Importer and Breeder, Crowle, Doncaster.

Scotch Fancies.

TWO buff piebald hens, 8/- each; ditto cocks, good position, shoulder, tail in to perch, full song, 8/- each; one nearly clear buff, 4th open, 12/-; approval three days; stamp, particulars.—Hunt, 6, Stoneville-st., Cheltenham.

SOME Northern Beauties.—Exquisite coloured plate of Belgian and Scotch Fancy Canaries, post paid on receipt of four penny stamps.—F. Carl, CAGE BIRDS Office, 154, Fleet-st., London, E.C.

PAIRS properly matched from winning strain, few others, various; guaranteed sound condition; moderate price.—Roscbank Cottage, Newmilns, Ayrshire.

Yorkshires.

HIGH-CLASS Yorkshire cocks, from 7/6.—Abbott, Lodore-rd., South Shore, Blackpool.

SEVEN high-class Yorkshire Canaries, 3/- each; approval.—Stow, Headley, Thornton, Bradford.

LARGE pair, good length, 1906, 10/6 pair; approval.—Hibbitt, Melton-rd., Oakham.

YORKSHIRE Canaries, splendid birds, cocks, 7/6, 8/6; hens, 3/6, 4/6; approval; deposit—Heasman, Flogs, Newenden, S.O., Kent.

I HAVE five cold-room bred hens to spare, ready for nesting, 2/6 each, or 10/- the five; 1906 birds.—Breeder, 3, Lowman-rd., Hornsey-rd., Holloway.

YORKSHIRES, clear yellow cocks, 7/6; clear buff cocks, 6/6 each; approval.—G. Pell, 50, Wentworth-rd., Tinsley, Sheffield.

HENS, two Yorkshires and one Hartz Mountain, take 6/6 lot, must sell.—Myers, 33, Cadogan-ter., Homerton, London.

THE old Yorkshire breeder has still a few pairs of classical Yorkshires yet for disposal, 10/6, 12/6, 15/- pair; cocks, 6/6, 8/6, 10/6; hens, 4/6, 5/6; approval.—Pickles, 5, Wardman-st., Keighley, Yorks.

EXQUISITE coloured plate of Cinnamon marked Yorkshires, pronounced by Mr. Battye to be ideal, sent, carefully packed, on receipt of a 6d. postal order.—F. Carl, 154, Fleet Street, London.

DISPOSAL of the late Doctor Collison Morley's cage birds; high-class Yorkshires, Redpolls, Twites, Mules, etc. Full particulars on application to J. Dewhurst, 52, North End-rd., W. Kensington, W.

MY last three birds for sale, 1906, splendid typical yellow cocks, all bred from winners, 10/- each to clear; approval; deposit.—Miss Price, Inveravon, Clifton, Bristol.

YORKSHIRES.—7 in. 1906 cock, brother Reigate winner, 15/-; also cheap cocks, breeding condition; seen any time; approval.—Hall, 134, Branksome-rd., Brixton.

MR. MARSH invites you to call and inspect his Yorkshires, all cold room bred, cocks 7/6, 8/6, 10/6, hens 3/-, 3/6, 4/6, 7/6; no rubbish; sent carriage paid on seven days' approval.—Freemasons' Aviaries, Merceron-st., Brady-st., Whitechapel-rd.

HAVING more birds paired than I have time to look after, I have the following matched pairs for sale:—Grand long slim clear yellow pink-eyed cock and cinnamon marked buff hen, 17/6; yellow cinnamon marked yellow cock and clear pink-eyed buff hen, 17/6; ticked buff cock and cinnamon ticked yellow hen, 15/6; clear pink-eyed yellow cock and cinnamon buff hen, 12/6; sent on approval, P.O. or deposit.—Dearden, Spring-st., Brighouse.

LATEST OPINION OF MACKLEY BROS.' BIRDS.

"High Street, Uppingham, Rutland. Jan. 12th, 1907. Dear Sirs,—The two Birds arrived safe, in the PICTURE OF HEALTH; they are the BEST TYPE of Norwich Plainhead I ever saw. I am HIGHLY DELIGHTED with them. I shall certainly recommend you to all I have the opportunity of so doing. I never had the favour done me from any one FIRM but yours by sending birds on approval without the Deposit System. Trusting the Firm of MACKLEY BROS. may live and reign for the sake of their customers.—Yours faithfully, J. Waddingham to Mackley Bros."

Postal and Telegraphic Address: MACKLEY BROS., (Jacob Mackley), NORWICH.

YORKSHIRES—continued

BAILEY'S and Shackleton's Strains.—Two best pairs, 9/- per pair; two good yellow hens, 5/- each; two buff hens, 3/- each, untried, all ready to nest; approval three days; particulars.—C. Hunt, 6, Stoneville-st., Cheltenham.

REMOVING to new premises shortly, must part with four pairs; yellow cock, buff hen, clear buff cock, yellow hen; yellow cock, variegated buff hen; buff cock, variegated yellow hen; 10/6 pair.—Walter Keech, Albert-st., Peterborough.

BARGAINS, to clear.—Crossley and Bailey's strains direct; ten champion stock cocks, 6/6, 8/6; real good from 10/6; two pairs for Cinnamon-marked breeding, 12/6 pair; choice buff hens, 4/6, 5/6; all cold-room bred and ready for breeding; approval.—W. H. Berry, Ingrow, Keighley.

CHAMPION Yorkshire Canaries, grand reliable cocks, either colour, 7/6, 8/6, 10/6 each; hens, ready to nest, 5/-, 6/6, 7/6; magnificent matched pairs for breeding the right sort, 15/-, 17/6, 20/- pair; approval; 21 years breeder.—Frank Stevens, Great Ayton, Yorkshire.

GENUINE sale; going away for complete rest, owing to ill-health.—My stock of prize-bred Yorkshires (Palace strain) for disposal, including winners, stock pairs, spare hens, all in grand breeding condition; must sell by May 4th; cold room bred; no rubbish; inspection invited; low prices.—Full particulars, Brown, 12, Upcerne-rd., Chelsea, London.

All orders sent off same day as received. Guaranteed safe delivery. All on approval.

All kinds of Breeding, Flight, Moulting, Show Cages made to order.

Only and old address,

J. TAYLOR,

9, Northdale Road, Frizinghall, BRADFORD.

IMPORTANT NOTE.

Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together and counted as one Advertisement.

E. TAYLOR'S Magnet of Method!!

E. TAYLOR has built up a business of splendid magnitude, large connection, and wide-reaching popularity on the following simple but unassailable principles: (1) A thorough knowledge of everything associated with Birds and Bird Appliances; (2) Dealing honourably with every customer, as he would wish to be dealt with himself; (3) Giving to every customer's commands the most careful and painstaking consideration; (4) Proving to the customer, by the test of the customer's own experience, that in the hands of **E. TAYLOR** his interests are kept safe and inviolate; (5) Acting always on truly fair-and-square lines; and (6) Never doing business on a scale of exorbitant charges. **E. TAYLOR'S** creed supports his Catalogue. See **E. TAYLOR'S** Catalogue and form your own judgment. Never mind, though others may have disappointed you before. That is only a stronger reason why, like Shylock, "thou shouldst not let the serpent sting thee twice!" Illustrated Catalogue sent on receipt of two penny stamps to cover postage, or Bird Price List free.

Remember that I send every Bird out on one full week's approval on C. B. Deposit System if desired.

E. TAYLOR, BIRD SPECIALIST,

3 & 7, Thornton Road, BRADFORD.

WHAT WINS.

What wins your confidence, the confidence of your friends, and the good faith of every bird lover at home and abroad, is the genuine straightforwardness and honest dealing of the Lady Bird Specialist. Why not favour her with your order? If it be for one bird or one thousand, you will be sure to be perfectly satisfied with your purchase. She sends all her Canaries carriage paid, on seven days' approval, taking all risk during the time of approval, guaranteeing you sound, healthy birds of good quality at reasonable prices. Her stock of high-class Yorkshires is undoubtedly the best and one of the largest in England (no half-bred and crossed foreign rubbish here); over 10,000 birds to select from Tight-feathered up-standing Yorkshire cocks, in full song, 6/6, 7/6, 8/6, 10/6, 12/6, 15/- each. Racy Yorkshire hens, 3/6, 4/6, 5/6, 6/6, 7/6, 8/6, 10/6 each. Properly matched pairs, 8/6, 10/6, 12/6, 15/-, 17/6, 20/- per pair. A few winners at reasonable prices. A trial order will convince you and your friends that for good quality, at low prices, it is impossible to equal Miss Storey. Every customer sends an unsolicited testimonial. Many thousands open for inspection. See my previous advertisement. If you want good reliable birds at reasonable prices, send your order to Miss Storey, who has a large stock of Norwich at the same prices as Yorkshires. All Canaries are sent to your address, carriage paid, on seven clear days' approval. Travelling cages, 2d. each. New up-to-date illustrated price list post free. Note the old and only address: Miss E. L. Storey, Bird Specialist, Crowle, Doncaster.

Various Canaries.

ALL BIRDS ON APPROVAL.

TRAVELLING CAGES, in all cases, 3d. extra.

IF YOU CANNOT SEE

what you require in above, send for fully **Extended Price List free.** Unlike many imitations of this List, **it is genuine,** because I possess the birds there mentioned and **challenge denial.** They can be seen, not on paper but in reality.

NOTE.—For **three stamps** I will send my **Amateurs' Guide and Breeders' Handy Diary,** containing over **250 Illustrations.**

"EGGERTINE."

It is the best, purest, and greatest bone and muscle forming food ever known, as the analytical reports of most eminent authorities prove. It will bring hens into sound and robust condition for breeding as nothing else will This during the past twenty years has been proved by thousands. It is a genuine egg food made with fresh laid English eggs, with white, of course, included (and NOT foreign preserved yolk of egg) with other valuable properties combined. Tins, post free, **1s. 3d.**; large size, **2s. 6d.** There is a saving in the larger size.

"ASTHMARINE."

This remedy has the largest sale of any similar article by far. Beware of imitations! For all lung affections it is marvellously efficacious—not a liver burner, but both soothing and healing, 9d. and 2s. 6d. per bottle, post free. Once used, always kept ready for any sudden attack.

After the stress of the Show Season your birds naturally require a pick-me-up. There is nothing in the Bird World that can compare with RUDD'S

CELEBRATED TONIC DROPS,

The Most Invigorating Preparation on the Market.

W. RUDD,

THE Bird Specialist, NORWICH.

BOOKLET FREE.
FINEST Talking Parrots. I only deal in Parrots that will make first-class talkers; no rubbish. I am willing at all times to send my Parrots on four weeks' trial and three months' talking guarantee. Why? Because all my Parrots are young, strong, and reliable. My lifetime has been spent among grey Parrots, both at home and abroad. I guarantee every customer every satisfaction. Grey Parrots are my special fancy. I have trained them, know their wants, and can give every purchaser a bird that will please him in every way. I can supply grey talkers, not thinkers, that will say almost anything, at reasonable prices. Before you purchase a grey or green Parrot, send for my Booklet, entitled "Talking Parrots." All my birds are sent on four weeks' trial, at my risk. Send postcard for catalogue.—Mrs. Forster, Princes Park Aviaries, Violet Street, Liverpool.

PARROT LOVERS
Should send post-card immediately for our new enlarged book entitled "Parrot Prattle" (registered copyright, infringers and imitators will be proceeded against). This book contains 120 pages of very interesting facts, and gives valuable advice and hints to all parrot buyers. Full details of our original system of selling Parrots on four week's trial, at our risk, which we were the first to introduce. We sell Parrots of all descriptions on four weeks' trial, at our risk, before settlement. Cheapest and best in the Kingdom, and any Parrot sold by us, and not giving full satisfaction, will be exchanged any time within twelve months. Remember we lead and others try to follow. Write to other dealers as well as us, and judge for yourselves. Lists of Parrots for sale and above book post free on receipt of postcard.
PARROT AVIARIES, MORECAMBE.

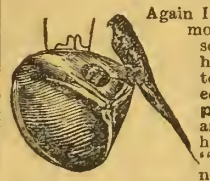
The Cosy Cokernut Shell Nest for small foreigners, canaries, etc., 4/-, and 6/- dozen; sample pair, 1/-, carriage paid. The Ideal Box Nest for Parrakeets, etc., 1/-; varnished, superior make, 1/6. Small German nests from 2d. each,
PEARSON & CO., Nest Specialists, GREENWICH MARKET.



Again I wager £25 that I have wired more husks than any other person living. Has any other maker, however large, sufficient pluck to accept and deposit with editor? My selected **"Improved Secure" Husks** are really and absolutely unbreakable; they have stood the "wonderful" test of 16 years—not six months. Competition always increases their popularity, and still they remain unequalled. Don't be gulled by any paper puff, but listen what experts say:—CAGE BIRDS says they are "far superior to the old husks." "Feathered World" says: "Undoubtedly, the new husks are very superior to the old." Again "Exchange and Mart" says: "Those prepared by Mr. Harper are very superior to the old style, which often fell to pieces at the most critical time, with disastrous results for the nestlings. You had better order the improved form; even if it is a little dearer than the old-fashioned sort, it is cheaper in the long run." "Fur and Feather" tells its correspondents: "They have distinct advantages over the old sort." "Poultry" has said: "For Budgerigars we advise the use of the improved style of husks." Surely these are convincing testimonials. They are **4/6** dozen; smaller quantities, **5d.** each. Interesting pamphlet, entitled "Budgerigar Breeding," free on application. Superior box nests for Cockatiels, etc., **1/6.** Send for the pamphlet now.
HARPER, Upper Villiers Street, WOLVERHAMPTON.

PAYNE & WALLACE,
TRAPPERS OF AUSTRALIAN BIRDS,
The Little Zoo, BATH.
AND AT WILD DOG CREEK, EAST KIMBERLEY, N. W. AUSTRALIA.

WANTED.

WANTED, surplus stock for cash or exchange.—Pearson, Greenwich.

WANTED, cock and hen Mules; state lowest price.—Santon, 4, Blossom-st., Norton-folgate, E.C.

WANTED, singing birds in exchange for new cages or seed.—Rollinson, Waugh-st., Oldham.

WANTED, from catcher, fresh-caught Nightingales.—111, Long-st., Middleton, Lancs.

WANTED, Canaries, for two pullets and cockerel, silver spangle Hamburghs.—Cook, Pembridge.

WANTED, good Pike rod and reel; will exchange cage birds.—Crearie, Carlingwark-st., Castle Douglas.

WANTED, yellow and green Budgerigars; exchange well bred Norwich Plainhead Canaries.—95, Sharrow-st., Sheffield.

WANTED, lever watch and cash; exchange grand free-wheel bicycle.—Write for particulars, Thompson, Hutlow-st., Beswick, Manchester.

GOOD healthy young pair Norwich or Yorkshires, for large double breeding cage, complete.—Bush, Chard.

WANTED, pairs Violet-eared Waxbills, Orange-breasted Waxbills and Pintail Nonpariels, reasonable; approval.—Crowston, 89, Lambert-rd., Grimsby.

WANTED, Norwich cock Canary and two hens, one Crestbred, with breeding cage, exchange violin, purebased in India.—Owen, 44, Tollington-park, N.

WANTED, singing cock Canary, exchange six cock Greenfinches, for Mule breeding, or offers.—Harris, 66, Southb-st., Taunton.

WANTED cock and two hen Canaries; exchange tweed suit length, patterns sent, sell £1.—Drummond, Hutcheson-st., Glasgow.

WANTED, Canaries, British birds, etc.; exchange cages; see Cage Column.—Parkinson, Cage Manufacturer, Sheepcote, Birmingham.

WANTED Canaries, Crests, Yorkshires, Norwich, Linnets, Goldfinches, Bullfinches, Thrusbes, Parrots.—Baker, Herbert-st., Bedminster.

WANTED, 1,000 Canaries, in large and small quantities, for cash.—Send particulars, C. Wressell, Crowle, Lincoinshire.

WANTED, any number of Canaries, weekly, cheap, for resale; state lowest cash price.—J. Thorn, 37, Plumstead-rd., Woolwich.

WANTED, cock and hen Canaries; state lowest price.—S. Goodchild, 3, Delta-st., Gossett-st., Bethnal Green-rd.

WANTED, clean copies of CAGE BIRDS ANNUAL for 1904 and 1905, full price given.—F. Carl, 154, Fleet-st., London, E.C.

WANTED, cage birds, exchange high-class Cavies, winners numerous prizes.—H. Watts, Workhouse, Axminster.

WANTED, a buff Norwich hen, 1906, must be good, will give in exchange a very old antique butler's table, Spanish mahogany.—T. Hardie, Laurieston, Falkirk.

WANTED, offers, cash or exchange, two cock Goldfinches, two Siskin-Canary Mules, three hen Canaries, ready to nest.—Bird, 10, Silver-st., Taunton.

WANT offer in Canaries for cock Greenfinch, 5/6; Bullfinch, 3/6; two hens, 5/-; well bred Fox Terrier dog, white body, marked bead, 25/-.—Sewery, Windsor-ter., Lyme Regis.

WANTED, Norwich cock, exchange complete parts "Handyman's Book," for working wood or metal, fully illustrated, clean, value 12/-; offers.—Anderson, 16, Whitchouse-st., Aberdeen.

WANTED, any quantities of Canaries (any variety), Goldfinch and Linnet Mules, for cash; approval, will deposit with CAGE BIRDS.—Marsh, Freemasons' Aviaries, Pereira-st., Bethnal Green.

WANTED, house moulted Siberian Bullfinch hen, must be good, reliable breeder; no reasonable price refused for good bird; approval.—Hy. Taylor, Milburn House, Deau-st., Newcastle-on-Tyne.

WANTED, offers in Crests or Norwich Plainheads, must be good birds, in exchange for silver Englisb lever, cost £5; approval.—Greenwood, Grocer, Lansdowne, Oldham.

OFFERS, gramaphone, Canaries, or anything useful, for cycle tyres and tubes, almost new, glazier's diamond.—Letters only, no cards, D. Vance, 12, Springfield-rd., Glasgow.

WANTED, good Norwich, Yorkshires, or good cock Mules, or any kind of singing birds, cheap for cash.—A. Lcitch, East End Bird Mart, Gallowgate, Glasgow.

WANTED, good Green, or buff Yorkshire hen, 1906; exchange Bullfinch, Linnet (cocks, house moulted), Goldfinch in full song, value 10/-.—Richards, 2, Norman-rd., Tunbridge Wells.

WANTED, Canaries; will exchange two pure bred Whippets, trained to rag, from winning racing parents, grand shape, eight months, or sell, 15/- each; will give particulars.—Harrison, New-st., Stamford.

WANTED, for abroad, will give 1/6, cock Bullfinches; 2/- cock Goldfinches; cock Larks and Bramfinches, Linnets, Yellowhammers, 6d. each; cock Canaries, 4/6; small or large quantities, for cash.—Bird Stores, 423, Attercliffe-rd., Sheffield.

WANTED, girl's bike, good condition, approval, exchange two pairs good Yorkshire Canaries, nesting, and two breeding cages, also Siberian cock Goldfinch and cage, value 45/-, or anything useful, offers, also Pansy plants, flowering, flower all summer, 1/6 100.—Longbottom, Wisbech.

WANTED to exchange, table cutlery, knives, forks, spoons, carvers, razors, fish-eaters, everything for household; cruets, teapots, electro-plate goods, for healthy Canaries; every satisfaction before settlement.—Broadbent, 129, Langsett-rd., Sheffield.

HAVE YOU SEEN OUR
Picture Post Cards of Canaries?

EXHIBITION Song Thrush and show cage, exchange common hen Canaries.—Saunders, Paperhanger, Tiverton, Devon.

Advertisements continued on page 400.

TWITTERINGS.
Continued from page 388.

Mr. Cook has been elected to judge the Pendleton First Feather Show on June 29th.

Leigh First Feather Show, on June 22nd, will be judged by Mr. Trengove.

Mr. F. F. Potter, Hon. Sec. City of Hull Cage Bird Society, has removed to 178, Thoresby Street, Prince's Avenue, Hull.

Please forward me another stud register. I think it a very good thing for a breeder.—Thus writes Mr. E. Barker, of Long Eaton.

The Eastbourne and District Fur and Feather Society have fixed the 13th and 14th November to hold their show, writes Mr. C. Attree, the hon. sec.

Fanciers are asked to note that Mr. Wm. Rutherford, late Secretary of the Crook Cage Bird Society, has resigned that office, and that the present Secretary is Mr. Arthur Bowes, Wilson Street, Crook.

One of the best of Welsh fanciers, Mr. M. J. Daly, of the Raglan Hotel, Dowlais, has just joined the noble army of benedicts, and the heartiest wishes of all who know him will be given to him and his charming wife from the Emerald Isle.

All communications for the Millom C.B.A. should be addressed to F. Bradley, 18, Lapstone Road, Millom, as that gentleman has been appointed Secretary. I have resigned because I shall not be able to give the attention I should like, writes Mr. W. J. Park.

Mr. W. T. Simpson, Hon. Sec., Guisborough F.S., writes:—Owing to the small entry at our late Open Show in the Cage Bird section, through clashing with so many Shows, the Committee have decided to fix a separate date for cage birds, January 1st, 1908.

"What sort of company is to be found at this sporting resort in Church Street, Shoreditch?" said a questioner at Mr. Dobson's lecture on "London Bird Life" the other evening. "Quite good enough for you," answered the lecturer; "the present King, when Prince of Wales, the Duke of Cambridge, Geo. Crabb, and myself."

"Bird Notes" for April is No. I of a new volume, and is issued under the editorship of Mr. Wesley T. Page, F.Z.S. It is a most interesting number, containing articles from the pens of Mrs. Warren Vernon, "Further Additions to my Birdroom"; Dr. McDonagh, F.Z.S., "Wanderings in the Show"; Messrs. Payne and Wallace, "The Gouldian Finch"; Mr. W. H. Foster has an article on his own aviaries, which is illustrated by a couple of nice half-tone plates. Miss T. Saywell gives a short account of some breeding experiences, while the Editor gives a trio of articles which will be eagerly read by those interested in Foreign Bird culture, dealing as they do with "The Queen Whydah" (illustrated), "The National Bird Show," and "Notes on the Wild Life of the Inhabitants of our Aviaries.

Picture Postcards Pleasing.

Our picture postcards are booming! From far-off Montreal Mr. Hammond sends us a large order, and says, "we are well pleased with same."

Items from Peterborough.

Owing to the fact that I am removing in October, writes Mr. S. L. Cocks, Sec. Peterborough C.B.A., I have had to give up the office of Show Secretary, which, however, Mr. H. C. Lilley has kindly taken over, as well as the offices of Hon. Sec. and Treasurer, which I have no doubt he will fill to the greater advantage of both society and exhibitors than I have done. Mr. J. Robson and Mr. R. J. Howe (Wellingboro') will judge the Open Show on Oct. 10th. We intend sticking to the C.B.U. and holding the fixture under its rules. Breeding operations are in full swing here, but from most accounts the recent sudden wet and cold have played havoc with young birds and eggs, many being dead in the shell. Mr. S. H. Mays (King's Cliffe) has kindly consented to be president of the society for the third year in succession, and, with a balance of £1 more than last season, I have no doubt we shall jog on in the right direction. I wish CAGE BIRDS continued success.

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. It kills all insects, harmless to everything else.

FOREIGN BIRD QUERIES.
Continued from p. 393.

Companion for Indian Green Parrakeets.

I want to put a small bird in with a pair of Green Parrakeets. What kind do you think would agree with them?—J. H. F.

J.H.F.—It would have to be some kind of a Parrakeet, and as the Indians are in possession, it would be rather a dangerous experiment, putting in a smaller, and consequently weaker species with them. All I can advise you to do is to bang up several cocoa-nut husks, and in two of the corners of your aviary fix up some faggots of twiggy branches (bean sticks answer well), and let the husks be behind them. With some such arrangement Budgerigars would be safe, I think, as most Parrakeets ignore such small fry. I also think Cockatiels would be safe, and given a suitable log at back of the branches, would breed. Madagascar Lovebirds also generally are fully capable of looking after themselves. With pairs of green and yellow Budgerigars, the Lovebirds and Cockatiels, your aviary would have quite a gay and animated appearance. You would have to supply seed in several hoppers, so as to obviate what is often a fruitful source of discord, viz., all wanting to feed at once from one hopper, with the result that the weaker birds are driven away, and, in some cases, starved to death. The birds I have named would require canary and white millet, a few oats, green food, grit, cuttlefish, and the egg shells left from your table crushed and scattered over grit. With moderate luck the sale of young Budgerigars at end of season should pretty well pay your seed bill for the year.

Breeding Budgerigars.

(1) How many pairs for breeding could I keep in a cage, 4¾ ft. by 13 in. by 4½ ft. high? (2) How many pairs of small Foreign birds could I keep in same cage for breeding? (3) How many pairs of Zebra Finches (for breeding) could I keep in a cage 36 by 13 by 15 in. high, and what is their diet, and kind of nest boxes required?—W. J.

W.J.—There are several other replies in this issue that will help you, and amplify what directions I can give you here. Only two pairs, as you must leave accommodation for the young broods; you must put up at least four husks, and supply plenty of perching accommodation. Keep up a continuous supply of grit, cuttlefish, green food, and water, other than the canary and white millet, with a few oats when they are feeding young, will fully meet their wants. (2) You could try three pairs, say Zebra, Ribbon, and Gouldian Finches, but only two pairs, say the first and last, would be more likely to lead to success. In any case, you must put up say two cocoa-nut husks, two Hartz Canary travelling cages, with fittings removed and two of the bars cut away for entrance, also two boxes, all as far apart as possible, and each one screened with twiggy branches, heather sprays, etc. (3) You will find this query fully met in our reply to "T. S. J." in this issue, as to birds and diet; as to nest boxes, see reply No. 2 above. For nesting material supply long grass, bay, and a Canary nest bag. Bake the egg shells left from your table, crush and scatter them over sand tray. Note: Good grit, clean water, fresh green food, and cuttlefish are sine qua non in the breeding season, for almost all species of birds, and should be given in liberal quantities too.

A Bulbul and Another.

(1) What is the diet and treatment for Red-vented Bulbul? (2) Can you tell the name of a South African Finch, good singer, something like English Linnet, but with yellow rump.—J. TAYLOR.

J. Taylor.—(1) The Bulbuls cannot have too much ripe fruit. You must as far as possible consult the bird's likes and dislikes according to what is in season; some individuals will take hardly anything else but banana, and others will hardly touch this fruit, but there is ample variety now at almost all seasons of the year to meet your need; candied fruits, apricots, etc., are also much appreciated by these birds. They must also have a continuous supply of some good soft food mixture (see advertisement columns), or make your own:—Equal parts game meal, dried flies, ants' eggs (very best), ground silkworm pupæ and crumbled sponge cake in equal parts; make crumbly moist for use. Green food, grit, and an abundance of water for drinking and bathing should be supplied. If they will not eat green food as thrown into the cage, a little must be minced and mixed with their soft food, but it must be fresh and clean. A few mealworms and such other insects as you can capture, almost any kind will be greedily eaten. (2) Your bird is the Yellow-rumped Serin (*Serinus angolensis*), a plainly clad, but pretty bird, and one of South Africa's sweetest songsters.

Diet and Cages for Bulbuls, etc.

Chloropsis.—The genus Chloropsis are about the same size as the other Bulbuls, certainly not larger, they have no crest, and while their capacity for song is fair, it does not equal that of *Otocompsa* and *Pycnonotus*; however, this is fully compensated for by their glorious plumage, for they are to be numbered amongst the most gorgeously apparelled of the feathered tribe. The Andaman Starling is only slightly larger than the Red-vented Bulbul, and has a somewhat Gull-like appearance as to plumage; it is a handsome bird of somewhat slender build, yet of true Starling contour. The others you name would be too large for you. Newly received birds should be kept warm and quiet, grit supplied with caution at first, and mild aperient is an advantage, providing you do not scour the birds. Dinneford's Magnesia and Epsom salts are both safe if not given too strong—the magnesia say half-a-teaspoonful to the ounce of water, and as to the salts make the drinking water just saline with it; cages should be kept strictly clean, peat moss litter is a good material for the sand tray; supply them with a liberal diet, according to their respective species, and as soon as they have picked up a little let them have a bath with water slightly chilled. A good soft food mixture is given to another querist in this issue. The cages at the Zoo for the Bulbuls are, speaking from memory, 20 to 24 in. long, but the condition of the birds at present must not be taken into consideration in connection with the cages; the birds have but recently been caught up from large outdoor aviaries, and for myself I am exceedingly sorry to see these active birds in their present quarters.

Food for Cockatiels.

H. Curtis.—This is most simple; canary and white millet, with a few oats, green food, grit, cuttlefish, and water for drinking and bathing about fill up their simple bill of fare. To obviated egg binding it is a good plan to first bake and then crush what egg shells you have left from your table and scatter these on aviary floor. When you can procure it free from frost give these birds tufts of grass in flower; they are very fond of it, and it is very wholesome for them. Some individuals when they have young to feed are very fond of a dry crust of stale household bread.

"CAGE BIRDS" BREEDING ROOM REGISTER AND BIRD KEEPER'S ACCOUNT BOOK

(COPYRIGHT.)

The Latest Publication for the benefit of keepers of cage birds. Is framed on novel lines and contains many entirely new departures. Is absolutely indispensable to everyone interested in the hobby.

It has been represented to us that while our Stud Register Cards are admirable for the purpose of hanging up in the bird room to make notes on of the season's proceedings, something of a more substantial nature is desirable for the purpose of keeping a permanent record of the progress made.

To meet this need we have had compiled "Cage Birds" **Breeding Room Register and Bird Keeper's Account Book,** which offers in a handy form a means of keeping—

The complete pedigree and description of every bird in one's room.
A full record of the season's breeding experiences.
An account of every young bird reared, and how it was disposed of.
A register of one's doings at the shows (the most complete and useful yet devised).
A cash account for the year.
A profit and loss account of the season's proceedings, and a balance sheet showing how much one has invested in the hobby.

A series of Registers will thus furnish a concise record of the career of a fancier as a breeder and an exhibitor from year to year, or over any number of years.

Many useful Emergency and other Hints will also be found in its pages.

THE YORKSHIRE UNION.

Election of Officers and the Revision of Rules.

The following fanciers have been nominated for office in the reorganised and united Yorkshire Union:—

President—H. W. Battye, J. S. Clarkson J. H. Greenwood, D. Sunderland, J. Townend.

Vice-President—John E. Clark, W. A. Cowgill, John Greaves, J. M. Halliday, A. Morton, T. Ogden.

Trustees—J. E. Brotherton, James Clark, W. Crabtree, H. Hill, Dan Hollas, O. Mitchell, A. Whatmough.

Auditors—F. Armstrong, J. Butler, S. Dean, R. Halliday., W. Jackson, Jabez Line, W. Sleaford, H. H. Towers, H. B. Townend, W. Wharton.

In the revision of rules it is proposed to alter rule 8, so as to allow the Vice-President to act as delegate. In rule 11 it is proposed to strike out the words "Nor officiate in a judging capacity at any winter show held by a society of which he is a member." Rule 13 it is proposed shall be struck out. It reads as follows: "That any person accepting an appointment as judge at a Union winter show be debarred from sitting on the Council during the remainder of the year." In rule 18 it is proposed to substitute May for September. An addition to rule 24 will, if carried, read as follows:—"Should this rule operate harshly upon any society, the Council may, on such being reported by the society, make such other arrangements as they think will meet the case." Additions are also proposed to rule 39. Addition No. 1 to read: "Four highest birds to count"; addition No. 2 to read: "Novice medals to be divided as follows—Three quarters for Yorkshire section and one quarter for Norwich section."

Mr. F. Hammond has been elected Secretary without opposition. All voting papers have to be returned to Messrs. Hollas and Wellock, the scrutineers, on or before Monday next, April 29th.

A Fasting Bird.

A bird dealer in Edinburgh has hit upon a scheme for calling atention to his shop. He has what purports to be a "fasting bird," which has been a certain number of days without food. We need hardly state that this is a hoax; the bird is simply a stuffed dead one.

We Wonder!

When we noticed in a contemporary last week-end an advertisement of St. Andreasberg Rollers classified under "garden produce," it at once brought to mind the story of the schoolboy who wrote that Canaries grew from canary seed. Can that boy have grown up and become a printer, we wonder?—or were the sweet-voiced ones mistaken for garden rollers?

A Blackbird's Romance.

A romance of bird life, it is said, has been enacted during the last few days in the garden of a Birmingham police inspector. He is the possessor of an aviary, and amongst its occupants is a magnificent cock Blackbird, whose appearance has impressed a too-susceptible hen, which has fallen head over heels in love, and pays constant visits to the aviary, chirping notes of endearment and endeavouring to coax the captive to follow her. But, alas! the lovers are divided by the inexorable wire partition. Moreover, their interviews and sweet converse are not allowed to proceed without interruption. They are jealously watched by a male bird, which, like the hen, rejoices in its freedom, and time after time he drives her away from the aviary and then attempts to fight his rival. But the wire again intervenes and prevents a combat that would probably be "to the death."

"C.B.'S" RHYMING COMPETITION.

C. stands for CAGE BIRDS, our paper, well known,
A. for the ANNUAL, a grand guide in the home;
G. for George Weston, who as judge often acts,
E. for the Editor, wha prints a' the facts.

BIRD WORLD—it costs ye nae mair than three D.,
Interesting articles within it ye'll see;
R. for reliance, when answering an ad.,
Deposit wi' CAGE BIRDS—you'll never be had;
Save yoursel', then, fra the cheat and the bad.
R. FARMER, Edinburgh.

Said the Owl to himself,
"I saw on a shelf—
I think it was five years ago—
A very small thing
I could hold with my wing,
It was CAGE BIRDS, that all of us know.
As before me I gaze,
I see with amaze
Ten volumes, all useful and wise;
As each book gets fatter
With interesting matter,
The fanciers welcome its size."
ALICE E. PRICE, Clifton, Bristol.

"Can you tell me now," said the wise old Owl,
as he gazed at the book with pride,
"A tome to compare, so large and rare, in all the countryside?
Great is its growth (I will e'en take my oath),
like the oak from the acorn small;
Each week, I trow—indeed, I vow—there are thousands for it call!
By the great round moon," said the wise old Owl, "which doth shine on this earth of ours,
I know the same (CAGE BIRDS its name), with all its latent powers.
Read it aright, view its columns so bright, and its ever-increasing store;
Do you want of the birds the choicest of words? then they're here in grandest array;
So we wish, one and all—the great and the small—to CAGE BIRDS a Happy Birthday!"
W. N. MIDGLEY, Winslow.

With solemn and wide-open eyes,
Even the Owl expressed surprise
At CAGE BIRDS' great increase in size.
For some foretold its quick demise—
Take heed, all ye who advertise!
Said Mr Owl, with raised lorgnette,
"There's one thing you must not forget:
Young CAGE BIRDS was the first that met
Our needs, and is unequalled yet
For those who keep a birdy pet!"
T. RONSON, Newcastle-on-Tyne.

When Luna's light, in silvery stream,
Has cast her rays across the night,
The bird of wisdom sits and thinks
Of CAGE BIRDS as a midget wight.
But see! the pale and envious beams
Give place to "Sol's" all-powerful light;
The "Babe" of sixty moons ago
Stands forth revealed in all his might!
J. S. CLINCH, Liverpool.

Full well the wondering Owl may stare
At "C. B.'s" tomes beyond compare.
"How has the nestling grown!" he cries,
"To reach this huge, prodigious size?"
Since CAGE BIRDS first was ever hatched
All fanciers its course have watched.
Its increase gives them great content,
With joy and wonder therein blent.
Mrs. GRIFFITHS, Horsham.

THE CIRCULATION OF "CAGE BIRDS."

OVER ONE MILLION AND A QUARTER

COPIES PRINTED IN TWENTY-SIX WEEKS.

Circulation Certificate

From J. G. HAMMOND & Co., Ltd.,

Printing Contractors, City Works, Fleet Lane, London, E.C.

To F. Carl, Esq.

We have pleasure in certifying that during the past six months we have printed and delivered to your order over one million and a quarter copies of "Cage Birds."

J. G. HAMMOND & Co., Ltd.

April 24th, 1907.

THE SALE OF A PARROT.

A Singular Case.

At King's Heath, on April 10th, William Hambling, bird dealer, of Church Road, Yardley, was summoned for stealing a paste brooch, value 3s. 6d. The case was of an extraordinary nature. The prosecution stated that some time ago Mrs. Lancaster, of 19, Alcester Road, Moseley, bought a Parrot from Hambling. On Friday he brought her another Parrot, and left it for Mr. Lancaster to see, with a view to purchase. He called again on Saturday between one and two o'clock in the afternoon, but Mr. Lancaster was again not in. He was shown up to a bed-sitting room to wait with the Parrot for Mr. Lancaster's arrival. On the dressing table were two diamond rings of the value of £20, and two diamond ear-rings valued at £10, as well as the brooch the subject of the charge. About three o'clock defendant went out, saying he would return, and about five o'clock called again. In the meantime Mrs. Lancaster missed the jewellery, and on the return of Hambling she asked the servant, in his presence, if she had knocked them off the table. Hambling then said that he saw them there, but he had not got them. He added, "What about the lady and gentleman who have been here? They must have taken them." Mrs. Lancaster stated that no one had been to the house. On Mr. Lancaster's arrival the police were sent for. In reply to Inspector Kitchen, defendant said he had seen the rings on the table and a gold watch, but about four o'clock Mrs. Lancaster put the watch in the pocket at the head of the bed.—Inspector Kitchen found the watch there, as stated.—Mrs. Lancaster said she had also missed a brooch, the subject of the charge. Defendant, who denied the allegation, offered to be searched. Told to turn out his pockets himself, he searched his overcoat and then threw it on the bed, and proceeded to search his other pockets. The Inspector picked the coat up and, noticing something in the pocket, told him to turn it out. The brooch was then found, along with some Parrot food. Defendant said someone must have put it there.—The Clerk: Was he sober?—Inspector: No; he had evidently had something to drink.—The Clerk: Was Mrs. Lancaster sober?—Inspector: Well, in my opinion, she had taken something to drink.—Defendant went into the box and denied that he left the bed room from the time he entered it until he left it with the police. He told Mrs. Lancaster he would not go away without either the bird or the money. He wanted to take the bird away, but Mrs. Lancaster would not let him. He and Mrs. Lancaster sat talking the whole of the time. A young lady and gentleman came in during the afternoon and stayed for about half an hour. He and Mrs. Lancaster had three glasses of whisky and water during the time he was waiting. He saw the rings and ear-rings on the dressing table, but he did not see the brooch.—Asked by the Clerk how he accounted for the brooch being in his pocket, he suggested that the young gentleman who visited the room slipped it into his pocket. He pushed close against him. Defendant said he would swear he never took the brooch; in fact, he was never left alone. Defendant also said Mr. Lancaster was lying on the bed all the time.—The Bench dismissed the case without comment.

HEAVY FINE FOR CRUELTY TO CANARIES.

At Wellingborough Police Court, on April 5th, a Canary breeder, Johnson Turner, of Tinsley, Sheffield, was fined £6 and costs for cruelty to Canaries. Nine birds were sent from Sheffield to Earl's Barton in a 9 in. box, the only hole being covered with paper. On arrival six birds were dead and the others nearly so.

Mr. J. Walsh, of Blackburn, writes:—You will wonder why I have not been advertising with you this last four or five weeks. The reason is, I have been quite overrun with orders from Jersey, Montreal (Canada), Fall River (America), Punjab (India), all over England, Ireland, Scotland, and Wales, and most of my orders come through advertising in CAGE BIRDS. I have taken the Rechabites Hall, a very large building, and am making same into a workshop and warehouse. I expect to be in next week. I shall then have plenty of room, and be able to employ more staff, and deal more promptly with my orders than I have been able to do this

THE SINGING CANARY.

Lecture before the Inverness O.A.

At the April monthly meeting of the Inverness Ornithological Association, Mr. Thomas Murphy in the chair, in the unavoidable absence of our esteemed president, Mr. A. Sanderson, Mr. George Mackenzie, of Seaforth Lodge, delivered a lecture on the Singing Canary. There was a large attendance of members and friends. At the outset, the lecturer pointed out that in size and outline the Roller Canary resembled more closely than other varieties the original wild Canary of Cape de Verde and Madeira. The standard aimed at was the standard of song, and neither form nor feather. Mr. Mackenzie went on to describe the evolution of the Roller, and defined the striking points of difference between the German country Canary, the trained Hartz Mountain Canary, and the St. Andreasberg. He explained from what he had seen in the Ober Harz and Unter Harz villages, how the peasantry of the district bred and trained the Rollers, and how large an industry it had become. Referring to the origin of the famous Seifert and Trute strains, and the elaborate training by means of simple musical instruments or specially selected schoolmaster, he showed how the commercial value of the Roller was enhanced. He entirely discarded the idea that imported Rollers would sing for only one season. In his own experience, imported birds were vocally perfect after even four or five years, and it was merely a matter of correct feeding and treatment. In regard to muling, he had got the best results as to song from Siskin Mules. Those bred from Linnet and Roller or Goldfinch and Roller had less compass of song, with fewer Canary notes. He touched upon the progress made in establishing the British-bred Roller, and said that his own experience made him favour the yellow Yorkshire cross as the best for giving style and size without taking away greatly from the vocal powers. Breeders of the Roller could not be too careful in securing quality in the hens that they imported; it was essential to success. Mr. Mackenzie said the Roller Fancy was extending rapidly, and societies were becoming numerous. He commended the study of the Singing Canary as a delightful and instructive field for the bird fancier. A hearty vote of thanks was accorded to the lecturer, and a similar compliment was awarded to Mr. Murphy for his conduct in the chair.

In sending us his annual subscription for CAGE BIRDS, Major Trotter (Rathmolyon) writes:—You have never failed to send my paper weekly when at home or abroad, for which please accept my best thanks, also my congratulations on the work and efficiency of the staff connected with the production of such a valuable journal to every lover of birds.

Mr. Jacob Mackley, of the well-known Norwich firm of that name, writes that, as the result of a small advertisement, costing 1s. 4d., inserted in CAGE BIRDS, for surplus stock, they have been enabled to purchase no fewer than 1,302 birds from all parts of the country, including some from the Continent. "You may not be surprised," he concludes, "but I am astonished at the result, which speaks volumes for the circulation of CAGE BIRDS." Messrs. Mackley are now busy getting 3,000 birds ready for exportation to New York.

Nightingale's Voice Heard.

This last week has been horribly cold, wet, and windy, writes a valued correspondent from Rotherfield, Sussex, but I heard Nightingales singing very early on the morning of the 16th inst. We have heaps of nests of Blackbirds and Hedge Sparrows, some with young and some with eggs, but I have not found nests of any other birds yet (only Wood Pigeons, which are too high up for me).

NOTES FOR HYBRID BREEDERS.

By "MULER."

HYBRID BREEDING.

As is well known, breeding Hybrids between two species of Briitsh birds is not quite such easy work as when the hen Canary forms the female parent. There is first of all the difficulty of getting hen British birds to breed in a cage, and then, in many cases, to get them to nest in a proper manner. Much of this latter difficulty could doubtless be avoided by supplying the hens, when in proper breeding condition, with material for nesting as nearly as possible resembling what they would select themselves if at liberty. So long as one only provides the usual nest bag of moss and cow-hair for, say, a hen Bullfinch to build with, they are not giving her a fair chance. And it is practically the same with every species of British bird, as they each possess their own fixed idea as to what constitutes proper nesting material, and are not easily imposed upon with imitations. The breeder who can get out into the country might well try the effect of providing his hen Britishers with the material from a deserted nest of a hen of her own species.

PREVENTABLE ACCIDENTS TO EGGS.

The disinclination to construct a proper nest just spoken of is responsible for many accidents to eggs. Even when deposited in a nearly bare box or pan they are liable to be broken before being removed to safer quarters, and when laid on the floor of the cage the risk is no less great; but when the floors are covered with gritty sand and the eggs are dropped on to it from the perch, as is often the case, they are generally beyond redemption. Most, or all, such accidents may be prevented by a little foresight. The upper perches should be placed rather low down, and the bottom of the cage kept covered with a thick layer of fine sawdust. A layer of sawdust should also be placed in the bottom of the nest box. Then the chances of broken eggs from these causes will be very small. Of course, a supply of grit must be provided, but it should either be kept in a small tin in one corner of the cage or, better still, hung on the front inside, after the manner of a water vessel.

COCK BREAKING EGGS.

Another cause of loss of eggs that might or might not be valuable is the mischievous curiosity of the cock birds. This is not quite so easy to prevent without often disturbing the birds, for one must either separate the cock from the hen each night when eggs are expected, or be up betimes to forestall his evil designs as soon as the egg is deposited. This is accounting the cock to be the only culprit, which is scarcely just or fair. Still, he is only one we need reckon with. Egg-destroying hens there certainly are, but as we consider they are never worth the trouble of attempting to reform, once the habit is formed, we should prefer to totally discard them. Neither must it be supposed that all cocks are egg-destroyers. The cock Goldfinch is notoriously one of the worst offenders. Yet I have known Goldies that would sit on the nest beside the hen during incubation, and were as trustworthy as any Canary. But these are the exceptions that go to prove the rule, and one can only discover the trustworthiness, or otherwise, of individuals of any species by actual observation and experience. It is best, therefore, not to put too much confidence in any individual specimen until he has proved himself worthy of such trust.

In answering advertisements kindly mention "CAGE BIRDS."

MICE

IN THE BIRD ROOM.

Rats, Mice, Field Mice, &c.,

EXTERMINATED BY DANYSZ VIRUS

Discovered and Prepared by

Dr. DANYSZ of the Pasteur Institute, Paris.

When affected with the Virus the Vermin leave their usual haunts and die in the open. The remedy is harmless to other animals and human beings and may be used everywhere with absolute safety.

For MICE only, 1/- per tube.

MY FAVOURITE BRITISH BIRDS.

By W. G. BULL.

(Continued from page 343.)

Now we come to type. You can get different types in Linnets just as in Goldfinches. You see here I have drawn two birds of extremely different types—one of the Yorkshire and the other of the Norwich type. I like a good, stout built bird, standing well up from the perch, with a good big head, and full neck. Get a stout bird, built on these lines, and you will hear the reporter say "beautiful, cone-shaped body." Don't forget size counts in a Linnet. Get them as large as you can. Well, when you have selected your Linnet, you must find out if he was caught in dry or in wet weather (that is, providing your bird is freshly caught), for this reason: In wet weather the seeds that they feed on are very soft, and if you put him on dry seeds at once, most likely he will have inflammation of the intestines, leading to diarrhœa, which very soon carries him off. So the best thing to start your freshly caught Linnet off is soaked rape seed. Put it in a pot with enough warm water to cover it; then strain and dry it, adding a little crushed hemp and canary seed, but be careful that you give fresh seed daily, as the soaked rape turns sour very quickly.

The stock mixture I use is the same as for Goldfinches, reducing the hemp half and adding rape instead. Some people say never give Linnets hemp seed; well, I have found no bad results, if given moderately. The bird is a free bather, so don't forget the bath. The show cage I like best is 11 ins. by 11 ins., and 5 ins. deep, enamelled a little lighter shade of green than that for the Goldfinch.

There are several ways of telling cocks from hens; the cock has a much browner shoulder or wing butt, and the white in the wing is much more plentiful. If you take a single flight feather of a cock bird you find white touches in the quill, which do not occur in the hen; but the best and surest way to tell is that the cock has red on its breast feather, which the hen entirely lacks.

SELECTING A BULLFINCH.

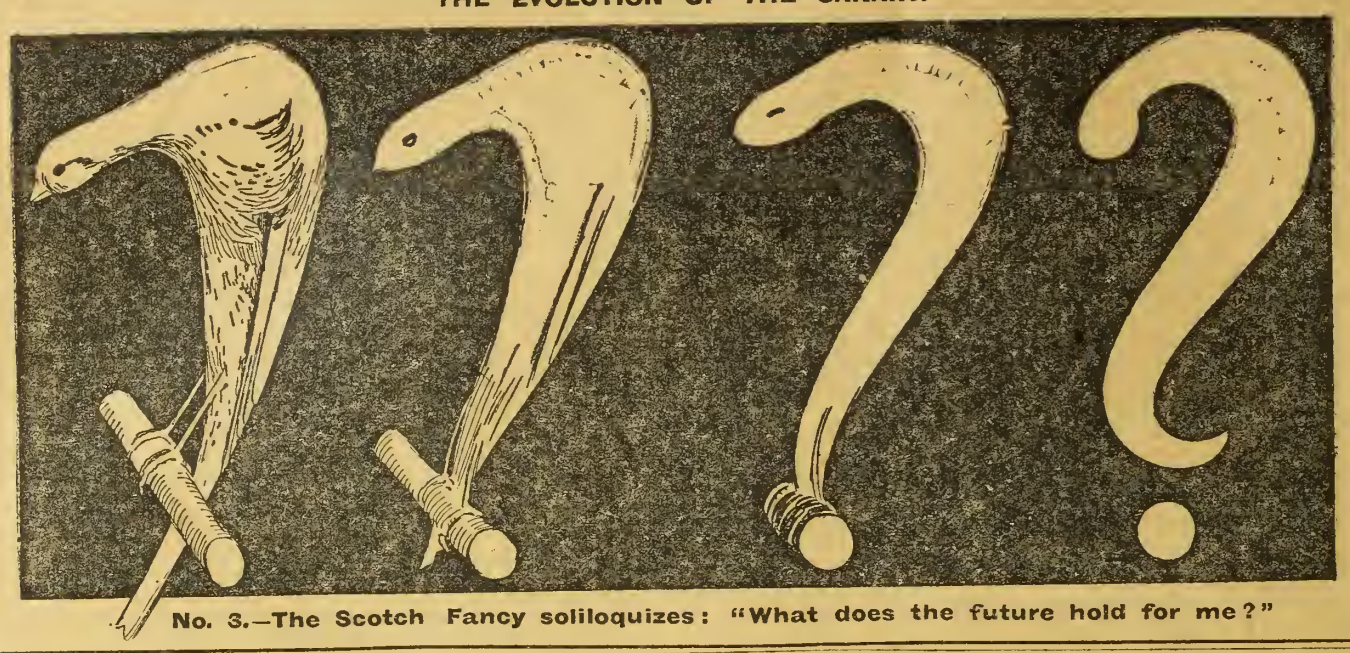
I can hardly say that the Bullfinch is such a great favourite with me as the two previously-mentioned birds; still, he is a beautiful bird, and commands a certain amount of attention. In selecting a Bullfinch for the show bench, you have got to consider size and colour of breast, which is a great item. It should be very bright and rich crimson, running from the base of the bill as far down the body as possible. The cap should be as large and as clean cut as you can get it, and a beautiful jet black. The back should be as bright a blue as you can obtain. The wings and tail also must be a dense black. The wing marking should be as large and as bright as possible, and the white on the rump, and under the vent, should be nice and clean. The type is often the John Bull style, as thick and as chubby as possible, with a full neck and large head. The legs must not be too long nor yet too short, or he will appear squatty.

The Bully is rather a difficult subject to cater for; his menu is large and varied. He is rather a short-lived bird in confinement, generally deteriorating in colour after being house-moulted. The best food to moult Master Bullie on is privet berries, blackberries, black currants, and ripe elderberries. These act as a colour food for him. For seeds, you had better let him have canary and a little rape. During the moult you must not give him any hemp seed, as it has the effect of making his plumage rather a dirty colour. I don't say a little after the moult will hurt him. Another thing the Bullfinch is very fond of (and this has earned him the dislike of the fruit-grower and the gardener) is the young shoots and buds of fruit trees. Still, I think he is merely in search of the blight and small insects that live on the trees. The best place to moult a Bullfinch is out of doors, or in a room free from any heat. I fancy they come out a better colour with plenty of fresh air. I dare say all of you can tell a cock from a hen by his crimson breast, as the hen is more of a chocolate colour.

Now, gentlemen, I thank you all for your very kind attention. If I have enlightened only one of you this evening on the selection, feeding, and management of my favourites—the Goldfinch, Linnet, and Bullfinch—I shall feel that my efforts have not been wasted.

A copy of No. 2 of the Douglas English Nature Books, entitled "One Hundred Photographs from Life of British Birds," reaches us from the publishers, Messrs. Bousfield and Co., London. The photographs are examples of the skill of Mr. K. B. Lodge, and a most charming booklet they make, the value of which is considerably enhanced by notes on the habits of the birds depicted. The shilling at which it is priced is a very reasonable charge.

THE EVOLUTION OF THE CANARY.



No. 3.—The Scotch Fancy soliloquizes: "What does the future hold for me?"

FROM OUR NOTE BOOK.

Formally Admitted.

The Black Lark (*Melanocorypha yeltonensis*) was formally placed on the list of British birds at the last meeting of the British Ornithologists Club. It will be remembered that a male was shot near Pevensey, Sussex, on January 29th, 1907, a female killed at Lydd, Kent, two days later, and a third specimen, also a male, killed at Rye on February 16th. This species, of course, can only be regarded as an accidental visitor to Great Britain, and it is improbable that it will ever be anything more, since its native habitat appears to be Turkestan, whence it sometimes strays into Russia. While the female might very well pass—to the uninitiated—for a common Skylark, the male differs remarkably, having a black livery, obscured during the autumn and winter by rusty brown fringes to the tips of the feathers. The short claw of the hind toe, however, readily distinguishes the female from the Skylark.

The White Blackbird Mates.

A little while ago we told of a white Blackbird in Newcastle—a wild white Blackbird. We learn now that this albino is mated, and that the nest is in process of being built. It seems evident, says a writer in the Newcastle "Journal," that in such a case the recognition of a particular colour plays no part in the choice of a spouse, and that the individuals of a species recognise one another independently of any perception of colour. The gentleman sending the above information said:—"About ten days ago I noticed the white Blackbird on the terrace in company with another Blackbird of normal colour, running backwards and forwards and circling round, and performing what appeared to me to be very curious antics. Both birds were so much absorbed that they allowed me to approach quite closely, and I then observed a (presumably) hen bird sitting on the palings. I came to the conclusion the performance was for her benefit, and the result has apparently been in favour of the white bird. I trust they may be allowed to carry out their domestic duties in peace and without disturbance."

THE
Next Number of the
BIRD WORLD
MAGAZINE
will be the last of the series to be published at Threepence.
The price in future will be
SIXPENCE
per Month, with the following Subscription Rates:
Six Months - - 3/-, Post Free.
Twelve Months - 5/-, Post Free.
APRIL Number still selling, but only a few copies left.
The frontispiece, in colours, depicting a dainty Spring migrant, is one of the most effective and charming plates ever issued, and will be voted by all a beautiful piece of work. There are many other splendid illustrations, and the literary contents are of great interest to all sections of bird lovers.
Sydney T. Heselton (Bridlington) writes:—I note with pleasure the proposed increase in the size of "The Bird World."
Single copies 3d., from your booksellers or railway bookstalls; post free 4d., from
F. CARL,
154, FLEET STREET, LONDON, E.C.

A Family Affair.

A curious occurrence is reported from Ellel, near Lancaster, where three species of Tits were found to have been caught in a bird-trap at one and the same time; they were the Great Tit, Coal Tit and Blue Tit.

The Fatal Draught.

A remarkable bird found in Mexico, the Bee Martin, is said to have a trick of ruffling up the feathers on the top of its head into the exact semblance of a beautiful flower, and when a bee comes along to sip honey from the supposed flower it is snapped up by the bird.

Trims it's own Feathers.

It is a curious fact that we have one bird which trims its feathers—the tail feathers—to a shape which, presumably, pleases it. This is the Motmot, an inhabitant of the dense forests of Mexico, and a bird akin to our own Kingfisher. It has a long tail, which the adult trims in an extraordinary fashion by mobbing away the barbules from the shafts of the long central feathers for a space of an inch at a short distance from their ends, giving the said feathers a racquet-shaped appearance, so that they hang down not unlike the pendulum of a clock.

To the Gentler Sex.

The Rev. K. A. Deakin, speaking recently at the Redditch Institute, said he felt strongly on the destruction of life simply for the purpose of personal adornment. There seemed to be something so utterly unwomanly in the encouragement of the taking of the lives of God's most bright and innocent creatures just because an odious fashion had pointed out some bright-hued bird as an ornament for a lady's hat. One might not be surprised at such an adornment finding favour in the eyes of ignorant savages, but that women of refinement and gentle breeding should take pleasure in such a thing was a satire on our boasted civilisation. If ladies must have feathers for their hats—and he did not deny that they were sometimes very becoming—why could they not be content with those of the birds which were killed for food, and which, by the dyer's art, they could have of any shade they pleased?

Bird Choked by Fish.

Whilst walking by the side of the Wharfe, near Crum Wheel, Ilkley, the other day, two men found a bird in the water with a fish fast in its throat, with which, in the attempt to swallow, it had evidently been choked. The bird was a Lesser Grebe (or Dabchick), one of the most beautiful and interesting of our river-frequenting web-footed birds. The fish which the bird attempted to swallow measures 3½ inches from head to tail, and two-thirds its length projected beyond the bird's beak. It was a bullhead, or miller's thumb, its large head having been too much for the bird. The bird and fish are being stuffed and mounted, and will find a place in the Ilkley Museum.

How Birds keep Warm.

A bird is clothed in the best of non-conducting substances, says a writer in a contemporary. Even the disorderly accumulation of feathers in a feather bed offers enormous resistance to the passage of heat, whereas living feathers arranged on the body like scales must constitute an armour against radiation that is almost perfect. By ruffling up its feathers, as a bird does when at rest in cold weather, a sheath of air, which soon becomes hot air, is created round the bird, and beyond that radiation is very slow. Moreover, within the skin are many air-chambers, in some cases connected with the lungs, and in others communicating with the outer air through pores in the skin. Their very bones are in most cases filled with air instead of marrow. Thus the bird resembles a double-walled house, with all its internal spaces filled with air warmed by a central stove, none of the heat of which escapes except through the labyrinth of jealous barriers. The same arrangement that in no small degree enables the bird to fly is also the best possible warming apparatus. As a matter of fact, birds seldom die of cold alone.

OBITUARY.

Mr. H. GOLLWITZER.

We regret to have to record the death of a well-known London Canary breeder, Mr. H. Gollwitzer (of Lambeth) who passed away on April 1st, and left his wife and children, we regret to say, practically unprovided for. His birds and cages, we believe, are being advertised in our pages.

MR. A. BENNET (GOVAN).

It is with the deepest regret and sympathy, writes Mr. J. A. Stewart, that I inform you of the death of Mr. Alexander Bennett, of Govan, who passed away on Saturday night, April 20th, after a long and painful illness. He was a genial, kind, warm-hearted man, and an enthusiastic breeder of Scotch Fancy Canaries. I am sure all who knew him will sympathise with his widow and family in their sad bereavement.

"Out, Damned Spot."

It is reported that a commuuity of Rooks at Poole, Dorset, was so horrified by the body of a tame relative, which they had put to death on the poor bird attempting to join them after escaping from its cage, that they have now abandoned the spot.

FANCIERS' FESTIVITIES.

The Greenwich and Deptford Cage Bird Society held a most successful smoking concert at the Two Brewers, Church-street, Greenwich, on April 11th. During the evening the following artistes appeared:—Mr. Fred Putner, who kindly arranged the programme, and opened the concert with "A Different Girl Again." Mr. and Mr. Joe Bass greatly amused the company with a duet, composed of different choruses. Mr. Meads, the chairman, gave the toast of "The Society," dwelling upon the amicable feeling existing among the members, and the promising outlook of the society. Mr. Hill responded, and mentioned that five years ago the society was started with half-a-dozen members in a railway arch, and now the membership exceeds fifty. Mr. R. Simpson sang "The Jovial Monk," and after a few more songs and a gramophone selection, Mr. Putner proposed "The Visitors," which was responded to by Mr. Joe Bass, who remarked that the only association he had with the bird Fancy was when as a boy he accidentally liberated his father's pet Canary, which happened to be a hen, and consequently received a thrashing, but having enjoyed himself so much during the evening he felt inclined to enter the Fancy. Miss Simpson sang "Queen of the Earth," while Mr. Higett caused great mirth with his "Walker walked away, because he coudn't pay." Mr. Hill gave "The Ladies," saying how pleased he was to see so many present, and advising all fanciers present to endeavour to interest their wives in the Fancy, as then they would have no complaints of seed, sawdust, etc., on the stair carpet. Mr. Lees responded in a suitable manner on behalf of the ladies, and quite endorsed Mr. Hill's remarks. Mr. Gripton sang "I see you've got your old brown hat on." Mr. Fred Putner then splendidly rendered "The Wizard." Mr. Atwell sang a song in two voices. Mr. Powell obliged with "Where the sunset turns the ocean blue to gold." Time drawing on, and having toasted the artistes and host, a most enjoyable evening was brought to a close with the singing of "Auld Lang Syne."—SID. HACK, Sec.

SINGING CONTESTS.

WARRINGTON L.S.A.

Contest April 20th, at the File Cutter's Arms. Mr. G. Eastwood gave four prizes, which brought an entry of 27 birds. I was pleased to see such a good number of fanciers and friends. Some fine singing was heard, to the delight of all present. Judges, Messrs. T. Crawford and J. Ball; timekeeper, Mr. J. Lawton; 1st, Stanway; 2nd and 3rd, Tryner; 4th, Armitage.

BLACKBURN.

The Blackburn Linnet Singing Association held contest for quality on April 20th, at Club House. Twenty-five birds competed. The singing was of the best. 1st, Leeming; 2nd, R. Topping; 3rd, Bentley; 4th, W. H. Topping; 5th, Bentley; 6th, W. H. Topping. Judges, J. Dobson and M. Place; timekeeper, G. Rostron.

RD. HAYHURST, Sec.

LEEDS.

Usual week-end contests at the King's Head. The birds were in splendid condition, and gave a good account of themselves. April 21st, eighteen picked birds competed for £1 in three prizes, 1st, 2nd, Galley, 3rd, Booth; judges, Messrs. Mawson, Naylor, and Tours. April 22nd, twenty-two selected birds competed for four prizes given by Mr. J. Booth, the proud owner of the best quality singing Linnet in Yorkshire; judges, C. Cooper and W. Naylor; 1st, Clark, the Linnet king; 2nd, Booth; 3rd, Naylor; 4th, Pearson. I should like our Lancashire and Yorkshire members to know that May 4th is the latest date for paying up for our great Whitsuntide contest.—J. MELIA, Hon. Sec.

Contest at Skinner's Arms, Buslingthorpe-lane, April 21st, when sixteen birds competed, and some good singing was heard, to the delight of a good number of visitors and friends; judges, T. Crane and F. Raper. Laycock and Galley share 1st and 2nd; Galley takes 3rd.—C. HUNT, Sec.

The members of the Prince Albert Association held a contest April 21st. Mr. J. R. Saynor gave three prizes, and some of the best singing was heard for many a year. The large room was crowded, and the winning bird was loudly applauded. It is a marvellous Linnet. Judges, S. Green and B. Jackson; timekeeper, G. Towers. 1st, 2nd, Allen; 3rd, Binner. There was a gentleman present to hear the birds sing who said he will match Mr. Allen's bird for £25 a side, for quality singing, best and cleanest bird in ten minutes.

E. WOOD, Hon. Sec.

Seeing Mr. Booth has bought Mr. Whittaker's bird, and is now out with a challenge to sing any Linnet in Yorkshire, I will match my bird to sing Mr. Booth's for £25 a side, quality singing, best and cleanest bird, length, turns, and form; one minute spring, and nine minutes sing, ten minutes in all. The Editor of CAGE BIRDS to pick three judges who have judged neither bird before. The match to take place out of Leeds. I may state my bird can be matched up to £100. I don't want any paper talk; business only meant with me.—HARRY ALLEN, 42, Brown Hill-crescent, Harehills-lane, Leeds.

The Quality Linnet Singing Brigade were treated to four successive days Linuet singing at the Old Bird House during the Easter holidays. The majority said that they had never met such a gathering of fanciers. There were representatives from Blackburn, Wigan, Oldham, Keighley, Normanton, Bradford, Dewsbury, etc. The first contest on Good Friday brought 17 birds to the scratch. Judges, J. Melia and B. Mawson. 1, C. Whitaker; 2, P. Hohan; 3, T. Stead. Easter Saturday: 1, 2, T. Stead; 3, P. Hohan. Judges, Melia, Crane, and Somers. Easter Sunday: 1, S. Hardcastle; 2, T. Stead; 3, A. Nicholson; 4, shared by T. Chadwick and H. Hayes. Judges, J. Melia and C. Cooper. Twenty-seven birds. On Easter Monday 31 birds sung for six good prizes. Judges, J. Melia, Crane, and Cooper. 1, S. Hardcastle; 2, C. Whitaker; 3, T. Chadwick; 4, T. Davis; 5, 6, F. Galley. April 6th, 18 birds sung for three good prizes. 1, S. Hardcastle; 2, J. Clark; 3, shared by F. Galley and H. Hayes. Judges, Melia, Tours, and Naylor. On Sunday 26 birds competed. 1, Whitaker; 2, S. Hardcastle; 3, J. Clark; 4, T. Stead. Judges, Melia, Crane, and Cooper. The prizes were given by Mr. J. Booth, which, I think, is a record gift for the week.—J. MELIA, Sec.

Novice Breeding Competition. Send me at least 500 of the cards to display in the shop windows and amongst the cage bird fanciers I know in the district, as I think it will be a great advantage both to your paper and our society.—B. COOK, Hon. Sec. Dewsbury and District C.B.S.

JARROW & DIS, C.B.F.S.

Meeting held April 17th, and a very good attendance of members. Business was, show and selection of judge, Mr. J. H. Payne, also joining Cage Bird Union, which was carried unanimously; new members were enrolled, and a great amount of business gone through. Next meeting, May 1st.

J. T. CARRICK, Sec.

GLOUCESTER C.B.S.

Meeting held April 4th. Several new members enrolled. It was decided to hold First Feather Show at headquarters, on June 6th, Mr. Mansfield being unanimously elected to officiate as judge, and he has kindly accepted. Next meeting, May 2nd. J. Houghton, Hon. Sec., Dargai, Hatherley-road, Gloucester, to whom all communications should be sent.

CROOK AND DIS. C.B.S.

A meeting of fanciers was held on April 20th, at Love's Hotel. It was decided that a society be formed to be called the Crook and District Cage Bird Society, confined to cage birds only. Sixteen members associated themselves in the effort, and several promised at our next meeting held May 18th. Officers elected:—President, Mr. Thos. Fowler; chairman of committee, J. Horner; treasurer, E. Hutchinson; secretary, Wm. Rutherford, late of Crook C.B.S.

HAMILTON CADZOW OAK O.S.

Meeting held April 20th, Mr. Wm. Shearer in the chair. The balance-sheet, after clearing off last year's debt, leaves a nice little nest egg towards next show. The following office bearers were elected:—President, Wm. Shearer; Vice-President, D. Johnstone; Treas., J. B. Smith; Sec., R. Gadsden; Auditors, Wm. Haddon and Wm. Brownlie. It was agreed to hold show December 14th. Next meeting, May 18th. Selection of judges and classification.

R. GADSDEN, Sec.

TORBAY O.S.

This go-ahead society, which was recently formed at Paignton, has for its Chairman that good fancier, Mr. T. H. Vealc. First open show is fixed for October 30th next, and the Committee have secured the services of that noted specialist, Mr. J. H. Payne, to judge. Although this is looking well ahead, the Committee are to be congratulated on the success that has so far attended their efforts. Mr. H. Whitley, of Primley Hill, has been elected President, and the Committee recognise that they are fortunate in being able to secure him for that position, Mr. Whitley being held in great respect by all sections of the Fancy in the neighbourhood of Paignton.

E. C. PARNELL, Hon. Sec.

GATESHEAD & DIS. C.B.S.

Meeting held on April 17th. Correspondence was read from Mr. Hadwin, Sec. E. and W.B.F.C.C., informing us our offer to hold this international contest had been accepted by his members, and for which we are providing 14 classes. Mr. J. S. Wilson, Workington, was elected to judge. Nine new members were elected. A paper by Mr. J. Robson, "The Breeding Room and its Occupants," was read by our Chairman, Mr. Hawkins, and listened to with rapt attention. Discussion took place, and a resolution was carried unanimously that the Secretary he instructed to write and thank Mr. Robson for the very instructive paper, for the thorough and masterful way he had gone into every detail of the matter, and for which the members were deeply grateful. It was decided to remove the headquarters to Lockhart's Cafe, High-street. Next meeting, May 29th.

THOS. TAYLOR, Sec.

Fanciers are all talking about the Substitute for Egg and Bread Crumbs.

SPRATT'S PATENT, LIMITED,
24 & 25, Fenchurch Street, London, E.C.

ARBROATH SCOTCH FANCY C.C.

Annual meeting held April 18th. It was arranged that instead of restricting the British birds to one class there be six classes, to allow all fanciers to show their birds in their distinct classes. The election of office bearers was left over till next meeting, the first Thursday in May. The date for annual show was fixed for October 26th.

JOHN S. NAPIER, Sec.

RUTHERGLEN AND DIS. ASSOCIATION.

Meeting April 15th, Dr. Manson (vice-president) in the chair. The first business was the reading of Dr. Gray's report regarding Canaries that had died young, and was as follows.—"Viscera examined and found quite healthy; crops empty, but no sign of irritation; brain and spinal cord very much disintegrated, probably due to inflammation. This condition of the brain and cord I do not consider infectious, and was most likely brought about by the cold weather and too early pairing." This report was received with much interest by the members. It was decided to hold a First Feather Show on June 15th, at which it is expected to have classes for Borders, Plainhead Norwich, Crest and Crestbred, Scotch Fancy, Any Other Variety, and also for Mules and Hybrids, and a special prize was offered for Borders by Dr. Manson, and one for Plainheads by Mr. Lappin. It was decided to charge 3d. entry for each bird, to be divided as prizes.

SCOTTISH NORWICH PLAINHEAD CLUB.

The first meeting of the new Committee was held at Glasgow on April 20th, to elect the President and five Vice-Presidents, Mr. John Ferguson in the chair. Great satisfaction was expressed at the large vote of the members, which indicates that more interest is being taken in the affairs of the club. New rule provides that Secretary and Treasurer (combined), two Auditors, six judges, and eighteen of a Committee to be elected by and from its members. The Committee to elect their own president and vice-presidents from the eighteen members elected. The result has been a great success. Members of committee were asked to vote by letter if unable to be present at the meeting. Result of voting embodied in official report given below. Scale of points for judging will be given in new rules to be sent out to all members shortly. Societies wishing patronage and support of Scottish Plainhead Club must send the name of judge appointed, number of classes given, with date of show. Result of vote:—President, John Ferguson (Glasgow); Vice-Presidents, A. G. Cameron (Kelso), John Hector (Aberdeen), G. Scaife (Fauldhouse), W. Watson (Kilmarnock), and A. C. Daudie (Edinburgh; Committee, John Ferguson (Glasgow) (31), A. G. Cameron (Kelso) (26), John Young (Rutherglen) (26), W. Watson (Kilmarnock) (25), W. B. Mackie (Aberdeen) (25), C. Campbell (Stirling) (22), G. Scaife (Fauldhouse) (22), J. Winter (Edinburgh) (22), J. Hector (Aberdeen) (22), A. Chalmers (Kirkintilloch) (21), J. F. Dewar (Edinburgh) (21), J. McLay (Kirkintilloch) (21), J. Howe (Dundee) (20), W. Jaffrey (Brechin) (19), J. Adams (Dundee) (18), W. G. Muir (Kilmarnock) (18), A. McFarlane (Glasgow) (18), A. R. Langlands (Montrose) (16), A. C. Daudie (Edinburgh) (16). Judges, A. G. Cameron (Kelso) (28), J. McLay (Kirkintilloch) (25), W. Watson (Kilmarnock) (21), J. Robson (London) (19), J. Adams (Dundee) (18). J. Ferguson (Glasgow) (17); Auditors, J. Young (Rutherglen) (13), A. R. Langlands (Montrose) (11); Secretary and Treasurer, D. Smith (33). Votes certified by John Young and John Ferguson, scrutineers.

D. SMITH, Sec.
142, High-street, Edinburgh.

GLASGOW & WEST OF SCOTLAND NORWICH M.B. & F.B.C.

On April 16th, special meeting, to hear a lecture by the prominent British bird and Canary judge, Mr. Matthew Craig, of Tolleross. Mr. Craig chose for his subject, "Mule and Hybrid Breeding," and divided his discourse into three parts, viz., Light Mules, Dark Mules, and Hybrids. He began with the Light Mules, and favoured box cages not less than 9 in. from front to back, and the length of the usual double breeding cage. The cages should be well washed and disinfected to free of redmite, and kept regularly cleaned while in use. The Canary hen should be a large clear bird, if possible from clear parents, and the Finches well set up large birds, not thick or cloddy, and the pairs should be run together for some time early in the season, then separated for a while. Two nests might be had from the Canary paired with a Canary cock, and then the Finch would be in trim for breeding. The cock might be run with the Canary for some time for a day or two; then left with her till she looked like laying, when the Finch should be separated at night. When the hen has laid her full clutch, she can be left to hatch and rear the young, getting the same food and attention as when rearing young Canaries. Mr. Craig is of opinion that fanciers trying for light Mules should breed their own strain of clear Sib-bred Canary hens, and thinks it probable that with careful pairing and patience none need despair of breeding a good light Mule. Much the same routine should be pursued in breeding for Dark Mules, and for preference a good-sized yellow Cinnamon hen should be used. Hybrid breeding Mr. Craig characterised as the most interesting study, the different nests, habits, and characteristics being most pleasing to notice, and the strange vagaries of the different Finches needing all the ingenuity of the breeder to forestall and checkmate the eccentricities of the hens. He mentioned that 28 crosses were known, all more or less pleasing, each and all offering difficulties sufficient to captivate the attention of the genuine fancier. The pairs should be run together in the same way as for muling, and the cages kept in as quiet a place as possible. In the case of Bullfinch hens plenty of young hawthorn buds and branches of other young budding trees should be supplied, and also a few mealworms; a small strawberry basket makes a good nest, and if a bit of hair is put in the cages before running in the cock you will soon see if the hen is ready. Mr. Craig found that wild birds were very fond of a small piece of bread soaked in water, and advised that when young Hybrids were hatched by the Canary fostermothers they should have some insect food along with the usual egg food. Mr. Craig finished with some general interesting remarks, and the members were asked to question the lecturer on any points they might wish made more clear. Nearly all of the forty members present took turn in the subsequent conversation, and a most profitable hour was spent, the young fanciers particularly getting many useful hints, some of us thinking that after all there was a "Royal Road" to Mule and Hybrid breeding, and that these lectures payed the way. A most enjoyable meeting was brought to a close with a vote of thanks to Mr. Craig and also to our President, Mr. Roland Eastman, for so ably presiding.

R. A. BROWN, Sec.

POTTERIES & DIS. C.B.A.

Special meeting held April 18th, to consider an appeal from the Wolverhampton C.B.S., asking if we could alter the date of our annual show, to avoid clashing with them, as their judge could not come on any other date. We decided finally to hold a two-days' show on October 23rd and 24th, as our judge, Mr. Vardy, could come on that date.

J. SIMCOCK, Sec.

DEAL, WALMER & DIS. F.A.

Special meeting held April 18th, to discuss the question of the annual show. Cr. W. H. Redsull presided. In compliance with an arrangement made at the last meeting a poll had been taken to decide whether the annual show should be thrown open to the whole of Kent, or restricted to members as on previous occasions. The majority proved to be in favour of an open show, the result being as follows:—For open show, 44; for members' show, 21. In expressing his pleasure at the result of the poll, the chairman said that he hoped all those who had voted for an open show would do their utmost to ensure its success. Three new members were proposed.

GUISBOROUGH F.S.

Annual dinner on April 20th, in Mr. Wear's Rooms, Church-street, where a very large number of fanciers and friends, presided over by Mr. Lawrenson, sat down to an excellent repast. The Chairman, in proposing the Guisboro' and other societies, spoke at great length upon the year's working, and the sound financial condition of the society. It had been a source of great pleasure to him in the past to be amongst us, and in congratulating the members upon the excellent manned in which they had worked together, felt certain that a brilliant future lay before the society. The hon. secretary, Mr. Simpson, in responding to the toast, drew the attention of the members to the large number of shows clashing with ours upon the same day, and yet with care they had come right side up, and had no doubt but that they would do so again with support similar to that received in the past. The King and Queen and Royal Family having been proposed by Mr. Jones, was responded to by the company singing "God Save the King." The "Chairman," and "Our Host," having been proposed by Mr Hodgson, was humorously replied to by Mr. Clarkson. During the remainder of the evening songs and duets were sung by the following artistes: Messrs. Thompson, Gendle, Pallister, Wear, and the Brothers Jones, Mr. King ably assisting at the piano. After enjoying themselves to near midnight, the company broke up with "God Save the King" and "Auld Lang Syne."

W. T. SIMPSON, Hon. Sec.

CINNAMON-MARKED YORKSHIRE C.C.

Annual meeting held at Bradford on April 20th. In the absence of the President, through illness, Mr. J. Greaves presided. The balance-sheet was considered, showing a profit on the year of nearly £3, and over £5 to the credit of the club. The following officers were elected:—Messrs. J. Greaves (Windhill), President; R. W. Gledhill (Huddersfield), Vice-President; R. Garnett (Windhill), Sec.; R. Sutcliffe (Windhill) and J. E. Brotherton (Bradford), Trustees; W. Crabtree, J. Hartley, T. Fortnam, F. Hammond, J. E. Brotherton, H. Simonett (Bradford), J. F. Gibbous, J. J. Norris (Manchester), W. Gladwin (London), W. T. Hall (Dewsbury), F. Armstrong, J. F. Clarkson (Halifax), H. H. Towers (Windhill), H. Dobson (Soltaire), A. Hirst (Accrington), T. Milburn (Allerton), M. Blakey, A. Dearden (Brighouse), J. W. Wharton, J. Holmshaw (Liversedge), M. Richmond (Rodley), T. Bentley (Cleckheaton), A. Kent (Hartshead Moor), A. Lowford (Huddersfield), T. Ogden (Dudley Hill). It was decided to again hold competitions for champions and novices, also that specials for best fourth prize birds, and for most points gained by novices at competition shows, either first feather or winter. It was decided that we adhere to our rule as to a separate judge for each competition show, the National Show included. The following gentlemen have kindly promised specials for 1907:—Messrs. J. E. Brotherton, first prize for novices: R. Sutcliffe and Son, medal; H. Dobson, watch; T. Bentley, teapot; J. F. Gibbons, 10/6, all for novices; Ogden Bros., value 7/6, for most points with consolation cards; J. Greaves, 10/6; W. H. Shackleton, 10/6; W. Gledhill, 10/6; F. Hammond, 5/-; H. Simonet, 5/-; W. Crabtree, 5/-; J. Hartley, 2/6; T. Fortnam, 2/6; T. Clegg, 2/6; A. Kent, 2/6.

R. GARNETT, Sec.

GRIMSBY AND DIS. C.B.S.

At our last meeting Mr. H. E. Stubbs opened a discussion on the Rearing and Feeding of Birds. He commenced by describing the action of the muscles of the maw and the process of the food through the body. In the feeding of young birds we should look to Nature as our guide. The yolk of the egg is attached to the vent of the young bird when it is in the shell, and is absorbed by the chick during the latter stages of incubation. Let this, therefore, be our guide, he says, in the selection of food for young birds. We must adopt some food of similar composition to that of the yolk. He advocates the use of the yolk, disregarding the white. The yolk is rich in fats and proteids, and necessarily contains all that is required for the construction of the body. The young should be gradually weaned from egg diet to one of rape seed, because this seed is similar in composition to that of the yolk, the analogy being that they both contain a high percentage of fats. He said birds thrive well on this seed as a staple diet, but unfortunately such a diet is unsatisfactory when colour-food is being used, because the amount of oil in this seed causes the colouring matter to be passed too quickly through the body. Canary seed contains too much starchy matter to be an ideal staple diet. Here he particularly warned novices not to change suddenly from one seed to another, but to gradually introduce the new kind by degrees. It was his opinion that an ideal way of feeding was to allow the birds only to feed at regular intervals. He has placed cards before their hoppers in order to prevent birds eating between meals. By such a treatment birds, like human beings, will be healthier and less subject to indigestion. He finds indigestion and tuberculosis the causes of much mortality among birds. He therefore advocated plenty of ventilation in the bird room. Green foods, such as lettuce, groundsel, and watercress are all reliable. They contain a large amount of water, which is helpful in carrying off the waste products of the body. In the discussion which followed, it was asked why Mr. Stubbs had not mentioned hemp seed, which had always been useful in rearing young birds. In reply he said analysis shows that the composition of hemp and rape is so similar that what you may say of one is true of the other. At the conclusion of a pleasant discussion, Mr. Clews proposed a vote of thanks to Mr. Stubbs, which was seconded by Mr. Moore, who added further advice to the novice section. Next month we shall arrange the classification for our open show in October, together with other business.

HY. E. EMERSON, Hon. Sec.

FIRST FEATHER SHOWS.

The dates fixed for First Feather Shows are inserted in this column free of charge. Secretaries should notify us of same as soon as decided upon.

May 6 and June 3.—Hull C.B.S.
May 18.—Hucknall Torkard C.B.S.
June 1 and 27.—Bradford East O.S.
June 1 and July 20.—Shipley O.S.
June 6.—Gloucester and Dis. C.B.S.
June 12.—Grimsby C.B.S.
June 15.—Rutherglen and Dis. C.B.A.
June 20.—Goldsthorpe, Thurnscoe and Dis. C.B.S.
June 22.—Leigh and Dis. C.B.S.
June 22.—Rochdale Good Intent C.B.S.
June 29.—Darlington C. and B.B.F.A.
June 29.—Littleborough C.B.S.
June 29.—North London C.B.A.
June 29.—Pendleton and Salford C.B.S.
June 29.— Potteries C.B.A.
June 29.—Sheffield C.B.S.
June 29.—Rotherham C.B.S.
July 1.—Wimbledon C.B.S.
July 3.—Bristol C.B.S.
July 6.—Admiral Duncan (Notts) O.S.
July 6.—Blackburn C.B.S.

July 20.—Wallsend and Mid-Tyne C.B.S.
July 23.—Stoke Newington F.S.

JUDGES OF CAGE BIRDS.

The attention of Show Secretaries is directed to the following list of gentlemen willing to act as Judges. Terms for insertion on application.

A. AMBLER, 17, Lytton Road, Bradford. Judge of Canaries and Cage Birds. Life experience. 11 years reporter to the Fancy Press.

H. W. AXE, 55, Market Place, Doncaster. Judge of Canaries and other Cage Birds. Practical experience (Norwich and British speciality).

W. O BARLOW, The Aviaries, Malpas, Cheshire. Judge of Canaries, British Birds and Mules. Terms moderate

J. C. BARNES, 119, Duncombe Street, Walkley, Sheffield. Judge of Canaries and Cage Birds. Long practical experience. Terms moderate.

W. P. BARNES, Judge of Canaries and Cage Birds. Life practical experience. Breeder and exhibitor. Reporter for Fancy Press. Commercial Road, Grantham.

GEO. BENNETT, 46, Wenlock Street, Luton, Beds. Judge of Canaries and Cage Birds. Thirty years' experience. Terms moderate.

J. BERTIE, 7, Mitchell-st., Nottingham, Judge of Canaries and Cage Birds; all classes; 30 years' practical experience.

W. A. COWGILL, 115, Washington Street, Girlington, Bradford. Judge of Canaries and Cage Birds. Over twenty years' experience. Terms moderate.

A. G. DAVIS, Judge of all Classes of Cage Birds. Long practical experience. Terms moderate. 110, Tib Street, Manchester.

T. DIXON, Pioneer Terrace, Bedlington Station Northumberland. Judge of Canaries and Cage Birds. Life experience.

J. DOBSON, 14, East Road, London, N. Judge of Canaries and Cage Birds.

J. W. DRIVER, (Adnitt & Driver), Gladstone Street, South Normanton, Alfreton. Judge of Cage Birds.

GEO. GARDNER, 11, Haverstock Road, London, N.W. Judge of all kinds of Cage Birds.

C. A. HOUSE, 82, Upper Walthamstow Road, Walthamstow Judge of Canaries, Mules, British and Foreign Birds.

W H. LINDLEY, 4, Summer Lane, Wombwell, near Barnsley. Judge of Canaries and Cage Birds only.

E. A. LOVELL, 19, Islington Road, Southville, Bristol. Judge of Cage Birds (all varieties). Life experience.

F. MARWOOD, 1, Barnard Street, Thornaby-on-Tees, Mules, British and Foreign, a Specialty. 17 years exhibitor. Terms moderate.

W. R. MILES, The Aviaries, Chichester. Judge of Canaries and Cage Birds. Life experience.

W. MUNDELL, 6, Carlisle Place, Bradford. Judge of Canaries and Cage Birds.

J. NORTH, 435, Oxford Road, Reading. Canaries, British and Foreign Birds. Author of "The Common Sense of Canary Rearing."

J. PATTERSON, Chirnside. Judge of Cage Birds. All varieties. Wide practical experience. Specialist Border Fancy Judge.

J. H. PAYNE, 17, Northgate Street, Gloucester. Judge of Canaries, British and Foreign Cage Birds.

PARKER ROBINSON, N.B.B. & M. Club, 1, Back Hartington Street South, Barrow-in-Furness. Cage Birds, all Varieties.

J. H. ROE, 167, Clarence Rd., Derby. Judge of Canaries and Cage Birds. Twenty years' practical experience.

WILLIAM J. ROSS, 19, Haulgh Road, Inverness, N.B. Judge of Pigeons, Canaries and Cage Birds. All varieties. Life experience.

C. E. SILK, The Aviaries, Emsworth, Hants. Judge of Canaries and all Cage Birds. Life experience.

HENRY TAMS, Orchard Place, Longton, Staffs. Judge of Canaries, British and Foreign Birds. Twenty-five years Breeder and Exhibitor.

R. B. TOPE, Hoe Street, Plymouth. Judge of Cage Birds, Rabbits, Cats, and Cavies. Twenty-five years' experience.

J. WILCOCK, 14, Chapel Street, Eccleshill, near Bradford, Yorkshire. Judge of Canaries and Cage Birds. 25 years Breeder and Exhibitor leading shows.

J. C. WILMOT, 17, Sandhurst Road, Bedford. Judge of Canaries & British Birds. Thirty years' experience.

H. WRIGHT (WRIGHT & SON), 84, Heath Road, Norwich. Judge of Cage Birds. Life experience.

Canary Breeding Competition.

I notice a letter from Mr. Reynolds (Kendlebury) stating that he was not in touch with any club members, and that he did not think he would be able to get any without paying for them. Fortunately, however, there are members of the Pendleton and Salford Society in his district, and I can put him in touch with two if he cares to communicate with me, or I would visit him myself with a friend with pleasure. Trusting this competition will be successful from every point of view.—S. SKELTON, 63, Goulden Street, Seedley.

[We are much obliged to Mr. Skelton for his kind offer.—ED. "C. B."]

SHOW DATES FIXED.

To secure insertion in this column a guarantee that the show will be advertised in "C.B." to the extent of at east 25/- must be sent to our manager.

HARPENDEN, WHIT-MONDAY,
Horse Jumping and Driving Competitions, Dogs.
POULTRY, PIGEONS, and CAGE BIRDS.
Entries close May 13th.
Particulars from the Secretary, J. B. Townend, Station Road, Harpenden.

RUNCORN and District Show of Poultry and Cage Birds, Saturday, Aug. 10, 1907.
—Schedules from Godwin & Hardy, Secs.

"CAGE BIRDS" BY POST.
The Subscription Rates for this Journal are as follows
13 Weeks ... ... 2s. 6d.
26 Weeks ... ... 5s. 0d.
52 Weeks ... ... 10s. 0d.
The Annual Subscription will, in future, include
A Free Copy of "Cage Birds Annual."
Copies are posted to Subscribers every Thursday evening promptly and regularly.
THE MANAGER, "Cage Birds.

Sheffield C.B.S. First Feather Show will be held on June 29th, writes Mr. T. Bishop, Sec.

For the third time in succession Mr. A. Hirst has been elected to judge Warrington Show. The date is November 8th.

I must congratulate you upon No. 5 of the "Bird World Magazine." It improves with every issue.—W. A. Mulliner (Wolverhampton).

We have arranged to hold our Young Stock Show on July 11th, and country rambles on Sundays, May 5th and 19th, writes Mr. G. Hill, the Greenwich and Deptford C.B.S. Hon. Sec.

The Cage Birds Annual to hand. If every person who kept birds would procure this wealth of information, there would be small need for your query column.—W. E. Greeves (Wrentham).

The Goldthorpe, Thurnscoe and District C.B.S. have decided to hold their Nest-Feather Show on July 20th, with Mr. W. Brotherton, of Rotherham, as judge, writes Mr. W. Jackson, the Sec.

At a meeting of the Sale Open O.S. on April 22nd, it was resolved to hold Nest-Feather Show on July 20th. Mr. Geo. F. Hardcastle gave a paper to novices on "Hints for the Breeding Room."

North London C.B.A. Young Stock Show has been fixed for June 29th, and the Annual Show (members only) for November 29th and 30th. Judges, Mr. J. Robson and Mr. S. Cook, writes Mr. R. P. Harper, Hon. Sec.

The Bristol Fanciers' Association Annual Show, December 4th and 5th, will be held under the rules of the Cage Bird Union, writes Mr. T. R. Ind, with Messrs. J. Payne (Gloucester) and T. Heath (London) as judges.

Mr. Harper, the North London C.B.A. Secretary, writes drawing attention to the fact that the date of Mr. Robson's lecture on "The Yorkshire" is May 1st, instead of May 8th, and requests those interested to notice the alteration.

Mr. B. Stevenson has removed from 69, Margravine Gardens, West Kensington, to 12, Great Church Lane, Hammersmith, W. Mr. Stevenson is the chairman of the West London Fanciers' Association, and would be glad to hear from any fancier wishing to join.

Mr. R. B. Tope (Plymouth), has been appointed judge of Cage Birds and Fur Section at the Royal Cornwall Show, June 11th and 12th, and the Western Fanciers' Show, Plymouth, and the Royal Society, Guernsey, December 4th and 5th.

A remarkable picture post card reaches us from Emsworth. It shows Mr. C. E. Silk and his shop. Judging from the splendid display of beef, mutton, dead poultry, etc., we should say that the genial Charles is certainly an expert on things other than Canaries.

With reference to Swindon Show, I beg to state that the vhc was awarded to me for Softbill class, not Mr. Milne. The Waxwing shown was the well-known bird "Ambition." I should be pleased if you would correct, as this sort of thing does not encourage novices.—C. D. Cooper.

From Thornaby-on-Tees, on April 22nd, Mr. T. Baldwin writes:—With my last advertisement I had numerous applications, and had to return several P.O.'s. I disposed of what I advertised and several extra pairs. There is no getting away from the fact—yours is the leading medium for disposing of surplus stock.

Mr. F. J. Green is desirous of increasing the interest felt in Cage Birds in the neighbourhood of Reigate and Redhill, and in our correspondence columns will be found a letter calling attention to a meeting which is to be held on Monday next at Redhill, in connection with the formation of a Cage Bird section of the Reigate F.A. We wish the promoters the best of good luck.

By one of those peculiar slips for which printers are famous, the address of Mr. Roll, the Secretary of the Norwich Alliance Cage Bird Association, appears in Cage Birds Annual as Fakenham. It should be Dolwood, Cecil Road, Lakenham, Norwich. All who have need to communicate with Mr. Roll on matters concerning the great show of the Eastern Counties should make a note of this fact.

E. L. A. Crow, Hon. Sec. Lowestoft Fanciers' Society, writes:—We are at present uncertain about our show for 1907. We have, unfortunately, been involved in an action for damages for injuries sustained at our late show. I had read of your novice prize scheme (I never miss Cage Birds—have been a subscriber almost from the first number), and I think it a very good idea; and if you send me the cards I will do my best to distribute them and make the competition known.

Many thanks for memo. forms to hand. Very artistic—just what I was short of. Your paper, sir, is excellent. I owe much of my success as a breeder to the valuable hints I have from time to time taken from it. Your "Illustrated Idea" column I look forward to each week for something new. Your prizes for novices, I trust, will meet with the success it deserves. Am glad to say I have a friend who is going in for it. Be good enough to send me down forms for same.—T. H. Davies (Liverpool).

The South and North Shields and District C.B.S. Annual Show, on October 25th and 26th, is to be held under Cage Bird Union rules, writes the Sec., Mr. Duke.

I had over 50 enquiries for my Yorkshires advertised last week, from all parts of England and Scotland, which shows you have a good circulation.—John Barker.

Mr. Wade has removed to 228, Mitcham Road, Tooting. He informs us that the Young Bird Show of the L.C.B.A. will be held at the Napier Tavern, High Holborn, on June 29th.

I have taken Cage Birds now six months, and think it a smart, useful weekly to all in the Fancy; and I wish we few breeders here had a society of our own. We might get strong enough some day.—A. E. Headech (Charing, Kent).

I wish to thank all who replied to my advertisement in your last issue, as they were so numerous—far more than I was able to reply to—answers coming from Ireland, Scotland and Wales and down to Land's End.—S. Andrews, Sec. Widnes O.S.

Writing on April 22nd, Mr. Moakes, of South Normanton, says:—I should like to speak a word of praise about your splendid paper, Cage Birds. I have sold all my surplus stock through it, and could have sold a lot more; so don't bother about putting my advt. in any more.

At our last committee meeting, writes Mr. W. H. Colman, Hon. Sec. Wimbledon C.B.S., it was decided to hold our Annual Show on January 8th and 9th, 1908. The judges we have not yet decided on. The Young Stock Show will be held on Monday, July 1st.

From the Norwich Record Bird Breeding Society comes a neat book of rules, and a perusal of the latter shows that they are well framed to assist the Canary breeder in his hobby. The Secretary is Mr. C. Hobart, of 22, Paddock Street. The annual show is fixed for October 14th, at headquarters, the Spread Eagle, Sussex Street.

Lovers of the Lancashire or Lizard should not overlook the claims of the Lancashire and Lizard Fanciers' Association, which Mr. Oliver tells us be is anxious should receive an addition to its membership. Mr. Oliver's address is 35, Hadfield Street, Glossop, and he will be pleased to give any information needed as to the aims and objects of the L.L.F.A.

Mr. Riley, of 8, Delamere, Dumpton Park Road, Ramsgate, sends us a sample of the New Grit he is advertising in our columns. It is claimed that it is equal to any grit on the market, and sold at a price very favourable to buyers. Judging by the sample before us, New Grit is most suitable for the use of cage-bird keepers, being really gritty and free from dust, while, being rich in iron, it is especially valuable during the breeding season.

The Exeter and Devon P.P. and C.B.S., write Messrs. Cornish and Adams, hon. secs., have decided to throw their Show open to all-comers this year for the first time, and will use every endeavour to make it a thorough success. The show will be held under the Cage Bird Union rules, and Mr. J. H. Payne, of Gloucester, will judge. The date selected is Oct. 16th. We all want to make the thing go, as this is the first time we have thrown the cage bird section open.

The members of the Oldham Natural History Society and Oldham Cage Bird Society have for some time been agitating for an aviary to be placed in the Alexandra Park, and their endeavours brought forth an interview with the Parks Committee. Messrs. Stubbs and Ackroyd waited on them last Wednesday, the 10th, and explained their views, and also gave promises of assistance and advice in any shape or form. They also pledged themselves to provide 25 pairs of suitable birds. It was eventually decided that £150 be put in next year's estimate for the provision of an aviary.

700 Eggs for Swansea.

Colonel Morgan, we learn, has presented to the Royal Institution at Swansea a collection of 700 birds' eggs, representing 118 different species, collected in the North of England by Mr. W. R. B. Richardson, now of Neath.

Made in Germany.

The lay press has been full of ridiculous and untruthful statements lately about the great fortunes the Germans are said to be making out of Canaries. But one paper "gave the show away" when it confessed that only 50,000 Canaries were raised yearly in St. Andreasberg. This figure is insignificant beside the annual output of the Canary breeders in Norwich.

The Type of the Norwich.

It has been arranged that a meeting of Norwich Canary fanciers shall be called during the second week in May to try and settle, or come to some arrangement with the idea of securing a fixed type of the Norwich Plainhead Canary. We invite all fanciers who may be interested to bring models, drawings or photos to be submitted to the meeting. Further arrangements will be stated in the Press as to time and exact date.—F. S. Matthes, Hon. Sec. Southern Norwich Plainhead Club, 34, Rotherhithe New Road, S.E.

OUR BREEDING COMPETITION.

The Scheme Booming.

The number of applications for forms in connection with our Canary-breeding competition is still considerable. One result of the competition is a great influx of new readers for Cage Birds. Extracts from a few letters published this week go far to show that societies all over the country will benefit materially by these recruits. No fewer than fifty societies have signified their approval of our co-operation scheme, and are briskly engaged in distributing the cards advertising the competition. Every club should help, if not for our sakes, for their own. We must express our sincere thanks for the many kind wishes and friendly suggestions that have reached us from all quarters about the competition.

We are offering to send, carriage paid, 500 neat cards, with the name of a society and the name and address of the secretary, referring novices to particulars of our competition to the address given. These cards are intended for distribution by the secretary and members in the shop windows, hairdressers' rooms, etc., of the district, and constitute a capital advertisement for each club.

I am pleased to see that you have organised a breeding competition, and I think it will be the means of getting a good few fresh starters in the clubs. I am sure that it will be a success, and will do all I can to encourage the new beginners in the Fancy. You may send me 700 cards—or more if you wish—and I will see that they get circulated about my district.—Joseph Smith, Mansfield and District C.B.S.

Your novice competition will no doubt be the means of making the Fancy grow, and getting more members into societies.—Thos. Smith (Ilkeston).

Your competition column says from now to July 15th. I have my first nest coming on all right, but hatched on the 11th inst. To be just, do they come within the limited time?—H. Burder (Ripon).

[Competitors may take into consideration all young hatched and reared this season up to date specified in rules.—Ed.]

C. Brown (Llandudno) writes:—Re Canary-breeding competition, I am going to have a good try to breed some Canaries this season. I had a try last season, but failed to rear one out of two hatches. I have been studying my Cage Birds paper for two years now, so I think that I will be able to do something with my Canaries this time. I have got one sitting on four eggs and one sitting on five. Will I be able to enter these for the competition?

[Mr. Brown will not be able, unfortunately, to enter as a novice. Although he failed to rear any Canaries last season, he has that season's experience to guide him. He is only eligible for the open competition.]

I have called the attention of one or two breeders whom I know come in line with your conditions. We have in Bingley a good many breeders who are not members of our society, and I don't see why it should be so. I have from time to time canvassed them, but have not yet been able to succeed, and I hope your admirable scheme will have the desired effect upon all societies. In conclusion, I will recommend your competition, and any applications, either personal or otherwise, will receive my prompt attention.—A. Livesey, Hon. Sec. Bingley and District O.S.

Noting your offer in Cage Birds of a prize for Canary rearing, I should like to know if your competition is based on the luck from a certain quantity of pairs. Personally, I have five pairs, but some may have 50. Therefore, if I had ever such good luck, I should stand no earthly chance.

I have at present one young 14 days old, and doing well; five eggs due to-morrow under one hen; five ditto due Wednesday; four due 30th, four due May 1st.—A. Carter, Bury-St.-Edmunds.

[This query is answered by rule 3 in its new form.—Ed. "C. B."]

I think this a grand idea, both for increasing the breeding of birds and the sales of Cage Birds.—H. G. Brooks (Leamington).

I think your scheme will be the means of introducing new members to any society, and will do my best to further your competition. All our members take in Cage Birds every week. We never make a new member but what we, the members, and myself, tell them what benefit they can get by taking Cage Birds. We have made about 12 new members since January, 1907, and I have two more to propose at our next meeting, so you will see we are in a flourishing condition now.—C. Gleadhall, Hon. Sec., Wombwell, Barnsley.

I read with pleasure your note of the 17th inst. re your breeding competition. I think it a capital idea, and one that should draw new recruits into all societies.—A. Parks, Leigh and District C.B.S.

I think your scheme ought to prove beneficial both to Cage Birds and our society, and I intend to have it discussed at our next meeting.—D. Harwood, Sec.

I have had a talk to our Chairman, and we have decided to co-operate in your scheme, as we think it will be, as you suggest, a good thing both for the society and your paper as well.—Jas. Metcalfe, Hon. Sec. Brainley and District O.S.

Wm. H. Campling (Norwich), North and South Heigham B.B.S., writes:—I am very glad to see the latest up-to-date scheme of our favourite—Cage Birds.

THE CANARY BREEDER.

A Special Literary Supplement to "Cage Birds."

Having a Special Interest for Canary Keepers and Enthusiasts.

The Fascinating Art of Breeding and Rearing Canaries.

By F. KING.

Hints from a Paper Read before the Leeds Cage Bird Society on April 6th.

We will take it for granted that you have your stock birds together, all strong, healthy birds. By together I do not mean paired up, because I want you to suppose that the time is somewhere about October or November. In my opinion, a great deal depends upon the treatment stock birds receive during the winter months, whether you have a successful breeding season or not. At one time I used to turn all the hens I intended breeding with into a large flight about 8 ft. long, 3 ft. high, and 2 ft. from back to front, and I found it answer very well for some time, but eventually I discarded it altogether, because I found that I could attend to them better and see that each individual bird was going on all right when eaged in a double breeder with the partition removed, about half-a-dozen hens to each cage, less if convenient. The cocks, I think, are best caged off singly if possible. I have not much faith in the advertised medicines for Canaries, because if disease has got that firm hold which a simple remedy will not remove, better for you and better for the bird that it should die.

FOOD DURING THE WINTER.

Taking it for granted that your birds are in good health to begin with, your ambition should be to keep them so, and to attain that desirable end, feed on good, sound canary and German rape as staple food; reserve all other seeds as tit-bits. If you notice one rather loose in the bowels give maw rather freely, if costive give a liberal supply of niger. Give a small quantity of hemp during the cold months, and at least once a week give a piece of sweet apple between the wires. For the cage bottoms, I prefer Hyde's shell gravel. This supplies them with all that is necessary both for shell forming and grit. I have never used cuttlefish, so cannot speak as to its merits. Keep them free from draught, but let them have plenty of fresh air. Don't forget birds want fresh air just as much as we do ourselves. I wonder how long we should remain healthy if obliged to spend the whole of our time shut up in some of the close, stuffy rooms that some fanciers give their birds? Not long. If you follow out the above, I think you will find that when the sun begins to shine and the days get longer, your birds will not want stuffing with egg food to get them into condition for breeding. This preparing birds for breeding, as some fanciers understand it, I have never been in favour of. Nature will do all the preparing for you if you only feed the birds in a rational manner. I do not say give them no egg before you pair them up, but use it very sparingly, not more than a teaspoonful to each bird about twice a week. I should advise the use of good old home-made bread, and do not be afraid of it; three parts bread to one of egg is, I think, quite rich enough.

THE TIME TO PAIR.

The majority of breeders do not pair their birds up until they think they are in rank breeding condition. Myself, I always paired up about the end of March or beginning of April, if the weather was at all suitable, and I generally found that they went on all right. Have all your cages clean, perches firm, and at a suitable distance from the nest-box, to enable the old birds to feed the young from them. See that screws are fixed firmly in proper position to suspend the nest boxes, that seed boxes fit properly, and are easy to remove; the same with the water glasses. These may seem small matters, but they are better attended to before you introduce your birds to their homes. Catch your birds and cut their claws, also cut away all loose feather around the vent. I do not say this is necessary with some of the close-feathered varieties, but it will do no harm if not overdone, and it is best to be on the safe side. I also cut away about one inch of the tail; if left full length they get messed up. As soon as you notice that they are getting kind to each other give them a nest. I do not advise taking the eggs from the first nest. The less you disturb them the better, and unless your hen is a very keen sitter I do not think that you will benefit very much by doing so at any time. Just before your hen commences to sit, dust the nest with Keatings insect powder.

THE PERIOD OF INCUBATION.

When you have got your hens all sitting, disturb them as little as possible. If, as sometimes happens, a hen has sat over her time, or you have forgotten when she should hatch, and are doubtful whether the young are alive, you can ascertain by the following process:—Fill a teacup nearly to the top with warm water; be careful not to have it too hot. Place the egg to be tested in the water, stand the cup on a firm table, and watch the egg carefully for a few moments. If the chick is alive, it will soon start kicking, and you will notice the egg rocking backwards and forwards. I prefer one hen to each cock, and as quality not quantity should be your motto, I think it will pay you in the end. I think it is too much to expect a hen to bring up her young unaided. You stand a great deal better chance of rearing fine, strong, healthy youngsters if the cock bird if left with the hen to help rear the young. Give a little egg food each day during the time the hen is sitting. The reason for this is that some hens sit so close that they will not give themselves time to crack sufficient seed to keep up their strength for the hard task that is awaiting them if they hatch a good nest of young.

CARE OF THE YOUNG BIRDS.

I will endeavour to tell you first how I manage my young birds. I do not presume to claim that it is the best way, far from it. We all have different methods, but this is mine, as plain as I can put it. When I know that a hen is about to hatch I do not disturb her, but put my ear close to the cage, and if there are any young out, I can generally hear them chirruping. If so, I leave them unmolested for a day or two, unless I see the hen off the nest, and then I have a peep. When the young are two or three days old I expect to see a little egg food in their crops; if not I feel afraid that the hen is not feeding, and do the best I can to find out before I interfere with them myself. I had a hole bored in my bird-room door, through which I could watch them unseen, because some hens, especially at the commencement of the season, will not feed while being watched. If I was convinced that a hen was not feeding I got a small portion of yolk of egg in the palm of my hand, moistened with water, and gave some to each youngster just a little. I did not want to take the job away from the hen, you may be sure, but just to keep the strength of the youngsters up until the hen finds out what her duty is, and sets to in right good earnest. Be very careful not to give them too much; leave them gaping, so that if after you have left them the hen wants to feed they will not refuse. I have saved dozens of nests in this way. I use for feeding hard-boiled egg pressed through perforated zinc, and mixed with good home-made bread, about three parts bread to one of egg, mixed fresh daily, without the addition of any moisture. I always use, right through the breeding season, scalded summer rape. I prepare it in the following manner, just sufficient to last one day: I put it in cold water, let it boil, turn all the lot into a strainer over the sink, and let cold water from the tap run into it until the seed is quite cold, and give to the birds just as it is without any drying, in separate glass vessels. You will find some hens will feed on this before egg. I never give very much green food—a little nice, fresh, young dandelion, lettuce, or watercress. I have lost fine nests of young through giving green stuff, and have heard of others doing the same, but have yet to hear of any young birds dying for the want of it. When your birds are feeding their young give them their food in small quantity and often.

THE FIRST FEED.

This should be given in the morning, as soon as possible, and bustle the hen off her nest just as you are leaving the room. This nearly always sets her feeding. I have a look at all youngsters that are about three to nine days old, just before dark, and if any have not been fed give them as much as they will take, but be careful not to do this if there is any chance of the hen wanting to feed again the same evening, or you will spoil the best feeding hen that ever lived. Keep the young in the nest as long as possible. Don't disturb them when they are old enough to fly, because if you once get them out, you will be very fortunate if you get them to settle down in the nest again. Watch the hen, and if she starts plucking get the young into a feeding cage as soon as possible, and if your hen has laid again take them away altogether; put the cock with them for a few days until they have got well into feeding themselves.

ERRORS OF JUDGMENT.

Some fanciers seem to have an ambition to get their young birds on to hard seed as soon as possible. This is a mistake. It is not wise to stop the egg food altogether. I always give my young birds a little egg food and boiled rape, right through the season, until they have finished the moult. If you have a hen egg bound, annoint vent and lower parts of body with a little warm castor oil. This I have found always acts, unless it is a very bad case. I have not often been troubled with nesting diarrhœa, but when I have had a case I have cured it by giving Epsom salts, both in the drinking water and mixed with the egg food.

MISFORTUNES AND DISAPPOINTMENTS.

I believe that most of the misfortunes and disappointments that a fancier has to contend with during the breeding season are caused by cramming the old birds with too much rich food; always put plenty of bread with your egg food, and rather let them go for a few hours with empty pots than always have them full. If you can manage it, I should advise you to keep all the birds you breed until after the moult, or you may be parting with some of the best. The best for the young bird shows are not often the best after the moult.

Canary Notes in Brief.

By CLAUDE ST. JOHN.

Soft-shelled Eggs.

Egg-binding is such a real source of trouble and worry to many bird breeders and is so often associated with the laying of eggs with soft and imperfect shells, or no shells at all, that the latest theory as to the cause of soft-shelled eggs must be of vital interest to fanciers. This discovery, like so many others, comes from the United States, and I give it for just what it is worth. It is to the effect that excitement is the cause of soft-shelled eggs. This theory is based on a series of experiments conducted at the Kansas Agricultural Station, when it was found that these imperfectly shelled eggs could be produced by simply keeping the hen in a continual state of excitement. True, these experiments refer to poultry, but the development of eggs and shells is quite analogous in the case of birds. This may, perhaps, help to throw some new light on this trouble of the bird breeder. There is certainly something to be said in its favour. Persistent egg-binding—that is, when hens are repeatedly affected with different eggs—is nearly always accompanied by the laying of imperfectly shelled eggs, and it is equally certain that the cause is not always, as is too often supposed, due to the hens not consuming a sufficient amount of limey substances, because I have known hens to be affected whose consumption of limey material was all that could be desired. In any case, this theory should be an extra inducement to fanciers to disturb the birds as little as possible once they are mated.

Is a May Chick "Kind?"

One is at times a little apt to throw ridicule at what may be termed the unwritten laws of the old time fanciers. But this stock phrase of one of the "oldest inhabitants," well skilled in the hobby of breeding feathers, that "a May chick is always kind," would probably withstand all the light of modern progress and knowledge. Of course, the word "kind" was used in its obsolete sense as signifying something healthy, vigorous, and flourishing, and the old fellow, instead of being crazy to produce the earliest chick, strove rather to get the bulk of his chicks, whether of birds or poultry, hatched in May. There is much to be said in favour of such a theory, as doubtless at this time, when Nature itself is revivifying, quickening, and filling everything with the fulness of life, the advent of these delicate lives responds to the sympathetic influences of Nature, and receive the very best aid towards developing the little spark and making a good start in life. Canary breeders who start early rarely find the pick of the season's results in the first nests. If a vote could be taken it would probably be found that the great majority of the best birds that are bred were hatched out in May or within a few days of that month on either side, thus giving some colour to a very "old saw."

Lice on Canaries.

We are gradually getting fanciers as a body to appreciate at something like their true worth the injurious effects of parasites upon cage birds, if one may judge from the frequency with which they are now brought into prominence. The redmite everyone knows, or should know by now, and also an efficient remedy for them. But the grey louse which we have now in view is quite different from mites. It *is* a louse; whereas the redmite is more nearly related to the spiders. The treatment usually advised for mites is practically useless to exterminate these lice, which almost invariably will be found to attack either delicate, weakly birds, or birds which for some reason or other cannot properly attend to their toilet. I well remember a blind Crestbred Canary, which a well-known fancier once kindly gave me for purposes of observation becoming infested with this pest. Unlike the mites, these insects live permanently upon the host, so that to be really useful the bird itself must be treated. A good method of treatment is to catch the bird and, with a small bellows, such as are sold for distributing insect powder, puff a liberal supply of freshly ground pyrethrum powder into the feathers, particularly around the base of the neck, the root of the tail, and underneath the wings, and at once wrap the bird up in a handkerchief so that it cannot move, leaving its beak open to the air, and let it remain so for ten minutes; then return it to a temporary cage, and after it has shaken the bulk of the powder out of its feathers, give it a bath, with a little quassia added to it, before returning it to its proper cage. The bath may be given daily for a week or more, but the whole process of swathing the whole bird up in the powdered feathers should be repeated three or four times at intervals of as many days, in order to thoroughly oust any that may survive, and the young that are produced from the eggs, or "nits," which will be stowed away at the base of the feathers.

ANOTHER INJUSTICE TO IRELAND.

By J. STEEL.

Erin's need of a National Canary voiced in verse. To be sung to the air of "Father O'Flynn."

Of Canaries, no doubt, there are charming varieties;
Riprisinted by various clubs and societies;
Still do Oi claim, and widout impropriety,
Oireland should yit have a toipe all her own.
Faith, but Oi'll thry to discroibe, in a wurrd,
What 'tis Erin wants in her national burrd;
And sure its a nate wan—
Though Fancy's creation,
Loike the fairy Pat saw on the bog o' Tyrone.

Now oi won't be deluded wid strange ornithology,
Nor themes that requoire Liverpudlian apology,
While a writch wid a microscope cries "eriminology"!
Though me model's as green, as me emblem so dear;
And Oi won't have a frake, wid a back like Carn Tual.
Nor a frillifoid noitmare, wid fedders loike wool,
But a swate little creature,
Wid graee in each feature,
And as smart and erict as a Dub. fusilier.

A nait little swagger crist, tilted up sideyways;
If faked front and back, be the powers 'twould win praise;
And a full chist, that's tapered to waist, loike me eolleen's stays,
And a well carried tail, jist divided so nate.
It takes the twig quick, loike a Dan at the fair,
Recovers and turns, loike a rifleman square.
Now come on Enniskillen,
And sure Dublin's willing,
'Twill be faugh a ballah whin our own can compate.

NORWICH PLAINHEADS:

HOW TO BREED AND REAR.

By D. HUNTER.

A Lecture delivered before the York C.B.S.

The usual monthly meeting of the York Cage Bird Society was held on April 8th, at headquarters, All Saints' Church-rooms, to hear a paper read by Mr. D. Hunter, on the breeding and rearing of the ever-popular Norwich Plainhead. On being called upon by the Chairman, Mr. A. Richardson, he said: Mr. Chairman and brother fanciers,—I will endeavour to give you my system of breeding and feeding the Norwich Plainhead. I never pair up before Easter for various reasons; one is, the days are then longer, with more sunshine and with less frost at nights. I keep my birds at the top of the house, which is subject to changes, with hot days and cold nights. I always keep the hens in flights right up to pairing time; by this method I find they do better, are healthier and stronger for the breeding season, than by being confined in small cages, and are better able to stand the strain they have to undergo.

The cocks I keep in separate cages and give them little tit-bits to get them into good, hard, sound condition—a little bit of egg food twice a week, and a bit of mixed seed scattered in the bottom of their cages. In pairing up I like a large variegated cock, one with a good sized head, broad chest, good neck, short flights and tail, and plenty of feather, and a good upstanding bird. As to the hens, I like a nice typical hen, brimful of quality, one not over large, and of good type, soft and silky in feather, with a good position over the perch, and standing on nice, medium-sized sound legs. That goes a long way to make up a pair likely to throw a show bird. I like a bold hen, one with good full chest, full of action, not pinched at the front, and with good wings and short tail; that is the class of hen to breed with.

After pairing up, I give a little egg food and biscuit every morning. I put plenty of grit and crushed lime on the floor of my cages. As to the nest box, I have used the old square ones and the new round earthenware ones. I think the latter far the best, as it makes much less work and dirt. I use felt lining, as I find this answers very well; I give a little moss and cow-hair to finish off the nests with. After the first egg is laid, I take it away until the third is laid, and then replace them on the third night, as I find the hens take to the nest better at night than morning. Of course, some young hens are uneasy for a day or two, but then settle down to business in real earnest. If disturbed by the cock I take him out and leave the hen to hatch and rear the brood by herself. About the twelfth day I hang on the bath, as I find this greatly assists the hen in hatching off her brood. About the time of hatching I give the hen a little egg yolk only, and a little crushed hemp, in separate pots, for the first two or three days, and then I give yolk and white along with the biscuits until the brood is successfully reared. I like hens that feed on plenty of seed. Now, as to green food, I give them a bit of lettuce after the first three days of the young birds' life. I never stint them as to egg, hemp and green food. But here, my friends, take warning — don't overdo it, as there is nothing to be gained by cramming your birds with a lot of rich food.

When the young are about three weeks old, you have to watch them very closely Some hens want to go to nest sooner than others; and here your trouble commences. If this happens, put the young at once into a nursery, and hang it on in front of the breeding cage until they are able to do for themselves; that will be when about four weeks old. Then get them into the flight cage and give them a little soft food, as well as crushed seed, at first. Get them on to seed soon, but don't forget to give a little, very little, soft food, and as a change, instead of egg food give them a little milk sop, and you will be surprised how they thrive apace. Should there be any extra good ones or one that looks like making up into a show specimen, take him out and put him in a cage by himself. Hang on the bath bright, warm, sunny days, and train him to run into the show cage, as often as possible, and also give him a few minutes' drill; that's the way to steady a bird to show itself to perfection on the show bench.

I had forgotten to mention colour feeding, for Norwich are no use for showing unless they are colour fed, and you must have a rich, even colour throughout. Commence feeding for colour when about eight to ten weeks old the first nests, and about six or eight weeks old the last nests. There are various kinds of colour foods on the markets, look round, and through your CAGE BIRDS, and select what you think is the best. Don't mind the price; pay good money and get the best food you can possibly procure, and the results you will never regret.

Gentlemen, this concludes my paper on breeding and feeding the Norwich Canary. I thank you all for your kind attention, and hope the young members may benefit somewhat by it. If this has been achieved I shall be well repaid.

Here the Chairman, Mr. A. Richardson, threw open the meeting and asked all members and friends present to ask Mr. D. Hunter questions "thick and fast." A very interesting discussion followed, in which the following took part: Messrs. T. Wright, D. Alderson, H. Shorney, T. Boyle, A. Humphries, A. Waud, and A. Cardwell. After Mr. D. Hunter had replied in a masterly way, one of the most successful and instructive meetings the above Society has ever held came to a close.—T. BOYLE, Hon. Sec.

The Graceful Yorkshire.

By J. Cavanagh.

A Paper read on March 5th before the Leigh and Dis. C.B.S.

The graceful Yorkshire is well known, and much has been said of it in CAGE BIRDS (from which I have practically gained all my experience). It is with the greatest pleasure that I attempt to help some of the younger fanciers who are following the same variety. Excellent progress in quality has of late been made in this section, and one may reasonably expect greater improvement still in the near future. The novices now are fully alive to the fact that, after all, good birds are the cheapest.

Now as to what the real Yorkshire should be. I shall try to treat this subject from two standpoints, the one that I do agree with and the other that I object to. A source of difference of opinion, and of sharp division, is the question of length; let me say at once that I do not underestimate length for certain purposes. But there is a recognised standard length of $6\frac{3}{4}$ in., and I think that plenty long enough. In all shows of note the recognised Yorkshire standard is accepted, and although nine birds out of ten are never measured, they would, if so measured, be found to come within it. It takes a good long bird to go $6\frac{3}{4}$ in., and one about that length, or under, generally carries good quality with it.

Size has no influence on me in a Yorkshire; I like style and neatness. I think a Yorkshire should be finely drawn, well up on the leg, clean at the thighs, with neat head and beak, level back, as fine across the shoulders as possible, and tapering right down to the root of the tail. The latter should be nicely piped.

Getting to the front of the bird we come to

THE STUMBLING BLOCK

of Yorkshire breeders—I mean frills. If Yorkshires could be bred without frills some of you would think the millenium had come. A great deal has been written and said about frills; they are objectionable and to be avoided. This question of frills is often associated with another legacy which comes from the blood of the Belgian—a deep chest. These deep chests are usually pointed, and the feathers do not lie well upon them; therefore in selecting your breeding stock avoid both cocks and hens with deep chests. I attach considerable importance to the back and wing coverings. I like them smooth and level, with the feather glistening and fulling, and fitting close to the flights. This is a great point and goes a long way to make up a bird of quality. I like to see plenty of life and nerve in a Yorkshire, not a sluggish bird, but one that will dance along the perch very quickly and get upon his legs with a firm grip of the perch, shooting up like a snake out of his coil. It is very pleasing to note during the last two years that a marked improvement has taken place in the style of our birds, but in many instances they yet lack that all-important bit of breed (as the Yorkshiremen call it), which, to my thinking, is even more essential in the breeding room than on the show bench.

The quality of our birds is steadily improving, but with this, as with colour, we are still a little behind. In spite of what may be said to the contrary, colour is still very necessary.

OUR POPULAR CANARIES.

By GEORGE GARDNER.

A Lecture delivered before the Hanwell, Ealing and District Fanciers' Society.

Mr. Gardner said: I am like a good many others, I suppose, who are called upon to speak on the subject of Cage Birds—I am at a loss to know how to present what must of necessity be somewhat an old friend in a new dress. My difficulty lies in making the disguise effectual. A man cannot manufacture bird lore. He can at the most go over a beaten track. But I will try and present a few points to you to-night in an interesting manner, even if they cannot lay claim to be new.

Some people enter upon cage bird breeding just as if it were like shelling peas, or the old game of "a penny in the slot and a prize every time." I am going to caution intending aspirants against that idea. Cage bird breeding is one of the most precarious hobbies there are. It is full of disappointments, but it is also full of interest and fascination. It is split up into two main sections, and also many sub-sections. One main section is Canary breeding; the other is Mule and Hybrid breeding. I am leaving Foreign birds out of the question, because that is an entirely different branch of ornithology. I am also leaving out to a great extent, British bird keeping, because, in a large measure, these birds are wild caught and not bred in captivity. Furthermore, a great many British birds—now, no laughing—would, if they were in their right places, have to be included in the Foreign section. I am told by your excellent secretary, Mr. Peet, that you are fond of discussion, and on that point I must throw down the gauntlet. I don't suppose any of you will hurt me, even if I am vanquished.

CONCERNING NORWICH PLAINHEADS.

What are you Norwich Plainhead breeders about that you do not get rid of the coarseness so often seen in your birds? Why don't you get them close, compact, and tight in feather, with a jacket that shows like boxwood? You could do so if you were not hankering so much after size. Some of you pop in the Crestbred hen to get size, and you are not particular as to what kind of feather she has, or what are the antecedents of the strain she comes from. Do you think that a bird springing from double Buff-bred stock—year after year double-buffed, without regard in the least to colour—is going to improve a stock one of the primary characteristics of which is colour? If you do think so, then keep on doing it, and you may win a cup for Norwich Plainheads—when the world is at an end, but not before. Why did not you keep the colour in your stock instead of losing it to get rough edged, draggle breeched, colourless raw recruits? You will never make soldiers of the line of them, or breed soldiers from them either! (I can see the stones coming, but never mind.)

You don't want bags of coloured feathers; you want dapper birds of a beautiful outline, with a level back, neat head, short neck, beak, legs, and tail well across the perch, with the feathers folding tightly and gracefully over the shouders and wings, glistening like the dewdrop, with plenty of genuine, naturally bred colour. Colour feed such, if you like, and they will please you. So they will the judges. Use plenty of green blood as well as clear birds. Buff green in cocks is preferable, on account of shape, and it is also good in hens, because you can get but few yellow green hens. Don't breed from yellow green cocks, unless they are typical, which 18 out of every 20 are not! Of all things, look well to shape, and quality of feather, and green blood will help in the matter of colour. The best prinicple is to breed yellow to buff; or buff cocks to yellow hens, as I prefer. If you want size, select two boxwood feathered ticked buff birds of fair size and shape, and mate together. Often I have preached this, but even now many will not believe. I had a letter the other day from a very old friend, and a large and successful Norwich breerer, living in the far south. He said: "You are about right all through, in your lecture before the City and Suburban Society, especially in your remarks about double buffs. Such advice is valuable if strictly adhered to, but the mischief is that fifteen out of every twenty breeders of Norwich Plainheads have not the class of birds or the quality of feather to use." That shows how few grasp the idea sufficiently to lead them to breed for it. My friend does, but cannot get stock to do it with.

POINTS FOR YORKSHIRE BREEDING.

Now I must pass on to the Yorkshire. Don't go running after size until you know. It takes a clever and experienced breeder to do what is called "putting size into a Yorkshire," that is, to do it, and not to overdo it. A great many illustrations of Yorkshires have appeared from time to time in the columns of that excellent paper, CAGE BIRDS—that casket of knowledge at envelope price. If any of you are beginners, and have chosen the elegant bird of the "County of Broad Acres" as your variety, you cannot do better than study CAGE BIRDS from week to week. In it you will be certain to read something to interest and instruct you. Get well hold of the correct view of what a Yorkshire is. I consider it a bird of nervous but elegant pose, standing well up on the leg, as if it were going to reach Heaven before you or I can ever hope to do so; and although fully extended in the effort, never losing its elegance. It wants a neat head and beak, a tight jacket that shines well, feet that grip the perch and toes that move like those of an accomplished stage dancer. Its wings should be well closed and meeting with exactitude at the tips, thighs smoothly covered, and no ragged breeches. Sometimes these breeches are made ragged by wilful tearing. Not by the bird, but by——well, that's the secret! A Yorkshire does not want frills and furbelows on its chest. It is a comely bird in this respect. Its tail should be well folded, until it is what is called a pipe tail. Six and three-quarter inches is plenty of length in a Yorkshire, and is as much as nine out of every ten good and typical ones can carry.

If you are going to breed these birds with the success which some of your members have bred Belgian Hares, you will have to learn that a Yorkshire is a bird of elegant mien, beautiful, silky, close-fitting feather, exact in position (and quick to show its exactitude), rich in its undercolour and peach-like in its bloom (in a buff, of course). You may hope to win with such a bird. The hen has a great deal of influence on the progeny of a pair of Yorkshires. She should be typical and elegant in the highest degree, although she need not be large in stature. Better not.

CRESTS AND CREST BREDS.

Now, about Crests. There are, to-day, after all that has been done and seen, some strange ideas of what constitutes a good Crest. I don't mean amongst the "inner circle"; they know, and keep their knowledge (and their birds) pretty much to themselves, except when the Stanley who is after them has a good banking account. Even then he needs caution. I heard the refrain one day—"Do you think I am going to sell the goose that lays the golden eggs? Not I." Oh! no. It only happens that wonderful birds are sold when their hair has grown grey, and "their natural force abated," when their sight has become dim and they have to feel about the cage for something like a perch to stand upon. Poor old chaps! They may be polished up for one or two more parties, but their glory will soon see an eclipse—sooner than their owners will see a return adequate to their outlay on old age You Crest men: If you pay heavy prices—and you won't get much unless you do, and should be sure you get it even then—pay for something young. Never mind the birds with two or three years of show "records."

A Crest is not a mop twirling round in the hands of a maid, or even a mop standing handle upwards. It is not like a lady's hat, tilted to three-quarter position, with one or two feathers saying they should fall, or three or four other clinging desperately in another direction to keep them up. Neither is it like another lady's headgear I saw on my way here, an imitation of that kind of pastry we sometimes see in pastry cooks' windows—rolled round with a hole in the end for the jam to go in at. A Crest is not a thing with a narrow front, and horns behind. A good Crest is not the size of a brace button or a field daisy.

A DESIRABLE TRAIT.

I cannot say to what dimensions they will get Crests some day, but I can say they should be of regular formation, droop nicely all round, have a small centre, be as dense in colour and as veiny as possible, or wide in vein at the mid-rib of the crest feather. That trait is more generally possessed by the lady bird than by the gentleman. Indeed it is somewhat rare for the latter to possess it. Don't you wish you might get such? And they are got. Good, clear, and grey crests of the same formation are also got—not nicely drooping, scanty crests, but dense in layers and beautiful in formation. A fine stout body enhances the appearance of a good crest. When you have got your crest, why wish to ape the Lancashire body? Leave him, noble bird, to his own glory. Every peacock should be content to strut on its own domain.

(To be continued.)

Roller Canary Breeding.

By F. A. LESTER.

A Paper read before the British Roller Canary Club on February 5th, 1907 *(translated from the "Allgemiene Kanarien Zeitung).*"

"It is astonishing how quickly neglect or wrongly applied care causes the deterioration of a good strain."—Darwin.

BIRDS TO CHOOSE FOR BREEDING.

The exhibition season is drawing to its end, and the time arrives when the Canary breeder has to turn his thoughts to the coming breeding period. Now, the first question is, Which birds shall I choose for breeding? Let the breeder use birds which he bred himself; let him buy new birds from the same strain always. He will have cause not to treat lightly the choice of breeding material if he intends to better his breeding strain, or keep it at the height attained, because the future of his strain depends on the right choice of the breeding birds. How difficult it is to find the right birds! We see every year breeders who for many years were victors in the fight for the gold medal having to be satisfied in later exhibitions with the silver medal; and the time may even come when they dare not send their birds for competition, because their strain has gone back. Although it is quite correct that in the breeding nothing remains stationary, yet by careful and diligent watching of the breeding many mistakes can be avoided. It must be ascribed to the neglect, or falsely applied care, as Darwin puts it, if a strain goes back or degenerates.

STRAINS THAT ARE DEAD.

Hence, the overlooking of an apparent trifle is very often the cause of undreamt-of consequences, so the breeder must therefore work with the greatest care. I do not speak of cases where the breeder will be forced by unforeseen circumstances to act and leave the result to luck. These things will happen at times to every breeder; and that they do happen bygone times prove.

Where are the beautiful St. Andreasberg strains? Where the highly-prized Trute strain? What has become of the strain, Erntgen. No one will be able to say that the possessors of these strains, or all the breeders who produced excellent birds from them, and for a few years shone like stars of the first order, were deficient in care. And yet these were faults committed, for we may be sure not one of them voluntarily descended from their attained height; so that one may say of them—they were once, but are no longer.

To-day the Seifert bird is the hero of the hour. How long will it be before we shall say—they existed once? If it could be said that this celebrated Seifert strain was a further improvement of an already existing strain, then one might say the improvement of the Canary song progresses continually out of already existing material. But this is not the case. What we have achieved with this strain had its origin in inferior material, which by accident and luck, combined with special knowledge of the breeder, reached its fame of to-day.

Still, we must allow that what has been obtained and admired by the whole fraternity has been permitted to go to ruin and to die out, instead of being kept up and improved. Thus we see in Canary breeding a continued fickleness, notwithstanding that the breeder of to-day has much advanced in the knowledge of breeding and the development of song. Let this evil of fickleness be caused by the striving after purity of song, let it be a consequence of fashion, let it be due to the endeavour to make Canary-breeding profitable from a business point of view, or to the desire of certain centres to have the monopoly, this much is certain—we cannot lay sufficiently to the heart of all Canary breeders and societies the necessity to use the greatest perseverance in the continued endeavour after higher things, and to keep undefiled what has been already achieved. Above all do I advise the keeping up of good strains, so that we may not share the same fate as the died-out Tourin, which, except to old veterans, are only known by name by breeders of to-day, who have no idea of their goodness and excellency. Even if the Trute strain is no longer what it used to be, we have yet breeders which keep the strain in all its beautiful Tourin. Let us pay to these men well-earned esteem and attention.

THE DEVELOPMENT OF SONG.

Canary breeding and development of song is an art, and must be treated as such. But this art cannot limit itself to one-sided contemplation. Nothing hinders progress more than if what was built up grandly and acknowledged for years as noble and beautiful is given up and neglected, because over night there arose a new edifice; or, to speak of our Canary breeding, if breeders endeavour to introduce a modern kind of song, and try to coerce all others to follow Dame Fashion. This is done by many judges, who, in one-sided fashion, prefer the modern. Therefore, oh breeder! keep the good you have got, and endeavour to further improve it; then you will find more joy and profit in Canary breeding than when giving up your strain every few years, and hazarding your luck in new things. By adopting the last mode of procedure you will never establish your own strain, unless luck favours you very much. On this principle are my further arguments built.

IN-BREEDING AND CROSSING.

The very first thing with which the breeder has to make himself acquainted is the meaning and range of in-breeding, as also of crossing. About both things there has been much written, because here we stand before a problem about which the clever ones cannot be of one mind. What we song-Canary breeders have learned from our own practical experience about in-breeding does not count for much. I do not know one Canary breeder who, with one or more selected Canary strains, has worked solely to please science. I shall joyfully welcome the time when our celebrated ornithologists study scientifically the song development in Canaries, and give us infallible proof as to how we should do things rightly. In practice we are much advanced, but the scientific proof is still in many parts wanting.

Although I am a song-Canary breeder I read with much interest the articles about colour and position Canaries. In these articles I find many valuable hints, which you may use with profit, even if you are a breeder of Edel Rollers. I advise my colleagues in this sport to do the same. In lectures and articles about other animals, and even human beings, I find much that is very appropriate. The doctrine of inheritance can be applied to all living beings, and these articles are also instructive for the Canary breeder.

Herr Woerz says: "In any case, in-breeding is the shortest way for the safe inheritance of certain, nay, of all, peculiarities, and for the improvement of the strain. No breeder can do without it. The most experienced breeders acknowledge a certain degenerating power in in-breeding, and give, therefore, the prudent advice to breed once inside and twice outside the family. In such manner can any faults or imperfections connected with the strain be quickly remedied. Anyway, one must keep the in-breeding within bounds, and the greatest care has to be taken in the choice of the breeding material."

SWISS PRINCIPLES OF BREEDING.

I also find in the "Swiss Leaflets on Ornithology and Canary Breeding" the following; the writer gives to the Canary breeder plenty of material for meditation:—"Pairing amongst blood relations can spoil the whole result of the breeding if a proper choice is not made of the breeding material to prevent the evil." But it must not be said that this is the exceptional case, for, if you reckon with given factors, you can avoid the rock of too near relationship in most cases. The question whether blood affinity conduces to the degeneration of any race has often been discussed to my disadvantage, so that I hardly hope to convince anybody. Yet all adverse arguments have not been able to convince me, because on the other side so many experiences of an opposite nature in the realm of breeding are on my side, which prove to me that many negative results may be put down to the account of heredity. All breeders who try to prove that blood affinity or in-breeding must be avoided at all hazards find themselves in a pardonable error.

The prejudice against in-breeding is so difficult to combat that I cannot avoid calling in the sayings of authorities and savants. It was formerly said: "In men, for example, deaf and dumbness was the consequence of too near relationship, just as other human frailties or illnesses were attributable to blood affinity; and in the same way it acts on animals." This does not at all prove that heredity can have her part in it.

MEDICAL OPINIONS.

Dr. Chervin, of Paris, president of the Deaf and Dumb Asylum there, writes to me the following:—"I have never had occasion, amongst the deaf and dumb of my institution, to think that near relationship was the cause of this human affliction; on the contrary, science has lately shown this to be imaginary prejudice. I wish you all success, in consequence of your patience and industry in the breeding of the different classes of animals. I am also convinced that near relationship of the begetter cannot be considered exclusively the cause of bad results."

Seasonable Hints on Canary Breeding.

By ST. BRIDE.

With special reference to Scotch and Border Fancy Canaries.

I take it for granted that breeders have put up in pairs what they purpose breeding in 1907, and that no matter how good the stock is there is a yearning for something better, a fancier's ambition being boundless. The true fancier strives after the production of the ideal, and that a high one. Fanciers should make the most of what they possess, and were that done, in many cases greater success would attend effort.

If the bird room has not undergone a spring cleaning, that should be done at once, cleanliness being of the utmost importance. That accomplished, the cages and nest boxes should be washed in a disinfectant, and painted with spirit varnish. A red mite preventative is the painting of the outside of the nests with a good disinfectant fluid; this keeps the pests away for a whole season, which, needless to say, is a decided help.

PAIRING THE BIRDS.

Everything being in order, no time should be lost in pairing the birds off into the breeding cages, as they are intended to be bred. Flirtation, which is more common at the beginning of the season than later on, should be discouraged. An excellent plan is to have frosted glass between each cage.

It is commonly accepted that patience is a virtue, but to the fancier it is more—it is an absolute necessity. The fancier who thinks all he has to do is to put a pair, or pairs, of birds up and as a matter of course success will follow, is likely to find himself disappointed. Success may come, but it may mean a long, weary wait, sometimes until well on in the season. In all the variable circumstances it is usually a wise plan to wait patiently.

EGG MIXTURE AND GREEN FOOD.

This should be given two or three times per week until eggs are laid, when it must be witheld until two days before the young are hatched. Then the supply should be resumed and given three times daily till the young are weaned. While the young are being fed by the parents, or foster parents, a plentiful supply of fresh green food should be given thrice daily.

I usually commence with dandelion roots and leaves, and give these until the white heads are available. The latter, in my opinion, is the best kind of green foods. Upon them follows chick weed, which is also excellent for feeding purposes. Care should be taken to avoid the use of stale or unwholesome green food, and to see that it is not affected by the numerous kinds of weed killer.

FOSTER PARENTS.

It is advisable to have reliable foster parents, though on this point there is great diversity of opinion. After all, there are assiduous couples and indifferent couples in all sections. Capital feeders have been found in the high-class Scotch Fancy, in the highly-bred Norwich, and in the winning Border Fancy, but, as a rule, what is called the "common" Canary proves the most reliable; it is very often a cross-bred bird. It is an advantage to have size in foster parents

The young birds can generally do for themselves four weeks from the day on which they come out of the shell. They should be fed on egg mixture and crushed hemp seed until six or seven weeks of age, by which time in the ordinary course they should be able to break seed, and live upon it.

The maintenance of good health should engage the attention of the fancier. The whole stock should be glanced over two or three times a day, when the skilled eye of the breeder will speedily detect any bird which is out of order, and no time should be lost in applying the remedies. A splendid article on how to treat invalids is to be found in CAGE BIRDS ANNUAL, which, in the writer's opinion, is the most useful treatise on birdy ailments that can be obtained.

THE CRITICAL PERIOD.

A very critical period in a young bird's life is the moult. An undue use of the bath should be guarded against, chills being frequently contracted in its inordinate use. Draughts should be avoided, as they are another cause of many of the ills to which cage birds succumb. Box cages are suitable for moulting in, and no bird should have access to the bath unless in the morning, and on a bright, dry day, when the birds can preen themselves thoroughly dry before roosting. Were this rule observed a great deal of asthma and other ailments would be avoided.

Cuttlefish bone should be fastened in the cages; it is a good thing all the year round, but it is particularly useful during the breeding season. Good seed and clean sand are indispensable. There are shopkeepers who give special attention to bird room wants, and it is advisable to go to them, as they are alert to supply the best of everything, and to keep the seeds free from vermin. It may not be generally known, but it should be, that mice droppings among seeds are poisonous.

SHOW BIRDS.

In the process of getting on their new feathers a show bird should be kept in a single cage. When a number are kept together feathers are plucked and spoiled. A great deal depends on the moulting as to whether success on the show bench is attained. An excellent plan, which I have tried with extra promising birds, is to put them into a large cage with three perches of the ordinary show cage width between each perch. The advantages are too numerous to detail.

A strong and well finished exhibit will well stand the wear and tear of the show season. The aim of every breeder should be to breed such winning birds. There is infinitely more credit in exhibiting one's own breeding than in paying a big price for a winner to lift prizes.

AIDS TO SUCCESSFUL CANARY CULTURE.

By W. A. BLADON.

The Rev. R. P. Hudson presided over a fairly large attendance of the Bury and District C.B.S., on April 9th, when Mr. Bladon, Chairman of the C.B.U., gave a lecture on the management of the bird room. He said he considered the management of the bird room a very important item in the success of Canary culture, and it was necessary that fanciers who had any desire to keep their stock in health and good condition should be very careful about the management of their bird rooms. He was of opinion that nine out of ten of the diseases to which Canaries were liable arose from neglect of a few simple rules, the observation of which would perhaps save the lives of many valuable birds. The first rule to which he desired to draw attention was that of cleanliness. It was not often that the novice was found to offend in this respect. It was oftener the fancier of long standing and those who had succeeded in breeding winners who were negligent of the primary rules of cleanliness. A dirty room was bound to swarm with insects, which were deleterious to the birds. The water should be changed at least once a day, and in the summer time it would be much better for the birds if the water was changed twice a day. A dirty bird room was a nuisance, but if the cages and their surroundings were kept clean the room was a treat to behold. If cleanliness was not observed, Nature would take its own revenge, disease would follow, and perhaps the whole of the birds would be killed. Dealing with essentials, Mr. Bladon insisted upon absolute cleanliness, a plentiful supply of pure water, and a good system of ventilation with immunity from draughts, which was a thing most fatal to birds. He warned his hearers against overcrowding, which did not necessarily mean too many birds for the room, but meant too many birds for the owner to give proper attention to. Every fancier had his own ideas of attending to his birds, but his contention was that everything should be ordered so as to make cleanliness as easy as possible. The food should be of the best. The hoppers should be cleansed at least every two days, and the soft food dishes should be frequently washed out and not merely dry wiped. As to ventilation, Mr. Bladon advised the introduction of as much fresh air as possible into the room. Fresh air was most valuable, but draughts should be avoided. Every fancier, of course, would have to arrange the ventilation of his bird room according to the character of the room.

The Rev. R. P. Hudson, in the course of a few remarks, pointed out that sanitation in a bird room was like sanitation in the homes. In years gone by people lived and thrived in what were now termed insanitary surroundings, and old-fashioned people did not think much of what were called new-fangled notions about sanitation. Similarly in the bird room. Old fanciers had bred splendid birds under conditions which nowadays would hardly be tolerated, and so new ideas as to the management of the bird room were being put forward. He was of opinion that cleanliness was an absolute essential in bird management. Of course, each fancier had his own ideas, and his (Mr. Hudson's) practice during the breeding season was to clean out the cages at night and in the dark. This did not disturb the birds, and although the cleaning was not absolutely perfect it kept the cages sweet. He endorsed Mr. Bladon's remarks about overcrowding and ventilation to the full.

Does Canary Breeding Pay?

By A. C. SELF.

A Story with a Moral.

Two years ago I became possessed of a pair of grand birds. Everyone who saw them seemed envious of them. People whom I had looked upon for years as friends "cut me dead" because I would not make a deal with them. These people were mostly only acquainted with the cheap and nasty kind of Canary—those generally sold for anything between a shilling and half-a-crown. When I told them what might tempt me to deal they generally ended up with something like the following:—"Look here, old chap, I don't want to stock a shop or buy wholesale, I just want one bird, and that one of yours would suit me nicely." Well, to cut a long story short and to try and reinstate myself in the good graces of my friends, I determined to commence breeding. I promised several people they should have something good and cheap if I were successful, and I also promised myself I would make my hobby profitable as I had heard of others doing.

With these noble ends in view I devoured the advertisement pages of CAGE BIRDS, and when I had made what I considered a wise selection, I made money fly in all directions. We talked of nothing but bird-room appliances, the merits of the "one cock two hens theory," illnesses, etc.—not to mention the glorious "castles in the air" the better-half and I erected. Where we would go with the proceeds of the sale of the youngsters—and how many dozen we should have. Well, the time arrived for pairing up. I had bought two more hens and a cock, rigged everything up to the best of my ability, digested books innumerable on both breeding and rearing, and I must say to some purpose. I was successful beyond my most sanguine expectations. I had my disappointments, of course, but I was the happiest man alive when I was able to take my friends into my bird-room and show them eight bonny little balls of gold—and they *were* balls of gold to me, for at that time diamonds as big as bricks would not have tempted me to part with them.

Everyone I met must be told of my Canaries, and, of course, they were better than the best they had ever seen. There was nothing else of interest in the world but those birds. I used to dream of the time when I should have the back garden wired over, little ponds dug out, fruit trees and all the rest for the birds to perch upon, to say nothing of the profitable side of the venture. The birds seemed to improve by leaps and bounds. "The air was filled with music sweet," as the poet would sing. Nothing would induce me to spend a moment of my leisure time away from my hobby, from early morn till late at night, and to tear myself away to business became a daily struggle.

The time arrived when my pets were ready for disposal, and after long consideration and many heart-burnings we decided to sell. I had no need to advertise them, I had already done that. Everyone knew I had them. In fact, I had almost selected the buyer for each particular bird, when on arriving home from business one particular night I felt there was something unusual in my wife's manner. You know that something, reader, but it was not a new hat this time, this is what was the cause. "Oh, did I tell you So-and-so was coming to see me to-day? You know what a dear, good soul she is? And she did so admire your birds. Said she had never seen such sweet things. And then she went on to tell me how she once lost a dear little Canary. How a beastly cat had stolen it during her absence. You won't mind, I am sure, dear, I gave her Bobby." Bobby was the pick of the lot. Of course, I did not mind. But I refrain from telling you what I said to myself. However, I comforted myself with the knowledge that I still had seven left, and that I would distribute them at the earliest possible moment myself. A particular friend wanted two. What a chance! I carefully packed them into travelling cages and despatched them, receiving in a few days a letter of acknowledgment thanking me for my kind present! Here was a chance for the wife to score, but rather than succumb to this humiliation I lied. Yes, reader, I lied. I will not tell you how much I was supposed to get for those birds, but by the time I had given the wife her promised share and recklessly spent an amount equal to what would have been my own, my pocket was very much lighter than my heart, and I could sympathise with the sage who said "save me from my friends."

Now, I have already said I need not advertise my birds—herein was a mistake, for if I took this means of disposing of my surplus stock and chose a reputable organ in which to do so, one with a splendid circulation, such as CAGE BIRDS, I should be sure to come into contact with people who are always ready and willing to buy good birds at good prices. I adopted this course, and in less than a week I wished I had had fifty—not five—birds to dispose of.

Am I downhearted? No! For this year I mean to go in and win one of the many prizes your valuable paper is offering—and it won't be my fault if I fail.

The Wickedness of Colour Feeding.

Prejudice does die hard always, so that even after CAGE BIRDS' plebiscite, which showed an overwhelming opinion of practical folk that colour feeding did not injuriously affect a bird's health, it is no great wonder that we still find a Daniel occasionally rising up in judgment on the side of fanciers. Truly, our honourable fanciers "with colour-fed noses" should feel flattered by the courteousness (?) of their latest judge and jury. Of course, it is useless to point out that a fancier does not feed his birds on cayenne, nor even give a very appreciable quantity of it in these days, or that we have wild birds which enjoy feeding upon the ripe pods of chillies! But, then, Nature is admittedly a "cruel dame," and may be, equally with the bird fancier, intent upon compassing the deaths of such misguided creatures! Here's a curious problem: Granted that the "true bird fancier is not to be found at shows," where was the bird fancy to be found before bird shows became popular? C. ST. J.

Canary Management.

By W. N. TURNER.

A Paper Read before the Pendleton and Salford O.S.

There was a good muster of members when Mr. W. N. Turner read the following paper on the breeding and general management of Canaries.

Mr. Chairman,—Having been requested by my fellow members to submit my individual experiences in the form of a paper, I will try and gratify their desire. In doing so, I do not wish to pose as an authority on the subject, because I am well aware there are many here to-night with equal experience, but it is only by exchanging our views on these matters that the Fancy is educated. Should anyone not agree with my remarks, I would ask for their forbearance. The enlightenment of the novice is my object in being here to-night, and if I should in any way improve his knowledge, or further him in the Fancy, it will be ample reward.

So much has been written on the subject by various fanciers that it is a most difficult matter to say something new concerning the breeding and management of Canaries. We are once again on the eve of the breeding season, and every real fancier will, or should, be welcoming its approach. It must be borne in mind that if you intend to be successful, everything must be in first-class order previous to this most entertaining and exciting period.

In the first place you must obtain snitable cages. I will try and give you a few of my ideas concerning them. You will require breeding and stock cages. I would recommend you to have them made of a uniform size, as nothing looks worse than a quantity of cages, all of different sizes, packed on top of each other in a room. I, myself, prefer them about 20 inches long, 15 inches high, and 10 inches from back to front, and made of cyprus, this having advantages over other cheap woods, it being a disinfectant, and obtainable in greater widths. Enamel them inside, and let them be neatly made, with as few joints as possible, so as to have less room for filth and red mite.

Having procured your cages you will require an absorbent. Some prefer sand to sawdust; I, myself, prefer the latter, on account of it being the more absorbent. But I also keep a supply of grit and a quantity of old mortar in the cages, for the sake of the lime it contains, as this is necessary for the hens, to enable them to shell their eggs, and so avoid "soft" eggs.

We will presume you have your stock birds in your room. You will have to get them into breeding condition. Diet of a rather higher order than the usual will be necessary. About a month previous to pairing up I generally give, about twice a week, a little egg food and mixed seed, such as hemp, inga, maw, and gold of pleasure; also a few drops of chemical food in their water as a tonic, with a piece of apple and boiled carrot. I continually keep a piece of suet between the cage wires.

Do not pair your birds until you are sure they are quite ready, as they will do very little good in the breeding cage. It is an easy matter to tell when birds are in breeding condition, by their "calling" and unusual movements. Never be in a hurry to pair up. The second week in April is about the recognised time. When the birds have been together a day, you may supply them with the nest pan and building material, such as moss and cowhair. If matters go on as they ought to do, it will not be long before the nest is ready. At this time there is danger of egg-binding, and as prevention is better than cure, one teaspoonful of common treacle in a quart of water will save any bother. Give this in the drinker until the clutch is laid. But should you have a hen egg-bound, one drop of syrup of hypophosphates, given direct in the beak, will effect a cure.

After the birds have been paired up about a week, the eggs should put in an appearance. I think it advisable to take each egg away until the third is laid, as otherwise they are likely to get damaged. When the third is laid I dust the nest well with insect powder and return the eggs. Another great advantage of taking the eggs away is that they are more likely to hatch about the same time, and this gives all the young an equal chance. While the 14 days of incubation are going on, I give the hen a little egg food every day, so that when the young are hatched she is used to it. From about the ninth day I give her a bath (or spray) every day, as the moisture is required to assist the chicks to hatch.

When the young are about three days old, I mix a little maw, or boiled rape seed, with the egg food, and occasionally give milk sops; also keep a supply of crushed hemp seed in the cage. I also give as much tender dandelion as they will eat. When the young are a month old, take them away from their parents, and put them into the cage you intend keeping them in. Feed with egg food and boiled rape seed, and milk sop; also crushed hemp and canary seed, with a few drops of gentian in the water twice a week. By degrees lessen the quantity of soft food, and replace by hard food as soon as possible; but do not stop the soft food entirely until after the moult.

It is not advisable to continue breeding after July, as the birds are then likely to drop into moult at any time. Any birds you intend showing should now be given colour food. Give this gradually at first, in the proportion of one teaspoonful to half a pint of egg food, and add a little castor sugar. Increase the colour food gradually to two teaspoonfuls, so that by the time the birds break into moult the system is thoroughly saturated with the colouring agent. When colour feeding, cover over your birds, so as to keep any strong light from them; this preserves the colour, and keeps them free from draughts. Do not forget to hang up the baths on fine days, as bathing is very beneficial. With this I conclude, and I sincerely hope, as I said before, that my paper has proved interesting and useful, particularly to beginners.

A few questions were asked and ably answered by Mr. Turner, after which a hearty vote of thanks was accorded him. Mr. Turner suitably replied, and this brought a most enjoyable evening to a close.

THE CANARY BREEDING SEASON

Is now with us and everyone who contemplates cultivating Canaries for pleasure or profit, should immediately procure the Standard Work on Canaries:—

HOUSE'S CANARY MANUAL

PRICE ONE SHILLING. Post Free 1/2.

Superbly illustrated by the Champion Canary Artist, Mr. H. NORMAN. EVERY BIRD DEPICTED IS A VERITABLE MODEL, and shows the breeder what to aim for. Some idea of the popularity of this Practical Manual may be gathered from the fact that under the title of "The British Canary," it has passed its Third Edition entering upon a Fourth Edition of 5,000 copies under the new title of "HOUSE'S CANARY MANUAL." The following Summary of Chapters, etc., will show you how completely the ground is covered:

Aviaries and Cages.
Show Cages.
Perches.
Breeding Canaries.
The Young Birds.
Food for Nestlings.
Hens Refusing to Feed.
Sweating Hens.
Young Birds Dead in Shell.
Red Mite.
Clear Eggs.
Moulting.
Exhibiting.
Diseases (treated very fully).
Every variety of Canary is treated upon at length and illustrated.

Mr. HOUSE has thoroughly revised and brought this work up-to-date and incorporated a chapter on the "Roller or Singing Canary."

Send 1/2 now and secure a copy hot from the press.

F. CARL, 154, FLEET STREET, LONDON, E.C.

Printed for the Proprietor, Mr. F. CARL, 154, Fleet Street, E.C., by J. G. HAMMOND & Co., LTD., Fleet Lane, London, E.C.

I think your idea for encouraging the novice is very good. This is the first year I have ever tried Canary breeding, and I am going in to try for a win. Being very fond of birds, I have enjoyed many a Sunday with your interesting paper, CAGE BIRDS, and it was the last Birthday number that stirred me up to try my hand. Please send me on a form, so that I can enter the competition. Hope this scheme will increase the circulation of your valuable paper. I would also like a few specimen copies of CAGE BIRDS to distribute amongst my friends, and will try and induce them to take it in every week.—H. E. CRACKNELL, Moukwearmouth, Sunderland.

[These have been sent.—ED. "C. B."]

S. Vincent (Shefficld) writes:—Just a line to make application for a form, for I should very much like to join the Fancy. I have never tried to breed before, but intend trying this year. I have two young birds now, hatched April 17th, from one pair of Norwich—yellow cock and a buff hen. I have two pairs to breed with. The reason I began I was advised by your valuable paper, CAGE BIRDS, and a friend. I have read your CAGE BIRDS since last October, and it is a champion paper for all that have birds of any kind. My wife takes a great fancy in this hobby as well.

[Mr. Vincent also enquires whether two gentlemen whom he names (having seen references to them in "C. B.") would do as scrutineers. The two fanciers named by him will do very well, both being well known and having reputations to lose.—ED.]

I think your new competition for Canary breeding amongst novices (to use the American term) great. I must say this is another of your ingenious ideas to welcome outsiders to take an interest in our fascinating hobby, and it cannot help but be a great success, which I am sure it deserves. The outcome of it will be that Secretaries will have more new members to enroll. Regarding the awarding of prizes, personally, I think they ought to be awarded by points at present. I can see there are two drawbacks to the competition. Novices, when first starting, do not as a rule start with many pairs, and I see that the one who rears the most birds in 1907, or rather up to July 15th, 1907, is to be the winner. Take, for instance, one man who starts with two pairs and breeds say 18 to 20 birds, and another breeds from six pairs and rears, say, 25 birds; well, this man wins, but the other one is the more successful, as he has bred more per pair. Another point which I think should be fully considered is, what birds they are breeding. A man that is trying to breed Norwich, Yorkshires, or any free breeding birds, stands a much better chance than a man who is breeding Scotch Fancy, Belgians, Crests, etc. I think if points were allowed, say one point for each youngster from Norwich, Yorkshire, Borders, Germans, Crossbreds, etc., and two points for Scotch Fancy, Belgians, and the like, and all the points or young added together, and then divided by the number of pairs that is put up, will bring out a percentage. I think this would be more of a correct way to find the most successful; for example, a man is breeding from two pairs of Norwich and one pair Yorkshires. He breeds, say, eleven Norwich and seven Yorkshires, making 18 birds or points, and these are from three pairs. Well, you divide the three pairs into the eighteen points, viz., 3 into 18 leaves 6 points per pair. Another example. A man breeds from three pairs of Scotch Fancy, and he rears 12 birds. Counting each bird two points makes 24 points; divide the three pairs in 24 points—8 points per pair. I think this would be a satisfactory way of awarding same; perhaps others would give their idea. GEO. B. LECLAIR.

We are greatly indebted to Mr. Leclair for the foregoing observations, which show that he has given no small amount of thought to the problems presented by the competition. We feel, however, that the points he raises will be better left to editorial judgment when making the awards. But, in common with others, he may rest content in our assurance that the prizes will be awarded with a due regard for the novice of limited means, equally with his more fortunately placed competitor.

I notice in this week's CAGE BIRDS your kind offer to "Novices," but perhaps you will excuse me for asking will your decision be based on the average system, or will the prize go to the one who has bred the greatest number, irrespective of the number of pairs of birds he may have? I may say I am a novice just commencing in the Fancy, and I have got two pairs of birds—one pair of Yorkshires and one pair of Rollers. I am not in a position at present to invest in any more pairs, and it will give me the greatest pleasure in the world to compete for your prize if by so competing everyone is given a fair chance (and I am confident that is what you want), and the only way all fanciers have a fair chance is if you base your decision on the average. There may be some who have twenty pairs, others, like myself, only a few pairs; but, still, if you take the average, it does not matter how many pairs anyone has—they are all on the same footing; whereas you see, if you judge otherwise, your poorer readers will have no chance, as it will be the person with the long purse who could afford to buy and keep the largest number who would have the better chance. Of course, I am bound to say that it not always follows the man with the largest number has the best result; but, still, his chances are greater when all is said and done. HARRY ROTHWELL.

Ashton-under-Lyne.

[Note reply to Mr. G. B. Leclair.—EDITOR "C. B."]

OUR

CANARY BREEDING COMPETITION.

Received by all with enthusiasm. **NOTE! RULES, 3, 5, 7 and 8.**

With the idea of stimulating the interest of outsiders in the hobby of Canary Breeding, and so provoking new recruits for the Fancy, the Editor of "CAGE BIRDS" has decided to offer £28 in Prizes, including £15 for the most successful Novice Breeder of Canaries, under the following conditions:—

1. Only Novice Breeders are eligible for the Competition, a "Novice" to mean anyone who has never bred Canaries before.
2. The Prizes will be: **A**, Cup, value £5 (or Cash), First Prize; **B**, Cash, £3, Second Prize; **C**, Cash, £2, Third Prize; and **D**, Five £1 Cash Prizes for the next best in succession.
3. Prizes to go to the "most successful" breeders, meaning those of the competitors who are most successful in satisfactorily rearing the best average of healthy young birds during 1907 Canary breeding season now in progress.
4. The young Canaries must be bred by the competitors on or before July 15th, 1907, next. None bred after that date will be eligible.
5. All stock birds used must be the *bona fide* property of the Competitor.
6. Competitors must have the results of their breeding operations attested to by two responsible officials of any recognised Cage Bird Society, or may swear a declaration attested to by two responsible witnesses (form on application).
7. From now till the date of the Competition closing, August 17th, each issue of CAGE BIRDS will contain a Coupon, and when sending in the declaration competitors must enclose the whole series of coupons to show that they have been during the period regular readers of CAGE BIRDS. The second Coupon appears at the foot of *this announcement*, the first appeared last week.
8. The Editor's decision shall be final.

Secretaries and Officials of Societies are invited to communicate with our Manager, when a scheme of co-operation by which new recruits for their Societies may be enlisted, will be forwarded.

A Prize offered for the Old Hands.

It has been represented to us that though our Canary Breeding Competition is of vast interest to the raw recruit, the absolute novice, it leaves the experienced hand out in the cold. To remedy this we have decided to offer **FIVE POUNDS** Cash, or Cup to full value, at winner's option, to the most successful Canary breeder of any experience. All breeders of one season's experience and upwards eligible. Same conditions as for Novices. The Editor's decision to be final.

We also invite the hearty co-operation of all readers in the following "rolling" scheme:—

THE "TELL SIX" PLAN.

By simply procuring SIX Signatures you may be able to win £6.

The plan is as follows: All you have to do is to tell six of your friends, unrelated to each other, about CAGE BIRDS' great Canary Breeding Competition, and persuade each of them to enter and tell six of their friends about it also. You send in to us the first six signatures to an undertaking to this effect, and if any of the signers are successful in our Canary Breeding Competition we will award you £1 for each successful competitor nominated by you. If any of the six people you tell fill up our forms as appended with signatures of six of their friends whom they have persuaded to enter, we will award them £1 for each successful competitor nominated by them. If two or more people nominate the same successful competitor the nomination prize will be divided amongst the successful nominators. The nomination forms must reach us by May 27, 1907, and the *bonâ fide* signatures and addresses in full of the competitors you have induced to enter must be given in each case. Here is the

NOMINATION FORM.

We, the undersigned, having carefully read, or had read to us, the rules of CAGE BIRDS' great Canary Breeding Competition, agree to enter for the Competition and abide by the rules of same. We further, each of us, undertake to try and induce six of our friends to enter the Competition and tell six of their friends about it also:—

Full Name and Address.

1. .....
2. .....
3. .....
4. .....
5. .....
6. .....

The above are the *bonâ fide* signatures and the complete addresses of six intending competitors in CAGE BIRDS' Canary Breeding Competition, and I hereby nominate them to win one of your prizes. If any of them are successful I should like my prize money sent to me addressed as under:—

Name.....

Address.....

.....

Every form sent in, if properly filled up, will entitle the sender, whether a successful nominator or not, to a set of picture postcards, "Dickie in the Dumps."

All forms must be sent in on or before May 27, 1907.

Now you want to know WHY you should adopt our "Tell Six" plan. We will tell you:

1. It will make new recruits for your hobby.
2. It will teach people to look after their pets better.
3. You may be successful in winning one or more of our prizes.
4. The friends you persuade to enter may win one or more of our prizes.
5. The friends your friends persuade to enter may win one or more of our prizes.
6. You may be a novice or an experienced hand; you have still a chance to win a prize.
7. If you are a member of a society you may enlist a new member by means of this Competition.
8. Rich or poor—a lot of birds or a single pair—it makes no difference. All have an equal chance.
9. It will take your mind off your business or private troubles and give you a little spare-time recreation of a novel kind with the chance of making a pound or two.

Roughly and briefly these are the benefits of the "TELL SIX" plan. Follow it up for all you are worth and see how much you can win.

You need not necessarily enter for the Canary Breeding Competition to win one of the nomination prizes. It will be sufficient if a breeder nominated by you on one of our forms is successful in winning one of our prizes. That is to say, if he or she is successful you will be successful. If there is any point you are dubious on, write—

F. CARL, 154, FLEET STREET, LONDON, E.C.

Have you a young friend? Induce him or her to enter for our Great Breeding Competition.

Canary Breeding Competition.

APRIL 27th, 1907. Coupon No. 3.

CLUB NOTICES.

No charge is made for notices of forthcoming meetings, but they can only be inserted once. Should secretaries desire to secure immediate insertion of their announcements **exactly as written** they can do so by prepayment at the rate of three words a penny.

Battersea and Dis. C.B.A.—May 1st, at Duchess of Devonshire, Lavender Road, Clapham Junction. Mr. J. Dewhurst will lecture on "Cage Making"; all fanciers welcome.—F. Easterling, sec.

Blackburn and Dis. C.B.S.—May 2nd, at Meliona Rest, 8 p.m. Very important business.—J. W. Marsden, sec.

Blaydon-on-Tyne and Dis. C.B.S.—May 4th, at Co-op. Hall, 7.30 p.m.—D. A. Ogilvie, sec.

Bramley and Dis. O.S.—April 27th, at Headquarters, 8 p.m. Questions and answers; also presentation to our late Sec., Mr. Wilkinson.—Jas. Metcalfe, hon. sec.

Brighouse and Dis. C.B.S.—April 30th, at Headquarters, 7.30 p.m. Novice washing exhibition.—A. Morton, hon. sec.

Brought Ferry C.B.S.—May 1st, at Bakers' Hall, King Street, 8 p.m. Appointment of judges for Open Show; fanciers invited to become members; membership fee, 4/-; radius, 25 miles.—C. Muir, sec.

Burnley and Dis. C.B.B.—April 30th, at 5, Mosley Street, 8 p.m. Committee meeting.—John Bee, sec.

Cheltenham C.B.S.—May 1st, at Sydney Arms Hotel, 8 p.m. To elect Assistant Hon. Sec. and other important business.—A. S. Treasure, hon. sec.

Chester and Dis. C.B.S.—May 7th, at Nag's Head Cocoa House, 8 o'clock. Nest Feather Show, etc.—A. J. Red, sec.

City of Birmingham C.B.S.—May 1st, at Crown Hotel, 8 p.m. Lecture by Mr J. A. Eckersley, "The Norwich Canary"; fanciers and friends invited.—H. C. Wilkins, sec.

City of Dundee and Dis. N.M. and B.B.A.—May 1st, at Doig's Rooms, 8 p.m. Classification for Open Show.—A. Miller, sec.

City of Hull C.B.S.—May 6th, at Oddfellow's Hall, 8 p.m. Nest Feather Show.—Potter and Stamford, secs.

Coventry O.S.—May 1st, at Sydenham Palace, 8.30 p.m. Important business.—G. Turrell, sec.

Darlington C.B.S.—May 1st, at Half Moon, Northgate, 8 p.m. Classification and judges for the Open Show.—E. Brunskill, sec.

Dulwich and Peckham C.B.S.—May 2nd, at the Herne Tavern, Peckham Rye, 8 p.m. Table Show of British birds; judge, W. H. Vale, Esq.; country ramble May 12th; tickets, 3/6 each.—W. Hodson, hon. sec.

East Bowling and Dis. B.F.A.—April 27th, at the Barley Mow Hotel, 5 p.m. Judging competition.—T. E. Higgins, sec.

Eccles and Dis. C.B.S.—May 1st, at Grapes Hotel, Peel Green, 8 p.m.—A. Wheatley, sec.

Edinburgh Norwich and M.B.S.—May 2nd, at 142, High Street, 8 o'clock. Monthly business meeting.—W. Dunlop, sec.

Farnworth and Dis. C.B.S.—April 28th, at Old Post Office Inn, 7.30 p.m. Show arrangements.—W. Dawson, sec.

Glasgow and West of Scotland N.M.B. and F.—April 30th, at 122, Ingram Street, 8 o'clock. Show of British birds; Yellowhammer, A.O.V. Bunting, Chaffinch, and Bramblefinch.—R. A. Brown, sec.

Greenock, Port Glasgow, and Gourock O.S.—May 1st, at Victoria Hall, Rue-end Street, Greenock, 8 p.m. Bird washing exhibition by Mr. D. Black.—W. H. Stodder, sec.

Greenwich and Deptford C.B.S.—May 2nd, at Two Brewers, Church Street, Greenwich, 8 o'clock. Lecture, "The Norwich Plainhead," by Mr. G. Gardner; fanciers invited.—G. W. Hill, hon. sec.

Leeds Roller C.C.—May 5th, at 55, Briggate, 7.30 p.m. Important business; also a paper by the Secretary, "Clear Eggs: Cause and Preventions"; all Roller fanciers are cordially invited to attend.—C. Towes, hon. sec.

Leigh and Dis. C.B.S.—April 30th at Railway Hotel, 7.30 p.m. Arrangements for Young Show.—A. Parks, sec.

Loughborough and Dis. C.B.A.—May 1st, at Charnwood Coffee House, 7.30 p.m. Subscriptions overdue; please remit at once.—E. Thorp, sec.

Middlesbrough Teeside C.B.S.—May 4th, at Crown Hotel, 7 p.m. Report of judges and selection of silver bowl.—A. Wake, sec.

Newcastle and Dis. C.B.S.—May 2nd, at 65, Grainger Street, 7.30 p.m. Schedule for Open Show.—Curry and Hutchinson, secs.

Northampton Hand-in-Hand.—April 30th, at Foresters' Arms, 8.15. Entries for Nest Feather Show, etc.—J. Nason, sec.

North London C.B.A.—May 1st, at Public Library, Church Street, Stoke Newington, 8 p.m. Lecture on "Yorkshires," by Mr. J. Robson; all heartily welcome; members please note alteration of date.—R. P. Harper, hon. sec.

Nottingham and Notts O.S.—May 1st, at Cobden Hall, 8 p.m.—G. E. Wilkinson, sec.

Porth and Dis. C.B.S.—April 27th. General meeting; elect judges for Annual Show.—J. Challenger, sec.

Potteries and Dis. C.B.A.—May 4th, at Headquarters, 8 p.m. Classification and judge for First Feather Show.—J. Simcock, sec.

Queen's Park and Dis. C.B.A.—May 2nd, at Windsor Castle Hotel, 8 p.m. Schedule First Feather Show.—J. C. Birch, sec.

Rochdale Good Intent C.B.S.—May 1st, at Temperance Club, 8 p.m. Paper by Mr. J. Law, "Breeding, Rearing, and Management of the Canary."—Sam M. Clayton, sec.

Rotherham C.B.S.—April 27th, at College Inn, 8 p.m. Entry for cups; lecture, "Rearing and Breeding for Exhibition," by G. Browning; members and friends invited.—J. C. Hayes, sec.

Sheffield and Dis. C.B.S.—May 2nd, at Wentworth Cafe, Pinstone Street, 8 p.m. Delegates from Sheffield Amalgamation of C.B.S.; half-yearly subscriptions due.—Bishop and Pilley, secs.

South Metropolitan F.A.—May 2nd, at Wesleyan Mission Hall, Lyham Road, Brixton Hill, S.W., 8 p.m. Lecture on Pigeons, by Mr. Leith.—A. Maddison, hon. sec.

Spen Valley C.B.S.—April 29th, at Northgate Hotel, Cleckheaton, 8 p.m. Special business.—A. Whitehead, sec.

Stockton and Dis. C.B.—May 2nd, at Leeds Hotel, 8 o'clock. Important business; members please attend.—J. W. Lowes, sec.

Wallasey and Dis. C.B.S.—May 2nd, at St. Mary's Schools, 8 p.m. Discussion, "Feeding of Young Birds."—Wm. Mallison, sec.

West London F.A.—May 2nd, at Bush Hotel, Shepherd's Bush, 8 o'clock. Mr. J. Robson will lecture on "The Breeding and Rearing of Canaries."—J. Dewhurst, sec.

West of Scotland Norwich, Etc.—May 4th, at Nelson Hotel, Glasgow, 7 p.m. Lecture on "Crests and Crestbreds," by Mr. John Young (Rutherglen); new members specially invited.—Geo. Smart, sec.

Widnes and Dis. O.S.—May 2nd, at Grosvenor Hotel, 7.30 p.m. Nest Feather Show judge, schedule, etc.—S. Andrews, sec.

QUESTIONS & ANSWERS

DOUBTS AND DIFFICULTIES SOLVED BY SPECIALISTS.

Queries will be answered under the following conditions:—

(1)—*All questions must be clearly written in ink (or typewritten) on one side only of paper, and must conclude with either the correct name of querist, or a pseudonym, or initials.*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper and enclosed with the query. In no case must the address appear on the query.*

(3)—*Queries intended for different specialists must not be written on the same sheet of paper.*

(4)—**Queries must not include** *or be included in orders for books, instructions re advertisements, or any other matter for publication.*

(5)—*The department to which the queries refer must be stated in bold letters on the left-hand corner of the query.*

(6)—*If an answer in the same week's issue is desired, queries must be posted to reach us by* **Monday's first post** *at latest. Queries will be dealt with in the order in which they are received, and only as space permits. The earlier queries are received the better attention they are likely to have.*

(7)—*Queries relating to illnesses of birds, except enquiries as to cause of death (for which see Post Mortems) will be answered by return of post on receipt of a postal order for sixpence and an addressed stamped envelope. Queries of an ordinary nature will be answered by post, if desired, on receipt of a postal order for one shilling and a stamped addressed envelope.*

(8)—*All who require letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence to pay postage expenses, &c., otherwise their letters will not receive attention.*

(9)—*All queries must be addressed* **the Editor, "Cage Birds,"** 154, *Fleet Street, London, E.C. Only queries so sent will be answered. Postcards are not admissible.*

NOTE.—Readers are requested to carefully study past numbers and current issue before submitting questions. By doing so they may save trouble and unnecessary repetition.

THE following gentlemen represent CAGE BIRDS staff of **ADVISORY EXPERTS.** Queries must in no case be addressed to any of them individually, but to the Editor.

Norwich Plainheads.—**J. H. Payne.** Yorkshires.—**H. W. Battye.** Crests & Crestbreds—**W. E. Greeves.** Cinnamons—**J. North.** Miscell.—**"Old Judge."** Border Fancies—**J. Patterson.** Scotch Fancies—**R. Wright.** Lizards—**Barker Clegg.** Lancashires—**S. R. Compston.** Greens—**S. Hadwin.** Belgians—**W. B. Cobb.** British Birds, Mules and Hybrids—**G. E. Weston.** Foreign Birds—**Wesley T. Page,** F.Z.S., M.B.N.H.S., &c. Park and Lake Aviculture—**Frank Finn,** B.A., F.Z.S., M.B.O.U., &c. Wild Bird Life—**H. Norman.**

CANARIES.

NORWICH PLAINHEADS.

Answered by J. H. PAYNE.

Hen Ruffled and Panting.

Sindbad.—I think your hen has caught a chill. Give in the drinking water for three days ten drops of acetate of ammonia, after which you may give instead, every other day for a fortnight, ten drops of ipecacuanha wine. Keep covered over at night with a warm cloth, and be sure she is not in any draught, or she may catch another chill, when you would probably lose her.

Hen Making Squeaky Noise.

Novice.—Give your hen, in the drinking water, for a fortnight, fresh daily, fifteen drops of syrup of tolu, and six drops of paregoric. You may afterwards give her for about a week a little honey dissolved in warm water. Put a piece of muttou suet between the bars of the cage for her to peck at. By the time she has had this treatment the weather will no doubt be nice and genial, and if she appears to be well you may then put the cock with her, but do not do so at present.

Taming Birds.

G. Bellamy.—From what you say, I do not think you will have much difficulty in getting your buff Norwich cock to be finger tame, as I should say it is now well on the way. Talk to it as much as you possibly can before giving it some tit-bit, such as a few hemp seeds, a bit of apple, or a sprig of watercress. Put your hand inside the cage, and try and induce him to alight on your hand. You may let him fly about your room, providing you keep doors and windows closed. If you have a member of the feline tribe, see that it is put outside, or he will soon get outside—the bird. Some birds are much easier tamed than others. I once had a Goldfinch, it had only been caught three weeks, yet would come out of its cage on to my finger and take seeds out of my mouth. The sample of canary seed is just fair, it is clean, but not very bold.

Not Singing.

A Young Beginner.—Give your bird, in its drinking water, a small piece of sulphate of soda, about the size of a horse bean, twice in one week. Then give in the water ten drops of tincture of quinine fresh daily for ten days. Twice a week let it have a little egg and biscuit, to which add five drops of Parrish's Chemical Food. You can now procure some nice young leaves of dandelion. Give him one or two twice a week. I should think you will be able to breed with him after this treatment, and when the warm weather has set in.

Still Wheezy.

Bill Sticker.—As you say your bird now sings a little every day he is certainly getting better, for he was in a very sorry condition when you wrote about him first, judging from the description you gave. Give him three times a week a small teaspoonful of egg food, to which add five drops of Parrish's Chemical Food. Give him, in his drinking water, fresh daily for a fortnight, ten drops of tincture of quinine. Let him have a dandelion leaf or two twice a week, and occasionally a little watercress.

Continual Moult.

J. Lelshman.—When the bird has quite finished its cross moult it will commence to sing, but as this is a rather weakening sickness, you may brace him up by giving him a tonic. Let him have, in the drinking water, fresh daily for a fortnight, ten drops of syrup of phosphate of iron. You may also give him twice a week a little egg food, to which add five drops of Allen and Hanbury's Byno-Phosphates. Let him have a sprig of watercress two or three times a week.

Drooping Wings.

J.R.M.—I should advise you to take the hen away from the cock, and put her in a cosy place quite free from any draught, and cover over at night with a warm cloth. In the drinking water put fifteen drops of syrup of tolu, and ten drops of ipecacuanha wine. Continue this for a fortnight. You may give her twice a week a piece of sponge cake, over which put a few drops of best sherry. (2) From the two Green birds which you have paired up, you will certainly get nearly all the progeny self greens, especially as you say they are both out of the same nest, as this will have a great tendency to fix the colour.

Tired, not Singing.

Standerton.—I am pleased to hear your bird's feathers have come on again so well after the treatment I recommended. You are treating your birds correctly, and you should have better luck this nest. The cause of your ill-luck was the fact that you paired your birds too early, and apart from that they were not in tip-top breeding condition. Let the cock stop with the hen, as I feel sure you will have better results. You will, I think, find your Norwich cock and Green hen will pair up all right, but as you only put them together a few days since you see there is no time lost. Do not let the fact of your cock bird not singing since you put him with the hen trouble you, as this is of frequent occurrence. Feed the two Norwich cocks as you have been doing, and they should soon be in song. Are you sure they are cocks? If they have been quite healthy, and have not had a cross moult they should be singing quite hard now. I should advise you to keep the Siskin cock with the yellow hen, as you say he feeds her. If the hen is lively and strong, she is none the worse for not going to nest for a week or two. You have plenty of time for Mule breeding.

YORKSHIRES.

Answered by H. W. BATTYE.

A Doubt About the Sex.

Constant Reader.—I am inclined to be of the same opinion as the man who has told you that your supposed hen is a cock. Perhaps, if you separated the pair, the bird might soon settle the point by breaking into song. There are many young birds that are very difficult to distinguish as to sex, even by experienced fanciers. Try the bird in a cage by itself, and have it, if possible, where you can see it, but where it cannot see you, when I should not be surprised if you found it hurst out in full song. Yes; unfortunately it generally is these grand-looking hens that turn out to be cocks at this time of the year.

In a Poor Way.

Bury Pudding.—From the description of the symptoms, your bird seems to be in a very low condition, and until the present cold weather improves, you will need to keep it cosy and warm, and cover it up at nights, keeping it free from draughts. I might have been better able to advise you if you had given me some little information as to how you feed it, and under what conditions you keep it; but of these things you do not give a hint. Let its staple food be good sound canary seed, with plenty of clean, sharp, gritty sand, and clean boiled water that has gone cold (fresh every morning). Also give, in addition, for one week, fresh daily, a little boiled milk sop, well mixing with it ten drops of syrup of buckthorn and a little moist sugar. Then, for another week or ten days, give, in place of milk sop, a little egg food, say half a teasponful twice a day, to which add and well mix ten drops of Parrish's Chemical Food; also a little sugar, and sprinkle over the lot a pinch of maw seed. Also give daily one or two, not more, young and tender leaves of dandelion. Follow up the above treatment, and I think you will have your bird in breeding condition by about the beginning of June. Of course, you will keep it in a cage to itself. You need not be afraid of trespassing on my time, and I shall be pleased to hear how your bird gets along in the course of a few weeks.

A Case of Broken Eggs.

Hopeful.—You say the pair of birds are quiet, and I suppose you mean that they seem agreeable. This being the case, it is somewhat difficult to account for them breaking the eggs. As you say the eggs were found broken in the nest, it is evident they have been laid in the nest, and not dropped from the perch, as they sometimes are. From what you write, I am of opinion the cock bird is the culprit. Probably he does not like the hen to stay on the nest for any length of time. Some cocks are very vicious, and will attack the hen quite savagely when on the nest, and yet seem quite friendly when she is not sitting on the nest. I should advise taking him away from the hen each evening, and returning him each morning, removing the eggs each morning before returning the cock, and substituting dummy eggs in place of the real ones, until she has laid her third egg, when, about noon on the third day, take him away for good and return the three eggs and let the hen sit, hatch, and rear the young ones by herself. Should also advise plain white canary seed as the staple food. You may, if you like, give separately a little of the mixed seed you name, two or three times a week, giving a little egg food on the days you do not give the mixed seed.

CRESTS AND CRESTBREDS.

Answered by W. E. GREEVES.

Went Mopy when Paired.

J.T.H.—Give your Crestbred cock an entire change of food. Canary seed daily, with rape twice, hemp twice, and egg food twice a week. When cleaning out the cage throw a pinch of maw seed on the bottom. Give no other food with the exception of a dandelion leaf or two every other day. Mind and give the necessary grit, which is procurable now at any bird shop or grocer's. You might also give one drop night and morning of Parrish's Chemical Food direct into its beak, for three consecutive days; finish the week by giving it once a day only. Do not put him back with the hen until quite well. I have no doubt whatever but that its condition is due to the changeable weather we are getting just now. If the wheezing comes on again, give bread and milk instead of the egg food, dropping over it 3 drops of syrup of tolu.

Hen Looks all Ruffled Up.

J. H., Dublin.—Do not mate your Crested hen until quite well. In the first place give 1 drop of castor oil direct into the beak. Be careful not to give more. Feed on canary seed as a staple food and give a small quantity of scalded rape seed every other day. Mind and wash well after scalding it, and then dab out all moisture by putting it in a cloth. Give bread and milk daily for a week, with just a pinch of maw seed over it. Discontinue egg food and all green food until the bird is quite well again. Give a reasonable supply of grit, as advised "J. T. H." Many ailments in cage birds are the result of an insufficiency of proper grit. In your case you have been too liberal with egg food; twice a week is ample. The Goldfinch mates freely with the Canary, but should not be paired until in condition, which is generally about the beginning of May. Note that queries relating to different varieties must be written on a separate sheet of paper, and addressed to the proper specialist concerned.

BORDERS.

Answered by J. PATTERSON.

Result of a Chill.

Novice.—He has seemingly caught a chill on the journey, but seems on the way to recovery. Your feeding is quite correct. You might give the rape seed scalded until he stops wheezing; put the required quantity into a small saucepan, and cover with cold water. Allow it to boil three minutes, strain immediately through a fine wire sieve, place on a rough towel, and rub it until dry. Give a young daudelion leaf fresh every morning, and give each day in water ten drops of the following mixture:—One ounce each of glycerine, Scotch whisky, and syrup of squills; mix all together in a bottle. Do this for the next two weeks; keep him out of all draughts, and covered over at night.

Crossing Cinnamons.

J. Roberts.—You have been wrongly informed. If you pair a Cinnamon hen to a dark-eyed cock, unless that cock has a dash of Cinnamon blood in him, you will not get one Cinnamon in the progeny. (2) By pairing a cinnamon-marked cock to a dark-eyed hen, you would get a fair percentage of the progeny cinnamon-marked; the dark-eyed birds would be both cocks and hens, but any showing the cinnamon would undoubtedly be all hens. (3) The person who informed you that all birds bred from a Cinnamon mother would be hens must have got a little mixed. I expect he would mean that all Cinnamon birds bred from a Cinnamon father and a dark-eyed mother would turn out hens.

LIZARDS.

Answered by BARKER CLEGG.

No Progress in Pairing.

John Evans.—In the first place, are you sure you have cock and hen together? This being answered satisfactorily, we will proceed. You say the hen is quite active, strong and healthy, and frequently calling, yet will not pay attention to the addresses of the cock. You have evidently other cocks in the room. Keep a sharp look-out, and ascertain which bird it is that replies to her calls. I am of the opinion that she has paired naturally to another bird in your room. This is a frequent occurrence, and is always rather unfortunate, particularly when the points of qualification of both birds are not in accordance with your desires. Should the result of your investigations satisfy you that the above is the case, and you are agreeable to the mating, all will be well. If otherwise, you must remove the hen to another room, keep her alone for a week, then introduce the mate you have selected. Keep in separate compartments until you notice corresponding desires, calling, etc., and other evidences of an understanding between them, which you will notice. The difficulty will then be overcome, pair together, and the couple will, I hope, be fortunate in propagating their kind.

ROLLERS.

Treatment of a Roller.

Puzzled.—You do not want to take notice of all your friends. Treat your bird in common-sense fashion, and ignore the "tips" everyone seems anxious to give you, and which all differ! The staple seed mixture for a Roller should be equal parts best Spanish canary seed and best German summer rape. Whoever told you to use English rape is very ignorant of what a Roller requires. No bird should be hung in the direct summer sun. It may have a sun-bath for an hour or two early morning in the spring, but even then the cage should be at least partly covered over. Never let a Roller be in a cold wind or a draught. There is a special Roller cage, which has folding doors, and these are very good to keep high-class birds in. As the temperature goes down at night in your room, cover the cage over. For tit-bits, give a feed of canary-bread (or cake) three or four times a week, a pinch of maw seed now and again, and a little sweet apple between the wires occasionally; also a sprig or two of green food, such as young leaves of watercress or lettuce, or rape seedlings. A little "song mixture," as it is called (ordinary mixed seed will do), can be given once a week, say on Sunday. Write again when your bird is moulting, and you can get some advice about that state.

MISCELLANEOUS CANARY QUERIES.

Answered by "OLD JUDGE."

Canaries and the Nightingale Song.

Is it possible to train Canaries to sing the song of the Nightingale? My bird has picked up a few notes, but not enough to be of any value. What is the best seed mixture?—C.H.

C. H.—If a Canary is kept in a room with a Nightingale, it will learn its song. Some birds are naturally better mimics than others, and young birds are more teachable than old ones. Strong, robust-voiced birds like Lancashires, Yorkshires, and Norwich cannot take up the Nightingale notes with the ease and fluency of Rollers, or half-bred Rollers. The best mixture for birds kept as you mention as pets only is two parts German summer rape and one part canary seed. Half-a-teaspoonful of maw or inga may be given once or twice a week by way of a change, using a separate tin or pot for the same, or else place upon the sand in cage bottom. A few grains of hemp may be given now and then in the same manner.

Clear Eggs.

Paired Norwich hen to Yorkshire cock, had five eggs, all clear. What is the cause, is March too early?—DOWNHEARTED.

Downhearted.—It is difficult to say why the eggs were clear. If you paired the birds early in March it would be too early, the end of March or the beginning of April is quite soon enough. More important still than the mere matter of dates is the fact of the birds being thoroughly fit and ready. The best thing you can do now is to separate the birds for a week or ten days, feeding them well, and then let them go together again. Feed daily upon plain canary seed and egg food, and every other day give a little inga or niga seed; continue the green food, but stop the bread and milk. When birds are being prepared for breeding they need stimulating somewhat; bread and milk sop is a cooling and soothing diet, which is most admirable diet when birds are sickly and unable to properly digest and assimilate stronger foods; it is of little use as a force producer. During the breeding season birds require to be kept in the highest state of vigour possible, and therefore require strong foods. I should advise you to study some good handbook. House's "Canary Manual," which our manager will be pleased to send you for 1/2.

Birds not Pairing.

F.E.W.—(1) From what you say there is not much doubt that you have matched two cock birds, and if it is so they most certainly will not make a nest. You should secure a couple of hens and mate one to each of your present birds. Then I think you will quickly see them go to nest. (2) The progeny of a Norwich Plainhead and a Hartz Mountain Roller would be cross-bred Norwich-Germans. The Border Fancy is a distinct and old-established breed, and quite different in appearance to what a cross-bred Norwich-German would be, being smarter in carriage and tighter in feather.

Restricting Food.

Two young birds, five weeks old, have been feeding on crushed seed and egg food, also whole seed. Should I limit food, as they feed all day long, and have become so fat and puffy looking, although they hop about quite cheerfully?—MAY.

May.—I certainly should not advise you to limit the supply of food. Young birds need plenty of food, for not only have they to sustain life, but also build up their frame, and grow a coat of feather as well. When young birds are growing and feathering they often sit on the perch at intervals to take rest. If your birds feed well and hop about in a lively manner there is no need whatever for you to worry or distress yourself about them. Young growing stock need to eat well, and whilst they do both there is not much wrong with them.

Period of Incubation.

Strawplaiter.—I am afraid you are not a very diligent reader of CAGE BIRDS. During the past two months many articles and letters have appeared containing the information you ask. You evidently are quite one of the young hands, therefore the best advice I can give you is to send our manager 8d. for a copy of our new book, "Canary Breeding for Beginners." It gives, in simple form, a mass of the most elementary instruction, such as novices require, and should prove of great assistance to you as a handy book of reference. The period of incubation is fourteen days.

Hen Laying Irregularly.

A. Palmer.—(1) You evidently paired your birds before the hen was ready, and it is very doubtful if the eggs will be any good. As things are I should advise you to let her sit the full fourteen days. Feed her well, and this, with the rest, will probably bring her into condition, and she will lay properly the next round. (2) Egg food should be made fresh twice a day at the least; it is not safe to only make it once. Seeing that you have only the one pair, why not use one of the prepared foods which are advertised in our columns? It would certainly be more economical, and you would avoid the risk of illness from sour food.

Canaries Out of Condition.

Allan Roberts.—(1) Mix daily 10 drops each of paregoric and tincture of lobelia in the drinking water of the bird which is wheezy, also give him in addition to his ordinary seed a small quantity of milk sop each day; continue this treatment for a fortnight, then write me again. (2) All you can do with your other birds to bring them into breeding condition is to feed them generously. You say nothing as to your past treatment, which is really most essential, as it enables the question to be answered in a more satisfactory manner. Speaking generally, I can only say give egg food twice daily, and, in the way of seed, canary as the staple food, with a little inga or hemp three times a week. It will also assist if you colour the drinking water a nice rosy pink with Parrish's Chemical Food.

Cock or Hen—Which?

Dummy.—If the bird is two years old and has never done more than give one solitary chirp now and again, I should most unhesitatingly say it is a hen. To bring it up in condition give a little egg food twice daily, in addition to its seed. Also give watercress or some other kind of green food each day. If you suspect insects give the cage a good cleaning with hot water, using plenty of soda and soap and some carbolic acid. Dry the cage well, and then paint all cracks and crevices with turpentine. Let the bird have a bath every other day, and mix in it a little essence of quassia.

Birds Losing Feathers.

My Canaries are losing their feathers, each day I find some in the cages; they moulted properly in the autumn. Kept in living room in wire cages.—HETTIE.

Hettie.—Your birds have fallen out of condition owing to the extremes of temperature which prevail in the room. At night when the fire and gas are both going the room becomes very hot, and the air exhausted; this is very trying indeed to the birds' constitutions. Before the gas is lighted in the evening take birds down, stand them on a table. If you do this they will not be affected by the fumes of the gas. When you go to bed cover them with a cloth, and don't remove it until some time after the fire has been kindled in the morning. Give the birds a little milk sop every morning in addition to their seeds, and in the drinking water mix 30 drops of Fellowes's Compound Syrup.

Seed v. Egg Food.

(1) Have hen with three young ten days old, gave them egg food for three days, then equal parts hemp and rape seed soaked for 24 hours; since giving seed they will not touch egg. Will they be all right without the egg? (2) Did I do right by leaving eggs in nest till hen had done laying, or should I have taken them away? Young hatched out one each day.—NOVICE.

Novice.—(1) If the birds are doing well, let them go on. It is not the first time birds have left egg food for soaked seed. I have known it happen frequently. If the birds are only songsters, and the old and young both do well, let the seed diet suffice, but if they are show birds, then I should advise you to give egg food at least twice a day. They will eat it if you give the egg food and soaked seed at different times. (2) It is much the best plan to remove the eggs. Your hen evidently began to sit immediately she laid the first egg, and that accounts for the young hatching one each day, and not altogether, as they should have done.

How to Wash.

R.S.M.—I much regret that space will not allow me to give in this column the process of washing a Canary. House's "Canary Manual" gives full instructions concerning the same. Shortly, before the exhibitions start, long articles describing the process appear.

Bad Feather.

Plumage.—Give your bird a teaspoonful of milk sop morning and night; stop the hemp seed and millet; give canary seed as the staple daily food; every other day give half a teaspoonful of German summer rape, but be certain it is German summer rape. In the drinking water mix daily thirty drops of Fellowes's Compound Syrup.

Size of Nest Boxes.

H. Guest.—Your boxes are quite large enough for the hens to sit in, but 3 in. long by 2¾ in. wide, and 1½ in. in depth, is not large enough for a large brood; an inch extra each way might very easily be allowed after the young are eight days old. Many breeders keep nest boxes and pans of various sizes, and use according to the number of young birds in a brood. We shall make an announcement later as to the forms.

Bird not Singing.

R.O.N.—Sorry it is impossible for me to say why your bird does not sing. It may be a hen, and therefore not endued with musical abilities; it may have asthma; it may be suffering from general debility. I have nothing to guide me as to cause, so how can I answer you? Write me again, giving full particulars as to how you feed, age of bird, where it is kept, and in what kind of cage. Shall be most happy to oblige on receiving these details.

Canary Lumpy.

I have a hen which has got very lumpy and seems lifeless and heavy. She feeds well, but will not lay.—R.T.S.

R.T.S.—Your hen, I should say, is too fat. Stop the egg food and inga seed at once; give her German summer rape and canary seed in equal proportions, place a few grains of Epsom salts in the drinking water every other morning for a week, just sufficient to make the water taste. If this does not improve her condition, write again, giving full particulars. In asking questions, breeders should always send full particulars as to diet and general treatment. It enables me to answer much easier, and to give more reliable advice.

A Case of Feather Plucking.

Bought Canary hen six weeks ago. Isolated for fourteen days, during which time health appeared good. In bird room it started chewing its feathers. I took no notice, thinking it was a feather eater, but it has now plucked itself nearly bare. There are no red mite. I have washed it with permanganate of potash, and anointed it with boric ointment.—J.C.

J.C.—At the first blush one would suppose that you had got hold of a bird that had contracted the vicious habit of feather-plucking; but this idea is dispelled by the fact that during the first fortnight you saw no sign of such mischief. My impression is that she is actuated mainly by the pairing fever. If there is anything outside her neck causing irritation, it is lice, which may be dislodged by dusting with a mixture of equal parts of precipitated sulphur and pyrethrum insect powder. Give egg food and salad every day to induce further growth, and then pair her up. In the meantime, give cuttlefish bone, stuck in cage wires, also plenty of crushed egg shells mixed with sand on cage floor, and, lastly, pieces of tape and hard stems of groundsel for her to nibble at in place of her own feathers.

Was it the Whitewash?

My birds were in good health and condition when I paired up, but now they are all in soft moult, most of them have lost their tails. After pairing I whitewashed the bird room and cleansed it thoroughly. Do you think this the cause?—W.H.T.

W.H.T.—It is very likely the operations connected with the spring clean have caused the birds to go into a false moult. All such work should be done before the birds are paired, not after. No good housemaid would think of putting a lot of new furniture into a room and then cleaning the room after, on account of the dust and dirt clinging to the furniture; what holds goods with the furniture holds good with clean cages and a dirty bird room. Apart, however, from this, it must be remembered that when birds are paired up their system is in a state of high nervous excitement, and the whitewashing operations would be likely to frighten and upset them greatly. It is possible they may have caught a chill owing to window and door being open together, causing draught. Again, the dampness arising from the whitewash, or the smell of the ingredients, may have upset them. This should be a lesson to you, and in future cause you to do your cleaning before you pair up. Experience has to be bought; you are paying dearly for yours. Unmatch all your birds at once, and keep them apart for the rest of the season. It is useless attempting to breed with birds that have gone into a moult in April. Let Canary seed be the staple food, and for the next month give them boiled milk and bread once a day; every other day give a little inga seed; let them have green food of some kind daily, and free access to grit.

BRITISH BIRDS, MULES AND HYBRIDS.

Answered by G. E. Weston.

A Batch of Brevities.

Dead Beetles (Smithy).—The bodies which you have favoured me with, having done them to death by scalding with boiling water, are those of that sprightly and useful (to the bird keeper) yet none too choice smelling insect known as the "black-beetle." I certainly should not be particularly annoyed over the presence of one or two about the house. You say you have a Thrush or two—well, just catch away, and hand over the beetles to their tender mercies. You will find you have a good and cheap source of food.

Lark Food, Etc. (Uncle Joe).—The sample of Lark food you send looks very good stuff; much better than that I usually get which purports to be fit to feed Larks on. Mix it in the way I always advise. Try your backward birds with some German paste, made from the recipe given by Mr. Bates on page 284 of issue for March 23rd, but adding a quarter pound of blanched sweet almonds. Your Lark which seems hoarse should have a teaspoonful of the following mixture, well stirred, fresh daily, into every two tablespoonsful of its drinking water:—Best honey and best glycerine, two tablespoonsful of each, well incorporated.

Thrush Ailing (W. Horsfall).—What your bird wants is better feeding—not medicine. It is absurd to say that it lives on "soaked bread and hemp seed and enjoys it." The pitiable condition you describe it as being in proves directly the contrary. If you give the Thrush properly nourishing food it will soon throw off the weakness—providing it is not already too far gone. Feed it as directed in another reply this week. Give it as much live food as you can get—mealworms and black-beetles ought at least to be available. For a fortnight or three weeks well mix a small teaspoonful of tasteless cod liver oil amongst its soft food every day.

A Very Old Friend Reappears (Dead Cert.).—I wish I had as many of the "five bobs" you seem anxious to bet, as the number of times I have already answered this query. It keeps on popping up, all smiling, at frequent intervals, however, and I suppose will go on doing so for long, long years to come. Once again: It has never satisfactorily been proved yet that Mules have bred. One or two people have claimed to have produced young birds when using a Mule as one parent. But their claims, so far as my own knowledge goes, have always fizzled out on being examined. A good many think a marked Canary is a "Mule bird"; hence the origin of most of the stories about "Mules" having bred. If your chums have any more spare money they want to lay out in bets, I wouldn't mind imperilling my chances of a summer holiday by laying them slight odds they don't produce young by the mating up of Mules.

Aviary Doings, Etc. (Amateur).—(1) You are not the only one who has had a "cock" Canary turn into a hen in the spring. If any of the likely breeders among the cock British birds in your aviary were in breeding condition, the clutches of both hen Canaries may quite likely be fertile. If you try the cock Greenfinch which has already paired up with a hen of his own species, with a hen Canary, I wouldn't be answerable for the consequences—he would probably knock her about savagely. (2) You should put hen Bullfinch and cock Goldfinch in a cage to themselves at once. In fact, you ought to have done it before, for one of the two may have already formed an attachment elsewhere. Very pleased to hear you say my former advice turned out so successful.

Thrush Ailing (J. Austin).—I have never heard of a Thrush having the "croup," which I imagined to be a complaint rife amongst babies. If I am wrong, possibly some kind reader who is an authority on the latter will set me right. If your bird seems merely hoarse, the glycerine and honey recommended "Uncle Joe" this week would be most likely to relieve it, if continued for fourteen days or so. Possibly, however, your feeding is at fault, and his daily food is too starchy and stodgy—Thrushes must have vegetable food, and they must have live food, if they are to keep in health for any lengthened period. Wrong feeding will cause a Thrush to sit about dully, and "gape." Why did you not state your feeding methods?

Breeding in an Aviary (J. T. H.).—An aviary, 6 ft. long and 3 ft. wide, will hold five or six hen Canaries and three male birds for breeding purposes. With the hens you could put in one cock Canary, one Goldfinch, and one Linnet. This batch might go along all right, and produce you some young birds. But breeding with different kinds of birds mixed together is always very speculative and uncertain, as you would have known had you read my answers during the past two or three weeks, for I have gone into this matter at length several times lately. Two cock Canaries would be practically certain to fight in such a place. It is curious how so many people seem to desire to mix Canaries, British, and Foreign birds all up together, to get a huge number into little space, and then have them breed. Such schemes certainly look and read very nice, but how utterly impossible they are one has only to try to quickly realise. Sorry I can't be more encouraging, but you have got hold of the wrong end of the stick, so to speak, at the outset, and I only want to save you from disappointment.

Two Difficulties (Perplexed).—The first of your troubles can hardly be called a difficulty, nor the second either for the matter of that. (1) The restlessness of Song Thrush during April and May is merely incidental to the season—is the effect of the "pairing fever" running through his veins, in fact. Thoughts of nesting duties in conjunction with a speckled mate stir him into unwonted activity. You cannot "do anything"; it will, as you are already aware, pass away in due course. If you can provide him with a wife in a big garden aviary, all well and good. (2) You need not give the cock Greenfinch hemp seed regularly—he will rub along very well without even any at all, providing he gets plenty of good sunflower seed. Neither sunflower, canary, teazle, nor summer rape will hurt the hen Canary; so your feeding problem is easily solved.

Egg Binding (Constant Reader).—In my opinion you have brought the trouble on yourself. It sounds incredible that your hen should already have built three nests this season! It sounds still more incredible when you go on to say that she was egg bound with each, and "has been nearly dead." Poor thing. What on earth did you want to start so early for? Your Goldfinch is probably hardly ready even now to fertilise his first round of eggs, so that in any case an early start could do you no good. As it is you have simply ruined your hen, for I should hesitate to say that she is likely to do any good this season now. Take my advice, and commence at a sensible time next year. Take the hen away from the cock bird, and let her fly by herself for at least a fortnight in a large flight cage. Feed her on plain seed, but give a little milk sop daily, well sprinkled with maw seed, and a pinch of niger seed one day and the same of hemp the next. Colour her drinking water like red ink with Parrish's Chemical Food, giving it fresh every day. Towards the end of May you might then possibly be successful in taking a nest from her.

Concerning a Thrush (T. Champion).—Your Thrush seems to be getting fed fairly well, seeing that his food is made up of egg, ants' eggs, and bread, with six mealworms a day and three or four snails a week. You could substitute plain broken sweet biscuits (obtainable cheaply from any grocer) for the bread, though, with advantage. Some vegetable ingredient should always be added when mixing it for use, however. See other replies this week, and the one to "Mavis" last week. Possibly the poor state his plumage is getting into is due to him being pestered with bird lice. If this is so, consult Cage Birds Annual for details of treatment. Most certainly a covering is needed for the cage bottom. The lack of it no doubt accounts for the state of the bird's feet. Try cocoa-nut fibre, laid on thickly; or a thick layer of peat moss litter, which most corn dealers sell. Tease it out a little before using; you will find it excellent.

Will He Eventually Love Her?

I have a cock Greenfinch, fairly steady, stout in song, at present with a Yorkshire hen. But they are rather quarrelsome. Do you think they will eventually agree, and do you think he will do her any injury? Is the Greenfinch a free mule, or otherwise?—J.H.B.

J.H.B.—Judged by my own personal experience of them, I should say the Greenfinch is the most variable of all the male British birds generally used by Mule breeders. When one tries a new Greenie one never knows how he is likely to turn out, hence it is necessary to walk circumspectly, in a manner of speaking. Some will make up to the hen Canary without any trouble, and prove good Mule breeders all along the line—even to feeding the young birds, I believe, though I myself have never had one which would do this. Others, on the contrary, seem to have all the "devil" in them aroused by the close proximity of a hen Canary (or other hen for that matter). They will go for her "bald-headed," to use an expressive phrase, and soon leave her bald-headed, too, if not quickly removed. I have had them (and, curiously enough, steady, sober-going specimens in other respects) chase the hens around, then lean over from the perch, and, as they scurried frightened about the cage bottom, grab hold of them with their powerful beaks in the region of the head, or neck, or back, and swing them up clean from the floor, while, poor things, they squealed for mercy. Left to himself, Master Greenie would doubtless hang on until feathers, or skin, gave way. Needless to say, I did not leave him to himself—in fact, I have more than once with difficulty repressed an itching to wring such a wretch's neck. Thus you will gather that a cock Greenfinch is certainly capable of harming a hen Canary. Your best plan (in fact, *the* best plan) is to have a wired slide between the couple until the hen shows signs of anxiety to put the nest together, when he may be run in along with her early in the morning. If he feeds her through the wires, you can then chance leaving him with her. Some cock Greenfinches (and hens, too) are very free breeders. I had one fine cinnamon coloured specimen who was, taken all round, quite the equal of any cock Canary.

Chaffinches Reared by a Canary.

Will a hen Canary hatch out and bring up the young of a Chaffinch? (2) How long will the eggs keep for sitting after taken from the nest?—J. H. H.

J.H.H.—(1) A hen Canary will certainly sit upon the eggs of a Chaffinch, and bring up the youngsters when hatched. Have never yet tried the experiment myself, but know several fanciers who have done so and succeeded. The hen will rear them on the ordinary egg food. Commence mixing this with soaked rape seed when the youngsters are five or six days old, gradually increasing the quantity; if it is just sprouting, so much the better. The chances of success will be increased if you can get the hen to accept a good sprinkling of best quality ants' eggs (freed from all bits of stick and rubbish), well mixed amongst the egg food; also, if she will eat and feed to them small pieces of chopped up mealworms placed amongst the egg food. If you can find any sprays of foliage off fruit or rose bushes infested with aphides (green or smother fly), these should also most certainly be given; often one can find seeding shepherd's purse, grass, etc., simply infested with tiny insects, and this is invaluable in the rearing of any young British birds or Hybrids. (2) Eggs, if taken as freshly laid (not sat on, that is) will keep up to seven days with fair certainty, even during hot weather. They should be laid on bran, in a cool place, and be given a half-turn over once every day at least—twice a day if you can manage it. I have heard some tall yarns about the time eggs have been kept, and then hatched out all right. But I think every day one keeps them over six or seven, the more their chance of hatching is imperilled.

Siskin Mule Breeding.

Cock Siskin, full song, with Norwich hen, does not mate with her at present. Been together four days. Nest box in cage and a little hair and moss, etc., between wires, which he pulls about. What is there that would make them more forward? Would you leave him with her if she should have eggs? I have clipped feathers from round vent of Siskin, which were very nearly ¼ in. long. My brother could never get fertilised eggs, although he tried the Siskin with hens that had and reared Linnet Mules, so perhaps what I have done will alter the case.—STANDERTON.

Standerton.—Your trouble does not seem very difficult to explain. Your cock Siskin seems to be in breeding condition, but your hen Canary certainly does not. The fact that she leaves the nesting material untouched points clearly to this being the case. If she were in breeding condition, and in the mood to accept the attentions of the cock Siskin, she would certainly be playing about with the nesting stuff. And as I so fully explained last week, it takes two to make a bargain in this as in all things; if hen birds are not ready it is useless to put male birds with them, no matter how forward they may be. At the same time, I believe the proximity of a "rank" cock bird helps to bring a hen forward. Could you not part your couple for a few days, with a wired slide, or in such manner as the cock Siskin could feed the hen if she would let him? That would be your best plan, in the meantime feeding up the hen with a little egg food, and a pinch of hemp and niger daily. You have apparently not offered the one thing above all things which helps to bring birds into breeding condition—I refer to dandelion. You should certainly let the couple have a liberal supply of this daily, both young, tender leaves, and the flowering and seeding heads, as all are to be obtained now in abundance. I saw dandelion in plenty in all stages when out this last week-end. All muling and hybridising couples ought to have dandelion; not forgetting seeding groundsel, shepherd's purse and chickweed. I don't think you will find it any advantage to leave the cock Siskin with the hen Canary after she has gone to nest. You can try it, if you like, but be may prove only mischievous. I really don't think the clipping of the feathers at the vent of the Siskin will affect the fertility of the eggs either one way or the other. Have never done this myself to any male British bird; and only to hen Canaries when breeding with exceptionally heavy-feathered ones, such as Crestbreds. A more likely cause of unfertile eggs with a Siskin lies in the pairing of him to an over-large hen—rendering it more or less a physical impossibility for him to fertilise her eggs. I like shortish, chubby Norwich type hens as mates for Siskins.

Goldfinch Mule Breeding.

Aviary 5 ft. 6 in. high, 4 ft. wide, and 2 ft. 6 in. deep, in which I want to breed with cock Goldfinch and hen Canary. (1) What sort of hen would suit, and could I get one for about 3/-? (2) What would be the best nesting material. (3) How would you advise me to feed the birds? (4) How old should the hen Canary be?—C.B.

C.B.—I presume your aviary is an indoor one, and in it you should experience no difficulty in breeding from a cock Goldfinch and hen Canary. (1) What sort of hen Canary do you expect to get for 3/-? Goodness knows. You might get a common, German hen, or a "waster" which passes for a Norwich, or a worn-out old hen (or a barren one), which looks a good one. If you are content with a puny German hen, then I have nothing more to say—you have only yourself to please. You cannot expect to get a good muling hen—that is, a nice-sized yellow Norwich hen—under 7/6 to 10/6, especially at this late day of the season. (2) Buy the nest-bags sold by most dealers in bird-seeds, and get a little charpie in addition from one or other of the advertisers using our columns. (3) Feed the Goldfinch on hemp, teazle, canary, maw, and inga seeds, and the Canary on plain canary seed with a little summer rape every day, and a little hemp and niger on alternate days. Also give the hen a little egg-food every day, and both birds a liberal daily supply of dandelion (note other replies this week). For detailed information on feeding ben Canaries and young birds, get a copy of "Canary Breeding for Beginners," from this office, published this week, price 8d., post free. You will learn all about breeding from it at far greater length than I can go into the matter here. (4) The hen Canary may be either a last year bird, or a second season hen. If a season older she will still be all right, but not quite so good a bargain.

Fresh-caught Linnet Breeding.

Novice.—The chances of a just freshly caught Linnet breeding during this season are but slight—so slight, in fact, as to be practically nil. If you are a new beginner, as your nom de plume (and question, too) goes to indicate, you should certainly commence with a steady, well-domesticated Linnet, if possible both house moulted and a proved breeder. You would then be much more likely to get such results as would encourage you to go in more extensively for Mule breeding, or bird-breeding generally. It is a mistake for a beginner to take the most difficult possible course at the outset; and even a hardened Mule-breeder would hesitate to pair up a fresh-caught Linnet with an idea of getting fertile eggs from it. If you are quite sure you will be disappointment-proof in the likely event of nothing tangible in the young Mule line resulting, then you might try your Linnet later on, in a largish cage hung in a very retired spot, or, preferably, in an aviary. If you are really anxious to get some young birds, however, you will take my advice and try another method.

Companions in Misfortune.

Levi Moss.—It is not good to have to rely on a Goldfinch which is only just getting over a bad, prolonged moult, for breeding purposes. One could hardly hold out hopes of him being fit before June is well turned, though the fact that he has commenced to utter a few notes is a hopeful sign. He should have maw and niger seeds rather more generously than is usual, and dandelion—especially the seeding heads—liberally every day. Most certainly Goldfinches will breed (get fertile eggs) when they still have the black streak at the end of the upper mandible. A clear beak, however, is a good sign, and one I like to see in a breeding Goldie. The report of the last season doings of your Goldfinch, though, is most unpromising. To have had not one fertile egg out of three nests sounds discouraging enough, to say nothing of his present backward condition. I should feel inclined to speculate in another Goldie for use this year, if I was really keen on breeding some Mules. Your Linnet which had the misfortune to break its leg, which member then proceeded to rot off, leaving him with but one, will not be of any use for breeding purposes, I am afraid. He would find it somewhat of a puzzle, I should imagine, to fertilise eggs. Still, I have never tried to breed with a one-legged bird—I prefer stock "sound in wind and limb." Personally, I am inclined to doubt whether with any of the Finches the act of coition is undertaken when on the wing. It is held by many to be so undertaken in the case of Chaffinches—probably it may at times seem to be so; however that may be, I know full well it takes place also under the usual conditions.

Points Concerning an Aviary.

F. E. Wright.—I must congratulate you on the design of your aviary, which should answer splendidly, the details having been very well thought out indeed. Here are my comments on the points raised. I recommend you to leave the floor plain earth in one or two places. Elsewhere put in sandy gravel (builders' gravel) on a foundation of broken up bricks; this keeps dry wonderfully well. Don't have sawdust on the floor of the inner shelter; it would be a mistake. Cover it with a two-inch or so dressing of the aforesaid sandy gravel. All surfaces, of course, would require raking over, also renewing, from time to time. The closed shelter would be best with an entrance from the outside; then, when it is entered, the birds would pass out into the outer compartments. The window should open to face the west; the reverse of what is shown on the plan. Don't use limewash inside the aviary, but sanitary distemper, of the outside quality, as it is termed. You will find it much the better of the two. The ventilation will be ample, though two ventilating grids let into the walls of the closed-in house (one near the floor, the other near the roof) would be a decided acquisition. Use the pattern which may be opened or closed at will. No heat at all will be required The outside boards should be felted over, then tarred, and the tarring should be periodically renewed. The roof can be whitened in the summer. The suggested positions for the nestpans seem quite all right; a few nest-boxes should be arranged outside, however. No seed or food troughs must be stood in the uncovered portion of the aviary. Holly, box, or privet bushes cannot well be beaten for pot plants.

Linnet Always Pecking at Wires.

I have had a Linnet for about two years, and this last few months it has taken to keep on pecking the wires of its cage. I changed its cage, but it was of no use. Have given it a piece of string to pull at, and a piece of cuttlefish on the sides of the perches; also of no use. It will keep on pecking the wires, even if it has to fly on the sides and hang on.—WINTER.

Winter.—Your letter is one of the many "puzzlers" readers from time to time manage to favour me with. Unfortunately, great though my reputation seems to be for "putting birds right," as you term it, I cannot alter their dispositions, nor pretend to cure them of little mannerisms such as the mania of your Linnet for continually pecking at its cage wires. And, after all, what does it matter whether he pecks at the wires or not? Presumably, he finds some sort of enjoyment in the process, and I really don't see any reason for trying to deprive him of it. Linnets in particular seem birds very prone to develop little traits of this nature. Some will be continually picking up beakfuls of water out of the drinker, and scattering them far and wide by sundry shakes of the head. Then they gravely proceed to sip the sparkling drops from off the wires, or wherever they may have chanced to lodge. A good friend of mine had a pet Linnet which spent hour after hour of its time tap, tap, tapping at one particular spot on one particular wire of its cage, letting out bursts of song at intervals. He and I laughed many a time and often as we watched it. Yet he never expressed any wish to "cure" his bird of the habit. I think you look at the matter in a wrong light. Personally, I should feel more inclined to smile at

the bird on account of its "funny little way." A spell in an aviary, however, might break it of the mannerism.

A Mixture in an Aviary.

(1) In an aviary of mixed British birds, can I have all cocks, or ought they to be in pairs? If some are pairs, must there be no single birds? (2) I have an aviary with a few Budgerigars (not breeding), also large aviary cage, 4 ft. by 2 ft., with cock Border Fancy Canary and Linnet cock. Have just bought cock Greenfinch and Bullfinch hen; could I turn either or both in, or would it cause a quarrel? Or would these large Finches agree better in aviary with Budgerigars? I should not like my Canary to get thrashed, for he is a beauty. Goldfinch cocks would agree with the Linnet and Canary, wouldn't they? (3) What mixture of seed is best for all Finches together?—W.H.P.

W.H.P.—(1) It is a great pity you did not mention the size of this aviary, as it must necessarily influence any answer given you. If it be a small place, no satisfactory breeding results can be expected, and it would be much the best to have male birds only in it. If you have pairs, then by all means avoid single (unmated) birds. Even then—in fact, no matter how you may arrange it—it is quite impossible to avoid quarrelling altogether. Some birds seem unable to exist without bickering with their neighbours, and such unneighbourly souls are best ejected. You might, for instance, get one cock Greenfinch of most vicious disposition, yet, when you got rid of him, you might quite likely get another which would be quite angelic in comparison. There is no accounting for, no ruling, such things. (2) A cage with a 4 ft. by 2 ft. floor area should hold five or six small Finches comfortably. But there can be no object in introducing the hen Bullfinch, unless you let her and one cock bird have the run of the place, as only by so doing could you expect her to breed with any chance of success. A Goldfinch, Greenfinch, Linnet, and the cock Canary might rub along all right therein. No one could say for sure whether one or the other might not get a "thrashing." You could only keep your eye open with a view to preventing anything of the kind taking place. The introduction of the hen Bullie would almost certainly be the prelude to ructions in the home. Two Goldfinch cocks together would also doubtless set about one another; at this season of the year most cock birds in good health are aggressive towards others of their kind. It is dangerous to keep any small birds, such as Finches, with Budgerigars, which bear an unenviable reputation as spoilers of the beauty of weaker and, comparatively, defenceless species. (3) I have frequently explained that to give a mixture is a very wasteful method of feeding aviary birds. You had far better give hemp in one pot, sunflower seed in another, and a mixture, consisting of canary and teazle two parts, summer rape one part, and linseed half-part, in another. The other seeds usually recommended as "dainties" can be given from time to time in the hemp seed hopper, withholding the hemp while doing so.

The Difference Between Turtle and Ring Doves.

Kindly describe the difference between a Ring Dove and a Turtle Dove. Or are they both the same?—A. E. Stanley.

A. E. Stanley.—The Ring Dove (*Columba palumbus*) and Turtle Dove (*Turtur turtur*) are certainly not one and the same bird, but two easily distinguishable species. The more correct name for the Ring Dove is the Wood Pigeon. This bird is of the usual colour (blue) associated with pigeons, and has white patches on the sides of the neck which may be likened to a ring, and which give the bird its popular name. When flying the wings may be seen to be distinctly barred with white. It "coos" very like the domesticated pigeon. The Turtle Dove is a much smaller bird, of a brownish-grey cast of plumage, though this is prettily mottled with chestnut and black, while there is a pinkish cast over several parts. At each side of the neck is a black patch interspersed with crescent-shaped white markings. In flight the tail shows conspicuous white patches. Its note is a curious "turr-turr," uttered in quite a purring fashion, but very audible and deep. The Wood Pigeon in our London parks and open spaces is very common and very tame; out in the country he is extremely wary and difficult to approach. The Turtle Dove is a summer migrant only, and then not at all common, I believe, higher than the Midland counties. When "the voice of the Turtle is heard in the land" we may usually be certain the summer is with us. Generally the bird arrives at the end of April. I wish it would hurry up. Despite the heat and excitement of a "Cup Final," it is still chilly down here.

Cock Goldfinch with Four Wives.

Cock Goldfinch flying in an aviary 6 ft. by 6 ft. by 6 ft. with four hen Canaries. Will he pair up with more than one, the same as a cock Canary does?—ANXIOUS.

Anxious.—Your bird is indeed well blessed! Four wives—the lucky chap! Though I would rather hear you had restricted his marital responsibilities by removing one of the feminine quartette, I am bound to say that if he is in really vigorous health and condition, he is practically certain to respond to all calls made upon him, and fertilise the eggs of the four hens. What sort of a Finch is he, though—a fresh-caught, black-legged one, or a house moulted, tried breeder? If he has bred with Canaries before, my reply as above stands good. If he has never bred in captivity—well, he may do all right, or he may not fertilise even so much as a single egg. I suppose you are aware it is not every Goldfinch that will breed in captivity?—though it is true enough that few Goldies in good condition refuse to do so. You will soon know, however, when the eggs commence to hatch—or to refuse to hatch. Your aviary has a nice floor area, and would comfortably hold two or three more hen Canaries, and, say, a steady cock Linnet. Or you could try another cock Goldfinch. Considering there are plenty of wives and plenty of space, the two might get along quite well. Let there be plenty of nesting sites in addition.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S., M.B.N.H.S.

Is it a Grey Parrot?

J.H.C., Stockton.—Your bird is the Rose-breasted Cockatoo (*Cacatua roseicapilla*). In their native wilds, as a solitary companion to a man in the bush, or some such similar situation, they are said to make fluent talkers. But of the many hundreds imported to this country, comparatively few accomplish much in the talking line. Several accounts of talented birds of this species have, however, appeared in our pages recently. Keep the bird where it will hear plenty of conversation, and also train by constant repetition, when it should, at any rate, talk a little. As regards value, if your bird is in good feather, and is fairly tame, the price you have paid is about right. The value of a newly imported bird would, at the present time, be about half, but prices vary materially according to number on the market. For diet, see first part of reply to "McGinty" in this issue.

Bluewing-Budgerigar Cross.

Smith.—Comparatively few Hybrids are bred in a mixed collection, and then, except in rare instances, it is the result of the pairing of odd birds of various species which were without mates. There are exceptions, I know, but it may be taken as a general axiom in Hybrid breeding, to as far as possible have one pair only in a cage or small aviary, and to, under all circumstances, isolate the respective birds from members of their own species. Under the circumstances you name, I certainly advise the cage; a good size for the purpose would be 20 in. long and wide, by 30 in. high, with the base, top, back, and half the width of the sides, wood; the front and remainder of sides being wired.

Keeping in Conservatory.

G.C.L.—Providing you do not have to keep up too great an amount of moisture, and can secure ventilation without draught, your arrangement should answer well; with the cover you are providing they will pretty well make themselves secure against draught. They will neither take harm from nor do harm to the plants; at the same time, I should avoid introducing any plants known as poisonous; they will keep the plants free from green fly to their own benefit and satisfaction. In such a situation they should nest with freedom, and find an abundance of small flies and other insect food for the rearing of their young. Roses and Fuschias would be good plants to keep, as they readily become blighty. You will have to provide shading of some kind in a portion of the roof; you will find plenty of suitable media for the purpose if you consult the advertisement columns of one of the weekly garden journals a little later. I recommend you to try Common and Green Avadavats, Firefinches, Orange-cheeked and Grey Waxbills, and Bicheno Finches, in addition to those you name. Supply an abundance of shell, husk, and box nests, with plenty of hay and long grass as building material; you will undoubtedly have many interesting nests built in the vines. Should be please to hear at the end of the season of your good fortune or otherwise. On no account put Budgerigars or Parrakeets of any kind among your vines and plants; they would strip the place of foliage in a week.

Grey Parrots.

E.S.—There are local races of almost all species of birds, and there certainly are of Grey Parrots, but as to one of these races excelling another in speech I do not credit for a moment. This usually depends on the care bestowed on taming and training the birds; with all the races the teachableness of individuals would vary. While I have not handled sufficient Grey Parrots to be quite positive re the irides of various ages, etc., of these birds, I believe the dark and light iris of the adult birds to be sexual. The losses are very heavy with newly-imported young Greys of any kind or race, and I certainly advise you to get an acclimatised bird, and pay a little more for it, but see that you get such. Much of the talk you allude to is mere trade jargon. I fear I am giving you but negative help, but the fact remains that the purchase of a young Grey is a very risky one. Their treatment has been given several times fairly recently.

Sulphur Crested Cockatoo.

D.B.V.—As far as I can see there is very little the matter with your bird. For one day make its drinking water quite saline with Epsom salts, and repeat as necessary to keep its bowels freely moving, not loose. I take it that your bird gets, in addition to the seed, ripe fruit, a bit of boiled potato, plain biscuit, green food, nuts, and cuttlefish. It must not have table scraps, slops, or any kind of animal food. Put the bird on a course of Chemical Food, just colouring its drinking water with same, when not giving the aperient. If the swallowing of the seed continues, omit the small seed from its mixture for a few weeks, and then try him with it again. These are hardy birds, but should not be exposed to draught; let it have cotton reels and a piece of some kind of non-splintery wood to chew up.

Indoor Aviary for Budgerigars.

(1) How many pairs would an aviary, 9 ft. by 3 ft. by 4 ft. high, accommodate for breeding? (2) Will Budgerigars and Foreign Finches do together? (3) What kinds of birds will breed in same aviary with Budgerigars?—BEGINNER.

Beginner.—(1) There is accommodation for about 20 Budgerigars in your aviary, but only for about three breeding pairs, as you must leave accommodation for the young, which must remain with their parents till well able to fend for themselves. (2) Even in large aviaries Budgerigars are very unsafe birds for Finches, though they apparently do no harm for quite long intervals; sooner or later catastrophes occur, and maimed or dead birds are picked up, the results of Budgerigars' rough play. In your aviary, if devoted to Finches, you could keep pairs each of Zebra, Ribbon, Gouldian, Ruficauda, Long-tailed Grass, and Grey Singing Finches, and if you suitably furnish it with branches for perches and nesting receptacles (12 at least), some of these would probably breed. (3) You could put a pair of Cockatiels with your Budgerigars, also a pair of Madagascar Lovebirds; in such case I should advise you not to have more than two pairs of Budgerigars; all these would thrive on the same diet. If you want more brilliantly coloured birds, then substitute Red Rosellas for the Cockatiels.

Wild Canary and Grey Parro .

(1) What is the correct diet and treatment for a Wild Canary? (2) When should Grey Parrots moult? Mine appears to be moulting all the year round, though apparently in perfect health. Is there any remedy?—C.H.

C.H.—(1) I feed my Serins (Wild Canaries on canary and millet, with a little German summer rape, green food, and a few ants' eggs (cocoons) scattered over the sand. A spray from rose bush or fruit tree that is covered with green fly or other plant lice, is greedily picked over, and a great help in keeping the birds in condition. These birds are very fond of green food, lettuce, chickweed, etc., and a liberal supply should be given. A little apple during winter is a good substitute for green food; grit and cuttlefish should be continuously supplied; and opportunity given them for taking a daily bath. As a tit-bit a pinch of blue maw seed might be given once a week on the sand tray. (2) The moult of these birds is very irregular in this country; according to my experience, gathered from very varied sources, quite as many moult in the early spring as in the fall. I can give no reason for the continuous moult from the few details you supply; it might arise from a weakened condition, and this from improper diet, a variable temperature, or, more probably still, though perhaps not yet observed by you, the bird is pulling or biting off its feathers. I can only suggest your comparing your diet with that advised to other querists in this and recent issues, and a dose of Dinneford's Magnesia, followed by a course of Parrish's Chemical Food. For strength and manner of giving these remedies, see other replies in this issue.

Blue-fronted Amazon.

My bird appears to be in good health, but has a swelling on its left cheek; there does not appear to be any head to it. How can I treat it?—ABRACADABRA.

Abracadabra.—The swelling you mention, if left to itself, may develop into some serious growth, while if it is taken in time and properly attended to at once, it may be removed or definitely checked. To this end I certainly advise you to let your vet. see it. It is most unsatisfactory attempting to advise in such cases, even from the most ample details in a written query; and any advice I attempt is equivalent to little more than making a guess at the cause, and must necessarily be somewhat unsatisfactory. However, no harm can come of just touching the swelling with the point of a camel-hair brush that has been dipped in tincture of iodine; you can do this without catching the bird, by rubbing its head with one hand (as it permits you to take this liberty), while you manipulate the brush with the other. Also an aperient would be helpful (Dinneford's Magnesia, see other replies) occasionally, to keep its bowels moving freely, not watery loose. But my advice is—let a vet. see it. Re handling your bird, as soon as you feel it safe to do so (you alone, by its demeanour, can judge of this), induce it to perch on your finger, by putting same against its feet. Some Amazons are of rather a treacherous disposition, and unsafe to handle even by those who feed them; but if your bird appears to like being fondled and have its feathers rubbed, it should be fairly safe for you to try and induce it to perch on your finger; if your rubbing has so far been done only through the bars of its cage, you must proceed with caution, say by letting it out of its cage, and seeing if it will permit you to take the same liberty when it is loose; if so, it should be fairly safe for you to go a step farther, and so on till it will permit you to freely handle it. A pair of stout gloves is some protection and a wise precaution till you are sure of your ground.

Grey Parrot Moping, etc.

W.H.—Stop giving the bread and butter and bone; do not give table scraps, tea, coffee, or milk slops, or animal food of any kind. Diet as follows:—Seed mixture, canary, oats, wheat, small Indian corn, hemp, dari, and sunflower seed; well mix, and keep a supply regularly in the cage, also at intervals to vary the diet, ripe fruit, nuts, boiled potato (dry), plain biscuit, dry crust of household bread, green food, grit, cuttlefish, and water to satisfy its thirst three times a day. Put one teaspoonful of Dinneford's Magnesia in its drinking water (one ounce), and let it have only this to drink for one day; repeat it after a week's interval; on other days, well colour its drinking water with Parrish's Chemical Food. It should be kept warm and out of all draught, yet where it will hear plenty of conversation and movement; this will mitigate the tendency to doziness, etc. If it continues to rasp its beak, give five grains of bicarbonate of potash in one ounce of water for a few days. Note.—The bird should be kept where it will stand no chance of taking a chill, and with the diet corrected as above there should soon be an improvement. If not, repeat query with full particulars a fortnight hence.

Grey Parrot in Poor Condition.

E. Balfour.—I take it, from your letter, that your bird is a young one, and probably not yet fully able to manipulate hard seed comfortably. Give it a little boiled maize (this only keeps fresh one day) daily till you find it eating the seed mixture freely, then gradually discontinue the maize. The seed mixture should consist of two parts canary and white oats, and one part each hemp, wheat, dari, and sunflower seeds. It should also have ripe fruit, green food, nuts, plain biscuits, or crust of household bread. It must have regular supplies of grit, cuttlefish, and be permitted to satisfy its thirst three times a day. Do not give tea, coffee, or milk slops, table scraps, or any kind of animal food whatever. Keep it warm, out of all draught, and where it will hear plenty of conversation. Note.—A supply of the seed mixture and the boiled maize, while you are giving it, should be continuously in the cage; the other items being given at intervals to vary the diet. If you notice any signs of constipation, give a little (say, half-teaspoonful) Dinneford's Magnesia over its boiled maize; its bowels should move freely, at same time excreta should not be watery loose. For a month at least just colour its drinking water with Parrish's Chemical Food, using a glass or crock drinking vessel.

Parrakeet and Treatment.

(1) What kind is it? (2) What is its diet? (3) Can I keep it in aviary with Budgerigars? (4) What are the sexual distinctions? (5) What is its value?—PARRAKEET.

Parrakeet.—(1) You appear to have a Rose-ringed Parrakeet (*Palæornis docilis*). This bird is slightly smaller than the more commonly imported species (*P. torquata*). (2) Staple diet: Canary, oats, wheat, small Indian corn, dari, hemp, and sunflower seeds in equal parts; also regular supplies of grit, cuttlefish, green food, and water. Give at intervals, so as to vary its diet, *ripe* fruit, nuts, plain biscuit, and a little boiled potato (dry). Do not give any table scraps, tea, coffee, or milk slops. (3) It all depends on the size of the aviary, providing they are not crowded, the larger Parakeets, as a rule, simply ignore such small-fry as Budgerigars. (4) The female does not possess the black facial markings and neck ring of the male. (5) Ring-necks can sometimes be purchased as low as 5/- each, but these are rough and newly-imported individuals; a well conditioned and talking bird would be worth very much more. Quite fancy prices are asked for birds in good feather, which have also an extensive vocabulary.

Indoor Aviary Inmates.

The aviary, 3½ ft. long by 5 ft high, is of the box-cage type, and contains five Bullfinches. Can I keep my six pairs Gouldians, Zebra Finches, Cordon Bleus, etc., with them? Will they take harm from one another's food? What kind of tree can I put a branch in from?—"PARTRIDGE."

Partridge.—The aviary is just about the right size for the foreign Finches without the Bullfinches; however, if it is cleaned daily, and the seed hoppers placed in such positions that they cannot be fouled with the birds' droppings, they should do well, providing there is an amplitude of perches, branches, etc. There should also be at least two seed hoppers for the foreigners, and another, with special mixture, for the Bullfinches; they will take no harm from one another's food. You do not mention your diet, but I should supply, for the foreigners, canary and millet, also spray millet. All the birds would appreciate a few ants' eggs (cocoons), and you must give liberal supplies of green food, and cuttlefish should be kept continuously in the aviary. As regards branches for perches, I usually keep a bundle of "bean sticks" by me for the purpose, and draw on them as required; but a branch of almost any kind of tree would answer, avoiding such as laurel, lilac, laburnum, and mock-orange. Of course, you cannot expect any breeding results with such a variety in so small a space, though, if you put up a few nest boxes and a couple of cocoa-nut husks, the Zebra Finches may bring off an occasional brood, and also possibly the Gouldian Finches. If such occurs, you must supply a little of some good soft food mixture while they are feeding young.

Zebra Finches Bald.

(1) The birds have gone quite bare on back of head and neck, and there appear to be blisters or bulges on the skin. What can I give to remedy this? (2) I have just got some Spice and Striated Finches; they are ragged and mopish. Can I give them anything, or must I leave them to come round of themselves?—H.G.S.

H.G.S.—(1) Twice a week put half a teaspoonful of Dinneford's Magnesia in their usual supply of drinking water, and on other days just colour their drinking water with Parrish's Chemical Food; use only a crock or glass drinking vessel while giving the above. Catch the birds and rub in a little spermacetti ointment, not sufficient to grease the plumage. I should also let them have as much greenfood as they will eat; fresh tender lettuce and grass in flower; the latter should now be procurable free from frost, if gathered at midday. I should advise their being kept away from other birds till they have recovered. (2) These are suffering from the hardships of the voyage, and some losses generally occur among such. I should treat them exactly as advised for the Zebra Finches as to magnesia and chemical food; keep them warm and free from draught, and you should save the major portion of them. Note.—Birds on the voyage to this country seldom get any, or very little, grit, and should only be given a little at a time at first, or they may take more than is good for them.

What Parrot, etc.?

(1) Can you name my bird from description herewith? (2) What it its proper diet and treatment? (3) The bird has a lump on the abdomen, between its legs. How can I treat? (4) It appears to have a cold; what is the remedy?—BOB ROBERTS.

Bob Roberts.—(1) It is the Rose-breasted Cockatoo (*Cacatua roseicapilla*), indigenous to Australia. A hardy and enduring species once it has got over the hardships of the voyage to this country. It makes a droll and companionable pet, but mostly does not accomplish much in the talking line. (2) This is given in reply to another querist in this issue, to which I must refer you. The temperature of an ordinary living room will be ample, but, like all birds, they must be protected from draught. Let it have a bath twice a week, and if it will not bathe, then lightly spray it, choosing warm sunny days for the purpose. Let it satisfy its thirst three times a day. (3) This can only be dealt with after observation; let your local vet. see it; it is impossible to advise in such a case without seeing the bird. A vet. would probably be able to give almost immediate relief. (4) The difficulty of breathing very probably arises from the other trouble, but if you consider it is really a cold, the following mixture (from your chemist) should give relief:—Ipecacuanha wine, oxymel of squills, and glycerine in equal parts; for use, take one teaspoonful of the mixture to one ounce of water; continue this till relief is given. If you do not care to see a vet., all I can advise is half a teaspoonful of tasteless castor oil, given direct to the mouth, and a course of Parrish's Chemical Food (see other replies), after you cease giving the cold mixture.

Cold or Indigestion?

Novice.—It appears to me more a bad case of indigestion, and I expect you have not been dieting your bird correctly; compare your diet with that advised to other querists in this issue, and bring yours into line. From the small data you supply, I can only advise you to give as a palliative: One teaspoonful of Dinneford's Magnesia in two tablespoonsful of water, let the bird have only this to drink for one day; providing the bird's bowels are not loose, repeat in a week's time. On other days well colour its drinking water with Parrish's Chemical Food. It should be kept warm, and strictly out of all draught, and its cage cleaned daily. If you send me fuller particulars, as to how long you have had it, how you have fed it, and all symptoms, possibly I may be able to give you further help. In the meantime, if you carefully read up other replies and queries, and compare with your own case, you should not be in doubt as to treatment. You must only use a crock or glass drinking vessel while giving drugs.

Spice Bird with Injured Leg.

Enquirer.—I should foment the sore parts with a hot (not to scald) decoction of camomile flowers, and then, after carefully drying, anoint the sore parts with spermaceti ointment. It should be kept warm and quiet till well again; cover the sand tray with peat moss litter, and supply grit in a tin till the lameness disappears; while the bird is in this condition all food and water vessels should be placed within easy reach. It should also be caged separately, so as not to be worried by other birds, for whatever other attractive qualities birds may have, they have but little tenderness for any sick member of their community; in fact, most species act as if they had a commission to help such over the "great divide." Make its drinking water just saline with Epsom salts for one day, and repeat same in a week's time.

Breeding Mannikins.

Constant Reader.—You have been rightly informed. Your male bird is a Three-coloured or Tri-coloured Mannikin, and the female is an African Silverbill. If the eggs prove fertile you will have a brood of interesting hybrids. You have come very near losing the hen; she has evidently had difficulty in getting rid of the eggs, and from the fact of two of them being shell-less, she has a deficiency of lime in her system. First bake and then crush all egg shells left from your table, and scatter these over sand tray. I think the best plan would be to take the eggs away, and let her start over again, supplying her with the crushed egg shells, cuttlefish, plenty of green food, and just colouring the drinking water with Parrish's Chemical Food. For green food supply fresh and tender lettuce, grass in flower, chickweed, etc., but garden weed should not be gathered before mid-day at this season, owing to the danger of frost; it must not be given in a wet or frosted condition. A little of some good soft food mixture must be given when they are feeding young (see advertisement columns), or other replies in this issue if you wish to mix your own.

Birds for Flight Cage.

T.S.J.—There are several replies in this and recent issues which will help you. You and many others are quite under a misapprehension as to space required for breeding. Though some species of Foreigners may be regarded as certain breeders, yet even these will not breed in the small quarters Canaries are accustomed to put up with. I cannot advise you to put in more than two pairs for breeding, or a dozen as pets; either way they should be a source of much interest and pleasure to you. For breeding try either of the following couples:—(1) Zebra and Ribbon Finches, 3/6 a pair; (2) Zebra, 3/6 pair, and Black-headed Gouldian Finches, 20/- a pair; (3) Black-headed Gouldians, 20/-, and Pectoral Finches, 10/- a pair. You must put up, say, three nest boxes and two cocoa-nut husks as far apart as possible, and well furnish the cage with twiggy branches for perches. If you only keep a lot of birds flying together as pets, you could include pairs each of the following, some being very small: Zebra, Grey, Orange-cheek, and St. Helena Waxbills, Common and Green Avadavats, all 3/6 to 5/- a pair, and Zebra, 3/6, Gouldian, 20/-, Ruficauda, 10/-, and Long-tailed Grassfinches, 10/-, all per pair. All the above are really beautiful birds, and once they have got accustomed to their quarters, not difficult to keep in health. Diet: Canary, white, brown, and spray millet, a little rice in the husk, green food, grit, cuttlefish, and water for drinking and bathing. In the summer give them blighty sprays and leaves from rose and fruit trees, and any kind of vegetable growth.

Foreign Bird Queries continued on p. 384.

PARK & LAKE AVICULTURE.

Answered by FRANK FINN, B.A., F.Z.S., M.B.O.U., etc.

Golden Pheasants in Captivity.

(1) My two pullets have just lately started eating their droppings; how can I stop them? Just laid first eggs. (2) If they sit, may I keep them together? (3) Must they be cooped separately for rearing if they sit? (4) When should I remove the cock?—GOLDEN.

Golden.—(1) You can stop your birds eating their droppings by putting them in a coop with raised tarred floor, but this would probably stop their laying too. Your feeding is very good indeed, and I do not understand why the birds have contracted this habit—one I have never seen or heard of in Pheasants. Do you give grit and crushed oyster shells? If not, you ought to. Try some small worms and snails, and give other green food besides grass, cabbage, and swedes; vary the food as much as possible, always giving the three items, corn, green food, and some animal food daily. (2) They are not likely to sit; give their eggs to a steady light hen. If they do sit, and you want to try them as mothers, give them some small fowls' eggs, but don't risk their own eggs with them. (3) If they sit and hatch, you must separate them for rearing, but they probably will not stand cooping; you will want a run for each. (4) You need not take away the cock unless you let the hens sit. Pheasants are usually reared by fowls in captivity.

POST MORTEMS.

Mr. J. North, 435, Oxford Road, Reading, will examine cage birds for a fee of 1s. 6d. each bird; for a reply direct, 2s. 6d.; analysis, 21s. Subjects for post-mortem examination must be sent packed in a box direct to J. North, with fee. Any sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.

Bullfinch.

S. Geddis.—Softening of the liver, then inflammation of that organ, extending to the lungs (pneumonia). The body was very emaciated, and it is suggested that more sunflower seed or some hemp seed, together with fresh salad or sweet apple, might have tended to prolong life.

Canary Hen.

J. H. Walker.—This hen died of "Canary Fever," and I fear your other birds, which you say are ailing, have got the infection. Disinfection with burning sulphur is the best remedy.

GENERAL.

Answered by the EDITOR.

Regular Advertiser (Mechanic).—Please refer to rule 8.

Mark Lane Express (J. B. W.).—Many thanks. It is very interesting, and we hope to use it later on.

Support (G. W. B.).—Accept our thanks. We much appreciate your generous assurances of support for our journal.

Paper (H. Turtle).—Thanks for the interesting paper you send, which we shall print at the earliest possible opportunity.

Special Reporter (R. T.).—We have written you and noted your remarks. The matter will have our careful attention.

Dates Fixed (A. Watson).—We quite understand the position of your society, and thank you for your explanation.

Suggestion (F. F. Potter).—Your very admirable suggestion has, you will see, been carried into effect this year.

H. Oliver.—Many thanks for booklet to hand, and for the further trouble you have taken. We much appreciate your kindness.

Competition (G. Cox).—A form shall be sent you. Glad to hear you have had such good luck to start with. May it continue.

Union Rule Book (H. A. Cooper Bagley).—We have referred your request for the rules to Mr. Lythgoe, secretary of the Union, 25, Stamford-st., Old Trafford, Manchester.

Dates Fixed (A. Parks).—You say the advantages offered are splendid, so we conclude it is through no lack of appreciation that your society is not included.

Bound Volume (J. Rukin).—Glad to hear that our special prize so delighted your wife and yourself. You are fortunate in having a wife who takes such an interest in your hobby.

E. W. Small.—We can send you House's "Canary Manual" post free for 1s. 2d., which is quite the best handbook dealing with the breeding of Canaries. We can also send you a very useful book on Hybrids, published at the same price.

Recommendations and Specimens (Harry Smith).—Accept our grateful thanks for the interest taken in CAGE BIRDS and valuable help rendered. Further specimens have been sent you. May your business increase as a consequence.

Heating Apparatus (W. Jackson).—If you could persuade your friend to send along a rough sketch and particulars of the heating apparatus you refer to, we should be pleased to reproduce same in our columns.

THE CRESTED CANARY CLUB AND THE C.B.U.

SIR,—Having had the pleasure of the acquaintance of Mr. W. E. Greeves for many years, and knowing him as a man of sound and reasonable judgment, it makes it all the more difficult for me to understand how he comes to hold the views he does on the matter of the Crested Canary Club and the Cage Bird Union. I can only describe them as entirely perverted and wrong-headed, for it seems to me they will not stand even the most cursory examination, providing the said examination is undertaken in a calm and reasonable frame of mind. I hope my fellow-members of the Crested Canary Club will carefully think the matter over for themselves, when I feel convinced they will not have any difficulty in seeing that affiliation with the C.B.U. does not in any way imperil the existence, or even the status, of their club. The C.B.U. does not set out to be a "governing body" to the C.C.C., nor to interfere in any way with its management. The secretary and its other officials would carry on their duties exactly in the future as they are doing at present. Why should the C.B.U. wish to interfere? Has it attempted to interfere with any other society, either ordinary or specialist? The only time the C.B.U. concerns itself with the doings of any society or show is when it has a definite complaint laid against that said society or show by one of its accredited members. Then such complaint is, as it ought to be, investigated. How many "complaints" is the C.C.C. likely to have made against it under its present able management? Not many, I think. And would either Mr. Tyson or Mr. Crisp shrink from having any C.C.C. matter investigated if there seemed reasonable ground for so doing? I think not. Neither Mr. Greeves nor anyone else can show in what manner affiliation to the C.B.U. would affect the prosperity of the C.C.C., or interfere with its working methods, or "tie the hands of the club in dealing with the interests of the bird it represents," as Mr. J. Robson is reported to have said it would. Let us turn to the other side of the picture. Mr. Greeves lays great stress on rule 2 of the C.B.U., which says: "In the event of conflict, these rules shall prevail over any other." He affects to see in this, if we agree to affiliation, the C.C.C. becoming a "nonentity"—subservient to the C.B.U. This is what I term a "wrong-headed" view—absolutely wrong-headed.

It is clearly stated "in the event of conflict"—then, and at no other time, will the C.B.U. rules affect the existing rules of the C.C.C. Now, what is a "state of conflict" likely to mean? Well, one of the primary objects of the C.B.U. is to protect the Fancy generally from fraud and fraudulent individuals, even to taking them before, or fighting them in, a court of law. With this object in view, the C.B.U. has had framed a set of rules which, according to the best legal advice obtainable on the point, are sound from a legal point of view—that is, fit to carry into any court of law. This being so, are they not perfectly justified in saying that, "in the event of conflict," their own rules shall prevail over all others? It is only common-sense that the C.B.U. *should* take such a course. Would it be either business-like or sound policy on their part to say, in effect: If you, as a society, pay us 2d. per head per member, we will undertake to fight all your legal battles, and upon your rules instead of our own, although we know ours are sound rules, while yours are probably the very reverse? It is surely laughable to imagine any such thing. It is not too much to assume that at some date in the future the C.C.C. may have trouble with one or other of its members, or trouble with an exhibitor at one of its Club Shows, and on which it is desirable to go to a court of law. Well, it has simply to report the matter to the C.B.U. to transfer the whole of the case, with its possibility of heavy costs, on to the shoulders of the C.B.U., thus avoiding all chance of being financially crippled, and really unable to look after "the interests of the bird it represents." If it is not necessary to go to law, then the offender can be punished by the C.B.U. with suspension from all Union shows. The C.C.C. could only debar the offender from its own Club Shows, which would not be worth the name of "punishment." We had glaring instances of the latter with the Norwich Plainhead Club and the L. and P.O.S. But the C.B.U. as a "governing body to the whole Fancy" can give the punishment a far and wide effect—make it likely to deter anyone from attempting underhand tricks. Yet we are asked to believe such a body is not worthy of support, is not wanted, and can never have the confidence of fanciers. What nonsense! The constitution of the C.B.U. is entirely in the hands of the Fancy at large, to say, through the voice of its delegates, who shall be its officials. Give it a chance to "settle down," and we shall see how things work out. If fair cause for dissatisfaction arises, we shall soon see societies and districts resigning membership from it, when it must soon fall. In the meantime, let us all take it for granted, as I am certain is the case, that the C.B.U. is trying to work for the good of the Fancy, consequently for the good of every fancier. What has any straightforward fancier, or straightforward show or society, to fear from it? Many of the remarks I have read made against the C.B.U. seem to me more like the sayings of an hysterical woman than the sane and reasoned remarks of practical fanciers. But I am straying from the point I set out to speak upon, and will conclude by asking every member of the C.C.C to thrash out for himself these two questions: What will the C.C.C. lose by becoming affiliated to the C.B.U? What benefits may it not at some period in the near future hope to gain by reason of being affiliated? I have little hesitation, then, in saying that the scale will plump down on the side of affiliation.

A COUNTRY MEMBER.

P.S.—I enclose my card. Exception will doubtless be taken to my anonymity, but I cannot allow even the C.B.U. to bring about possibly strained feelings between others and myself. Besides, simple facts remain simple facts, in whatever way they are stated.

SIR,—Mr. W. E. Greeves asks in what way the C.B.U. can benefit the C.C.C. Now, I would like to point out that all clubs, whether specialist or otherwise, by joining the Union are a part of the Union themselves, and the question need not be put that way any more, but rather, "What are we going to do for the Crested Canary fancier, with the aid of all other societies? For now we are one, and in dealing with questions affecting our variety we will be listened to with due deference by all fanciers, and our ideas acted upon; whereas before we were only able to affect our own members." With Crest fanciers who, like our friend Mr. W. E. Greeves, have a sound practical knowledge of the variety, and whose opinions are not only valued by members of the C.C.C., much good could be done, for such opinions would carry great weight, and would be practically final. With regard to the C.B.U. rules taking preference over all others, this will be no hardship when matters affecting Crests are decided by Crest fanciers of the C.B.U., who, instead of becoming a nonentity by not being represented, will still be the ruling body. Of course, where questions are of general interest to all fanciers, such as "What constitutes a novice?" all fanciers should be content to give in to the majority.

CREST FANCIER.

CRESTED CANARIES AT THE LATE EALING SHOW.

SIR,—Greatly to my surprise, I received the other day a letter from Mr. Dobson, the judge at Ealing Show, held November 7th and 8th last, asking me whether my Crest in class 83, No. 2, was present or not, as in his judging book he had it down as winning second prize. Will you please publish my explanation, as I would not like Crested fanciers to remain under the impression that I was in league with any show officials, and could win prizes without showing birds? I entered a Clear Crested cock at Ealing Show, but, owing to my ill-health, I decided not to show him, and he was not present. When I saw in "C. B." that a bird belonging to "Moore" had won second prize, I naturally thought that another competitor of the same name as myself had been successful; I never dreamt it had been awarded to my absent entry. Had I received any prize-money or communication from the show officials, I should have known that a mistake had been made, and should have rectified it. But as no money or communication whatever reached me, I naturally did not concern myself further in the matter. I trust that you will publish this letter, also your opinion on the subject.

W. H. MOORE.

[A representative of CAGE BIRDS saw Mr. Dobson with reference to the above matter, and he states that he awarded the second prize to a bird with a light feather in its crest (as reported in our issue of November 17th, 1906), but evidently made a mistake in entering the cage number in his judging book, putting No. 2 2nd, when, as a matter of fact, exhibit No. 2 (Mr. Moore's) was absent. The rightful second prize-winner appears to have belonged to Mr. H. Horton, of Blackheath; and Mr. Dobson, on learning of the error, wrote that gentleman offering to pay him the prize-money out of his own pocket. Mr. Horton replied as follows:—"April 21st, 1907.—I can quite see how the mistake occurred. I much appreciate your kind offer to send me the amount of the 2nd prize out of your own pocket; but I would wish you to excuse me accepting it, as it is so easy for us all to make mistakes.—H. Horton." This, Mr. Dobson says, ends the matter so far as he is concerned.—EDITOR.]

When Shakespeare wrote

Love's Labour Lost

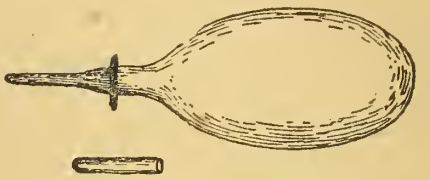
he must have been thinking of the poor deluded soul who tried Canary Breeding without the assistance of

"CAGE BIRDS ANNUAL."

EGG BOUND HENS.

A Novel Appliance for Treating Them.

SIR,—The enclosed sketch represents an appliance simply invaluable to Canary breeders at this time of year. It was introduced to the notice of the members of the Edinbro' Norwich Club by Mr. A. Cochrane in the course of a paper recently read to them by that gentleman.



Rubber Syringe for Injecting Olive Oil.
(Obtainable from any Chemist.)

He mentioned having used it with success on Goldfinches suffering from constipation, or stoppage of the bowels, though its primary use was for eggbound Canary hens, an injection of warm olive oil invariably relieving the hen of the egg in a few minutes. I have just put it to a practical test myself, and find it highly satisfactory.

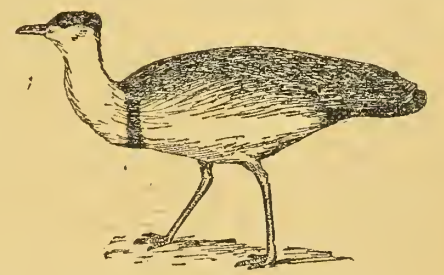
K. URQUHART.

THE LARGEST LIVING FLYING BIRD.

SIR,—I got a letter this mail from my brother in India, in which he tells me that, while out on a shooting expedition with three other gentlemen, he and one of the party shot, amongst different kinds of game too numerous to mention, some Lesser Bustard and three Imperial Bustard, one of which measured 8 ft. from the tip of one wing right across to the tip of the other; while the weight of this bird was 23½ lbs. He was told that the Imperial Bustard is almost extinct, and is the largest flying bird now living. Could you kindly tell me whether this is so?

THOS. AITKEN.

[We submitted Mr. Aitken's letter to our Mr. Frank Finn, and he sends us the following reply:—By "Imperial Bustard" the Great Indian Bustard (*Eupodotis edwardsi*) is meant, as is evident from the dimensions given. This



The Great Indian Bustard.

bird attains to even a greater weight, but is not so large as the Great African Bustard (*Eupodotis kori*), the "Gom-Paauw" of the Boers. It is this last species which is the largest of flying birds. The Great Indian Bustard is not a common bird, but is, fortunately, not near extinction, so far as I ever heard when in India.—EDITOR.]

A CREST PROBLEM.

SIR,—I am a Crest breeder, and am anxious to know if you think this youngster will make a show bird.

THOS. ROBSON.
(Hon. Sec. Northern Crest Club.)

A Crest Problem.

THE FAMOUS

"Mab" Dwarf Razor

The description given of the little "Mab" as the finest shaving implement in the world is confirmed in thousands of testimonials.

Do not accept any not bearing the registered Trade Mark, "The MAB," or you will be disappointed.

Black Handle 2/6
Ivory " 3/6

The "MAB" SAFETY RAZOR with extra blade. Price 3/6.

The "MAB" blades used in this Razor are absolutely perfect.

"MAB" CO., Newhall St., Birmingham.

A Champion Linnet.

"Joe," winner of 40 first prizes, including the Crystal Palace 1907 Show. The property of Mr. E. A. LOVELL (Bristol).

A GOOD START.

SIR,—I have been a reader of CAGE BIRDS for four years, and am pleased to tell you that from it I have gained my instruction as regards Canary breeding. I should like to inform you of my success. Although I am only a novice, I have already two nests of young, three in each, having lost one out of each. I have three more hens down with five eggs each, and a Goldfinch and yellow Norwich hen, which have up to writing three eggs. My young are now a week old and doing well. I might tell you my birds are bred in the garden, in a place I built myself, and I am no carpenter. They have been there for two years, without the slightest heat, not so much as a match. I have just been reading Mr. Bancroft's article on breeding, etc., which I consider is excellent. I am of opinion that any novice like myself should not fail to keep his CAGE BIRDS by him, so as to be able to look it up if he requires to know how to breed and rear successfully. I might mention that I have only four Norwich cocks and five hens, beside British birds.

W. E. FOUNTAIN.

THE PALACE WINNING GOLDFINCH.

SIR,—I am sorry I was made to appear to accuse Mr. D. J. Lewis's Palace winning Goldie of such a eriminal offence as having a roundcut blaze. Dear! dear!! Mr. Weston was right in surmising that I referred to the 1906 Palace Show. It occurred in this way. Last November I was asked to give a lecture on December 5th, which I promised to do, and wrote a paper accordingly. But when the time came, there was so much business to transact that the lecture was postponed to some future time. Then I was asked to give the lecture on March 5th, 1907, which I did. On reading the paper, I distinctively pointed out to our members that it was the 1906 Show that I was referring to. But having written the "last Palace Show" (which would have been right if I had read the lecture on the date first fixed) I forgot to alter it for publication. Hoping this explanation will satisfy Mr. L., and thanking you in anticipation of insertion of same. W. G. BULL.

CINNAMON BORDERS.

SIR,—All that I know about Borders is what I have read or seen at shows. At one time they were called Cumberland Fancy or Common Canaries. My first Canaries were called common Canaries, but, few, if any, were like the present race of Borders, and my first hen was a Cinnamon. At the last Palace Show I had a good look at the evenmarked, green and cinnamon Borders; there were only two cinnamons—one had, I think, a card, and the other would have passed for a German. Many years ago Cinnamon Germans were occasionally imported. From many years breeding for cinnamon Crests I know something about the ins and outs of putting the cinnamon colour on other coloured Canaries. I daresay some of your readers have seen that puzzle of a few bone or brass rings secured to a double skewer arrangement; to get all the rings off you constantly have to put two rings on to get one off; well, in breeding for cinnamons you are constantly appearing to get further from the cinnamon colour, and many birds are bred which the owner has a difficulty in disposing of at a remunerative price. To engraft the cinnamon on to any other colour Border, you will save many years of patience if you start with a cock with few or many cinnamon coloured feathers, whether a buff or yellow is of no consequence, that will be for a later experience when you have the cinnamon present to the eye in both sexes. In-breeding will have to be practised considerably all the time you breed from cinnamons. To the cinnamon feathered cock pair a very small hen, clear or variegated, as near to the type as you can get; you should breed a few young with cinnamon coloured feathers, all hens, save those nearest to the type; even if you cannot use them the succeeding year they will be found useful in future years. I have sometimes proved that cinnamon hens will not lay eggs until two years old. Save a young cock the nearest to type, which you must pair to his own sister, or a cinnamon hen as small as his mother; then the following year you will obtain some cinnamon feathered cocks and hens; by that time you can use your own discretion what to breed for, as you can pair two cinnamons together. The green feathered hens of this first cross are useless for producing cinnamon cocks, and I very much doubt if a green feathered hen will ever produce a cinnamon feathered cock, even if she has fifteen-sixteenths cinnamon blood. In succeeding years whatever is deficient in the young, either colour, even marks, or type, hens must be used for getting the same, bearing in mind that all the young cocks, whatever their colour when paired to cinnamon hens, will produce cinnamon feathered cocks. To fix the cinnamon colour do not be too particular whether you pair two buffs or two yellows together. If you wish to breed self or dark cinnamons, pair the heaviest marked birds together; if you wish to breed even marks, pair those with the fewest cinnamon feathers. With sufficient patience, and a well-filled purse, you will finally breed what you want. Now my purse is empty, but not my head, and my home and health are much better than they were five years ago, and I can, if I like, keep a pair of Canaries. I know of a double breeding cage I can have if any Border fancier will in kindness give me a pair, one of them having cinnamon feathers, I will try what I can do. It takes more years to obtain cinnamons when the hen only has cinnamon feathers, as in-breeding must be done in the second year, pairing a son to his own mother, and, possibly, a grandson to his grandmother, before a cinnamon cock will be bred. Therefore, I would not advise you to breed for cinnamons from the hen's side alone.—J. H. VERRALL.

REIGATE AND DIS. F.A.

Proposed Cage Bird Section.

SIR,—In order to further promote interest in the breeding, rearing, and exhibiting of high-class Canaries and other cage birds in this district, it has been decided to form a Cage Bird section of this Association, which will hold its meetings at Redhill, where monthly shows, lectures, etc., will be held throughout the year. Any fancier residing in this district will be welcomed at a meeting to be held at Mutton's Temperance Hotel, High Street, Redhill, on Monday, April 29th, at 8 p.m.

F. J. GREEN.

THE YORKSHIRE UNION.

Election of Officers and Revision of Rules—1907.

SIR,—The ballot papers, numbering nearly 990, in connection with the election of officers and revision of rules for the Yorkshire Union of Cage Bird Societies for 1907-8, have been sent out. Any person who was a member of the Yorkshire Union of O.S. or the Amalgamated Yorkshire O.S. during last year, not having received one, will be supplied on application to me at 70, St. Margaret's Road, Bradford. Monday, April 29th, is the latest date for the return of the papers. FRED. HAMMOND.

THE LINNET IN CAPTIVITY.

SIR,—Your Correspondent, "Linnet on the Brain," according to his own showing, has utterly failed to steady Linnets which have been in his possession since last year. He tells us they are in full song, but so frightened when approached that they take advantage of whatever cover the cage affords, and try to hide themselves. The reason his birds behave in this way is quite evident. They are afraid of him, not yet having learned that his visits are of a friendly nature. When they make this discovery, fear will give place to confidence, and if the progress made be taken advantage of, they will very soon show in various ways that his company is both pleasant and desirable. My own opinion is that he has given too much time to cages, and far too little to Linnets. A little reflection on his methods will reveal to him that a more appropriate "nom de plume" would be "Cages on the Brain," for most of his time appears to have been devoted to devising different patterns. Now, although those made all of wood except the front are advantageous, they are not indispensable, and I am speaking from experience, for the steadiest Linnet I ever possessed, one which was the admiration of all who saw it, was brought to this degree of tameness in an ordinary large all wire breeding cage. He may have read all that has been written about Linnets in your valuable paper, but the words spoken have not profited him or he would not still be asking how to steady a Linnet. Before leaving this subject let me advise "Linnet on the Brain" to adopt the simple methods so often advocated in CAGE BIRDS, or we will be compelled to write him down among those who are ever learning and never able to come to a knowledge of the truth. LINNET FANCIER.

SCOTCH FANCY AND NORWICH FANCIERS IN EDINBURGH.

SIR,—An effort was recently made by those who are not personally acquainted with what took place years ago, when the Scotch Fancy men and the Norwich fanciers in Edinburgh parted company in showing, each going their own way. Prior to that event the Norwich fanciers depended on the Scotch Fancy section for running shows; but through a slip, as much as anything else, the prize money for the Scotch Fancy Canary was reduced in a certain association, which has proved the ruin of the Scotch Fancy. Other societies speedily followed suit—result, poorly filled classes all over the country, fanciers recognising that there was no gain in competing at an open show; where the show lasted two days or more there was great risk. In Edinburgh the feeling ran very high, and ended in separation. The old society continued for Scotch Fancy and Belgian Canaries, on New Year's Day, and has been worked quietly, but, as can be easily understood, the general public do not appreciate the quality of the high bred Scotch Fancy, and therefore a big gate cannot be looked for. On the other hand, the Norwich, etc., section, finding they were not to get everything their own way, started the Scottish National, and were most fortunate in securing the services of Mr. D. Smith as secretary. He threw himself heart and soul into the work of his office, and spared neither time nor money. The enthusiasm which animated him extended to others. All went to business with a will; the Town Council of Edinburgh generously gave the use of the Corn Exchange free; the Show was freely advertised, and as is usually the case with a new venture, the Association has been an unqualified success. All honour to the founders and those who have taken part in the management. The Norwich, etc., section has benefited beyond all expectation, but the Scotch Fancy and Belgian Canaries have suffered. In view of the action by the Scottish National in opening up classes for Scotch Fancy and Belgian Canaries, to further beggar the old Edinburgh, it could not be expected that the majority of Scotch fanciers would approve of the old society being merged into the young association. The decision to cry off and get away from the New Year's Day Show to the middle of December has been cordially received in Scotch Fancy circles, and if the executive enter heartily into the scheme, and put themselves into touch with every fancier in the United Kingdom, their efforts will be crowned with success. The want of the age is unity amongst the Scotch Fancy section. Your readers will be delighted to hear that there is a prospect of two other shows being started in Glasgow, one in November and the other in January. If the management would secure a hall in the vicinity of Charing Cross, and advertise freely, it would be a financial benefit. The apathy in Scotch Fancy circles has reduced the membership; it must have struck your readers that the voting power at the meeting of the Old Edinburgh was memorable, and that had it been in favour of bowing the knee to the Scottish National, it would not have carried with it the confidence of the showing populace, upon which the financial results would have depended. It would have helped Paisley, Kilmarnock, and Dunfermline. In taking such an important step full publicity should have been given to the move, and not confined to a few. Voting papers should have been issued to every member of the old Edinburgh. Plenty of money could be raised to put the old Edinburgh on an easy footing, so that the executive need have no fear in going forward.—A CORRESPONDENT.

EARLY MOULTING OF BRITISH BIRDS.

SIR,—Would any reader be so kind as to tell me, through CAGE BIRDS, the best way to moult Linnets and Goldfinches, and the time, as I want them on song and over the moult in time for catching with next season? G. JACOBS.

HALF PRIZE MONEY IN GUARANTEED CLASSES AT THE CRYSTAL PALACE SHOW.

SIR,—My attention has been drawn to a letter under the above heading. From this letter it would appear that either you or myself had committed some breach of faith. As nothing could be further from the fact, I must ask you—in order to remove any false impression which may have been conveyed to exhibitors—to insert this statement of the actual facts. At the time the catalogue was being compiled you, Sir, were informed that the entries in the Scotch Fancy and Champion Crest classes were so weak that the managers had decided to cancel the said classes. On your asking how much would be required to let the classes stand, I told you the amount—£3 16s.—on the basis of half prize-money, as per rule 2. This was correct, as, according to the schedule, these classes were not marked as "guaranteed"; and, as Mr. E. G. Wright made his entries under these conditions, the contract between Mr. Wright and the Society was completed when I accepted his entries, and on these grounds I declined to pay more than half prize-money. Your statement in your issue of February 9th (to which attention is called) I understand to convey, as the context clearly shows, that you had given such a guarantee as would enable the sections to be included, although you did not in any way refer to rule 2 of the schedule, with which rule you were probably unacquainted. [Quite unaware of it.—Ed. "C. B."]

All things considered, the conditions appertaining to the Palace could not have been so very bad, as suggested by Mr. Wright, or he would not have made his entries. Any way, he was prepared to take the risk, and I have yet to learn that it is customary for show managers to inform competitors the number of entries in each class and how many competitors they will have to meet. Mr. Wright says that it passes his comprehension how any "sane" person could refuse to pay full prize-money. Well, Sir, I may or may not be "sane," but if any proof of my "insanity" were needed, I should say that it is provided in the fact that I took the trouble to answer his two or three letters, fully explaining all these facts. H. LAMBERT BROWN.

P.S.—I am in receipt of your letter informing me that if any exhibitor has been misled by the statement you made in your issue of February 9th into thinking that your guarantee was used in the technical sense of rule 2, and that full prize-money would be awarded in the classes in question, you will be pleased to make up the necessary balance to enable the full prize-money to be awarded to any such exhibitors.

PROPOSED HANDSWORTH AND DIS. C.B.S.

SIR,—With reference to the letter of Mr. J. H. Jennings, I feel that it only needs a little energy on the part of fanciers in this district to start and support such a society, and I shall be pleased to meet the gentleman, and others concerned, with a view of putting the formation of the same on a practical footing.

A. E. SMITH.

DOES COLOUR FEEDING SHORTEN THE LIVES OF CANARIES?

SIR,—In your issue of the 13th inst., I noticed a very sensible letter from "W. H. Moore," on "Does Colour Feeding Shorten the Lives of Canaries?" Last week I saw some correspondence on the shortage of colour food. I should be pleased if the crop was an entire failure, and should like to ask the question—Cannot this abomination called colour feeding be abolished? I would as leave see a lump of red ochre stuck in a cage as some of the red-fed colour birds. It is as bad as artificially colouring natural flowers, and goodness knows that is bad enough. I cannot possibly understand anyone with an "educated eye" admiring either. Let us breed for colour as well as form.

THOS. SOAR.

NOTES ON THE TANAGER IN CAPTIVITY.

SIR,—I was greatly interested in the letter, "Notes on the Tanager in Captivity," published in your admirable journal. Mr. Millsum is evidently an expert in the keeping and feeding of these lovely birds, and if he would be good enough to let us all know the various ingredients of his food for them, I feel sure the information will be very gratefully received by all those interested in the Foreign Fancy.

H. R. DAVIDSON.

BIRDS AND THEIR CHARACTER.

SIR,—When perusing the "Journal of Horticulture," recently, I came upon the following paragraph, which states the Bullfinch waylays and eats bees from out the bechives. I never knew nor heard of this before myself, and I have kept bees a long time in a district where Bullfinches are plentiful enough. The writer says:—"Some birds, such as the Crow, have no character to lose, especially when young potatoes are coming up. We are glad to hear that wee Jenny Wren never did harm anything. Her near cousin, the Robin, is also well spoken of for eating grubs, snails, moths, and, above all, earwigs. Dahlia growers, encourage the Robin! The Bullfinch is the rogue! One of his roguish tricks is to sit on the beehive entrance and tap with his bill, and at once the sentinel comes to ask who knocks, when the birds eat him up. We have watched this frequently. The Swallow is another friend without one 'redeeming vice'; insects are his from dawn till dark."—H. BOLLARD.

[It will be interesting to learn if any of our readers have observed this trait in the Bullfinch.—ED.]

JARDINE'S PARROT.

SIR,—Perhaps you will find a corner for a few words about this species of the Parrot family, which, as a cage bird or pet, deserves far more notice than it seems to get. Outside the pale of aviculture, if one may so term the body of enthusiastic bird keepers, the variety of Parrots kept as cage pets is extremely limited, though why this should be so it would be hard to say, were it not, in all probability, due to ignorance of the charm and qualities of the scores of varieties that make equally charming pets. The subject of this note is one of these, and only needs to be better known to be more highly appreciated. Its common name was, I surmise, given it in honour of Sir W. Jardine, and, therefore, it is all the more curious to find that it is omitted by this authority in his "Birds of West Africa" volume of the "Naturalists' Library," which was penned by no less an authority than Swainson. Possibly it was at that time confused with the Senegal Parrot, which inhabits the same region, and is described in the work referred to. To give a kind of condensed description, Jardine's Parrot is of a bright grass-green colour generally, with patches of reddish-orange on the bows of the wings, the forehead and the thighs, and the space between the eyes and the beak and the tail black. It is about 11 ins. in length over all. It is a native of Western Africa, where it ranges from the Gold Coast to the Congo, and it is reputed to be somewhat delicate when first imported, although it is hardy enough to succeed with the merest tyro when once it is acclimatised. Doubtless with this bird, as with so many other species, the supposed delicacy at the beginning is due largely to no systematic efforts at proper acclimatisation. Being subjected to draughts, even for a short time, is one of the most fatal things newly-imported birds have to contend against. As regards the qualifications of Jardine's Parrot for a caged pet, it is interesting to note that one of the greatest authorities of the day on Parrots gives it practically the very first place, considering it even more desirable than the Amazon or the Grey Parrot. Its capacity for learning to talk is not a matter of general agreement. Some keepers, amongst whom may be mentioned Dr. Russ, consider their linguistic abilities very small. Russ only goes so far as to say that it is "a little gifted with speech." On the other hand, specimens have been known to rival even the notorious Grey in talking abilities and versatile mimicry. Individuals, of course, vary greatly in this respect, just as they do in the Greys and every other species; but when one does get a clever bird, and one that is properly acclimatised, it will always command a marketable value that compares very fairly with the latter species. Its food should consist of a mixture of hard seeds for a staple—wheat, dari, canary, hemp, and a little maize. Occasionally a few small nuts may be given, or a piece of plain dry biscuit or crust of bread, and a little fruit should be given daily, ringing the changes on banana, sweet apple, grapes, or orange, and now and again, when in season, a spray of watercress or a few seedy heads of grass for it to play with will be appreciated as a change. Like most Parrots, it is all the better for having a bit of soft wood kept in its cage to occupy its attention when it wants something to chew up, as this simple precaution is frequently a preventive of feather plucking, and once a bird gets hold of this habit it is no easy matter to cure it or to keep it in a presentable appearance. Water, I need hardly say, should be offered daily, and coarse grit always find a place in its cage.—EMIL.

THE SONG OF THRUSHES.

SIR,—I notice in your Mr. Weston's answers to queries, he replies to Mr. J. C. Smith re Thrush not singing after nine in the morning. I might say I have had the same experience to go through. I have kept Thrushes and Larks for about eight years, so I can claim to know a little about them. With Thrushes, I think you will get more singing out of one, than two or three; but with Larks, the more the merrier. I have got a Thrush about four years old this summer, and during the first two years there was nothing to touch him—he would sing from early morn till late; he was never tired, and he would sing anywhere he was put. I hand-reared a young one last summer, and now, as soon as he has commenced to open out, the old bird has given up to a whisper. So I thought I would get a wild bird to train my young one to produce some good notes. I paid a good price, 15s., for one with some extra good notes. He sang well for a few days, but gradually fell off, as I think my young one was too much for him, for he would sing him down as soon as he started off. He has not sung for a fortnight now. It is just what I expected, but I thought I would risk it. Still, I yet have hopes, when the weather gets warmer, of hearing him again. I might mention I gave the wild bird, which had been caged about three months, a good "ducking" a week after I had him, for he needed it badly, and I think that upset him. He sang next day, and has not sung since. I put it down to jealousy, and I do not think I am far wrong. I think I can get them on song as well as most people. I know it is not the feeding that is wrong, for I feed them all alike, if anything the wild bird the more generously. Thanks to CAGE BIRDS for my success with songsters, and I think if some of your readers would pay a little more attention to queries, they would not have to ask for what was answered only a week previously, which I see is often the case. My first copy was a specimen picked up at a show almost five years ago, and I have taken it in ever since. Perhaps some one else would tell their experiences and say if they could recommend a cure without having to dispose of others. THROSTLE OFF SONG.

MY EXPERIENCE WITH SOME PARROTS.

SIR,—My first Parrot came from Brazil, and, although very pretty, was very savage. In a short time, however, I secured his confidence and got him quite tame. It was brought home by a sailor for a friend, who, not caring for it, sold it to me. Whenever there was food on the table he used to call, "A bit for Pollie." Clotted cream was a delicacy of which he was most fond. Once, when illness was in the house, Pollie was sent to a dealer to take care of; but he pined so much that he nearly died, so was brought home again and quickly recovered. One day Pollie had a fit and, to our great grief, passed away, despite all we could and did do. Next came an Amazon, a beauty, with wonderful variation of colour—not a common Amazon, but a King Amazon. He was a very tame bird, and would come out of his cage. A guard was put before the fire, and Pollie used to delight in climbing up the front to warm himself, and he never found it too warm. He would follow me about like a dog, and call out, "Pollie is coming." This was a very strong and healthy bird. Following him came a pair of Indian Ring Necks. The cock whistled well and the hen talked very well. Her voice was very peculiar, something like an old woman's, very low and squeaky. These were strong, healthy birds; nothing ever went wrong with them. I gave them to a friend, who, I expect, has them still. The next were a pair of Grey Cockatoos, with pink breasts. They were very pretty, but would not talk, so I sold them. Since then I have found out that these birds will talk, as a friend of mine had one that talked very well indeed; thus I have naturally regretted parting with my birds. I also have a white Cockatoo with lemon crest. Last, but not least, come my Grey Parrots. The first I owned died in six weeks; the second also died from the same cause, indigestion, brought on by soft food. My third was nearly dead on arrival from Liverpool, and did die the next day. Then a sailor brought home ten Greys, of which I bought one, and have had it for years; he has never been ill, has never had any sop or soft food, but has been fed on the ordinary Parrot food. He never has water unless he asks for it in the very hot weather, then just a few sips while I hold the glass in my hand. I give him grapes, oranges, apples, pears, cherries, raspberries and strawberries; these, of course, are moist and supply the lack of water. He can talk well, and mimics all our different voices. At last I have a really clever Grey. I always cover him up at night, leaving space for ventilation at the top of the cage. Many cover the top close and leave the bottom open; this causes a draught, and is the cause of asthma and other illnesses. My bird is now twelve years old, and flourishes well under the treatment described.—E. G. B.

THE INDIAN SHAMAH.

SIR,—This bird is well known by all who have knowledge of the common wild birds of India. I am not certain whether it is found all over India, but I have found it plentiful in all the districts I have been in, in the Punjab, except Simla, which is in the Himalayas, and is too cold for them. The cock Shamah is a very pretty bird indeed; its brilliant plumage and beautiful form make it so attractive, the female is very little smaller in build, and is of a brownish colour. These birds generally go about in pairs, and frequent dunghills, stables, cowsheds; in fact, any place where they are able to find a good supply of insects, worms, etc. They are very quarrelsome birds, and when one pair take up any particular plot of ground to peck around on, which each pair usually do, they will fight almost unto death with any other pair that may trespass on their land. When flying, they take short flights along the ground, from bush to bush, if there are any near. The cock bird is a beautiful songster; in some conspicuous spot, either on the very top of a bush or a wire fence he will perch himself, put out breast and cock up his tail, and then pour out his bold, defiant song. They breed twice, sometimes three times, a year. The nest is built of blades of dry grass, thin twigs, and pieces of string, etc., and is lined inside with hair; it may be found in holes of trees and in walls a few feet from the ground; the hen lays two or three eggs, each round. I remember the time I found a Shamah's nest in a "chatti" (earthenware vessel for holding water) which was hung up on the wall in the stables, about four feet from the ground, and was about eight feet away from a "charpie" (native bed), on which the "syce" (groom) used to sleep during the night. There were three eggs in the nest; these were hatched in about twelve days, and the youngsters reared successfully. There were two cocks; these were easily distinguished when about a week old. Their natural food consists of all kinds of insects and worms, such as white ants (these are plentiful in India), cockroaches, small beetles, grubs, etc. I have also seen them feeding on a kind of wild bramble berry which comes out at a certain time of the year in India. In captivity the natives feed them on a mixture of grain and Ghee, varied with white ants and any insect life which is obtainable. Caged Shamahs are not a common sight, as would be thought, considering they are so plentiful. They are easily caught, but are seldom taken when mature. Mostly all those that are kept in India are hand reared from the nest.

LONDON BIRD LIFE.

Lecture by Mr. J. Dobson before the L. and P.O.S. on April 18th.

There was much speculation amongst fanciers as to what phase of London bird life Mr. Dobson would deal with in his promised lecture on "London Bird Life." Few could have thought that singing birds and contests would be his theme. It was, however, and he dealt with them in a most entertaining manner. Mr. Dobson is quite a veteran in the London Cage Bird Fancy, and knows much of its history.

Speaking of Linnets, the lecturer mentioned Colchester, Leatherhead, and Epsom Downs as the favourite haunts of catchers of good songsters. He then went on to speak of how the birds are trained to sing, and gave the following as a sample of the notes of a good Linnet:—

Tollicky, tollicky, tuck ; whizzy, czzy qua
Tollicky, tollicky, chow weega.
Tollicky, tollicky, Egypt.
Tollicky, tollicky, chow weet.

He then went on to describe a singing handicap, in which the winner did two score ten, in ten minutes. Other items of interest were that £30 was offered and refused for two champion singing Linnets belonging to a Mr. Huxtable. Nestlings, or branchers, were generally considered the best to train for singing contests.

GOLDFINCHES.

Amongst champion Goldfinches he had known some gems to come from the catching grounds of Merstham, Brentwood, Lewes, Brighton, Willesden, and Frome. He gave the song as:—

Sippit, sippit, sa whiddy,
Sippit, sa pot sa whiddy,
Sippit, ker chay.
Sippit, ker uzzel, choy,
Whiddle, whiddle, C. G.

The last song is not a good one, and is said to be caught from the Yellowhammer, and is described by the cognoscenti as a little bit of bread and no cheese. As in the Linnets, nestlings and branchers are the best for training. The champion record bird was one of Mr. Austin's, which was credited with having done seventeen score of "Sippit ker choy" in fifteen minutes. The best Goldfinches of to-day were those owned by a well-known sporting character, named Symonds, of Church-street, Shoreditch, to whose establishment he had introduced such worthies in the exhibition world as Messrs. G. Crabb, F. W. Barnett, C. L. Quinton, J. Robson, etc.

CHAFFINCHES.

In Chaffinch singing, the champions were usually found amongst the birds caught by pegging, and the great catching grounds in and around London were Hackney Marshes, Chingford, Finchley, Victoria, and Hyde Parks. The Chingford and Finchley birds do a song known as:—

Pink, pink, chilling welah chock wado.

The Hackney Marsh birds do a much shorter song, which is known as:—

Joe, Jo, kiss me dear;
Jo, Jo, pot o' beer.

He gave interesting reminiscences of a pegging match by Hibberd and Hornage for £20, and a singing match for £50, in which the winning bird, owned by a Mr. Watts, sang nine score fourteen in fifteen minutes.

SKYLARKS.

These were briefly dealt with, mention being made of a match for £10, at Richardson's, between two birds owned by men known as Darky and Woody. Skylark matches were for time singing, and not like the others, for note singing. The winner in this particular match sang thirteen out of fifteen minutes.

At the close of the lecture an interesting discussion arose amongst those present, several of whom thought that singing matches and their surroundings were not calculated to lift and refine those who indulged in them. An opposite opinion was that the bird singing fraternity were quite as good fanciers as their show brethren, and had, if anything more real personal affection for their birds. Such things as drunkenness, and even fighting, had been known in connection with bird shows in the ages of the past, but that was in the days when CAGE BIRDS was not in existence, and those who complained of that paper taking notice of bird singing contests should think of what the Press had done in the refinement and improvement of the morale of cage bird exhibition circles. If the Press let the light of public opinion in on singing contests they would of necessity become better conducted, and attract attention from a higher class individual than hitherto.

On the proposition of Mr. Matthes, seconded by Mr. R. J. Pretty, and supported by Mr. J. W. Ramsden, a most hearty vote of thanks was given Mr. Dobson for his most interesting lecture.

[Those who would like to know more of how these bird singing contests are conducted should send our manager 3d. for CAGE BIRDS of September 1st and 15th last, in which they were fully described.—ED.]

SELLING SPLENDIDLY.
OUR DELIGHTFUL

Picture Postcards OF Canaries,

Etc.

EXECUTED IN COLOURS
BY
Mr. H. NORMAN.

The most delightful and appropriate Postcards for Bird Lovers on the market.

NUMBER.
1. Yorkshire Canary.
2. Cinnamon Canary.
3. Norwich Canary.
4. Stonechat and Blackcap.
5. Goldfinch, Linnet & Bullfinch.
6. The Lizard Canary.
7. The Lancashire Canary.
8. The Green Canaries.
9. Border Fancies.
10. London Fancy, Belgian and Dutch Frill.
11. Scotch Fancy Canary.
12. Crest and Crest Bred.

All represent exact and correct show types and have accompanying descriptions.

SOLD SINGLY OR IN SETS.
One Penny each or Sixpence the Set of Six. State Number required and exact quantity.

NOW READY!

AN ENTIRELY NEW SERIES OF

COLOURED POSTCARDS OF HYBRIDS.

On this Series the following are . . . . beautifully portrayed by Mr. H. Norman:—

(1) Jonque Four-pointed Goldfinch-Canary.
(2) Goldfinch-Bullfinch.
(3) Goldfinch-Redpoll.
(4) Greenfinch-Bullfinch.
(5) Linnet-Bullfinch.
(6) Jonque Dark Goldfinch-Canary.

Price 1d. each.

Post Free 6d. the Set.

On Order from any Newsagent, or from

"Peggy" and her owner.

THE LAST OF "PEGGY."

Death of a Noted Magpie.

In our issue of July 28th, 1906, we related some of the adventures of the Magpie "Peggie," owned by Mr. Nixon, of Heaton. What was probably one of the tamest wild birds known, (as Mr. Harris and other naturalists can testify) has unfortunately been drowned. Her owner had been doing some amateur photographing, and had left some water in the bath, and poor "Peggy," most likely wanting a drink, had fallen in, and was drowned. She will be greatly missed by visitors to Heaton Park, as "Peggy" was invariably perched on one of the window sills outside her owner's house, close to the park, whistling and chattering to her audience, and was looked upon by them as the real Magpie of the Newcastle United Football Club, the children shouting to her, "Who's going to win to-day, Peggy?" and "Play up the Magpie!"

When her owner was staying at Whitley, "Peggy" would fly and hop after him all over the sands, and would perch on a rock, and seemed delighted to watch the spray, and chatter to it. She would sit on his hand while he played the piano, and stay there as long as he played. She used to spread her wings and feathers right out warming herself in front of the fire—and many a mile of writing has her owner done with poor "Peggy" sitting on his wrist all the time. She could catch pieces of rolled paper thrown to her with remarkable precision.

Once she was lost for three days, refusing to take food from her finder, she was found quite a distance away at Walker Gate, and again lost in the roof leading from the attic, having neither water nor food for two days, and having been twice accidently stamped or trod upon in the dark and much hurt, and once having sustained injuries from an attack by a cat, she unfortunately had her left leg broken, about two months ago, and, awhile after, a friend of her owner's, (H. G. Bell, Esqr., of Percy Main, a great lover of birds and animals), bandaged the injured leg, and "Peggy" had quite recovered her lost vigour and spirits, flying outside and amusing her admirers as usual, until she came to her untimely end. When "Peggy" was a young bird, she used to steal and hide anything bright and glittering, but as she grew older, she only stole and hid food—"putting by for a rainy day." She had been in her owner's possession for about six years, since a nestling, and was a remarkable example how a wild bird might be tamed by kindness.

SOME OBSERVATIONS ON EXTINCT BIRDS.

"As extinct as the Dodo" has become a stock phrase, and yet, says a writer in a contemporary, it is believed to be less than half a century since a living Dodo was still to be seen. When Mauritius was discovered by the Portuguese sailors at the beginning of the sixteenth century, the Dodo was one of its most striking inhabitants. A huge, clumsy bird, which had lost its power of flight in the lapse of ages, this relative of our pigeons fell an easy prey to the explorers and their domestic animals. The Dutch, who acquired the greater part of the early traffic with the East Indies, imported several living Dodos to Europe, where, luckily, they were drawn by artists. Otherwise we should now not even know what the Dodo had looked like. A few fragments of their skeletons have been preserved in museums, and in 1866 a travelling naturalist discovered a hoard of Dodo bones in a peat-swamp in Mauritius; but no one seems to have thought of preserving a colony of Dodos, which might easily enough have been done fifty years ago, and it is not likely that a living specimen will ever be brought over to the Zoo, though the recent discovery of the Okapi shows that the remote fastnesses of primæval forests still contain unexpected forms of life.

Amongst the other birds which have become extinct within the memory of man, like the Solitaire of Rodriguez or the gigantic Moa of New Zealand, a leading place must be given to the Great Auk, whose eggs periodically fetch huge prices at auctions. This bird, otherwise known as the Gare-fowl, used to furnish a most valuable article of food to sailors and fishermen in our northern seas. Like the Penguin, of which Antartic gourmets still write with affection, it also had abandoned the use of wings, and so fell an easy victim to the hungry. Like Tennyson's Irish hero, "they slew and they sailed away" with a useful store of victuals. The Gare-fowl was "very good and nourishing meate," as one of the voyagers in Hakluyt's collection informs us. It was so unused to danger that it was easy to drive it on board ship along a plank, where it could be slain and cooked at leisure. Unfortunately the sailors, to illustrate the proverbial improvidence of their calling, killed a dozen Gare-fowl for every one that they ate.

The Garefowlskerry, in the Iceland seas, was so difficult to climb that it formed a safe home and breeding ground for the Great Auk till about 1830, when Nature took a hand in the game and a volcanic explosion blew the Skerry to pieces. Fourteen years later the last of the Great Auks, which had thus been driven to haunts more accessible to man, was captured and slain. It is just conceivable that some lonely and unknown rock may still contain a colony of living Gare-fowl, which would afford a moderate competence to its discoverer. A Great Auk's egg is worth from £200 to £300 in the auction room, and a good stuffed specimeu commands still higher prices, so that, if care were taken not to flood the market, the owner of such a colony need not envy any cattle breeder. But it is to be feared that the Great Auk is now as shy a bird as the Solitaire.

A HANDY BOOK FOR LOVERS OF BIRD LIFE

BIRDS OF THE COUNTRYSIDE

By FRANK FINN, B.A.

In Cloth gilt, 5/- net.

With about 130 full-page and other illustrations and 12 full-page Coloured Plates

"No better or more interesting companion for a stroll in the spring and summer days could be chosen by those who wish to be on speaking acquaintance with the birds they may come across."—WESTMINSTER GAZETTE.

PATERNOSTER ROW.

An Evening with the Cuckoo.

Some interesting details of Cuckoo life related by Messrs. J. Peat Millar and John Craig.

In the Templars' Lesser Hall, Beith, on March 14th, Mr. J. Peat Millar gave the members and friends of the Beith Rechabite Society a most interesting lantern lecture, giving an excellent description of each slide as it appeared on the screen. The photographs were numerous, varied, very clear and distinct, and the great majority of them were taken in the district, which made them all the more interesting. They included birds, birds' nests, and eggs, etc., and for many of which Mr. Peat Millar was indebted to my old companion and friend, Mr. Matthew Barr, then residing in Beith, but now in England. Mr. Peat Millar also exhibited a series of snapshots of young Cuckoos ejecting a young bird and eggs from the nest. Curiously enough the first snapshot Mr. Peat Millar took of bird life was a young Cuckoo ejecting a young Yellowhammer from a Meadow Pipit's nest, and which has made him famous in the bird world. This Cuckoo commenced operations more readily than any I have experimented with, either before or since, whether it was because it had conquered another Cuckoo, which was one of its companions, I cannot say, but certainly it was more active than any I have watched.

In June, 1901, one of the snapshots of a Cuckoo, taken by Mr. J. Peat Millar when the bird was about two days old, and which, while still blind, was in the act of ejecting an egg from a Meadow Pipit's nest. This bird was less inclined to commence operations than former ones I have experimented with about the same age. I again visited the nest two days later, and took two eggs and a young House Sparrow, about three days old, with me, and put them into the nest beside the young Cuckoo, but it was not inclined to commence operations. I again visited the nest about an hour later, but they were still in the nest. As a rule, the Cuckoo is less inclined to commence operations when about four days old, at least that is my experience. I again visited the nest a day later, but some person or persons had cleared everything out of it. In June, 1904, I found a Meadow Pipit's nest with two eggs, and a Cuckoo's. From the way in which the Pipit flew off the nest I thought she had sat a day or two, and that the full clutch was laid. I visited the nest two days later, and there were just the same number of eggs, which proved that my surmise was correct. Probably the full clutch was laid before the Cuckoo deposited her egg, and she removed one or more of the nest owner's eggs. I again visited the nest when the young were nearly hatched. The young Cuckoo showed the hollow back. Mr. Peat Millar took two snapshots of this Cuckoo, which was about two days old, and while still blind, with an egg on its back, one of them with the young Cuckoo well up on the nest, and in the act of throwing back its head. This bird, like the last, was slow to begin operations. I experimented with this Cuckoo each consecutive day, except Sunday, with young birds and eggs until it was about nine days old, when it suffered an egg to remain in the nest. I never saw it throwing out either the young birds or eggs, but they were always out when I visited the nest the following day, until the ninth day, when the hollow on the Cuckoo's back began to fill up. After that I watched the Cuckoo more or less until it left the nest, when about three weeks old. Mr. Percival Westell, when referring to this picture, which was published in a contemporary, makes it appear to its readers that he was in company with Mr. Peat Millar when the photo was taken, which is not the case.

In June, 1905, I saw a Meadow Pipit's nest with a Cuckoo's egg, but it proved to be clear. On June 2nd, 1906, I found a Meadow Pipit's nest in the same field, where the now famous snapshots were taken on June 12th, 1899, with two eggs and a Cuckoo's, but they were cold, and on visiting the nest a week later there were the same number of eggs, which were still cold. As the Pipit had forsaken the nest, probably the full clutch was laid before the Cuckoo deposited her egg, and she removed one or more of the nest owner's eggs, but I never saw a Pipit forsake a nest in this way before; probably it was a young bird. A gentleman saw a Meadow Pipit feeding an old Cuckoo in the beginning of May, 1906. I may say that all the photos of the Cuckoos above referred to were taken by Mr. Peat Millar himself, and the credit of the observation belongs to me, not to Mr. Percival Westell. He only bought the pictures from Mr. Peat Millar, with permission to use or sell them.

A gentleman who got some photographs of the Cuckoo from Mr. Peat Millar, expressed the wish that he would like to see a snapshot of a Cuckoo putting her egg into a nest with her bill. I think there can be but little doubt but that the Cuckoo carries the egg in her bill. Some years ago I wrote an article on the habits of the Cuckoo, which was published in one of the Fancy papers. I said the Cuckoo carried her egg in her bill to the nest selected, and the argument that the cuckoo carried the egg in her toes would not hold water. Mr. Percival Westell also wrote to the same paper contradicting me on the latter point. He said he saw the Cuckoo carrying the egg both in her bill and in her toes. Since then Mr. Westell has stated in two different papers that the Cuckoo carries her egg in her bill, not in her toes, as "erroneously stated." It is evident that Mr. Westell's observations are far from being reliable.

With regard to the young Cuckoo ejecting eggs and young birds from the nest, Mr. Seebohm says: "It has been said, on what appears to be incontestable evidence, that the young Cuckoo soon after it is hatched ejects the young or eggs from the nest by hoisting them on its back, but one feels inclined to class these narratives with the equally well authenticated stories of ghosts and other apparitions which abound." And this has been quoted over and over again by writers who pin their faith to Mr. Seebohm. No wonder that some books on "British Birds" are unreliable for reference! When I saw the point disputed about the young Cuckoo throwing its companions out of the nest, I carried an egg with me and put it into the nest beside the young Cuckoo, and solved the problem for myself, and the result was published in one of the Fancy papers, that the young Cuckoo did eject eggs from the nest, but that was not sufficient for the sceptics, until I got Mr. Peat Millar to take some snapshots, which were published in one of the Fancy journals on July 14th, 1899. It was also stated that Mr. Seebohm was not one of those who rush in where angels fear to tread, but the photographs above referred to proves that statement to be incorrect.

SWALLOWS AS IN-DOOR PETS.

Gnats on a Hatpin.

I was staying some time ago at Thorpe, the little fishing village near Aldeburgh, Suffolk, and under the eaves of our house a large colony of Swallows had taken up its abode. One morning I found that a violent storm of wind had wrecked a great many of the nests, and was fortunate enough to rescue one of the chicks. I put this in a small basket upon a window-sill, in the hope that the parents would feed it; but this they declined to do. Taking it in, therefore, it was fed with gnats and flies, given upon the point of a hat-pin. This was the nearest approach we could get to the beak of the mother, and was, indeed, the only way in which we could induce it to receive food.

Gnats and flies becoming scarce, we were driven to desperation. Little insects of all kinds were offered, scraps of potted-meat, and on one occasion one of the party offered it a bumble-bee, which, nicely minced, proved a very appetising dish.

Free Citizenship.

This young Swallow became so tame that it would always answer me when I whistled to it. We had no cage with us and gave it the free rights of citizenship throughout the house. It would get into the loose pockets of our Norfolk coats if the weather was at all cold. On one occasion it flew towards me the moment I opened the door, lit upon my shirt-cuff, walked up my sleeve, and flew away when it had reached the other end, tickling my arm meanwhile in a manner that was really excruciating!

We took it out one day with the idea of letting it fly away. It flew off with a flight that is totally different from the Swallows that are left wild, never darting, or swooping, employing nothing but the ordinary flapping of the wings. We never thought to see it again, but noticing a Swallow upon one of the chimneys, I whistled the call I had taught my bird. It instantly replied, then flew down to the door, and let me take it in.

Once again—it was now quite a strong bird and almost full-grown—I took it out into the garden for "exercise." It ventured rather farther a-field this time and a larger bird swooping upon it, wounded it so severely that it shortly afterwards died, to the great grief of the whole family.

Swallows Everywhere.

There never was such a house as this for Swallows. I have taken them from behind the chest of drawers in my bedroom, and the next morning have released another from the chimney in the dining-room! After that, and on the same day, I found a Blackbird in possession of the sideboard!—QUILL.

A Chat about Birds.

Some Simple Facts for Students.

A Lecture by the Rev. K. A. Deakin at the Redditch Institute on February 11th, 1907.

The fifth of the series of lectures arranged this season in connection with the Redditch Institute, took place in the reading room of the institution on Monday night, February 11th last. The lecturer was the Rev. Keelinge A. Deakin, vicar of Cofton, and the lecture itself was "A chat about birds." The vicar, the Rev. R. B. Littlewood, presided. We are indebted to the "Redditch Indicator" for the following account of the Rev. Deakin's interesting and instructive remarks.

FIVE GREAT CLASSES.

Birds, he said, were divided into five great classes: *Raptores* (seizers), *Insessores* (perchers), *Rasores* (scratchers), *Grallatores* (waders), and *Natatores* (swimmers). Of course the characteristics which the English names that he had given imply, were not entirely confined to the class which bore them, as many of the *Raptores*, for instance, were in the habit of perching, and the Moorhen which did not belong to the order of *Natatores*, was, as he need scarcely tell them—a very admirable swimmer; and—strange as it might seem—a Heron kept by Dr. Neill, in his garden near Edinburgh, was in the habit of swimming out some ten or twelve feet, where the water was two or three feet deep, for the purpose of getting to a Moorhen's nest in the hope of making a meal off the young ones. These were but one or two instances to show that birds of one class very often exercised the characteristic habits of another.

The order *Raptores* consisted of those birds commonly called "birds of prey"—the Eagles, Hawks, Owls, etc. These birds had a peculiar way of getting rid of the indigestible portion of their food—the fur, feather, and bones of their victims—by casting them up in the form of pellets, which might be commonly found near the nests and roosting places of owls. To these pellets he should have occasion to refer later on. The *Insessores* comprised all those small birds which gave such life to the fields and hedgerows, and without whose presence their country walks would be dull indeed. In this order were also included all those sweet songsters whose notes give such a charm to the early mornings and evenings of spring. As a type of the *Rasores*, he might take the Partridge, and those of his hearers whose gardens might occasionally be invaded by a neighbour's fowls would readily understand the full force of the name "scratchers," as applied to them. The *Grallatores* were those long-legged, and generally long-billed birds, which delighted to frequent their sea-shores and the mouths of rivers, and which (especially during the autumn migration) were often to be seen on the banks of their inland lakes and large reservoirs. The *Natatores* were the web-footed birds, of which they had familiar examples in the Ducks and Geese of the farm yards.

FEET AND BILLS.

They would have noticed that those five orders had been classified from the feet, and from the use made of them, but when they came to split these orders up into sub-families, or species, the distinctive feature was very often the bill, or beak. The bill consisted of two mandibles, as they were called, and those differed very much according to the habits of their owners, and particularly according to the kind of food on which they lived, and the manner in which they sought it. Thus, in the birds of prey the bill was strong, with the upper mandible hooked and very sharp, and admirably adapted for seizing animals and cutting and tearing their flesh. In the case of birds which fed on insects or vegetable substances the bill was not hooked, or very little so. The bill of insectivorous birds was weak and slender, while in the case of those which feed on seeds it was short and stout, a well-marked instance of which was the thick, stout, clumsy bill of the Hawfinch, which enabled it even to crack cherrystones, to the kernels of which it was very partial. While speaking of seed-eating birds, he must not omit one, which, unfortunately, was not a very common one. He meant the Crossbill, which fed on the seeds of firecones, and the mandibles of whose bill crossed each other (hence its name), the one turning up and the other down, thus forming an instrument most beautifully adapted for wrenching off the scales of the cones, at the bases of which the seeds lay.

In the case of birds which caught insects on the wing, the bill was short, but very deeply divided, so giving a wide gape. This was very conspicuous in all the members of the Swallow family, but it was even more noticeable in that most interesting bird the Goatsucker, or Nightjar. The Woodpecker, which obtained its food by digging into decaying trees, had a long, sharp bill, with which it easily and quickly effected its purpose. This bill it also employed in digging out a hole for its nest, which it did to the depth of a foot or more, the hole turning downwards after having penetrated a few inches. The entrance of this hole was, when completed, as perfect a circle as if drawn out with a pair of compasses. Some of the Waders (the Snipe in particular) which fed on the worms, etc., which they found in the mud, had slender bills of remarkable sensibility, while many of the aquatic, or water, birds had broad and comparatively soft and sensitive bills, with marginal ridges for straining the mud from which much of their food was extracted.

He was only concerned that evening with their native birds, or he might speak of the wonderful modifications of the bills of Toucans, Hornbills, Parrots, Pelicans, and Spoonbills (the last of which, by the way, was once not uncommon in England, and of which a specimen was, to his knowledge, and that only a few years ago, at St. David's, while he was assured that one was seen at Upper Bittel reservoir two or three years ago). All these were very interesting and intimately connected with the habits of their different owners.

The Oyster Catcher had a wedge-shaped bill, peculiarly adapted for insertion between the two portions of bivalve shells, and with it, it was able to detach limpets from the surface of the rocks with the greatest ease. But if he excepted the Spoonbill—the most peculiar bill among the Waders was that of the Avocet, which is curved upwards, and was long, slender, pointed and flexible, having very much the appearance of a thin piece of elastic whalebone. Up to the beginning of the present century this bird was still abundant in several localities on the east coast of England, but it had now, unfortunately, passed into the category of mere visitants to this country, a result due partly to drainage of the marshes, partly to persecution by gunners and egg gatherers.

HOW WONDERFULLY ADAPTED.

To go back for a moment to the feet of birds. It was very interesting to note how wonderfully these were adapted to their habits. In the birds of prey, the feet, as might be expected, were strong, with sharp, curved talons, but those of the Osprey, or Fishing Hawk, were specially adapted for holding its slippery prey. The outer toe was reversible, while the under surface of the toe was rough and covered with small pointed scales, thus ensuring a firm grip. They in the Midlands very seldom had the opportunity of seeing this interesting bird, but since he had lived in this neighbourhood one was to be seen for about a week at a reservoir near King's Norton. That was some fifteen years ago.

(To be continued.)

BENGER'S

Food

assists nature.

It is used mixed with fresh new milk and forms a delicate and nutritive cream which can be enjoyed and assimilated when other foods disagree. It is entirely free from rough and indigestible particles which produce irritation in delicate stomachs.

Mothers and interested persons are requested to write for Booklet, "Benger's Food and How to Use it." This contains a "Concise Guide to the Rearing of Infants," and practical information on the care of Invalids, Convalescents, and the Aged. Post free on application to Benger's Food Ltd., Otter Works, Manchester.

THE LANCASHIRE CANARY.

By C. A. HOUSE.

A Lecture delivered before the London and Counties Association of Canary Breeders on April 25th.

When your secretary, Mr. Pretty, asked me, two or three months since, to give you a lecture, I hardly knew what to select as the subject of my discourse. London fanciers have had lectures upon the various aspects of breeding, management, and exhibiting of Canaries, upon the Yorkshire, the Norwich, the Crest, the Cinnamon, the London Fancy over and over again. Thinking the matter over, it occurred to me that I must break fresh ground somehow or the other. A happy inspiration made me think of the Lancashire. So far as my memory serves me, the giant of the Canary family has never before been the subject of a lecture before either of the Metropolitan societies.

It is some twenty-three or twenty-four years ago that I bred Lancashires. It was during the time I resided in Somerset, and I obtained my original stock from Mr. Potter, of Taunton, who was at that time a well-known breeder of Crests and Lancashires, one of the best in the South. I have ever been an admirer of this noble bird, have for many years enjoyed the friendship of the principal breeders in the County Palatine, and have had the privilege of being in close touch with such celebrities as Barrass, Collinge, Fielding, Bell, Compston, Cundiff, Clegg, Winskill, Maxwell, Turner, Taylor, Butterworth, Fitton, Whitworth, Holt, Oddie, Naden, Clayton, Wright, Lever, Viles, Garner, Homer, Ratcliffe, Ashworth, Robinson, Barton, Buckley, and others whose names are far better known in Lancashire than they are here in London, and some of whom are now no longer in the land of the living.

THE CRY OF DETERIORATION.

Some fourteen or fifteen years ago there was a tremendous outery about the deterioration of the Lancashire, due to the fact that many of the birds were showing a shortness of leg and body which does not belong to the Lancashire, also a rotundity and droop of the headgear which savoured more of the Crested Norwich than of the Lancashire. It must ever be remembered that the headgear of a Lancashire is not a Crest, it is a coppy, and that to speak of the crest of a Lancashire is both literally and figuratively wrong. Accompanying these defects was a corresponding loss of carriage. The short legs prevented the short bodies from being held erect, and this, together with the drooping, rotund headgear, was a very plain indication that if Norwich had previously come to Lancashire, Lancashire had now gone to Norwich. That this was so was proved by a bird belonging to Dr. Jubb, of Halifax, which was shown both as a Lancashire Plainhead and and a Crestbread Norwich. A great hue and cry was raised, with much disputing, in the columns of the Press, as to whether this suggested deterioration was an accomplished fact or not. Many contended that the birds of the day were superior to those of the ages that had passed, others said it was not so, and that it was time breeders of the Lancashire began to set their house in order unless the bird was to be lost altogether.

The conclusion of the somewhat lengthly correspondence was that those who said the breed was losing ground proved their case, and the result of several meetings which were held was the formation of the Lancashire and Lizard Association, the drawing up of new standards, and instructions to the judges that the birds showing Norwich properties were to be heavily penalised when they came against the correct article, and that breeders and judges both were not to forget that in the Lancashire, as in the Yorkshire there was such a property as carriage of body. One of the strongest voices in urging this was that of John Garner, of Hazel Grove, to-day, as then, one of the best breeders we have, and one who has always, in season and out of season, argued against those birds which were short in body and slovenly in carriage. Those of you who have ever had the pleasure of seeing Mr. Garner's birds at the Crystal Palace will have noticed that they are invariably possessed of those two great essentials in a first-class Lancashire—carriage and length.

STRIVERS FOR TYPE.

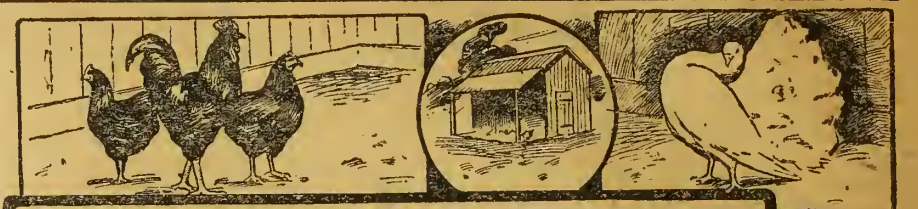
The men who were strongest in their desire to keep to the correct standard of the Lancashire were the Rochdale breeders, who were supported by those of Manchester and Stockport. The Oldham contingent were not so keen on reform, because some of them had been putting the Norwich blood into their birds with the idea of improving the coppy. It must be understood that I speak generally, because in each of the districts mentioned there were those who had offended the canons recognised in Lancashire circles, as there were others who had ever endeavoured to breed the real Simon Pure. North country men are not given to saying soft things either about or to each other. They call a spade a spade, not an agricultural implement, and some very plain speaking was indulged in at those meetings. As I have said, the Lancashire and Lizard Association came into being. Although it has not, perhaps, done all that its promoters were hopeful it would, there is no one who has watched the trend of events in these latter days but what must in all honesty acknowledge that it has done some good. That it has not done more is perhaps due in some measure to local jealousies, and the fact that the Lizard men have had a big say, rather too big a say, in its management. This has led to the formation of the Lancashire Canary Club, which has set out with only one object in view—the popularisation and improvement of the bird named after the land of the Red Rose. Amongst its members are to be found all the best breeders of the Lancashire in the County Palatine and the adjoining county of Cheshire, for the cheese county has ever been a stronghold of the breed. Quite recently the cry has again been raised that the Lancashire is deteriorating.

ANOTHER SCARE.

Those who have raised that cry know not what they are talking about, or else are raising it for some sinister and ulterior motive of their own. No one who has watched the Lancashire Fancy, as I have watched it for the past twenty years, can honestly say that the birds of to-day are inferior to those of any other time or generation. I have heard it said, and reiterated over and over again, that we have not to-day birds equal to those portrayed in Blakston's monumental work. Those who say this speak without the book, and without the birds. To prove this fact, one need not go back into ancient history. They need only compare the birds seen at the last two or three shows held in the Rochdale Town Hall with those illustrated in Blakston's book, and here let me say that, as one who for the past twenty-six years has been in close touch and association with the Cage Bird Fancy, and for twenty-three years connected with the Fancy Press, that the illustrations in Blakston's book were not actual portraits of birds, but portraits of the selected birds of the day, considerably overdrawn to suit the ideal of author and artist. Notwithstanding this, those idealised creations of the past are not to be compared to the birds of to-day. I wish it was in my power to show you to-night the birds which I have had the pleasure of judging at the Rochdale Show during the last few years. You would, I make bold to say, be amazed and astounded at the massiveness of their bodies, and also delighted with their splendid carriage and length. You would admit that it is not impossible for substance and carriage to be blended in the Lancashire any more than it is in such splendid specimens of the human race as the Irish Constabulary, our own City Police, or the Life Guards.

LANCASHIRES FROM YORKSHIRES.

Years ago the cry raised against the Lancashire was because of the introduction of the Crested Norwich blood, and there was, without doubt, both cause for, and reason in, the outcry. It is now said that Lancashire breeders have been introducing the Yorkshire to secure length of leg and style. It is absurd to even whisper such a thing, let alone shout it from the house tops. Our Lancashire breeders require great length with stoutness, and a broad flat head with overhanging eyebrows. Do you think it likely, whilst these points are all-important, that they would run the risk of losing them by introducing blood which would give them narrow, pinched, oval skulls and thin whippety bodies? I can imagine what would happen if anyone stood up in the club-room of the Rochdale Ornithological Club and preached such heretical doctrines. From all corners of the room would come foreible injunctions to "sit thee doun tha saft-head, and doan't talk such trash." I can imagine how those old stalwarts, Robert Barrass, Levi Butterworth, Ben Buckley, John Garner, Barker Clegg, Jemmy Winskill, Alf. Whitworth, Ben Turner, Jas. Fielding, and Ben Viles, would have smiled had anyone ever suggested to them crossing the Lancashire with the Yorkshire, the breeds have scarcely two points in common, and yet we hear talk about crossing them. We are told that the Lancashire men have not only dipped into Yorkshire blood, but they have dipped too freely. Did I attempt to preach such heresy here to-night I should hesitate ever to show my face in a Lancashire show room again. No sensible and practical breeder of Lancashires would ever dream of doing it.



IMPORTANT NEWS TO BREEDERS

and FLYERS OF PIGEONS and POULTRY, AVIARY KEEPERS and DOG FANCIERS.

All Breeders and Flyers should know that Hall's Sanitary Distemper is the best thing known for ensuring perfect cleanliness in breeding and store cages, show pens, fowl houses, kennels, etc.

It is sold in tins ready to mix with water and is applied with a whitewash brush. One coating effectually destroys all the insect life and fever germs, etc., which collect in cages and kennels.

At the same time Hall's Distemper is non-poisonous to bird and animal life.

It is made in two qualities: the outside quality is the one specially recommended for the above use, and suitable colours are—

No. 17, Cream. No. 66, Pale Green. No. 47, Pale Blue.

HALL'S DISTEMPER is sold by all Oil and Colourmen, Stores, etc.

Remember to ask for Outside Quality.

Sole Manufacturers—

SISSONS BROS. & Co., Ltd., HULL; 199b, Boro' High St., London, S.E.

Full particulars with sample and shade card will be sent post free on application.

TALES OF IMAGINATION.

Such a story can only be a figment of someone's imagination. A tale started with a desire to say something sensational. We don't want sensational, impracticable, theoretical statements made about the breeding of Canaries; we want solid fact and logic. It is not true for anyone to say that the Lancashire of to-day is thin and whippety. There are at the present moment Lancashires which are superior in every respect to any which have gone before. There is no doleful, dismal note being struck by practical breeders of Lancashires to-day. They know there are now such birds as have never before been seen, and quite pean-like were the voices of Lancashire breeders at the last Rochdale Show at the magnificent quality of the birds shown. I need not do more than say that, in the opinion of such men as Messrs. Barrass, Garner, Grindrod, Turner, and Whitworth, it was the best show for quality they had ever seen. The Lancashire has been on the up-grade for the last six or seven years, and is gradually improving.

SOUTHERN BREEDERS OF LANCASHIRES.

It seems strange to breeders of other varieties and difficult to understand, why the Lancashire does not become more popular outside the county of its birth. The Norwich and the Yorkshire have long outgrown the confines of their birthplace, whilst the Crest is also well distributed, being as popular in the North as in the South, whilst the Lancashire is not to-day so well known in the South as it was 15 or 20 years ago. One cannot, after the lapse of years, recall vividly the names of those who have been connected with one of the less popular breeds, but, as I speak, there occurs to me such names as Radmore of Plymouth, Heath of London, Foster of Portsmouth, Potter of Taunton, and Coward of Exeter (who, by the bye, was a Lancashire man, having migrated West from Accrington). Now about the only South country breeder of Lancashires is Mr. F. J. Green, who is meeting with well-deserved success in his efforts to produce typical Lancashires. Good as are the birds of this erstwhile London breeder, it would be fulsome flattery on my part did I attempt to compare them with the birds of such breeders as Barrass, Mills, West, Taylor, Whipp, Garner, Lord, Cundiff, Collinge, Butterworth, and other prominent fanciers of the distant North.

NOT POPULAR DOWN SOUTH. WHY?

I may be asked the question, Why is it that the Lancashire is not more popular in the South? There are, I believe, two reasons why the giant of the Canary family is not held in greater esteem in the South, and they are both due to misconception and misunderstanding. It is thought by many Southerners that the Lancashire is delicate and difficult to breed. This is the first mistake. It is nothing of the sort, as is proved by the success which has attended Mr. Green's efforts. The idea has arisen out of the other misunderstanding to which I refer. Southern breeders, in buying, have wanted big massive birds of great length and substance, and in getting them they have got old, worn-out specimens, because in no other way could they get birds of substance direct from Lancashire, the home breeders naturally will not sell their best birds whilst in their prime. They want them themselves, not only for exhibition, but also to breed with. When they have got about all they can out of a bird, they are, of course, not loath to part with it. It is put into a 40s. or 30s. selling class; perhaps it wins, and is claimed by some southern breeder, who has gone North in search of bargains; or, maybe, he writes to a northern breeder describing an almost ideal bird, and expresses his willingness to go to the extent of a £5 note for a real good one but it must have substance, and this "but" has not only a capital B, but a capital U and a capital T as well. He has one of the old crocks sent him. It has substance, and it has a show record. He keeps it. The next breeding season he is tempted to use sundry strong adjectives about Lancashires generally, and to ask himself the question, Is marriage a failure? For failure it is, so far as his Lancashires are concerned, and his lament at the end of the season is—"Love's Labour Lost."

NORTHERN CHAMPIONS TOO SMALL.

Some twelve or fourteen years ago, when I was living in the North, one of our best-known southern Crest breeders, who had a few Lancashires, wrote, asking me if I could get him a really good Lancashire, one that would be of some use to breed with. He would trust to my judgment, and I could go to £5 for a good bird. That season Mr. Jas. Maxwell had bred a particularly good young buff Coppy. In its first feather garb, it won at each of the three societies shows held in Rochdale; I had the pleasure of judging it at the show of the Old Original Society; it also won at one or two shows outside Rochdale. After it moulted it was again shown at the three local Rochdale shows, winning at each. It also won at Littleboro', Smithy Bridge, etc. In fact, it was never beaten. I judged it at the backend show of the Rochdale Ornithological Club, held in the old club-rooms in Yorkshire Street. This was the wind-up of the season, and it had not been beaten. All the Lancashire breeders who had seen it acknowledged it to be the best young Lancashire that had been seen for years, and several of the older hands asked Mr. Maxwell to name a price, but he would not part. I had some talk with him, told him I wanted a good bird, and asked him if he would take £5 and let the bird go South. He told me that he had already refused that sum from one of the Rochdale fanciers. I argued that the season was then over; he could not win any more with it that year; it might go wrong, not breed, and laid special stress upon the fact that it was going right away out of the district. After a great deal of argument, I secured the bird. I sent it to my southern friend. A few days later it came back—"It is no good to me. I want a Lancashire, not a half-bred Yorkshire; a bird with some length and substance." This was the southern verdict on the best bird of the year. Had my southern friend kept that bird, not bred with it the first season, allowed it to fly at will, it would have grown immensely, and then, when its nest wings and tail had been replaced by its first adult plumage, his opinion would, perhaps, have been different. This splendid young bird, the crack of the season, with all his life before him, was not good enough; but had I sent an old worn-out prize winner, it would have given the greatest satisfaction on arrival, but afterwards it would have caused nothing but disappointment and vexation of spirit. Southern fanciers have never seemed to have the capacity to grasp the fact that length and substance grow with the Lancashire. As a natural consequence, the breed has not caught on down South.

(To be continued.)

Too Fond of Birds.

A Newport young man, Thomas Morgan, who had served three separate sentences of one month each for the theft of a Parrot, a Canary and a number of photographs, was the other day, at the Newport County Police Court, sent to prison again for two months for stealing a Canary belonging to Frank Willis, of Bassaleg, on March 10th.

THE YOUNG NATURALIST.

Prizes of 1s. and two of 6d. each will be given for respectively the best and two second best cuttings or original bits about birds. Competitors must be children under sixteen years of age. All efforts must be briefly and clearly written, and ON ONE SIDE OF THE PAPER ONLY.

Two stars indicate the Winning Contribution; one Star the runners up.

Peter was as good as his word. He was very fond of his Bullfinch, and never tired of caring for it. And on his walks he always remembered to gather the seeds and berries he knew it liked best. He discovered, too, that Bullfinches are very fond of newly-hatched snails, which they eat, shell and all. They also relish several kinds of caterpillars, especially those of the currant moth and of the cabbage white butterfly. They eat the seeds of dock and thistle and other noxious weeds in great quantity, so that they may really be counted as useful birds, besides being exceedingly handsome. Peter's Bullfinch lived for eight years. When Peter was sixteen he went to college, but he left Garibaldi in charge of his sister Kitty. One day she wrote to Peter: "I am very sorry to tell you that your dear Garibaldi died this morning. We were all at breakfast when he suddenly fell from his perch and flapped his wings two or three times as he lay on the sand on the cage floor. I ran round to him, but he was dead before I could take him in my hand. I cried very much, and we buried him in our old 'Pets' Cemetery' in the pine wood." Peter was glad that he was alone when he read Kitty's letter, for, as he said to himself, "Grown up men don't cry about *anything*." And you will remember that, as Garibaldi was eight years old when he died, Peter must have been eighteen at the time.

* The Pied Wagtail.

This beautiful and active bird is with us all the year round. It flies up and down, and its flight can be likened to that of a switchback. The graceful running of these birds and the jerking of their tails is well known. The Wagtail is so named because it wags its tail when it is walking. It mostly lives in marshy places and on banks of streams, where it finds its food, which is generally insects and caddis worms. It is a very pretty bird, and belongs to the Softbills, and it has a white margin all round its tail.—ERNEST HALL (aged 12), 5, Holly Terrace, Whetstone, London, N.

[Your sketch is very neat and promising, Ernest. —UNCLE PETER.]

My Pet.

I have got a pretty white Java Sparrow, which is called "Peter." I got it from my father as a present. It will come out of its cage and feed out of my hand, and peck my finger. This white Java will fly off my finger into its cage; it knows it so well. I feed it on millet and paddy rice.—WILLIAM MCKINNELL (age 9), 22, Mill Street, Dalbeattie, N.B.

* The Lesser Redpoll.

My brother has commenced keeping birds. He has several Linnets, two Chaffinches, a Robin and a Lesser Redpoll. Of all these my favourite bird is the Redpoll. It is such a happy and trim little bird, and its antics are so amusing to watch that I have become very fond of it. On the top of its head is a brilliant red mark, and just below its beak there is a black mark, which is called its bib. It is fed on canary seed, teasel, summer rape, and sometimes a little maw and inga seed is added.—From MORRIS DAWES (age 13), 7, St. James Road, Watford, Herts.

** A Small Gardener.

One of the smallest of gardeners in the world is the Blue-tit, or the Blue-jenny as it is called. The Blue-tit is a small bird, not so big as a Sparrow; his head is dark blue, encircled in white; the back is olive green, and the breast yellow, shading to blue. The Blue-tit is easily distinguished, because he can hang on anything by his feet. In this fact he is very clever. The Blue-jenny lives on insects, and is a most useful little gardener, for he will clear rose trees and gooseberry bushes of blight. This bird only destroys the blighted buds of the rose trees, in order to procure the insects already inside them. This bird builds his nest in some hollow place—in an old flower-pot or in an old pipe; it is made of moss and lined with soft hair, wool, or feathers.—Sent by W. LEWIS (age 13), 122, King Street, Kettering.

The Kingfisher.

The Kingfisher is by no means common in any part of Britain, and rare in the North. It is yet to be found, all through the year, in most parts of the country where there are streams of water, river banks, and moist meadows, suited to its habits, which are solitary. It generally nestles in holes in the declivities near to its favourite hunting grounds—the clear stream, fringed with reeds and bulrushes, which glides away over pebbles that shine like gold and silver, and weeds as green as emeralds, amid which dart the minnows and other small fish on which, together with aquatic insects, the gorgeously painted fisher feeds. You may see him beneath the shadow of the grey alders sitting motionless as a statue, on a branch projecting over the stream. It may be that a ray of sunshine finds its way between the shivering branches, and out flash the glorious tints of its plumage, red, green, blue, and all changeable colours. Truly he is the monarch of fishing birds, and rightly named King fisher.—Sent by A. MORDUE, age 13, 44, Dorking Road, Tunbridge Wells.

ILLUSTRATED IDEAS

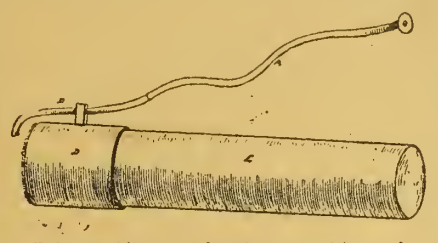
Under this heading we shall illustrate weekly some idea useful to the bird-keeper. Readers are invited to send us particulars of any novel and practical appliance of use in our hobby, either in cage, bird-room or aviary, with a rough sketch of same where possible. Every "Illustrated Idea" used in this column will entitle the sender thereof to a postal order for two shillings and sixpence.

No. 95.

BLOWLAMP FOR SOLDERING WIRE FRONTS.

Sent by C. Palmer, 19, Market Place, Olney, Bucks.

I am sending a sketch of a blow lamp, which I use with great success when soldering wire fronts, and find much quicker than the ordinary soldering iron. The lamp is made of 1 in. brass tubing, about six inches long, to hold wick and methylated spirit. The blow pipe is fixed to a piece of tube slightly larger than the wick in diameter, so as to get a free slide up and down the



A, Rubber tubing; B, blowpipe; C, wick; D, large brass tube; E, 1 in. brass tube.

long tube, to alter height of flame. I have a piece of rubber tube about a foot long on the blow pipe, with a glass union to put in mouth to blow with. The lamp could be made by any tinman or ironmonger for about 2s. The chief advantages I claim for the blow lamp are:—(1) No fire is wanted; (2) one has no iron to tin; (3) it is much quicker and cleaner than the iron. I use resin instead of spirits of salts on the cage fronts, which I find stops all rust.—C. PALMER.

[In connection with this Idea, readers should peruse the correspondence in last week's issue on "The Art of Soldering."—ED.]

No. 96.

FRAME FOR CAGE FRONT MAKING.

Sender is requested to forward on name and address.

Take two pieces of wood, about two inches by one, and any suitable length. Put in three (or more) square-headed bolts with fly nuts; a long frame wants more bolts than a short one. Push the wires cut to length between the two pieces of wood, into the holes in the punched bar, get ends all flush with same, see that it is set square in

frame, screw fly nuts down tight, then proceed to solder. The cage front can be placed in any position during the making, and, as all the wires are held close in frame, without fear of displacing them. I do not remember seeing anything of this kind mentioned before, and it seems to me much more simple and quick than the board sometimes advised. I have made many fronts one to three feet long in such frames..

"LIVERPOOL" VIRUS
is absolutely harmless to human beings and animals, but is speedily fatal to
RATS & MICE.
It causes a fatal disease to spread through a colony of these pests.
They do not die in their holes.
There is, therefore, no danger of smell from dead bodies.
Mice Virus, 1/6 per tube.
Rat Virus, 2/6 and 8/- per tube.
Prepared in Liverpool. Of all Chemists.
EVANS, SONS, LESCHER & WEBB, Ltd., Liverpool and London.

WILD BIRD LIFE

All communications for this column should be written on one side of the paper only, duly authenticated with the name and address of the writer, not necessarily for publication, and sent to H. Norman, Editor, "Wild Bird Life," "Eastcote," Alma Road, Carshalton, Surrey, by Monday in each week. Original observations and records invited.

Boldness of Parent Birds.

The weather of the past week has been still unfavourable for nesting birds. Possibly, no great harm is done while the hens are incubating, for they keep pretty close to their task, and the natural warmth of their bodies is so great, that the eggs would be pretty safe, excepting in cases of forced absence from the nest. Nestlings run great risk from inclement weather, for the old birds do not always take note of the increased cold; but during wet weather they scarcely leave them, and upon showery days, will always hurry home upon the approach of a storm.

One is inclined to think that disaster to eggs and nestlings is caused more often by interference than lack of attention by the parent birds. While feeding young ones, they become pretty bold at times. An illustration of this I had once in Epping Forest, while sketching. To get the desired view of the subject, it was necessary to place one leg of the easel in the centre of a small isolated bush, and while busily engaged, I was half concious of something darting past close to me, this proving to be a Lesser Whitethroat, which had her nest actually touching the easel. Time after time, she came to feed the chicks, although I sat within touching distance of them. Unfortunately I was not a witness of her first attempt at feeding, but it certainly must have required a good deal of courage on the part of this brave little bird to approach so close to a human being.

Where birds have nests close to buildings, or upon occupied premises, they do not make any fuss about approaching their charges. It is evident in their case that, "familiarity breeds contempt." Sparrows and Starlings can be seen carrying food to their chicks at any time, and the House Martins are busy all day. One cannot pass down the street without hearing the cheeping cry of the young, as the old ones cling for a few seconds to the underside of the mud house.

Away in the woods it is different. Anything unusual is looked upon as a danger, to be carefully watched, and during the summer, one can note a Redstart or Stonechat, for quite a long time, flying from nests to bush with food in beak, but never going straight to the nest while the intruder is watching, although I have known a pair to manage the feeding of the young by a little deception, one bird keeping in full view to attract attention while the other executed the business on hand.

The Loud-voiced Wren.

The common Wren has a wonderfully loud voice for so small a bird, and any unusual noise will excite him to song. To-day one was seen hopping about in a belt of timber adjoining the road, when the noise of a passing motor attracted his attention, for he flew to the fence and shouted his loudest. We know that a caged Canary will sing vociferously when music is being played, or any is indulged in. But wild birds as a rule are driven away by any musical noise.

The Wren.

The Wrens are very fond of building in the side of a hay or straw rick, and unless one is accustomed to hunt in these positions for the nest, it is not easy to locate. If one is interested in these matters, he should always make a point of searching round old rick, for quite a number of birds build there. In a season one may find all or any of the following species: Robin, Wren, Blackbird, Thrush, Wagtail and, of course, the House Sparrow. During my time I have located a goodly number of Wrens' nests in the sides of ricks, but do not remember ever finding one breast-high; they are generally about three feet from the ground. Is this by accident or design?

Little Owl at Fakenham.

The Rev. R. B. Caton (the Rector) recently found hanging on an alder tree at Great Fakenham a Little Owl (*Athene noctua*). This is said to be the first specimen of this bird recorded within a six mile radius of Thetford, and brings the number of species of birds so observed up to 194 for that inland district.

Notes and Queries.

Hard on the Birds.

It is reported that in the Newport district the law for wild bird protection is unheeded. Goldfinches and Kingfishers are caught with impunity, and aquatic birds are frequently shot within the city boundaries.

Stoats and Birds.

Stoats are pretty numerous in all country districts, and from observations taken at all times it is pretty evident that bird life is taken freely as food, especially during the summer months, when young birds are numerous and nestlings can be easily obtained, for the active Stoat will scramble up a tree as easily as a cat. They will not hesitate to attack larger birds when the opportunity offers—in fact, they have been known to seize birds large and strong enough to fly a considerable distance with them fastened to their bodies. It is quite evident that ground vermin must be numbered among the enemies to bird life.

The Blackbird's Tail.

Everyone has noticed when the golden-billed Blackbird alights upon the fence how he instantly raises his tail. The action gives one the impression that it is done to balance the body, but this can hardly be so, for he would in that case drop instead of raising it. Then, again, if you watch him in the evening, when his noisy good-night cackle is sounding through the shrubbery, the bird's tail is playing quite an important part in the act; it is, apparently, as excited as the owner. It shoots upwards with a quick, jerky movement; it is lowered slowly and deliberately; it expands and contracts, and is flipped about most strangely. This is all done in times of excitement, and few of our wild birds get quite so excited as this sable songster. Perhaps these singular motions of the tail afford relief to the owner, or possibly he is proud of such a full-feathered appendage.

Spare the Nests!

The "Evening News" publishes an interesting article with the above title, and we would like most heartily to join in the wish. The destruction of nests and eggs means the destruction of species. In spite of our laws, many interesting birds are fast disappearing, and, as far as the British Isles are concerned, others will soon be added to the list. It is the duty of everyone interested in the wild life of this country to do his best to help to carry out the wish expressed by the writer to "Spare the nests."

To Hear the Nightingale.

To hear the Nightingale it is only necessary to know and to seek for the peculiar kind of coppices in which they love to nest. They have two rules from which they rarely depart. In the first place, there must be oak trees convenient, for it is a law among English Nightingales that the nest shall be fringed with oak leaves of last year's growth, since they match the colour of their eggs. In the second, the undergrowth must be dense, for the nest is placed on the ground, and well hidden. Through all the Weald of Sussex, throughout a large part of Kent, in the neighbourhood of Godalming in Surrey, in Hertfordshire, Essex, and Suffolk there are innumerable small woods where these conditions are found, and there one can listen to Nightingales all day and all night during May. The first station out of London where one sees oak woods will probably be the nearest place to find the birds—for example, there are many at Chislehurst, Sidcup, and Bexley.—J. G. CORNISH, Sunningdale Vicarage.

HOW TO MAKE LIGHT BUNS.

By using Eiffel Tower Bun Flour the most inexperienced person can make *light* Buns and Cakes with certain success. Try a 1d. packet. Save Eiffel Tower Labels for 10/6 picture free.
